enemy vessels, under a specious, newly coined "rule" outlawing neutral shipping that the enemy had permitted in its ports in time of peace. Chief theoretician of this British reversion to official piracy was the Tory Jacobite Charles Jenkinson.

Britain's arrogant attacks on neutral shipping and violations of international law during the Seven Years' War alienated all the neutral countries of Europe, who soon raised a cry to return to "freedom of the seas." Particularly harassed was the highly efficient Dutch shipping, and fellow sufferers from British policy were Spain, Portugal, Sweden, Russia, Naples, Tuscany, Genoa, and Sardinia.

Concluding Peace

Although the conflict in America was ended by 1760, the war between Britain and France continued to rage elsewhere: India; the West Indies, where England captured Guadeloupe; and Europe. Through it all, England was driven by the mania of William Pitt for the total crushing of the French enemy. By the end of 1759, Guadeloupe had been conquered and New France all but vanquished. Coupled with England's commanding position, however, was the burden of high taxes and of a mounting national debt. Increasingly appalled at the long and terribly costly war, Newcastle and the Whigs concluded that it was high time to make peace. Newcastle's cry was typical: "I wish to God I could see my way through this mountain of expense!"

A pamphlet war now began to rage in Great Britain, sponsored by and reflecting the positions of the contending parties. The imperialist war crowd, led by Pitt, his brother-in-law George Grenville, the Duke of Bedford, and the young Prince of Wales and his high Tory adviser the Earl of Bute, panicked at any hint of peace and demanded the retention of every British conquest, especially of Canada. Some imperialist pamphlets went so far as to urge the conquest of French Louisiana. In the last analysis, however, the imperialists were willing to concede Guadeloupe in order to keep Canada. Even Pitt's instincts for keeping any and all conquests were tempered by the fact that his main political and financial supporter was Alderman William Beckford. Beckford, leader of the London merchants and financiers, was one of the richest men in the British Empire. An absentee sugar planter of the West Indies, he opposed incorporating the fertile and efficient French sugar plantations into the empire and thus into its extensive markets. Fur-

thermore, Pitt himself had strong family connections with West Indies planters.

To counter the imperialist propaganda, the Newcastle peace forces enlisted the services of William Burke, secretary of the newly conquered Guadeloupe. Burke rose to the occasion with a trenchant and popular pamphlet published in January 1760. Burke recalled the original war aim as stated in November 1754: the limited conquest of the upper Ohio Valley east of the Wabash. He suggested a return to these limited war aims, the retention of only Guadeloupe and the upper Ohio Valley, and the return of Canada to France. In this way "proper limits" would be established to English conquest, and peace could be concluded quickly and amicably. Several other Whig pamphlets joined Burke in asking for the return of Canada, one of which was also printed in Boston.

The imperialists counterattacked with another flood of pamphlets in February and March, insisting on keeping Canada and hence implicitly on continuing the war indefinitely. The major imperialist reply was the influential pamphlet by Benjamin Franklin and Richard Jackson, *The Interest of Great Britain Considered*, published in the spring of 1760 and reprinted that year in Boston and Philadelphia. Franklin, agent of the Pennsylvania legislature in England, was a friend of Bedford, Halifax, and Pitt, but his closest associates were among the high Tory clique, whose leading luminaries were Lord Bute and the Prince of Wales. All shared the goal of increased centralized royal control over the American colonies, and Franklin also aimed at royal replacement of proprietary government in Pennsylvania.

As the pamphlet war began to brew at the turn of 1760, Franklin had written to his close friend Lord Kames of his gushing enthusiasm for a grandiose British Empire: "As . . . a Briton I have long been of opinion that the foundations of the future grandeur and stability of the British Empire lie in America." Kames, the head of the high Tory Scottish faction that was always and ever subservient to the Crown and the royal prerogative, commissioned Franklin to write his major imperialist pamphlet. In this work, Franklin held out to the British the usual imperialist visions of being a huge naval power and of vast markets for British manufactures in a British Canada. Himself heavily engaged in speculation in western land, Franklin trumpeted the virtues of cheap virgin land to the British Empire. Grateful for Franklin's allegiance, the Tories were soon to make his son William a baronet and a governor of New Jersey, while Oxford University, the intellectual center of the Tories, granted Franklin an honorary degree.

Newcastle and the Whigs had been able, in late 1759, to force the reluctant Pitt into peace negotiations with France. By early 1760, England and France were very close to agreement on a mild peace that would have returned the bulk of Canada and Guadeloupe to French hands, while ceding the upper Ohio Valley and Nova Scotia to England, and demolish-

ing the French fort at Louisbourg. But Pitt was able to sabotage the negotiations and to break them off by April on the flimsy excuse that the British ally Prussia was not sufficiently protected in the peace terms—a particularly phony ruse because Prussia itself ardently favored the quick peace.

Pitt and the imperialists greatly needed an issue to prevent peace from breaking out. They found it in the series of aggressions and depredations they were conducting against neutral Spain. Spanish shipping was plundered on the high seas along with ships of other European neutrals, and Spaniards were illegally deprived by the British of their legal fishing rights in Newfoundland waters. But Pitt arrogantly refused to respect Spain's rights in fishing or in shipping. Furthermore, in direct violation of an agreement concluded by Newcastle six years earlier, Pitt refused to limit the aggressions of British loggers in Honduras. Spain had agreed to grant some permission to Englishmen to cut logs in Honduras. The English log cutters promptly began to violate Spanish goodwill by building forts and claiming sovereignty over the whole region for England.

Events took a fateful turn in the fall of 1760. The French surrendered Canada in September, and in the following month King George II died and was succeeded by the Prince of Wales as George III. Since George II had been an ardent supporter of Pitt's imperialist schemes, Newcastle and his chief follower, the Earl of Hardwicke, as well as their fellow Whigs, saw in both events an opportunity to resume negotiations for peace.

The Whigs reopened the debate on the peace terms in November, in a highly influential pamphlet by the wealthy merchant Israel Mauduit, *Considerations on the Present German War*. Mauduit advocated the old Whig policy of returning Canada, while retaining Guadeloupe and the other sugar islands. He also boldly recommended a return to the old Walpole-Pelham policy of ceasing to meddle or intervene in the affairs of Europe or to whip up conflicts against France. Mauduit showed that such a course would be far kinder to England's Prussian ally.

The new king promptly added to his cabinet his chief adviser, the Earl of Bute, and Bute brought in other Tories associated with the royal faction. The ultimate aims of Bute and King George on the one hand and Pitt on the other were quite similar: the absolute destruction of the Whig party and its legacy of liberalism, and the aggrandizement of royal control over Parliament and country. Both factions also agreed on the major imperial war aim of retaining Canada, since both had been nurtured in the visionary imperial dreams of the old Beckfordite opposition to Walpole. Here they were joined, of course, by the other imperialist factions, such as those of Bedford and of George Grenville. All these doctrinal positions could join in a systematic policy of high Toryism: aggrandizement of strong royal power at home and throughout the empire. Hence, these Tory-minded fac-

tions could also readily agree on other programs of the old anti-Walpole opposition: on the ending of "salutary neglect," on the rigorous enforcement of trade regulations over the colonies, and on a strong central government over America—perhaps to be headed by the pliable Benjamin Franklin.

The imperialists lost little time in mounting a heavy counterattack of pamphlets against Mauduit and the Whigs. The major rebuttal, *Reasons in Support of the War in Germany*, was published in January 1761 by Robert Wood, one of Pitt's chief aides. But the real author behind the scenes was thought to be Pitt himself. Also joining in the pressure to keep Canada was the alderman Sir William Baker, a leading military contractor and merchant in the American trade, in which he was closely associated with the leading American contractors DeLancey and Watts.

By the spring of 1761, the French declared their willingness to yield far more than called for by the moderate Whig demands. They would cede to Britain Canada, the Ohio Valley, and even Guadeloupe, provided that France could retain her precious fishing rights in Canadian and Newfoundland waters, with Louisbourg to protect them. But the fishing rights were precisely what Pitt was most eager to gain, one of his prime objects in the war being an English monopoly of Canadian fishing and the crushing of efficient French competition. Pitt delighted in pouring cold water on the Whigs, who were overjoyed at the French peace offer. He would, he savagely assured them, fight for another half-dozen years to control Canada *and* its fishing. Alderman Baker now returned to the attack, urging not only the retention of Canada and a monopoly of its fisheries, but also the seizure of French Louisiana.

By the end of June, a new division had emerged in the cabinet: King George, Bute, Pitt, and Pitt's faithful brother-in-law Earl Temple united on a minimum of peace terms—the Ohio Valley, Canada, Louisbourg, and the fishing monopoly. The Whigs, Newcastle and Hardwicke, were, surprisingly, now joined by Bedford and John Carteret, who realized that France would fight to the death for her fishing rights. In reply to the generous French peace offer, Pitt, bolstered by his wide support, fired an ultimatum: Surrender Canada, Louisbourg, the fisheries and French conquests in Germany in return for keeping Guadeloupe. Furthermore, none of Spain's grievances against England was to be satisfied, and Pitt disdainfully broke off all negotiations with Spain.

Its ships plundered, its fishing rights banned, and its Honduran territory seized by a contemptuous Britain, Spain grew desperate and sought aid from France. Both Spain and France grew still more anxious at a new, highly touted scheme of Bute and George Grenville (Pitt's brother-in-law) to conquer French Louisiana, a scheme that led to the transfer of General Amherst's forces from Canada to Charleston, South Carolina, in the spring of 1761. Bute and Grenville were heavily influenced in behalf of this plan by a

manuscript of Henry McCulloh, a British official in North Carolina. McCulloh, an active speculator in trans-Carolina lands, had for years hawked a French "threat" to America and advocated a strong centralized government over the colonies. Now McCulloh called for a grab of Louisiana and its valued lands and furs.

A debate now ensued on the meaning of what had been included in the surrender of "Canada" at Montreal. Pitt insisted that "Canada" also included all of Louisiana east of the Mississippi. France, however, pointed out that the surrender did not include the Illinois-Wabash area in the southeast. Thus, Pitt too had escalated English demands by claiming all of eastern Louisiana from the French.

To appease Pitt's paranoia, France had refrained from forming an alliance with Spain, but now the two harassed countries began to draw together. It was clear that Pitt would only issue outrageous demands rather than negotiate for peace. In desperation, France and Spain agreed in late August that the latter would enter the war should England permit or prolong the conflict. The maniacal Pitt, scenting plots, now broke off negotiations after France had again refused to accept his ultimatum. Pitt carried the day by threatening to resign if peace negotiations continued.

Britain now faced the problem of Spain's entry into the war. Open were two courses: one, to resume peace negotiations, which would keep Spain out of the war; two, now demanded by Pitt, to launch aggressive war upon Spain. Indeed, Pitt, in mid-September 1761, urged an all-out surprise attack on the Spanish fleet, a violation of international law that would further alienate all European powers from Great Britain.

In all of his recent aggressive designs, Pitt had been able to carry the day over Bedford and the Whigs by maintaining the support of the Earl of Bute. But now Bute, while favoring aggression against Spain, disagreed on the timing: he wished to wait and prepare the public, and first end the war on the continent of Europe. Backed by King George, Bute refused to bow to Pitt's threats to resign if Spain were not attacked. Pitt and Earl Temple were therefore allowed to resign on October 2.

Britain's fanatical war leader was now out of power. But William Pitt was hardly in disgrace. It was Bute's intention to reinstate Pitt—in a less-powerful post, of course—as soon as he had managed to make war upon Spain. Then, their common aim to aggrandize the royal prerogative and to destroy the liberal Whig party could proceed undisturbed. In the meanwhile, as a token of his esteem, Bute lavished peerages and pensions on Pitt and on his family. He also pursued a subtle form of Pittite policy without the great man's personal participation. England was to have Pittism without Pitt.

It is impossible to penetrate the tangled thicket of British politics in the eighteenth century without grasping the crucial and fateful role played by William Pitt, soon to be made the first Earl of Chatham. From the time that

he emerged on the political scene in the late 1730s, Pitt was the decisive force in destroying the Whig equilibrium that had been established by Robert Walpole in the early decades of the century. The liberal Whig principles of peace, low taxes, and minimal government—supported by merchants and masses as against statist Tory prerogative—were shattered almost single-handedly by Pitt. Pitt was able to win over for the Tory objectives of imperial aggression and the royal prerogative, both the masses and the leading merchants and financiers. The former were carried away by chauvinist demagoguery and war hysteria induced by Pitt's charismatic oratory; the latter were joyous at the advantages to be reaped by imperial plunder and the privileges of monopoly. In this way, Pitt was able to shatter the great Whig coalition of merchant and populace, to involve England in two long, costly, impoverishing wars, and thus to pave the way for an active Tory monarch like George III to impose his rule both at home and abroad. The half-crazed man on the white horse, welding effective demagoguery to special interests, William Pitt was the spearhead of the British counterrevolution.

George III's predecessors had not been particularly concerned with exerting the royal prerogative. William III and the first two Georges were largely concerned with Continental politics, and the last two with their Hanoverian home. The Georges, indeed, generally spent at least half of each year in their beloved Hanover. But George III was determined to play a direct and decisive role in government. He was inspired to break the Whigs and to exercise his dominance by his teacher Lord Bute. Bute, in turn, was influenced in this goal by the Tory political philosopher Lord Bolingbroke and his idea of the "patriot king" smashing all political parties independent of his will, and ruling the nation without check or limit.

With Pitt out of the cabinet, his brother-in-law George Grenville, who remained in the cabinet, became leader of the House of Commons. Grenville's brother-in-law, the Earl of Egremont, became secretary of state for the Southern Department. The great political struggle now centered on the projected war against Spain, with Bute preparing for it and Newcastle opposed and calling for a quick general peace. In plotting a war against Spain, Bute was more than fully backed by Grenville and Egremont, while Newcastle was supported by the Whigs and by Bedford.

To force Spain into war, Egremont, buttressed by Bute and Grenville, sent a series of arrogant and insulting ultimatums to Spain in the fall of 1761. Spain was ordered to agree to the forfeit of its violated rights, to the lack of any satisfaction of its grievances, and to renounce any use of force in protecting her rights—else England would go to war with Spain in retaliation for its silent "aggression." Newcastle, Bedford, and the Whigs tried desperately to launch negotiations and avert war, but England simply fell upon Spain in January 1762, despite opposition to the last by Newcastle, Hardwicke, and Bedford.

In the meanwhile, Pitt's acceptance of handsome pensions and perquisites had vastly alienated his support among the masses, who had thought him their champion and had valued his much paraded "honesty" and incorruptibility. To divert the attention of the masses from the mud on his halo, Pitt and Temple used Alderman Beckford's warmongering newspaper, the *Monitor*, to urge aggression and all-out war on France and Spain, and for keeping Canada and its fishing rights—a campaign that served to push Pitt's successors more forcefully into the attack on Spain.

The Spanish problem precipitated another pamphlet war toward the end of 1761. Israel Mauduit, now an agent of the Massachusetts Assembly, again called for peace and for keeping Guadeloupe rather than Canada. On the other hand, Bute's agent, Charles Jenkinson, and Grenville's agent, Alexander Wedderburn, launched a newspaper and pamphlet campaign for attacking Spain and keeping Canada—and included hints of attempts to conquer Louisiana and perhaps continue on to Cuba and the silver mines of Mexico. Newcastle was horrified at Grenville's plans to seize Spanish America: "I see things every day worse and worse; . . . this itch after expeditions will exhaust our treasure. . . . What will become of this *poor* country, God only knows. . . . I never saw this nation so near its ruin, as at present. . . . Peace . . . is the only remedy."

At the end of February, the English conquered the French West Indian sugar island of Martinique, and this acquisition again spurred discussion of peace terms. The French were all the more eager to yield Canada but not its fishing rights, provided that the West Indies were restored. But the British war leaders Grenville and Egremont insisted on Louisiana as well. Finally, at the end of May, Newcastle, isolated in the cabinet and seeing the war expand, resigned his post as prime minister, his fellow Whigs Hardwicke and Devonshire resigning as well. In contrast to Pitt, Newcastle refused a placatory pension from the Crown. Bute had at last achieved his aim of ousting Newcastle. Bute, Grenville, and their friends now advanced in their official posts. The Whigs were now completely out of the government for the first time in forty years.

The French were now willing to cede eastern Louisiana—east of the Mississippi—in return for the West Indian islands. But the English leaders had the war bit in their teeth. Grenville, Egremont, Carteret, and even Bedford were insisting on all of Louisiana. Oddly, Bute was now leaning toward the French peace terms. Bereft of allies in concluding peace, Bute began to long for the return of the Whigs, but the Whigs were too out of sympathy with the whole policy of conquest to come to his aid. In August, the British conquered Havana and the war crowd's appetite was whetted still more; Bedford and Halifax called for Florida, and Grenville looked to the conquest of all of Spanish America. Bute, however, was now determined on peace and brought the pliable Henry Fox to leadership of the House of Commons

in order to drive through a peace treaty. In return, Fox would be given a peerage. At the same time, Egremont and Grenville were downgraded in the cabinet. Bute and Bedford finally managed to conclude a preliminary peace on November 3; England would receive Canada, Louisbourg, and all of North America east of the Mississippi, including Florida, as well as three of the minor West Indian islands. France retained Guadeloupe and Martinique, as well as its precious fishing rights off Canada and Newfoundland, and it transferred New Orleans and western Louisiana to Spain in compensation for the Spanish loss of Florida. Cuba was returned to Spain, but Spain lost its fishing rights in exchange for the liquidation of English forts in Honduras. Fox skillfully drove the peace terms through Commons in December, and the final peace treaty was signed in Paris in February 1763. The long war with France was finally over, and France was now completely removed from the North American continent.

As peace finally drew near, British politics centered all the more insistently on the peace terms. In 1757, Parliament, by an oversight, had failed to continue the high tax on newspapers that it had deliberately imposed in 1711 to prevent the growth of a popular, hence an opposition, press. As a result, the press was able to grow and be supported by a wide circulation. The ouster of Newcastle and the Whigs led the Bute ministry, represented by Wedderburn, to establish the *Briton* as its mouthpiece, at the end of May 1762. Earl Temple, as a counter, set up the oppositionist *North Briton* in early June, edited by a long-time follower of his, John Wilkes.

Wilkes, a country squire hailing from a Nonconformist merchant family, was high sheriff of Buckinghamshire. Pitt opposed the new venture as too inflammatory; to Pitt, all such political writing would be "productive of mischief." Wilkes' audacity in editing the *North Briton* only confirmed Pitt's hostility. Even Wilkes' friend and backer, Temple, was generally cool to his bold policy. Temple peppered Wilkes with criticism and advice to temper his opposition, to eschew personal attacks—in short to "sail with the new current" and partake "of the court favor." By mid-October, Temple was writing harshly to his sister, the future wife of Pitt: "Mr. Pitt and I disapprove of this paper war, and the daily abominations which are published; though, because Wilkes professes himself a friend of mine, I am ever represented infamously as a patron of what I disapprove and wish I could have put an end to."* But Wilkes, on the other hand, quickly drew the support of Newcastle and the Whigs, since Wilkes ardently championed the opposition cause.

As the peace treaty became imminent, two contrasting groups made clear their opposition: the Whigs, who continued to oppose the *terms* of undue conquest in North America; and Pitt, who opposed peace *per se* as too soft on the French. The most important Whig statement was a new edition of

*See George Rudé, *Wilkes and Liberty* (Oxford: Clarendon Press, 1962), pp. 19–22.

William Burke's *Examination of the Commercial Principles*. . . , again calling for yielding Canada and the North American lands and to retain the sugar islands. Also influential was the similar *Letter to . . . the City of London* by George Heathcote, M.P., a radical Whig or "Commonwealthman." Temple's papers, taking a continued Pitt or Whig tone in opposition to the peace terms, drew down the wrath of the government, which prepared a general warrant in early November against both the *Monitor* and the *North Briton*. In a February 1763 issue of the *North Briton*, which took essentially the Newcastle-Whig line on the peace treaty, John Wilkes had denounced the ceding of the sugar islands in the West Indies, instead of the vast, expensively maintained tracts in Canada and Florida.

Henry Fox's shrewd management of the peace treaty, however, made this suppression unnecessary, and the general warrant remained unused. William Pitt, in his speech on the treaty, raved and ranted of the absolute necessity of the destruction of France, and for that purpose of retaining the fishing monopoly. By placing his opposition in these war-mad terms, Pitt drove many of the Whigs into lukewarm support of the treaty.

At the end of December, in the "massacre of the Pelham innocents," Fox engineered the ouster of all the Whigs holding public office, for daring to oppose the peace terms. Newcastle had always been friendly to opposition expressed by popular mobs, and he now spurred a vigorous Whig opposition to the increasingly Tory rule. John Wilkes wrote enthusiastically in the *North Briton* of December 25 that every "friend of liberty and of *revolution principles*" had been dismissed, and they must from now on depend on the people. In a six-part critique of Toryism and Tory rule, Wilkes thundered that "the Tory faction is triumphant, and the most slavish doctrine of passive obedience and non-resistance is preached up by every pamphleteer and . . . insisted upon by an all-grasping minister."

The Whig party was now at a fateful crossroads; it either had to go into vigorous liberal opposition to the administration, or, in effect, had to abandon all of its Whig principles and crawl back into government office. The Whigs polarized. Hardwicke, the Yorke family, and Newcastle's nephew Charles Townshend, along with other conservatives, refused to form a vigorous opposition; whereas the more radical and principled Whigs (especially the Whig youth), headed by the Marquis of Rockingham, formed an opposition "club" with the rather worried blessing of the aging Newcastle. But the reconstituted Whig Club suffered gravely from the lack of a strong leader in the House of Commons.

For its part, the administration felt it necessary to push aggressive expansion and rule in the new American lands in order to justify its own peace terms.

Administering the Conquests

With peace finally concluded and the French ousted from North America, the poor, hapless Acadian refugees in Massachusetts, totaling some nine hundred, began the dangerous and difficult trek back to their beloved Acadia. Many died along the way, but the rest settled again in Acadia. Of course, there was no thought of returning to them their old lands and property. In the final irony, the Acadians who had been sent to France remained as unwanted refugees, pushed from pillar to post for twenty years by the government.

On taking control of Florida from Spain, Britain divided it into two provinces: East Florida, centering in St. Augustine; and West Florida, with headquarters at Pensacola. To East Florida, the British sent as governor Major Francis Ogilvie, who made no attempt to conceal his complete contempt for Spaniards and Roman Catholics.

So grim was the impact of Ogilvie that of the three thousand Spanish inhabitants of St. Augustine, all but five persons decided to emigrate to Cuba. One of the notable events of British East Florida was the founding of the colony of New Smyrna, thirty miles north of Cape Canaveral on the Atlantic Coast. The promoter, Dr. Andrew Turnbull, wangled a grant of sixty thousand acres as well as a ship and a cash bounty from the Crown. In return, he transported over fourteen hundred emigrants from Greece, Italy, and English-occupied Minorca to the new homeland. The immigrants, expecting freedom and abundance, reaped the opposite: seven years of cruel and dispiriting indentured service, giving their forced labor to producing such goods as hemp, cotton, and indigo subsidized by England.

The immigrants arrived in midsummer 1768. In a few weeks they were ready to revolt. The August revolt was led by Carlo Forni and Clotha Corona. A brutal overseer who tried to stop the revolt was killed. The rebels, acting the part of their masters, plundered the property of the Minorcans of the colony, whose only crime was not joining the revolt. Governor James Grant's forces soon seized the rebels, but took four months to capture Forni and a band of his men. The governor decided to be relatively lenient with the mutineers, killing only the two leaders, Forni and Corona.

Another forced labor settlement in East Florida was established at Rollston, on the St. John's River, and organized by the wealthy English landowner Denys Roll. Roll secured a twenty-thousand-acre grant from the government. When the vagrants, beggars, and debtors he had shipped to Rollston balked at the forced labor, Roll cut off their food supply. The workers then ran off to St. Augustine, where the government forcibly shipped them back to suffer Roll's dictates. They succeeded, however, in running away again. In addition, eighty-nine more immigrants fled from Roll. Finally Roll found the open sesame to success; he purchased openly enslaved Negroes, whom he was able to whip into a passable degree of productivity.

What of former French Canada? After 1763, conquered Quebec was, to be sure, theoretically extended the blessings of English legal and representative institutions. But there was one very important catch: Roman Catholics would not be permitted to vote or to hold public office, and were even denied many protections of the law. Thus, the overwhelming majority of the French Québécois were condemned to permanent subjection in their own land. The established French legal and judicial procedures were swiftly destroyed, and English procedures installed in their place. As Catholics, French lawyers were even prohibited from trying cases and French citizens from serving on juries. Moreover, a nascent French Canadian bourgeoisie was crushed by the English conquest. A few hundred English merchants (who came as suppliers and contractors for the British army of occupation) and royal bureaucrats in Canada—almost all new inhabitants—were able to monopolize the courts and juries, and to carry on a systematic campaign of governmental exploitation of the people of Quebec. As in the case of conquered and battered Ireland, the Roman Catholic church in Quebec was forced to become the fortress church of a suppressed ethnic as well as religious people. The church—and the country—turned in upon itself, both stagnating under siege.*

The discrimination against Catholic voting was, in a sense, rendered harmless by the English failure to allow *any* representative assembly in

*See John C. Rule, "The Old Regime in America: A Review of Recent Interpretations of France in America," *William and Mary Quarterly* (October 1962): 590-91.

Quebec. The first royal governor of Quebec, James Murray, and his successor, Guy Carleton, blocked the institution of any assembly.

Meanwhile, in Louisiana, Spain was in no particular hurry to take over from France. The first Spanish governor, Antonio de Ulloa, finally arrived in Louisiana in 1766, and without difficulty managed quickly to alienate almost all groups in the population. Open rebellion and general disgust with government ensued. Things came to a head in 1768, when Spain imposed a thoroughly mercantilist decree excluding all but Spanish ships in Louisiana commerce, and all trade but those to Spanish ports. Five hundred protesters signed a petition demanding the removal of Ulloa and the restoration of freedom of trade. At the end of October, New Orleans was captured by the French rebels. When Ulloa was finally sacrificed to the massive demands for his removal, the citizens of New Orleans poured into the streets to laud the French and attack the Spaniards.

The French government, in politic fashion, rejected a petition from the rebels pledging allegiance to France. Spain decided to crack down on the revolt, and sent as the new governor General Alejandro O'Reilly. Bringing two thousand crack troops, O'Reilly characteristically invited the twelve leaders of the rebellion to meet him at his quarters, only to arrest them there and charge them with treason for rebelling against Spain. Five of the rebel leaders were promptly executed.

At the end of two decades of aggressive war against France, the triumphant British government had succeeded in driving the French empire completely off the North American continent, and in replacing France largely by its own hegemony. By the early 1760s, the British rulers felt themselves to be masters of all they surveyed. Furthermore, the king and the various Tory factions had succeeded in using the war to achieve one of their long-cherished aims: the removal of the liberal, quasi-libertarian Whigs from the seats of ministerial power at home. With that, the major check upon the expansion of the power of the Crown and its allies, at home and throughout the empire, was at last extinct. Since the death of Queen Anne and the accession of the Hanoverian dynasty in the early part of the eighteenth century, the Whigs, headed by Robert Walpole and the Pelham brothers, had succeeded, by crafty manipulation of Parliament, in imposing a lengthy rule that had kept the Tory centralizers and imperialist expansionists under severe and unwelcome fetters. Now, in the early 1760s, the Tories and imperialists had at last succeeded in rooting out the Whig-Pelhamite checkrein on their goals and designs.

In particular, in the colonies, the impatient king and the Tory factions were now free to scrap the policy of "salutary neglect," which Walpole and Newcastle had managed to impose on the reluctant Crown and Par-

liament. Enjoying the blessings of salutary neglect, the American colonies had been able, in the first half of the eighteenth century, to ignore the *de jure* mercantilist restrictions and edicts of Great Britain and to flourish in virtual *de facto* independence from the mother country. It was high time, the British imperialists felt, to cast off the restrictions of salutary neglect and to bring the American colonies to heel. It was that grand design that was to precipitate the great conflagration of the American Revolution, and to bring a new kind of nation into being.

Bibliographical Essay

The indispensable, and still unchallenged, overall study for this period is the monumental four-volume work by Herbert L. Osgood, *The American Colonies in the Eighteenth Century* (1924–25). Also useful are the latter volumes of Charles M. Andrews' four-volume *The Colonial Period of American History* (1934–38). A particularly useful text on colonial America is David Hawke's *The Colonial Experience* (1966). Older but still valuable is Oliver P. Chitwood, *A History of Colonial America* (1st ed., 1931; 3rd ed., 1961).

The most notable advance in many years in the historiography of the first half of eighteenth-century America, is the discovery of the great extent and depth of the growth and spread of libertarian thought, influenced particularly by radical libertarian English writers during this period. The discovery was made by Professor Bernard Bailyn, particularly in his *The Ideological Origins of the American Revolution* (1967) and his *The Origins of American Politics* (1968). *The Ideological Origins* is an expansion of Bailyn's first work on the subject, his "General Introduction" to Bernard Bailyn, ed., *The Pamphlets of the American Revolution*, vol. 1 (1965). An excellent selection from the most influential of the English libertarian writings, co-authored by John Trenchard and Thomas Gordon, may be found in David L. Jacobson, ed., *The English Libertarian Heritage* (1965). The Jacobson volume contains selections from Gordon and Trenchard's *Cato's Letters*, their most influential essays; and from their essays in *The Independent Whig*, in behalf of religious liberty. Both series were published in the early 1720s. Jacobson's "Introduction" is a useful survey of the life and work of Trenchard and Gordon. Bailyn's findings were based on the pioneering and monumental work of Caroline Robbins, *The Eighteenth Century Commonwealthman* (1959), which "discovered" not only Trenchard and Gordon, but also the line of descent from Algernon Sidney and Locke down to the radical libertarians of the eighteenth century.

The libertarian influence of John Locke on American thought has long been

known to historians. The definitive edition of Locke's "Second Essay on Civil Government" is to be found in John Locke, *Two Treatises of Government*, ed. Peter Laslett (1960). Locke's devotion to private-property rights and the free market is demonstrated in C. B. Macpherson, *The Theory of Possessive Individualism* (1962). The influence of the theory of natural law in America is discussed in Benjamin F. Wright, *American Interpretations of Natural Law* (1931). For a rather more cautious view than Bailyn's, see Lawrence Leder, *Liberty and Authority: Early American Political Ideology, 1689-1763* (1968). The only work on deism in America in this period is Herbert M. Morais, *Deism in Eighteenth Century America* (1934). A detailed work on the Enlightenment background in Europe is Peter Gay, *The Enlightenment: An Interpretation* (2 vols., 1966, 1969). The influence of French ideas in America is traced in Howard Mumford Jones, *America and French Culture, 1750-1848* (1927).

William W. Sweet's *Religion in Colonial America* (1942) is a good overall survey of the topic. The classic study of the Quakers in this period is Rufus M. Jones, *The Quakers in the American Colonies* (1911); Sydney V. James, *A People Among Peoples* (1963), is a good modern supplement. The saga of Quaker abolition of slavery is set forth in Thomas E. Drake's *Quakers and Slavery in America* (1950). Also see Arthur Zilversmit, *The First Emancipation: The Abolition of Slavery in the North* (1967). The famous *Journal* of the famed John Woolman, the leader of Quaker abolitionism, is available in paperback: *The Journal of John Woolman* (1961).

The renowned liberal Congregational cleric Jonathan Mayhew has at last found his biographer: Charles W. Akers, *Called unto Liberty: A Life of Jonathan Mayhew, 1720-1766* (1964). Mayhew is also discussed in Max Savelle's *Seeds of Liberty: The Genesis of the American Mind* (1948). The rise of liberal Arminianism and Unitarianism in New England is treated in Conrad Wright, *The Beginnings of Unitarianism in America* (1955).

There is still no overall history of the Great Awakening. Best is C. C. Goen, *Revivalism and Separatism in New England, 1740-1800* (1962); also important is Edwin Scott Gaustad, *The Great Awakening in New England* (1957). Alan Heimert's *Religion and the American Mind: From the Great Awakening to the Revolution* (1966) is a pro-Puritan overview; documents of the Great Awakening may be found in A. Heimert and P. Miller, eds., *The Great Awakening: Documents* (1967). Jonathan Edwards, the fanatical theoretician of the Great Awakening, has several biographers; a sympathetic emphasis on his ideas is Perry Miller, *Jonathan Edwards* (1949).

There are two indispensable books on the struggle of Americans against the threat of an Anglican bishop in the colonies: the classic by Arthur Lyon Cross, *The Anglican Episcopate and the American Colonies* (1902); and the newer Carl Bridenbaugh, *Mitre and Sceptre: Transatlantic Faiths, Ideas, Personalities, and Politics, 1689-1775* (1962).

The classic work on freedom of the press in colonial Massachusetts is Clyde A. Duniway, *Development of Freedom of the Press in Massachusetts* (1906). On the Zenger case, see the study by Vincent Buranelli, *The Trial of Peter Zenger* (1957), and the documentary source by Zenger's lawyer, James Alexander, *A Brief Narrative of the Case and Trial of John Peter Zenger*, ed. S. Katz (2d ed., 1972).

Particularly important is the brilliant and hard-hitting revisionist work of Leonard Levy on the Zenger case and on the dubious extent of devotion to freedom of speech and press in colonial America; see Leonard W. Levy, "Did the Zenger Case Really Matter?" *William and Mary Quarterly* (1960); and Levy, *Legacy of Suppression: Freedom of Speech and Press in Early American History* (1960). Valuable documents are reprinted and discussed in Leonard W. Levy, ed., *Freedom of the Press from Zenger to Jefferson* (1966). Selections from the leading newspaper champion of religious liberty and freedom of the press are now available, in William Livingston et al., *The Independent Reflector*, ed. Milton M. Klein (1963). The great reference work on colonial American newspapers is Clarence S. Brigham, *History and Bibliography of American Newspapers, 1690-1820* (2 vols., 1947).

A good survey of the cultural history of the American colonies is Louis B. Wright, *The Cultural Life of the American Colonies, 1607-1763* (1957). A rich interpretive tapestry is woven in Howard Mumford Jones, *O Strange New World: American Culture, the Formative Years* (1964). See also Jones, *Ideas in America* (1944).

The most recent survey of the history of American immigration is Maldwyn Jones, *American Immigration* (1960), but it is too scanty to be useful. More serviceable is Marcus Lee Hansen, *The Atlantic Migration, 1607-1860* (1940). The best work on the Ulster Scots is James G. Leyburn, *The Scotch-Irish: A Social History* (1962). Also useful is Wayland F. Dunaway, *The Scotch-Irish of Colonial Pennsylvania* (1944), for the colony where the Ulster Scots made the greatest impact. The saga of the Palatine Germans may be found in Walter A. Knittle, *Early Eighteenth-Century Palatine Emigration* (1937). The even more heartrending saga of the Acadians is treated in Arthur G. Doughty, *The Acadian Exiles* (1916), and in Oscar W. Winzerling, *Acadian Odyssey* (1955).

On labor and government in the colonies, Richard B. Morris, *Government and Labor in Early America* (1946), is thorough and virtually alone. Still useful, however, is Marcus W. Jernegan, *The Laboring and Dependent Classes in Colonial America* (1931). Abbot Emerson Smith, *Colonists in Bondage: White Servitude and Convict Labor in America, 1607-1776* (1947), is excellent and still the only major work on the subject. There are now two vitally important overall works on slavery and the Negro, David Brion Davis, *The Problem of Slavery in Western Culture* (1964); and Winthrop D. Jordan, *White over Black: American Attitudes Toward the Negro, 1550-1812* (1968), though both are marred by errors in interpretation. Almon W. Lauber, *Indian Slavery in Colonial Times Within the Present Limits of the United States* (1913), is the classic work on the subject. Herbert Aptheker, *American Negro Slave Revolts* (1943), is the only work on a neglected and important topic. There are also several useful articles on slave rebellions in New York: Kenneth Scott, "The Slave Insurrection in New York in 1712," *New York Historical Society Quarterly* (1961); T. Wood Clarke, "The Negro Plot of 1741," *New York History* (1944); and Ferenc M. Szasz, "The New York Slave Revolt of 1741: A Reexamination," *New York History* (1967). See also Edgar J. McManus, *A History of Negro Slavery in New York* (1966), and the substantial work of Lorenzo J. Greene, *The Negro in Colonial New England* (1942).

Land-grabbing and Indian conflicts were vital and intermingled aspects of the Western frontier in the eighteenth century. Two indispensable works on the Western land-grabs are Clarence W. Alvord, *The Mississippi Valley in British Politics* (2 vols., 1917), and Thomas Perkins Abernathy, *The Western Lands and the American Revolution* (1937), the early chapters of which are relevant to this volume. Nicholas B. Wainright's masterful biography of *George Croghan: Wilderness Diplomat* (1959) is a vivid study of this adventurer and swindler so vital to frontier and Indian relations during midcentury. Bernhard Knollenberg's *George Washington: The Virginia Period, 1732-1755* (1964) is a much needed revisionist essay by a superb historian. Verner W. Crane, *The Southern Frontier, 1670-1732* (1928), is excellent and indispensable on Indian fighting and other events on the Southern frontier during this period. See also John R. Alden, *John Stuart and the Southern Colonial Frontier, 1754-75* (1944), and John A. Caruso, *The Appalachian Frontier: America's First Surge Westward* (1959). Caruso's *The Southern Frontier* (1963) is particularly good on Florida and Louisiana. Dale Van Every, *Forth to the Wilderness: The First American Frontier, 1754-1774* (1961), is vivid and valuable.

Marshall Harris's *Origin of the Land Tenure System in the United States* (1953) is definitive, as is Beverly W. Bond, *The Quitrent System in the American Colonies* (1919), on the unsuccessful attempts to collect quitrent from the recalcitrant American colonists. The best overall economic history of the colonial period is Edward C. Kirkland, *A History of American Economic Life* (4th ed., 1969).

The classic work on colonial agriculture has not been superseded: Percy W. Bidwell and John I. Falconer, *History of Agriculture in the Northern United States*, vol. 1 (1933). The same is true of the works on colonial industry by Victor S. Clark, *History of Manufactures in the United States*, vol. 1 (1929); and Rolla M. Tryon, *Household Manufactures in the United States, 1640-1860* (1917). Valuable on colonial manufacturing as a threat to British industry is Curtis P. Nettels, "Menace of Colonial Manufacturing, 1690-1720," *New England Quarterly* (1931). Specific industries are treated in Arthur Cecil Bining, *British Regulation of the Colonial Iron Industry* (1938); Bining, *Pennsylvania Iron Manufacture in the Eighteenth Century* (1938); and Arthur Harrison Cole, *The American Wool Manufacture*, vol. 1 (1926). Also valuable is Carl Bridenbaugh, *The Colonial Craftsman* (1950). On various aspects of colonial commerce, see the useful works of Harold A. Innis, *Fur Trade in Canada* (rev. ed., 1956); and Richard Pares, *Yankees and Creoles: Trade Between North America and the West Indies Before the American Revolution* (1956). Arthur Pierce Middleton, *Tobacco Coast: Maritime History of the Chesapeake Bay in the Colonial Era* (1953), is an invaluable history. Howard M. Chapin, *Privateering in King George's War, 1739-1748* (1928), concentrates on an important topic, concerning which see also, in particular, Carl Bridenbaugh, *Cities in Revolt: Urban Life in America, 1743-1776* (1955).

Indispensable—and virtually alone—on the history of the post office is Wesley Everett Rich, *The History of the United States Post Office to the Year 1829* (1924), which needs to be supplemented by the excellent study of the history of the British postal service by Ronald H. Coase, "The Postal Monopoly in Great

Britain: An Historical Survey," in J. K. Eastham, ed., *Economic Essays in Commemoration of the Dundee School of Economics, 1931-1955* (1955).

Price statistics are scanty for this period, but excellent are Anne Bezanson et al., *Prices in Colonial Pennsylvania* (1935), and Arthur Harrison Cole, *Wholesale Commodity Prices in the United States, 1700-1861, with Statistical Supplement* (1938); see also George R. Taylor, "Wholesale Commodity Prices at Charleston, 1732-1791," *Journal of Economic and Business History* (1932).

The history of money and banking in colonial America is in an unsatisfactory state. The problem, in general, is that the earlier works are economically sound but historically out of date, whereas the newer and historically superior writings are fatally marred by an acceptance of modern inflationist dogma. The only overall studies, flawed though they are by inflationary bias, are Richard A. Lester, *Monetary Experiments: Early American and Recent Scandinavian* (1939), and Curtis P. Nettels, *Money Supply of the American Colonies Before 1720* (1934). Older but far sounder accounts, from the economic point of view, are Horace White, *Money and Banking Illustrated by American History* (1902), and Davis R. Dewey, *Financial History of the United States* (1936). A particularly hard-hitting critique of colonial inflationism is in Charles Jesse Bullock, *Essays on the Monetary History of the United States* (1900). Very old but magnificently sound on monetary economics is William M. Gouge, *Short History of Paper Money and Banking in the United States, Including an Account of Provincial Continental Paper Money* (1833). Specific colonies are treated in Kathryn L. Behrens, *Paper Money in Maryland, 1727-1789* (1923); Clarence P. Gould, *Money and Transportation in Maryland* (1915); and, from a sound-money point of view, Donald L. Kemmerer, "Paper Money in New Jersey, 1668-1775," *New Jersey Historical Society, Proceedings* (1956). E. James Ferguson, "Currency Finance: Colonial Monetary Practices," *William and Mary Quarterly* (1953), is an inflationist survey. Particularly valuable is the notable revisionist work by George A. Billias, *The Massachusetts Land Bankers of 1740* (1959), which demonstrates that the inflationary land-bank scheme was put forth and promoted by large merchants and landowners, and not, as older historians would have it, by a mass of impoverished debtors.

Andrew M. Davis, ed., *Colonial Currency Reprints, 1682-1751* (4 vols., 1910-11), is a superb source collection of monetary thought and opinion in the colonies in the first half of the eighteenth century. Harry E. Miller, *Banking Theories in the United States Before 1860* (1927), is excellent if sketchy. Joseph Dorfman's monumental *Economic Mind in American Civilization, 1606-1865*, vol. 1 (1946), is indispensable for economic opinion in the colonies, but it does not do justice to the great hard-money theorist of the colonies, Dr. William Douglass, who, unfortunately, still lacks a biographer or a systematic study.

On British mercantilism and the American colonies, a good account is provided in the fourth volume of Charles M. Andrews, *The Colonial Period of American History* (1938). The Board of Trade is examined in Oliver M. Dickerson, *American Colonial Government, 1696-1765: A Study of the British Board of Trade* (1912), and the influence of the British Treasury in Dora Mae Clark, *The Rise of the British Treasury: Colonial Administration in the Eighteenth Century* (1960). The effects of the Navigation Acts on the American colonies have given rise to

considerable historical controversy. Lawrence A. Harper, *The English Navigation Laws: A Seventeenth Century Experiment in Social Engineering* (1939), is an apologia for the Navigation Acts; far sounder is Oliver M. Dickerson, *The Navigation Acts and the American Revolution* (1951). Particularly good on the issue is Curtis P. Nettels, "British Mercantilism and the Economic Development of the Thirteen Colonies," *Journal of Economic History* (1952). On British naval-stores policy, see Joseph J. Malone, *Pine Trees and Politics: Naval Stores and Forest Policy in Colonial New England, 1691-1775* (1964).

The classic work on British government in America is Leonard W. Labaree, *Royal Government in America* (1930). Bernard Bailyn, *The Origins of American Politics* (1968), is a brilliant explanation of the underlying reasons for the rise of the colonial Assemblies to power over the royal governors, despite the *de jure* powers of the latter, increasingly by midcentury. Bailyn also provides an illuminating contrast, in the course of this explanation, to Great Britain itself, where the king's ministers managed to acquire working control over Parliament during this period, despite the latter's *de jure* power. Jack P. Greene's *The Quest for Power: The Lower Houses of Assembly in the Southern Royal Colonies, 1689-1776* (1963) is a detailed institutional account of the rise of Assembly power in the Southern colonies.

Jack P. Greene, "An Uneasy Connection: An Analysis of the Pre-conditions of the American Revolution," in S. Kurtz and J. Hutson, eds., *Essays on the American Revolution* (1973), provides new information on the abortive attempt of Halifax, at the Board of Trade in the early 1750s, to enforce on the colonies the network of mercantilist restrictions that had become a dead letter. Lawrence H. Gipson's massive *The British Empire Before the American Revolution* (15 vols., 1936-70) provides many useful facts on the British Empire and British-American relations, but its interpretation is deeply flawed throughout by furnishing an elaborate apologia for the empire.

A classic treatment of New England town government is Roy H. Akagi, *The Town Proprietors of the New England Colonies: A Study of Their Development, Organization, Activities, and Controversies, 1620-1770* (1924). Its class-struggle emphasis, however, particularly on land speculation, needs to be corrected by the brilliant revisionist work of Charles S. Grant, *Democracy in the Connecticut Frontier Town of Kent* (1961).

The decline of Puritan theocracy in Massachusetts is set forth in the brilliantly critical and uncompromising work of Thomas Jefferson Wertebaker, *The Puritan Oligarchy* (1947). John A. Schutz, *William Shirley: King's Governor of Massachusetts* (1961), is more than simply an indispensable, if overly sympathetic, biography of the most important royal governor in that colony (in the 1740s and early 1750s); he is also highly valuable on the frontier expansion and Indian and French relations of the period. The most important work on Massachusetts government in this period is Robert E. Brown, *Middle-Class Democracy and Revolution in Massachusetts, 1691-1780* (1955), which demonstrates the democratic nature of representation in the Assembly. Brown's celebration of an overall "democracy," however, is crude and simplistic. A valuable discussion on problems with indentured servants in Massachusetts is Lawrence W. Towner, "A Fondness for Freedom: Servant Protest in Puritan Society," *William and Mary Quarterly*

(April 1962). A leading merchant family in Boston is discussed in W. T. Baxter, *The House of Hancock: Business in Boston, 1724-75* (1945).

New Hampshire and Maine have at last found a modern historian in Charles E. Clark, *Eastern Frontier: Settlement of Northern New England, 1610-1763* (1970); and Byron Fairchild, *Messrs. William Pepperrell: Merchants at Piscataqua* (1954), deals with one of the leading merchant families of the area.

Apart from the Great Awakening and the Grant study on *Democracy in the Connecticut Frontier Town of Kent* (1961), Connecticut remains without a satisfactory history. Oscar Zeichner's *Connecticut's Years of Controversy, 1750-1776* (1949) deals briefly with the years just after 1750. The best work on the history of colonial Rhode Island is still Irving B. Richman, *Rhode Island: Its Making and Its Meaning*, vol. 2 (1902), which can be supplemented by Edward Field, ed., *The State of Rhode Island and Providence Plantations* (3 vols., 1902). The only book on the Narragansett Country is Edward Channing, *The Narragansett Planters* (1886), which needs to be supplemented by the only modern account, William D. Miller, "The Narragansett Planters," *American Antiquarian Society, Proceedings* (1933).

Early eighteenth-century New York politics is admirably discussed in Lawrence H. Leder, *Robert Livingston, 1654-1728, and the Politics of Colonial New York* (1961). Dorothy R. Dillon, *New York Triumvirate: William Livingston, John Morin Scott and William Smith, Jr.* (1949), deals with the leaders of the rising opposition in the latter decades of the half-century. The bibliography of the Zenger case has been discussed above. Irving Mark's *Agrarian Conflicts in Colonial New York, 1711-1775* (1940) is an indispensable work on the problems of land monopoly in that colony. Donald L. Kemmerer, *Path to Freedom* (1940), provides a good history of eighteenth-century politics in New Jersey.

The best political history of Pennsylvania in this period is Theodore Thayer, *Pennsylvania Politics and the Growth of Democracy, 1740-1776* (1954); see also Thayer, "The Quaker Party of Pennsylvania, 1755-1765," *Pennsylvania Magazine of History and Biography* (1947). Winifred T. Root's *Relations of Pennsylvania with the British Government, 1696-1765* (1912) is still not obsolete. The literature on Benjamin Franklin is, of course, enormous. The standard biography is Carl Van Doren, *Benjamin Franklin* (1938). Franklin's *Autobiography*, ed. Labaree et al. (1964), is vital as a clue to his character. On Franklin's political machinations, see John J. Zimmerman, "Benjamin Franklin and the Quaker Party, 1755-1756," *William and Mary Quarterly* (1960), and Williams S. Hanna, *Benjamin Franklin and Pennsylvania Politics* (1964). There are several excellent biographies of important political figures of the colony: Roy N. Lokken, *David Lloyd, Colonial Lawmaker* (1959); Theodore Thayer, *Israel Pemberton: King of the Quakers* (1943); and Frederick B. Tolles, *James Logan and the Culture of Provincial America* (1957). Carl and Jessica Bridenbaugh, *Rebels and Gentlemen: Philadelphia in the Age of Franklin* (1942), is the standard cultural history of that city. Frederick B. Tolles, *Meeting House and Counting House: The Quaker Merchants of Colonial Philadelphia, 1682-1763* (1948), is a fine economic and cultural study. War and the Quakers are discussed in Robert L. D. Davidson, *War Comes to Quaker Pennsylvania, 1682-1756* (1957).

The best history of eighteenth-century Virginia is Richard L. Morton, *Colonial Virginia* (1960), vol. 2, *Westward Expansion and Prelude to Revolution, 1710–1763*. Robert E. and B. Katherine Brown's *Virginia, 1750–1786: Democracy or Aristocracy?* (1964) is an absurd attempt to carry over their concept of "democracy" from Massachusetts to Virginia. Far sounder is the brilliant work of Charles S. Sydnor, *Gentlemen Freeholders: Political Practices in Washington's Virginia* (1952). James H. Soltow's "Scottish Traders in Virginia, 1750–1775," *Economic History Review* (August 1959), is a superb revisionist article that lays to rest the myth that the Virginia planters were "exploited" by the London merchants.

The major history of colonial North Carolina is still Robert D. W. Connor, *History of North Carolina* (4 vols., 1919), vol. 1, *Colonial and Revolutionary Periods, 1584–1783*. Also useful is Samuel A. Ashe, *The History of North Carolina*, vol. 1 (1908). A more recent overall history of the colony is Hugh T. Lefler and Albert R. Newsome, *North Carolina: History of a Southern State* (1954). The classic history of South Carolina in the eighteenth century is Edward McCrady, *The History of South Carolina Under the Royal Government, 1719–1776* (1899). The standard modern work is David D. Wallace, *History of South Carolina*, vol. 1 (1934); the most recent is M. Eugene Sirmans, *Colonial South Carolina: A Political History, 1663–1763* (1966).

E. Merton Coulter, *Georgia: A Short History* (1947), is the standard, overall history of the colony and state. The modern revisionist view of the founding of Georgia began with Albert B. Saye, *New Viewpoints in Georgia History* (1943). See also Verner W. Crane, "Dr. Thomas Bray and the Charitable Colony Project, 1730," *William and Mary Quarterly* (1962); and the excellent and hard-hitting chapter on early Georgia in Daniel Boorstin, *The Americans: The Colonial Experience* (1958).

The general history of England in this period is well discussed in J. H. Plumb, *England in the Eighteenth Century* (1950); Dorothy Marshall, *Eighteenth-Century England* (1962); John Carswell, *From Revolution to Revolution: England 1688–1776* (1973); Arthur H. Buffinton, *The Second Hundred Years War: 1689–1815* (1929); David Horn, *Great Britain and Europe in the Eighteenth Century* (1967); and Basil Williams, *The Whig Supremacy, 1714–1760* (1962). The economic and financial aspects of English history are treated in Peter M. G. Dickson, *The Financial Revolution in England, 1688–1756* (1967); and the opposition movements in Archibald S. Foord, *His Majesty's Opposition, 1714–1830* (1964).

The importance of the Walpole era is highlighted in J. H. Plumb, *Sir Robert Walpole* (2 vols., 1956–60); H. T. Dickinson, *Walpole and the Whig Supremacy* (1973); and Norris A. Brisco, *The Economic Policy of Robert Walpole* (1967).

The specific policies and the politics of Pelham and Newcastle are treated in detail in John B. Owen, *The Rise of the Pelhams* (1957); John W. Wilkes, *A Whig in Power: The Political Career of Henry Pelham* (1964); Roy A. Kelch, *Newcastle, A Duke Without Money: Thomas Pelham-Holles, 1693–1768* (1974); and Stanley N. Katz, *Newcastle's New York: Anglo-American Politics, 1732–1753* (1968). "Salutary neglect" is treated, although in a hostile fashion, in

James A. Henretta, "Salutary Neglect": *Colonial Administration Under the Duke of Newcastle* (1972). On the ideological influences behind salutary neglect, also see Herbert Butterfield, "Some Reflections on the Early Years of George III's Reign," *Journal of British Studies* (May 1965). On the fall of Newcastle Whigs, and the rise of the Marquis of Rockingham as the leader of the Newcastle Whigs, Ross J. S. Hoffman, *The Marquis: A Study of Lord Rockingham, 1730-1782* (1973), is definitive, but assumes considerable knowledge of British politics of the period. George Rudé, *Wilkes and Liberty* (1962), is excellent on John Wilkes and the Wilkite movement.

The rise of the new generation of English politicians in opposition to the Walpole-Pelham system of salutary neglect is detailed in Sir Lewis Bernstein Namier, *England in the Age of the American Revolution* (2d ed., 1961); and Namier and John Brooke, *Charles Townshend* (1964). The emergence of the Grenville clan in opposition to the Pelhamite policies of peace and laissez-faire is presented in the discussion of William Pitt and his brothers-in-law, Earl Temple and George Grenville, by Lewis M. Wiggin, *The Faction of Cousins: A Political Account of the Grenvilles, 1773-1763* (1958); see also Erich Eyck, *Pitt vs. Fox* (1950), and especially Owen A. Sherrard, *Lord Chatham: Pitt and the Seven Years' War* (1955). Pitt's (Chatham's) ideology and personality are discussed in John C. Long, *Mr. Pitt and America's Birthright* (1940), and J. H. Plumb, *Chatham* (1965).

A brief discussion of the Anglo-French rivalry in this era is in Walter L. Dorn, *Competition for Empire, 1740-1763* (1940), and a brief overall survey of the wars in America in Howard H. Peckham, *Colonial Wars, 1689-1762* (1964). On the War of Jenkins' Ear, see Richard Pares, *War and Trade in the West Indies, 1739-1763* (1936). The best history of the French and Indian War is Edward Pierce Hamilton, *The French and Indian Wars: Battles and Forts in the Wilderness* (1962). On the conquest of New France, see George M. Wrong, *The Rise and Fall of New France* (2 vols., 1928), for the history of New France, and Wrong, *The Conquest of New France* (1918), on the conquest by the British. The long-time consequences of British conquest are discussed by John C. Rule, "The Old Regime in America: A Review of Recent Interpretations of France in America." *William and Mary Quarterly* (October 1962).

VOLUME 3

ADVANCE TO REVOLUTION,
1760–1775

Let us not, I beseech you, sir, deceive ourselves longer. Sir, we have done everything that could be done to avert the storm which is now coming on. We have petitioned; we have remonstrated; we have supplicated; we have prostrated ourselves before the throne, and have implored its interposition to arrest the tyrannical hands of the ministry and Parliament. Our petitions have been slighted; our remonstrances have produced additional violence and insult; our supplications have been disregarded; and we have been spurned with contempt from the foot of the throne.

In vain, after these things, may we indulge the fond hope of peace and reconciliation. There is no longer any room for hope. If we wish to be free; if we mean to preserve inviolate those inestimable privileges for which we have been so long contending; if we mean not basely to abandon the noble struggle in which we have been so long engaged, and which we have pledged ourselves never to abandon until the glorious object of our contest shall be obtained, ó we must fight! I repeat it, sir, ó we must fight! An appeal to arms, and to the God of hosts, is all that is left us.

Patrick Henry

PART I

The British Army and
the Western Lands

The Stage Is Set

By 1760, the great French and Indian War in America between Britain and France was over, with Britain the absolute master of Canada and of all the land east of the Mississippi. The peace treaty of 1763 between the belligerents in the world war (Britain, France, and Spain), known in Europe as the Seven Years' War, completed the ouster of France from the North American continent. For Spain acquired France's domain in Louisiana west of the Mississippi, in compensation for Britain's acquisition of Florida from Spain.

The mighty British Empire now stood master of all it surveyed, and no place more so than in North America. Furthermore, the war had driven from power the peaceful Pelhamite Whigs—led by the Duke of Newcastle, who, along with his brother Henry Pelham and the previously ousted Robert Walpole, had managed to keep England on a course of minimal government and international peace, and of “salutary neglect” of the American colonies. These men had accomplished this feat against the reluctant opposition of Crown and Parliament. Salutary neglect had meant the conscious thwarting of Britain's grand mercantilist design for controlling and restricting American commerce and industry for the benefit of British merchants and manufacturers. Furthermore, the Walpole-Newcastle policy of *laissez-faire* toward the colonies had allowed the representative colonial assemblies to wrest effective power from royally appointed governors by wielding the power of the purse over colonial taxes and appropriations, notably including the governors' own salaries. Thus, from 1720 through the 1750s, the American colonies were virtually *de facto* independent of British imperial control, an independence bolstered by a libertarian spirit and ideology eagerly imbibed from the radical libertarian English writers and journalists of the period. The hostility of these writers to govern-

ment in general, and to the existing English government in particular—especially to its designs for power—keenly alerted the American colonists to the slightest signs of aggression by the mother country against their liberties.

For its part, the British government, seemingly all-powerful, was now freed both of the distractions of a two-decades-long conflict with France and of the salutary-neglect policies of the Pelhamite Whigs. The British were now free to bring the fractious American colonists to heel, to impose a comprehensive system of imperial British political and mercantilist control over the colonies. To her surprise, the mother country was to find that the Americans would not sit still while she imposed her grand design that would unleash her imperial power.

2

The Ohio Lands: Pontiac's Rebellion

The first and immediate problem the British faced was what to do with the Ohio lands, which had been militarily conquered from the French by 1759. Since the European war with France was not to be ended for four more years, the Ohio lands would continue, at least temporarily, from 1759 on under British military occupation.

First to swing into action, with a claim to Ohio lands, was the Ohio Company. In 1749, the Ohio Company, a Virginia company headed by the president of the royally appointed Virginia Council, Thomas Lee, and including the Lee family, the Washington family, and George Mason, induced the Crown to direct Virginia to grant the company 200,000 acres of French-held land at the strategic forks of the Ohio River. Soon Robert Dinwiddie, royal governor of Virginia from 1751 to 1758, his patron, the powerful imperialist the Duke of Bedford, and the powerful Mercer and Carter families were added to the Ohio Company.

Now, with Britain in full military control of the Ohio lands, the Ohio Company naturally swung into action, putting pressure on the Crown and the military for acknowledgment of its claim. During 1760, officials of the company offered Colonel Henry Bouquet, commandant of Fort Pitt, a share in the company. The Ohio Company, however, met formidable resistance among British officialdom. The new governor of Virginia, Francis Fauquier, was trenchantly opposed to the Ohio Company and to land grants in general. Furthermore, the British militia dug in for a lengthy stay and constructed many more forts in the Ohio Valley. Finally, the Earl of Egremont, in November 1761, officially proclaimed a British policy of prohibiting all grants to settlements upon Indian lands, thus blocking the Ohio Company or any other settlement.

As soon as the fighting ended in 1760, General Jeffery Amherst, the British commander, indulged his absolute contempt and hatred for the Indians. The substantial supply of presents that the British had been wont to grant the Indians was suddenly cut off now that France was beaten; moreover, Amherst arbitrarily decreed severe restrictions on the amount of ammunition that could be traded or given to the Indians. With the supply of ammunition, so necessary to their livelihood of hunting, suddenly cut off, the Indians were naturally embittered against the English. When the Indians protested, Amherst savagely told them through intermediaries that should they cause any trouble, "they must not only expect the severest retaliation but an entire destruction of all their nations, for I am firmly resolved whenever they give me an occasion to extirpate them root and branch." As a typical hard-liner, Amherst scoffed at the suggestion that the Indians might be either capable of causing or courageous enough to create any real mischief. He was therefore heedless of repeated warnings of probable Indian uprisings upon the cutting off of their ammunition.

In addition to cutting off the Indians' supply of ammunition, Amherst ruthlessly blocked their supply of rum. Not only did he prohibit any sale of rum to the natives, but he also ordered all trading to be confined to the British forts in order to enforce the ban. Also aggravating Indian resentment was the personal arrogance of the British toward them, a striking contrast to the previous friendliness and camaraderie of the French. The Indians were expected to conduct business at the forts and then leave; the English soldiers were forbidden to fraternize with them.

Another Indian grievance was Amherst's arrogant disregard of English treaties with the western Indians and of the Crown's own pronouncements, by permitting white settlement and by giving Seneca Indian lands at Niagara Falls to some of Amherst's officers. The gifts were, of course, made without bothering to purchase the land from the tribes. Alarmed by the threat to their lands, the Indians were further disturbed by the rapid British construction of new forts, especially the one at Sandusky Bay on the southwest shore of Lake Erie. Amherst grew particularly cocky from the ruthless British suppression, during 1761, of a Cherokee uprising in South Carolina.

The western Indians were driven to a point of desperation by the news in early 1763 that their friends, the French, had ceded the whole of America east of the Mississippi to the hated British. Jeffery Amherst simply shrugged off the problem of disturbed Indians: "Whatever idle notions they may entertain in regard to the cessions can be of very little consequence. . . ."

But General Amherst was soon to find out that the consequences were great indeed, for on May 7 the Indians launched a general uprising dedicated to driving the hated British out of all lands west of the Appalachians. Headed by the great Ottawa chief, Pontiac, the "Pontiac Rebellion" began with the massacre of a band of British soldiers near Detroit, followed by the rapid con-

quest of all the forts in the northern Ohio Valley, including Fort Sandusky and Fort Miamis (now Fort Wayne, Indiana), with the exception of the great fort of Detroit. This conquest was completed by the beginning of June 1763 and included the destruction of a troop sent to relieve Detroit from Indian siege.

Hearing the great news of victory, the Indians further east joined the rebellion. In the Allegheny region, Forts Le Boeuf, Presque Isle, and Venango were quickly captured by Senecas and Hurons, and Delawares and Shawnees had even besieged Fort Pitt by the end of June.

General Amherst perfectly exemplified the classical hard-liner, the eternally "tough" enemy of "appeasement." Like all hard-liners, he was ignorant of the fears, aims, or motivations of those he designated as the enemy. He knew only that they were evil and contemptible, men easily cowed by the equivalent of a "whiff of grape." Convinced that they would not dare to resist stern and harsh measures, Amherst found, as hard-liners invariably do, that repression only provoked resistance, and suddenly the despised enemy was striking and winning on many fronts. One would think that the hard-liner, seeing the abject failure of his policy, seeing his "toughness" only provoke a conflict, would have the grace to admit his error and retire from the scene. But the hard-liner has never done so; instead he takes the outbreak as merely an indication that only extermination can be the deserts of such a diabolical enemy. To Amherst, negotiations for peace became more traitorous than ever.

General Amherst reacted to the Indian uprising as might be expected. At first, and for quite a while, he refused to believe that near savages could have the gall to attack, much less endanger posts where *British* soldiers were stationed. When he finally realized the scope of the war, he could only express amazement. He could not believe that *his own* actions might have provoked the war; the enemy must be irrational: "It is difficult, my Lord," he wrote to the British secretary of state, "to account any causes that can have induced these barbarians to this perfidious attempt." Driven into frenzy, Amherst vowed—as is typical of the hard-liner—ruthless extermination of the enemy. He set upon all-out punishment, and frantically ordered his commanders to take no prisoners. As he ordered one troop, the Indians were to be treated "not as a generous enemy, but as the vilest race of beings that ever infested the earth, and whose riddance from it must be esteemed a meritorious act, for the good of mankind. You will, therefore, take no prisoners, but put to death all that fall into your hands. . . ."

If the Indians were truly subhuman, then *any* means for their extermination was proper. Accordingly, Amherst, in early July, directed his chief aide, Colonel Henry Bouquet, a Swiss mercenary, to spread smallpox among the Indians. Colonel Bouquet, an apt pupil, answered that he would send blankets infected with smallpox as gifts to the Indians. Delighted, Amherst replied that "you will do well to try to inoculate the Indians by means of

blankets, as well as to try every other method that can serve to extirpate this execrable race." One other method was hunting the Indian "vermin" down with dogs, but this proved impracticable because of the scarcity of good English hunting dogs in the colonies.

Thus Pontiac's rebellion gave rise to one of the great advances of the "art" of modern war: germ warfare. As in the case of other important inventions in history, other great minds were thinking along the same lines: even as General Amherst was adumbrating the concept of germ warfare, his commandant at Fort Pitt had been putting it into practice. Captain Simeon Ecuyer, another Swiss mercenary, generously gave two smallpox-infected blankets to the Delaware Indians. The new theory bore fruit, and soon smallpox raged among the Delawares and the Shawnees and seriously reduced the fighting spirit of the eastern Ohio tribes.

Germ warfare was not decisive, however. The summer of 1763 found all the Ohio country in the hands of the Indians, except for the besieged forts of Pitt and Detroit. The Indians proceeded to ravage the frontier settlements of Pennsylvania, Maryland, and Virginia; by the end of the year, over a thousand whites had been killed or captured. Unfortunately for the Indians, neither the more northerly nor the southern Indians revolted. In New York, the Iroquois (except for the Senecas) remained pro-British; to the south, the Cherokees were still cowed by the suppression two years earlier, and by the lavish presents given them at a great conference in Augusta arranged by Lord Egremont.

The turning points of the war were Colonel Bouquet's ability to relieve Fort Pitt, after his victory at Bushy Run in early August, and Fort Detroit's ability to withstand Pontiac's siege. Pontiac had always clung to the hope that the beloved French, still occupying Louisiana and the Illinois country, would come to his aid and drive out the English once again. But in October the French commander in Illinois wrote to Pontiac and told him the facts of life; the French had made peace and were indeed leaving, and the Indians had better make peace themselves. His heart no longer in the war, Pontiac offered peace, and the offer was accepted by the commandant of Detroit.

The Indians were ready to quit and make peace. The big question now was the attitude of the British army. Would it make peace calmly and bloodlessly? Or would it insist on bloody vengeance to be wreaked upon guilty and innocent Indians alike in the name of "punishment"? Amherst, no longer a hero, had been happy to hurry back to England in October, leaving General Thomas Gage with the task of "crushing the Indians' insurrection, and punishing those tribes who have so ungratefully attacked their benefactors."

Gage's instincts were certainly hard-line, but he soon realized that a policy of suppressing the *western* Indians would at least drive them west of the Mississippi into Louisiana and thus end the lucrative British beaver trade with them. The Indians to the east, however, had no such escape route, so Gage

sent out two punitive expeditions in the summer and fall of 1764. But Colonel John Bradstreet, leaving Fort Niagara in the summer with a formidable force, had either the wisdom or the naiveté to circumvent Gage's rather vague orders, and to conclude a just and easy peace with the Shawnees and the Delawares, insisting only on the Indians' surrender of all their English prisoners. Gage and Bouquet were furious at this failure to wreak vengeance, "to punish these infamous murders" by the Indians. Gage refused to ratify the peace and ordered an attack on the Indians, who at the same time had failed to surrender the white prisoners.

Colonel Bouquet was now sent out, in the fall of 1764, from Fort Pitt, with orders to pillage and kill all the Shawnees and Delawares in Ohio that they could find and to burn all their villages. He was then to force the Indians not only to surrender prisoners but also to "deliver up the murderers" of white traders, to pay a high indemnity to the traders, and to renounce all land east of the Ohio River. Bouquet, however, found out that the Indians had been preparing to surrender their prisoners to Bradstreet, and, out in the field, even the tough Bouquet agreed to forgo punishment for the prompt surrender of captives. By mid-November, with Gage giving him *carte blanche*, Bouquet had concluded peace with the Delawares and Shawnees in return for the prompt return of white prisoners. Unfortunately, the British insisted on forced repatriation, including as "prisoners" all whites who had grown to prefer Indian life, and half-breed children born in the Indian camps. At any rate, rationality triumphed over repression, and a formal and harmonious peace was concluded with Delawares and Shawnees in the spring of 1765; the only imposed indemnity was to be land granted as compensation to the English traders.

3

The Ohio Lands: The Proclamation Line of 1763

With the French and Indian War completely over, and the northern American continent east of the Mississippi subdued by 1763, the English government faced more insistently the problem of what to do with the western lands. Until now—or at least until the temporary edict of 1761—virgin land had been open to settlement, on various terms and in various relationships to the Indian tribes. But now the British government began to prepare what would be a rude shock to the American colonists. On June 8, 1763, Lord Shelburne, powerful protégé of the Earl of Bute and the Duke of Bedford, and president of the Board of Trade, recommended that the newly conquered land be divided into three new colonies: East Florida, West Florida, and Canada; simultaneously, the vast remaining lands of the Ohio and Mississippi valleys were to be reserved completely to the Indians and barred totally from white settlement. Rule over the west was to continue indefinitely in the hands of the British army.

It is incorrect to imply, as many historians have done, that this measure was designed merely to quiet the Indians temporarily in the face of Pontiac's rebellion. The Board of Trade's proposal was made months before the Indian rebellion had become known in England. To be sure, the rebellion hastened the English decision, and the board now urged an immediate proclamation reserving to the Indians all territory west of the Appalachians and ousting all white settlers from the western lands. The king issued a proclamation to this effect on October 7; it established East Florida westward to the Appalachian River; West Florida in the southwest from the Appalachian to the Mississippi; and Quebec in what was formerly French Canada. Cape Breton Island was added to Nova Scotia, and the region south of the Altamaha River to Geor-

gia. Most important, the proclamation barred any white settlement, present or future, in the lands west of the Appalachians, and placed its government under the military commander in chief. Even voluntary purchase of land from the Indians was outlawed! The proclamation also decreed that Indian lands within the bounds of the seaboard colonies must be voluntarily purchased from the Indians in public transactions.

What was the reason for this astounding British policy, which stunned and deeply angered the American colonists? We have seen one grave flaw in the theory that this was only a temporary way to appease the rebellious Indians; another flaw is that the Proclamation Line continued in force long after Pontiac's rebellion had been quelled. The Board of Trade later proclaimed its aim to be the altruistic one of protecting and safeguarding the Indians, and many historians have naively fallen for this myth. But surely the contemptuous attitude of the British then and in the past toward the Indians is enough to discredit the idea of a sudden burst of enlightened altruism toward the Red Men. Far more convincing are two motives attributed to the Crown, both economic: (a) a general desire to keep the Americans confined to the seaboard, to continue to provide markets for English manufactures; and (b) a bowing to the pressure of the powerful English fur lobby, which was desirous of keeping the West free of settlers and therefore confined to the fur trade.

On the first point, the British were apprehensive that Americans in the interior would begin to make their own clothes and other goods in their households rather than buy English textiles, so that valuable English markets would be lost. This motive for outlawing further settlement was privately admitted by various key British officials, including John Pownall, secretary of the Board of Trade. For its part, the fur lobby had powerful connections in the English government. Particularly important for the American fur trade was David Franks of Philadelphia, who was connected with John Watts and James DeLancey in the Albany fur trade. The crucial London connection of Franks and Watts was David's brother Moses Franks, a powerful recipient of government contracts and largesse. There was some evidence that Lord Egremont, who issued the original prohibition on settling the western lands in 1761, was heavily involved financially with Moses Franks.

A memorandum by Lord Shelburne's secretary, Maurice Morgann, declared the need to confine colonists to the eastern seaboard in order to preserve the West as a source of furs and to keep it as "open and wild as possible for the purposes of hunting." Thus the fur lobby was able to triumph over the interests of the settlers, as well as over the separate interests of the various speculative land companies, now dismayed to find themselves deprived of all the fruits of victory of a war they had helped to foment. Particularly distressed was the Mississippi Company, formed by the Washingtons, the Lees, and other leading Virginians of the old Ohio Company, who had petitioned the Crown for an enormous grant of land in the Mississippi and Ohio valleys.

Individual settlers, however, began steadily to defy Crown policy and quietly moved to settle west of the Proclamation Line. The British military succeeded in obtaining orders from Pennsylvania and Virginia to desist from settlement, but these laws and edicts could not be enforced.

If the speculators in western lands were thwarted by the Proclamation Line, the reverse was true for speculators in lands *east* of the Appalachians, which were now the only lands open to new settlement. A boom occurred in Nova Scotia, on lands seized from the unfortunate Acadians (Benjamin Franklin picked up one hundred thousand acres there), in Pennsylvania, and in Florida. Indeed, many highly important interests in England had speculated heavily in Florida lands, interests that included the prime minister George Grenville himself, the Earl of Egremont, Earl Temple, Charles Townshend, Henry Fox, and Sir Jeffery Amherst. This speculation undoubtedly strengthened their resolve during the war to seize North America rather than the sugar islands of the West Indies.

4

The British Army and the Grand Design

The British rulers, during and immediately after the French and Indian War, confronted the American colonies for the first time in four decades free of the restraints imposed by the liberal Whigs within the government. The Whigs were at last out of power and hence the remaining imperial and Tory factions were able to execute a Grand Design for cracking down on the American colonies. Spurred by the wise Whig (Walpole-Newcastle-Pelham) policy of salutary neglect, and by the right to levy its own taxes, America had been allowed to flourish with a good measure of independence.* Vital checks had been maintained upon British imperial power. Not only were trade restrictions unenforced and taxation levied only by consent of the colonial assemblies, but funds for the colonial executives were supplied only by the assemblies and thus subject to their power. Moreover, virtually no British troops had been stationed in America in peacetime. Troops had been largely confined to colonial militia, raised and paid by the colonial legislatures themselves.

The imperial Grand Design, hatched during the French and Indian War and put into effect as soon as it ended, was a comprehensive many-sided move to subject America to the British power. The vast new domains captured from France and Spain were to be occupied and administered as befitted a mighty imperial power. The laxity of salutary neglect was to be no more; all the mercantilist laws were to be strengthened and, above all, vigorously enforced; the British army was to overawe the unruly colonials by being stationed in America in force. The British army was to keep the French suppressed, rule the

*The extent of salutary neglect is indicated by the complete absence of condemnation proceedings in the Massachusetts admiralty court between 1745 and spring 1760, and of enforcement against colonial smuggling between 1743 and mid-1764.

newly won western lands, and help a network of royal bureaucrats enforce mercantilist restrictions. To pay for all this the British rulers hit upon a cunning expedient: the Americans themselves were to be taxed for that purpose. Thus the fractious Americans were to be forced to pay for their own suffering; to supply the funds to finance soldiers and customs agents who would enforce restrictions and taxes upon them. And a vast increase in the royal bureaucracy and the peacetime military would thus be established without imposing new levies on the already war-burdened English taxpayer. The Americans would thus be caught in a vicious circle of tyranny: the British army was to be stationed in America, largely to enforce unwelcome regulations and taxes upon them, while the major excuse for the unpopular taxes was to pay for the selfsame army.

It was a clever scheme—for the English imperial power. But the American colonists were not as enchanted with the new dispensation. Somehow, the British argument—that it was no more than justice for Americans to support the army that liberated them from the French threat—failed to impress the Americans. On the contrary, Americans, especially after the first phase of the war for the Ohio Valley, tended to regard the French and Indian War as a war for Britain and not for themselves. The crushing of Canada wasted American resources, oppressed and conscripted Americans, and wrecked their trade with Canada—all to redound to British imperial glory and the profits of London merchants. Furthermore, Americans reasoned that with the French conquered and the Indians crushed, the postwar need for a British standing army was far less, not greater, than before. They could only regard the large new standing army of British regulars as a permanent instrument of oppression. And the events of the Pontiac Rebellion and the Proclamation Line only convinced the Americans of (1) the ineptitude of the British troops as “protectors,” and (2) the use of the army to prohibit American settlement of the tempting virgin lands of the Ohio Valley.

The imperial Grand Design had been formulated as early as the wartime Pitt administration.* For Pitt, conquest and retention of North America were to be logically accompanied by the imposition of imperial power, the ending of salutary neglect, and the stationing of an army in America. Bute, Bedford, and Grenville all had similar designs, and they envisioned Benjamin Franklin as the head of a new overall central government in America. Pitt ordered enforcement of the trade acts in 1760, and when Newcastle resigned in mid-

*Indeed earlier, as can be seen from the truly ominous dispatch of Massachusetts' London agent Thomas Bollen in 1756: that the British intended to govern America as they governed Ireland—specifically to keep a standing army there and to demand the right of prior approval of the acts of colonial assemblies. During the same year, Lord Loudoun wrote from New York: “Governors here are ciphers; their predecessors sold the whole of the King's prerogative, to get their salaries; and till you find a Fund, independent of the province, to pay the governors, and new model the government, you can do nothing with the provinces. . . .”

1761, the latter wisely wrote that "I shall certainly in and out of office oppose the continuation of the militia, in any shape, at least after the war is ended. I shall oppose any alteration that may be proposed of . . . received usage and practice, with regard to . . . our settlements in America." Presumably Newcastle was referring to salutary neglect.

During the regime of Lord Bute, the imperial design made further strides. Bute and Parliament made a preliminary decision for a large peacetime standing army in America, which Bute planned to force the colonies to support. A new customs act pushed by Grenville, as first lord of the Admiralty, encouraged British sailors to harass smuggling by promising them shares of the booty from condemned vessels.

The final decision to station troops in America after the war was made by the imperialist Earl of Egremont, brother-in-law of George Grenville and secretary of state for the Southern Department, and by Welbore Ellis, secretary of war, and a follower of Henry Fox. Egremont and Ellis decided in December 1762 that twelve thousand troops would be stationed in America as a regular standing army, and that the Americans would be forced to pay for its support. The decision was based on the model of Ireland, where the Irish Parliament had been compelled by England to pay for the redcoat army that kept Ireland in subjection.

As liberals and opponents of strong imperial and royal power, Newcastle and the Whigs strongly opposed the large army. The crucial debate on the scheme took place in March 1763, when the army budget was submitted to Parliament (somewhat reduced to appease the instinctively liberal country gentry, who tended to oppose expansion of government power and of the budget). The Whigs argued for a huge slash in the army budget and for withdrawal of all troops from America. They thereby echoed American sentiment: the French were now conquered and the Indians controllable by the colonists themselves. Newcastle charged that "such an extensive plan of power, and military influence, was never thought of before in this country." But the edge of Whig opposition was blunted, as so many times before, by the disruptive influence of Pitt, a maverick out of power whom the Whigs were anxious to bring into unified opposition against the ministry. Pitt, as usual the ultramilitarist and warmonger, attacked the government for not providing a bigger American army. Pitt called for bigger and better military budgets, attacked the "permanent" disarmament desired by Walpole and Newcastle, and looked forward with relish to imminent renewal of war with France, a country displaying the ill grace to continue in existence.

As a partial and immediate means to pay for this extra expense, Bute introduced a domestic excise tax on cider, along with his army budget. The cider tax extended the enforcement of the excise from retail shops to private English homes. Cider was produced by the West Country, the great center of an

instinctively liberal country gentry. Here was an issue of basic English liberties—both personal and economic—on which the Whigs could unite with the country gentry in powerful opposition.

William Pitt, though happy enough when in power to impose an excise on beer and general warrants against Dissenters, was now willing to join with the London merchants, Earl Temple, the Whigs, and the West Country gentry in bitter opposition to the tax on cider. The City of London was vehement in opposition, and the lord mayor, the aldermen, and the Common Council of London vigorously and repeatedly instructed their representatives in Parliament to oppose the tax. This pressure was characterized by a contemporary observer as "a proceeding which, though by no means illegal or blamable, has no precedent that we can recollect."

The tax on cider was able to pass in Parliament despite the opposing coalition. But its lasting significance for America was the depth of the popular and ideological opposition that it engendered in England. Leading the opposition was John Wilkes' *North Briton*, which distributed widely and popularized the great slogan "Liberty, Property, and No Excise." Throughout the West Country, the people rose in virtual rebellion, demonstrating, marching, resisting—and setting a welcome and instructive example eagerly observed by American colonists. Church bells were stilled, thousands marched in bereavement bearing symbols of freedom and mourning, and Lord Bute, throughout the West Country, was hung in effigy. Large bonfires consumed effigies of Bute, and freeholder meetings of protest were held in towns and counties. Above all, the people refused to pay the tax and set upon the hated tax collectors. The government proceeded to send an army to the West Country to subdue the people. But it was finally forced to repeal the provocative tax two years later.

With the West Country in virtual rebellion, Lord Bute was forced to resign as prime minister at the beginning of April 1763. Bute was succeeded by George Grenville. Grenville's brother-in-law, the Earl of Egremont, continued as secretary of state, and Charles Jenkinson (secretary to Lord Bute), the Earl of Halifax, and the Earl of Shelburne took prominent roles in the new administration—the last as president of the Board of Trade.

The Crown did no better with the crucial part of the financing of the troops: the plan to tax the colonies. For the first time, a tax was to be imposed on the colonists in violation of the ancient English principle of taxation only when approved by representatives of the public. Sparkplug of the plan was Charles Townshend, a highly conservative Whig who had been secretary of war during 1761–62. In February 1763, Townshend was rewarded by the Crown for deserting the opposition Pelham "innocents" and Rockingham's Whig Club, receiving appointment as president of the Board of Trade. Inspired by the devotion to royal prerogative by Halifax and Grenville, Townshend introduced a bill to tax the colonies, but even the king

attacked it as hasty and premature and Parliament rejected the plan at the end of March.

More important, in early March, the Crown, in a masterful piece of tactical management, drove the plan to station troops in America through Parliament with a minimum of opposition. The Crown had managed to defuse the opposition by playing off the Newcastle Whigs against Pitt (his two major groups of opponents), and by confusing the potentially troublesome West Country gentry. Newcastle was muted by a threatened Parliamentary inquiry into the financial dealings of his previous administration; and the Crown counted correctly on William Pitt's devotion to militarism to win Pitt's charismatic support.

Despite the sometimes vehement opposition, the Crown managed to drive through Parliament the principle of a standing army in America, as well as a domestic tax on cider in partial payment thereof. The British decided to station approximately eight thousand troops permanently in North America. The disposition of these troops refutes the thesis of British apologists that the huge increase in the postwar army was needed to keep down the western Indians and to man the forts of the newly conquered interior. Of the existing force in America, the British deliberately dissolved *every one* of the units of rangers and others established during the war as specialists in Indian fighting. Rangers but not forts were useful in protecting settlers from Indians.*

There were many indications that the British intended to use their army to keep the American colonists in line and to enforce restrictions and taxes there. Maurice Morgann, secretary to Lord Shelburne, along with an associate wrote during 1763, "I have no idea that we want military establishments against the Indians" and "no danger is to be apprehended from the Canadians." On the other hand, troops were needed "in order to awe the British colonies. The lines of forts so much talked of before the war will restrain the colonies at present as well as formerly. The pretenses for this regulation, must be the keeping of the Indians in subjection. . . ." Another paper by Morgann succinctly summarized the Grand Design: "That the military force on that continent be increased . . . so that with the aid of a naval force, the whole of the provinces shall be surrounded. . . . That . . . under pretense of regulating the Indian trade, a . . . line be suddenly drawn on the back of the provinces and the country beyond that line thrown . . . under the dominion of the Indians. . . . The provinces being now surrounded by an army, a navy and by hostile tribes of Indians . . . it may be time to exact a due obedience to the just and equitable regulations of a British Parliament." The use of the army to enforce trade restrictions and taxes in America was particularly stressed by the powerful Lord Halifax, who, after the death of Egremont in August 1763, had become secretary of state for both departments.

*See Bernhard Knollenberg, *Origin of the American Revolution: 1759-1766* (New York: Macmillan, 1960), pp. 88ff.

It did not take the American colonists long to see what was going on. Colonel Eliphalet Dyer, a member of the Council of Connecticut and the leading lawyer of eastern Connecticut, wrote from London in the spring of 1764 that Parliament "seems determined to fix upon us a large number of regular troops under pretense for our defenses," with the revenues to be raised from the colonies to support them. Rather than for defense, the army was "designed as a rod and check over us." And a leading young lawyer, John Dickinson of Philadelphia, condemned the "formidable force established in the midst of peace, to bleed [America] into obedience. . . ."

Enthusiasm for the British troops among the colonists was hardly strengthened by an incident between General Amherst and the Massachusetts recruits stationed in Halifax, Nova Scotia. The troops' terms of enlistment were up on May 1, 1763; yet the British refused to discharge them. One refusal begat another, and finally the troops refused to serve any longer. The British retaliated by cutting off all provisions to the colonial troops, who were thus forced to buy their own supplies. General Amherst was responsible for forcing the troops to stay, in violation of the Massachusetts Charter, which required consent of the General Court before Massachusetts' troops could be forced to serve outside the colony.

Since the beginning of the French and Indian War, there had been an appointed commander in chief of the British armed forces in America; and now, in mid-1763, the Board of Trade recommended that the commander in chief also be made military governor of the western territory. The commander—who after 1763 was General Thomas Gage—was also in charge of western Indian affairs. To Newcastle, this military regime portended an upheaval in the colonies, which would expect a similar fate to descend upon them.

We have seen that Townshend's premature bill for taxing the colonies was defeated, but the plans continued brewing in the upper echelons of the British government. English taxation of the colonies to raise revenue had been suggested by royal officials in America for half a century, but had never been adopted during the Whig regime. The proponents had largely been governors anxious to secure their salaries independently of colonial assemblies, or royal officials asking for troops to enforce customs or other regulations. The latter included Colonel Robert Quary, chief customs officer, and Colonel David Dunbar, surveyor general of the King's Woods; among the governors, the arch-imperialist William Shirley and Robert Dinwiddie of Virginia were the most insistent. During the war their voices were joined by such military commanders as General Braddock and Lord Loudoun.

In England, during the French and Indian War, Lord Halifax was an early champion of parliamentary taxation of the colonies, and he was quickly joined by Charles Townshend. Halifax suggested a stamp tax, but the most influential and fateful plan for a stamp tax was proposed in 1761 to Lord Bute by the royal bureaucrat Henry McCulloh. So long as the great Newcastle

remained as prime minister, there was no chance of approving taxation of America without its consent. But Newcastle's fall completely turned the tables, and Bute, Halifax, and Townshend began to drive toward English taxation of the American colonies.

Henry McCulloh, one of the chief theoreticians of a stamp tax, was a London merchant who for thirty years had been a Crown official and a power in North Carolina. He tried to impose quitrent payments on the reluctant colonists and participated in large-scale land grants and speculation in land in North Carolina and across the mountains. His transmontane land speculation led him to espouse the British acquisition of eastern Louisiana from the French. In the autumn of 1763, McCulloh, along with a colleague, was assigned to write a draft for a stamp tax on the North American colonies. Of the two drafts, McCulloh's was the more daring, calling for a broad stamp tax that would finance not only the cost of colonial troops but also an entire royal civil bureaucracy in America. McCulloh's draft was rejected, however, and the competing bill, which confined the stamp money to financing the standing army, was selected by the Crown at the end of 1763. The draft of the bill was completed the following spring. Caution, however, dictated postponement of the stamp plan for another year.

PART II

Enforcement of Mercantilism

5

Writs of Assistance in Massachusetts

Having secured its army in America, the Grenville administration proceeded to a comprehensive plan of enforcing its mercantilist restrictions and imposing its imperial power. The various regulations, so long a dead letter because of the policy of salutary neglect, were now to be imposed in all their rigor. The Navigation Act, the Wool Act, the Hat Act, the Sailcloth Act, the Iron Act, the White Pine Act, the particularly crippling Molasses Act—all were now to be enforced and some to be strengthened and updated.

Actually the first crisis of tightened enforcement had begun earlier during the French and Indian War. The Crown was frantically trying to stamp out the flourishing illegal commerce with the French and Spanish West Indies. To this end, the government ordered the customs officers in Massachusetts to use “general writs of assistance,” that “terrible menacing monster” as John Adams labeled it. The writs of assistance authorized customs officers to break into and enter warehouses, stores, and even private homes, to search for smuggled goods without having to present any grounds for reasonably suspecting contraband to be there. In short, warrants could be general rather than specific, and a virtual *carte blanche* was given to the customs officers (who needed to be accompanied only by a local constable) to invade private property at will. In contrast, “special writs of assistance” (as in common law or in present-day “search warrants”) required specific evidence to be presented to a judge before the writs could be issued. The Massachusetts merchants, the citizens most harassed by these writs, did not protest the original writs issued from 1756 on, but they became alarmed by the petition of customs officers to renew the writs after the death of George II in October 1760. Under a British law these general writs automatically expired six months after the death

of a king; a renewal would continue writs of assistance long past the end of the war and throughout the reign of the new king. Besides, the end of the war was already clearly on the horizon.

The threat to liberty and property was evidently serious, and sixty-three Boston merchants banded together to oppose renewal of general writs. The merchants retained as their lawyers Oxenbridge Thacher and James Otis, Jr., who was in this capacity to assume the leadership of the new Popular Party, or "Smugglers Party," in the colony. It was Otis who, according to the charge of the Tories, "first broke down the barriers of government to let in the Hydra of rebellion." To take up the cause, Otis resigned a lucrative post as the king's advocate general of the Boston Vice Admiralty Court, where he had been engaged in prosecuting such merchants. In hearings before the Massachusetts Superior Court in February 1761, Otis soared beyond narrow legalisms to base his opposition on unconstitutionality, and on the right of the courts to supersede an unconstitutional act of Parliament; and beyond even that to base his opposition to general writs on the law of man's nature. Otis based his ultimate argument on the great early-seventeenth-century liberal Chief Justice Coke's declaration—even then falling into disuse under the pressure of Tory statism—that "when an act of Parliament is against common right and reason . . . the common law will control it and adjudge such act to be void." As Otis declared: "An act against the Constitution is void; an act against natural equity is void; and if an act of Parliament should be made . . . it would be void."

Although the majority of the judges of the superior court agreed with Otis and stood ready to prohibit general writs, Chief Justice Thomas Hutchinson managed to persuade the court to uphold the writs and to continue them in force. The Massachusetts legislature passed a law in February 1762 prohibiting colonial courts from issuing general writs, but Governor Francis Bernard vetoed the bill.

Despite this veto, the furor over writs of assistance died down for a few years, since they were not used again until 1766. However, the agitation catapulted Otis into the leadership of the Popular Party. Massachusetts now split into two camps: the "Court" or Prerogative Party headed by Thomas Hutchinson and the Tory Governor Bernard, and the liberals headed by James Otis, Jr. and Samuel Adams. Hutchinson, a wealthy Boston merchant, was lieutenant governor, president of the Council, and chief justice, and gathered power into the hands of himself and his friends. He dominated the executive, legislative, and judicial functions in Massachusetts and used them to erect a formidable political machine and to control the province. Shortly after his speech against general writs, Otis was sent by Boston to the House and became head of the liberal party. Otis was motivated partly by revenge; the Prerogative Party had passed over his father, James Sr., Speaker of the House, for preference to the chief-justice post in favor of the nonlawyer Hutchinson.

Samuel Adams was Otis's righthand man in whipping up agitation among the people. Adams' father, Samuel ("Deacon") Adams, had himself been a wealthy Boston merchant and brewer, and a leader of the popular liberals. Now the younger Adams, an impoverished Boston officeholder, showed himself to be a consummate radical-liberal agitator. Adams obtained an M.A. from Harvard in 1743, and while there he read deeply such liberal or republican thinkers as John Locke, James Harrington, and Samuel Pufendorf. His M.A. address declared it lawful to resist superior magistrates to preserve the commonwealth.

Adams employed as his major political arm the recently founded newspaper, the *Boston Gazette*, as well as several eager political clubs of Boston: the Boston Caucus Club, which packed town offices; the Merchants Club; the Monday Night Club; and the Boston Masonic Society. The clubs met either in the garret of one of their members or in a Boston tavern. Taverns, the centers of meeting and discussion, were critical in Massachusetts politics in that era, and the tavernkeeper was a power in local politics. Sam Adams' Boston Caucus Club, for example, met regularly at the Green Dragon Tavern. At the other end of the cultural spectrum, Otis also mobilized allies, not the least being the "Black Regiment" of Congregational ministers, who lent spiritual force to the new ideologies. Particularly ardent in this movement was the Reverend Dr. Samuel Cooper, the pastor of Samuel Adams.

6

The White Pine Act

Although the furor over writs of assistance had temporarily died down by 1763, the comprehensive Grenville program for enforcing and strengthening the mercantilist restrictions was soon put into effect.

One important step was the sudden enforcement of the White Pine Act. The restrictive White Pine Act had scarcely been enforced by Benning Wentworth, surveyor of the King's Woods and governor of New Hampshire, for over twenty years. Suddenly, in 1763, Wentworth seized over two thousand white pine logs in western Massachusetts, and charged in admiralty court that the trees were legally reserved to the Crown. The nearly impossible task of the owners was to *prove* that the logs had come from trees growing within township boundaries in New Hampshire, for all other logs were legally reserved for royal use. Hundreds of white pine logs were also seized in Connecticut. Ironically, very few of the pine logs thus confiscated were suitable for use by the Royal Navy, and the great majority soon would have rotted away if they had not been cut for timber. Wentworth's zeal was spurred by the new general enforcement program, and also by a desire to cripple the timber operations of Wentworth's new Connecticut rival in the trade, Jared Ingersoll.

Enforcement of the White Pine Act quickly reactivated the ardent hostility of New England colonists to Crown policies. Wentworth's deputies were threatened with beatings and assassination by the people of Massachusetts, and the local justices of the peace refused to aid or protect the deputies in enforcing the law, despite the orders of their governor.

Molasses and the American Revenue Act

Of all the mercantilist measures that had not been enforced before 1763, perhaps the most important was the Molasses Act of 1733. This act had provided for a prohibitive duty of sixpence a gallon (amounting to 100 percent) on the import of foreign molasses, in order to grant inefficiently produced British West Indies sugar a monopoly of the American market. The molasses trade was vital to the North, which could sell its staples in the West Indies in exchange for molasses. The molasses could be used either as a sweetener or to produce rum, which could be then sold at home or exported. The illegal molasses trade was largely with the French West Indies (Guadeloupe, Martinique, San Domingo) and the Dutch West Indies (Surinam, St. Eustatius). Of all the illegal commerce, the molasses trade was the most benevolently "indulged" by the customs officials. Domestic vessels were openly permitted to import foreign molasses on payment of a negligible duty, most of which was pocketed personally by the officials, as well as fresh fruit and wine directly from southern Europe. The duty charged in this way usually amounted to less than a half penny per gallon. This open indulgence put the molasses trade on a footing far different from that of most imports from Europe or the East Indies, which had to be smuggled secretly.

During the Seven Years' War, attempts were made, especially by Pitt, to suppress trading with the enemy, but the molasses trade also flourished with the islands captured from the French in the later years of the war. In March 1763, Charles Townshend, new president of the Board of Trade, attempted to lower the official molasses duty to twopence a gallon and to enforce it strictly, in order to be able to tax the colonies. We have seen, however, that Parlia-

ment rejected the plan, and the old salutary indulgence for molasses was quickly resumed. The postwar salutary neglect, alas, proved short-lived. In the first place, Parliament decided, in May 1763, to use a good part of the British navy as a powerful instrument of enforcement of the trade laws. As an incentive to the naval officers, the ships and cargoes seized by them for illegal trade were now to be sold by the courts at auction, with the proceeds divided equally between the officers themselves and the Crown. Twenty British warships with over two thousand men were assigned to this task. Absentee colonial customs officers were ordered back to America to assume their posts, and the colonial governors, as well as the commander in chief, were ordered to render all possible assistance.

At first it seemed to the relieved merchants that the molasses trade would still be indulged, and John Temple, the chief customs officer for the northern colonies, gave reassurances to that effect. But the customs commissioners dashed these hopes in November, by threatening all American customs officers with instant dismissal for any laxity in enforcing the law. In response, Temple, at the end of the year, gave notice that customs officials would board all the vessels in the West Indian trade to execute fully the Molasses Act of 1733. Governor Francis Bernard of Massachusetts wrote that this notice caused a greater alarm in America than had the French capture of Fort William Henry six years before. And not only the merchants but the rest of the public began to denounce customs officers for restricting the natural rights and liberties of the people. The term *Tory* now came into common use to designate the advocates of imperial aggrandizement over America. The British West Indies planters, in contrast, were highly gratified, especially since they made sure that *their own* illegal trade with the Spanish West Indies would continue to be "indulged."

The Molasses Act was scheduled to expire in 1764, and so the Massachusetts merchants took the opportunity to bring pressure against renewal of the law. The merchants and traders of Boston, Salem, Plymouth, and Marblehead petitioned the Massachusetts legislature in December against renewal, and a committee of Boston merchants presented a detailed economic argument against the duty. Particularly concerned were the Massachusetts fishermen, whose low-grade product depended on the West Indies market. The Massachusetts legislature backed up the motion against renewal, and stressed that a lower duty strictly enforced would introduce the dangerous principle of parliamentary taxation of the colonies' trade. (The previous laws were deemed *trade restrictions* rather than revenue measures, as Townshend's proposal would be.)

Connecticut merchants, led by Gurdon Saltonstall and Jared Ingersoll, filed a petition against enforcement or renewal of the Molasses Act, and the March session of the legislature sent a protest to England. A committee of Philadelphia merchants asked the same of the Pennsylvania legislature, but the agitation came too late to have any effect.

Many merchants helped organize the opposition by writing to associates or correspondents in the colonies. The most fully developed example was a letter of January 1764 written by a committee of Boston merchants to merchants in Rhode Island and Connecticut, rousing them to the cause. The merchants called on their fellows to "unite our endeavors" and to "defeat the iniquitous schemes" of the West India interest—"these overgrown West Indians." The letter inspired the merchants and traders of Newport and Providence to call for and obtain a special session of the Rhode Island legislature for January. The legislature decided to send to England a remonstrance, which constituted the first official American protest against renewal of the Molasses Act. The remonstrance pointed out that Rhode Island did a flourishing trade in molasses, importing almost as much as Massachusetts. For its supplies it was dependent on the non-British West Indies. Rhode Island had over thirty distilleries processing the molasses into rum, much of which was traded to West Africa for slaves, who in turn were sold to the British West Indies and the southern colonies.

In January 1764, New York merchants, inspired by a letter from Nicholas Brown of Providence, chose a committee that issued a proclamation against enforcement of the molasses duty; the committee pointed to the wide West Indian market for New York agricultural staples, and to the manufacture from molasses of beer and rum, the latter vital to the Indian trade. The merchants' protest was later approved by the New York legislature and sent to England. During February, New York and Philadelphia merchants were also in correspondence about joining New England's protests, and a committee of Philadelphia merchants petitioned the Pennsylvania Assembly to oppose the renewal.

This movement of pressure by merchants in the northern colonies was the first case of intercolonial pressure on England in behalf of colonial rights and liberties. It was, however, totally unsuccessful; in fact, by the time the pressure was fairly under way, the Crown had introduced the American Revenue Act (also called the Sugar Act), in the spring of 1764. The London agents of the northern colonies (including Jasper Mauduit from Massachusetts and Richard Jackson from Pennsylvania and Connecticut) were remarkably quiet, being willing to settle for a duty of twopence and thus to abandon the principle of no English taxation upon the colonies. But the Revenue Act, as introduced in March and passed quickly in April—to take effect at the end of September—imposed the crushing duty of threepence a gallon on foreign molasses, and promised a rigorous enforcement. The Revenue Act passed easily because of Newcastle's continuing anxiety not to alienate Pitt and thus to keep a united opposition. A few members of Parliament mildly urged reduction of the duty to twopence, but only John Huske, an MP from Malden who had spent his early life in New England, opposed the American Revenue Act *in toto*. Huske, it should be noted, had been newly elected the previous year by the agitation of the radical John Wilkes movement.

An important factor in the abject collapse of British opposition to the new molasses duty was the failure of the London agents of northern colonies to press opposition *in principle* to the molasses duty. They confined their opposition to urging a somewhat lower duty. Particularly grave was the defection of Richard Jackson, who also held the critically influential post of private secretary to Prime Minister Grenville.

Richard Jackson was an old and close friend of Benjamin Franklin, and the two had co-authored an important imperialist pamphlet during the war with France. As an old friend and a member of the Pennsylvania Assembly's committee of correspondence, Franklin embodied the American position as far as Jackson was concerned. Yet Franklin raised no protest over the Revenue Act or against stationing a standing army in the colonies. Indeed, Franklin went so far as to welcome the "steady protection" and "security" of a British standing army. Franklin also reacted blithely to the plans to tax the colonies. In fact, he even offered a helpful suggestion for a tea tax for raising revenue from America.

Much of the responsibility for Jackson's attitude and for the easy passage of the new Sugar Act must therefore be laid at the door of Benjamin Franklin. Franklin's soft attitude toward the Crown and imperialism was certainly not unconnected with his own bureaucratic post as deputy postmaster general of the American colonies, or with his son William's royal appointment as governor of New Jersey.

In addition to the threepence duty on molasses, the American Revenue Act of 1764 provided for: a continued duty on foreign raw sugar and an increased rate on refined sugar; higher import duties on foreign textiles, coffee and indigo; much higher duties on Madeira and Canary wines; double duties on foreign goods imported from England; prohibition of imports of foreign rum or French wines; and the addition of iron, hides, whale parts, raw silk, and potash and pearl ash to the "enumerated list" imposed by the Navigation Acts. A particularly important provision crippled the intercolonial trade. No goods could be shipped from one American colony to another without a detailed registration with and permission from a royal customs officer. Furthermore, every vessel had to put up an expensive bond on each trip for paying duty on foreign molasses. The requirement of a detailed registration and listing of goods (or "cocket") imposed particular hardships on small vessels engaged in local trade. Chief Justice William Allen of Pennsylvania wrote in November 1764 of the plight of a typical owner of a small boat on the Delaware River carrying a load of wood for iron from New Jersey to Philadelphia. He now was forced to go forty miles out of his way to the nearest customhouse to make out his manifest, "the charge of which and his traveling makes this burden intolerable." Before the Revenue Act, small vessels carrying nonenumerated products in the coastal trade had not been forced to gain customs clearance. The cocket requirement also permitted Britain to

begin the enforcement of the restrictive Wool Act of 1699, the Hat Act of 1732, and the Sailcloth Act of 1736, which had been virtual dead letters for many years.

Another provision of the American Revenue Act proved extremely irritating to the colonists. Despite the incentive of acquiring a share of the loot, naval officers had been reluctant to confiscate the goods of alleged smugglers, being deterred by a healthy fear of the common-law rule of personal liability for damages to any owner found innocent of the charge. Personal liability for arresting officers was a superb way of making governmental officials extremely careful about invading someone else's property. Now the Revenue Act virtually removed this deterrent and opened a broad channel for injustice, by limiting the owner's damage claims to twopence if the officer could prove "probable cause" for the unjust seizure. And if the trial judge did not certify probable cause, even a minority of the customs board could now reimburse the naval officer for paying damages.

Critical to the British campaign of strict enforcement of the trade laws was the aggrandizement of the vice admiralty courts. The Act of 1696 had established vice admiralty courts for the colonies. These courts possessed jurisdiction over violations of the trade laws. The judges were appointed by the royal governors, and were able to decide cases themselves, without granting the accused the benefit of trial by jury. In the common-law courts where trial was by jury, the juries generally acquitted smugglers and violators of the trade laws as a matter of principle. Before the Revenue Act of 1764, however, the vice admiralty courts were not intolerably oppressive for the colonists. For one thing, the Crown decided that the admiralty courts did not have jurisdiction over enumerated products or importations of goods from Europe. This was firmly established by the Privy Council in 1743 in the *Archibald Kennedy* case. It was there decided that only the navigation laws prohibiting foreign ships came under admiralty jurisdiction. Secondly, of course, the policy of salutary neglect gave the courts little work in any case.

The American Revenue Act changed all this. First, the law made crystal clear that the admiralty courts had jurisdiction over all trade and revenue law violations. Second, the new law authorized the creation of a new admiralty court specifically covering all colonial trade violations. Before 1764, each court was limited in jurisdiction to its own colony. At the urging of Admiral Lord Colville, commander of the British North American fleet, a new overall admiralty court was set up in the fall of 1764 in the raw little military-run town of Halifax, Nova Scotia. Halifax was the headquarters of the North American fleet, but remote from the center of American commerce. Dr. William Spry, husband of a niece of William Pitt, was appointed judge of the court. The Englishman Spry ominously contrasted to the other vice admiralty judges, who were all American colonials. Lord Colville had frankly written that admiralty court judges in the major colonies might be influenced by the pressure of

jobs or of their neighbors; but this pressure would be avoided by conducting trials in far-off Halifax.

Admiral Colville's warnings were not simply hypothetical; they were based on the solid experience of existing vice admiralty courts, which indeed were under the influence of the merchants and the pervasive smuggling trade. During the French and Indian War, the three judges who successively served in the Charleston Vice Admiralty Court were unmistakably in league with the merchants of the town. Charleston had arisen during the war as a center for trade with the French West Indies, to which it was nearer than any other American port. Not surprisingly, the vice admiralty court judge in Charleston after 1761 was Councillor Egerton Leigh, formerly a lawyer for many of the merchants in the illegal trade and a close friend of the leading merchants of the town. Leigh was usually able to find a way to rule for the accused merchant.

In Philadelphia Judge Edward Shippen ruled in favor of the illegal "flags-of-truce" method of trading with the enemy. In New York City the vice admiralty judge before his death in 1762 was Lewis Morris, Jr., who was notoriously partial to the harassed merchants, often waiving jurisdiction of their cases. In fact, the New York customs officers were moved to complain of Morris's partiality to their superiors in England; to these zealots, Morris was little better than the colonial juries of the common-law courts. In 1762, Morris was succeeded by his son Richard, formerly a lawyer for accused merchants and a deputy admiralty judge in New Jersey.

Rhode Island was a great and flourishing center of illegal trade, helped by its self-governing charter, by which the governor and all other officials—except the appointed royal customs officers and admiralty judges—were democratically elected. When the war with France began, the Rhode Island merchants decided that they could control the vice admiralty court better if the colony had an admiralty court of its own, rather than a mere branch of Massachusetts courts. The Rhode Islanders not only quickly obtained their own court, but even persuaded the king to appoint their own choice as admiralty judge: the Providence planter Colonel John Andrews. When Andrews forgot his true role and shifted toward the Crown, the whole Rhode Island political structure put pressure on Andrews and brought him into line. In fact, the independent and individualist Rhode Island merchants publicly proclaimed the advantages of trading with the enemy, and quoted the Magna Carta against enforcing the trade acts.

In Massachusetts, the former customs collector for Boston, Benjamin Barons, cashiered for accepting payment for not enforcing the navigation laws, led the merchants during 1761 in an all-out legal attack on the admiralty courts. The merchants took successful action in the common-law courts to hold customs officers liable for damages to property, and to recover money for the sale of confiscated property.

Thus, by 1763, the enforcement procedures of the trade acts were pleasantly lax, inefficient, and hobbled—not the least of the causes being the partiality of the admiralty judges for the merchants' problems. Hence the imposition of the super admiralty court at Halifax.

A third vital change in enforcement procedures was effected in the admiralty courts: the amazing provision that the onus of proof would henceforth lie on the accused rather than on the officer who seized his property.

Thus, only a little more than a year after the end of the war with France, a comprehensive network of expanding and strengthening enforcement of the trade acts was imposed upon the colonies: the end of salutary neglect; revenue from molasses duties; new commodities on the enumerated lists; use of the British navy in force to apprehend smugglers and violators; use of general writs of assistance by customs officers in Massachusetts; a thoroughgoing expansion of jurisdiction of the vice admiralty courts, and the establishment of an overall colonial admiralty court in remote Halifax; the granting of one-half of the loot from the seizure of the goods of the accused to the arresting naval officers; placing the burden of proof on the defendant rather than on the arresting officer, and removing the latter's common-law liability for damages for false arrest; and the coerced registration of bills of lading ("cockets"), hampering small vessels in the coastal trade.

Most of the enforcement provisions of the Revenue Act had been proposed by the commissioners of customs, and had been specifically drawn up by John Tyton, their solicitor, and Robert Yeates, chief clerk in the Treasury. The only opposition within the royal bureaucracy was expressed by William Wood, secretary to the commissioners. Wood, an elderly holdover from the Newcastle era, was clearly out of step with the new dispensation of aggressive Tory imperialism.

8

Reaction in Massachusetts

The news of the new Revenue Act reached America in early May 1764 and provoked a storm of protest in the northern and other colonies, especially in trade-conscious Boston. A Boston town meeting on May 15 quickly appointed a committee to draw up Boston's instructions to its four representatives in the Massachusetts House. The committee's instructions, approved rapidly at the next meeting, were drawn up by the great popular leader of the Massachusetts liberals, Sam Adams. Adams threw down the gauntlet on constitutional and libertarian principles as well as on the pragmatic consequences of the crippling restrictions. He boldly denied *any* right of Parliament to tax the colonies. Adams warned: "For if our trade may be taxed why not our lands? [an appeal to the farmers of Massachusetts]. Why not the produce of our lands and every thing we possess or make use of? This we apprehend annihilates our charter right to govern and tax ourselves—it strikes at our British privileges. . . ." Adams also called for uniting the efforts of protest of the other American colonies.

The Massachusetts legislature promptly organized two committees, each dominated by their Boston members. One committee, headed by James Otis, instructed Massachusetts' London agent to urge repeal of the American Revenue Act, and wavered between a principled denial of the right of Parliament to tax the colonies, and a call for reduction in the molasses tax to a penny a gallon. The Massachusetts House sent this protest along with an essay by the great leader of the Boston liberals, the lawyer James Otis, Jr. The essay, "The State of the Rights of the Colonies," implied an immunity of the colonies from parliamentary taxation, and grounded its argument not only on the Magna Carta but also on common law and on "The laws of Nature and of

Nations, the Voice of Universal Reason, and of God." The other House committee sent a circular letter at the end of June to the other colonies, urging a united colonial protest.

A few weeks later, James Otis published an expanded version of his thesis titled *The Rights of the British Colonies Asserted and Proved*, stressing citations to John Locke, as well as to the international law-theorists Hugo Grotius, Samuel Pufendorf, and Emerich de Vattel. Again Otis's arguments were partially self-contradictory; at some points he stressed the constitutional right "to be free from all taxes but what [an English subject] consents to in person, or by his representative," as well as the invalidity of acts contrary to natural law; at other points he upheld the absolute power of Parliament to legislate for the general good of the empire. But in the pamphlet Otis stressed that government derived its powers from the people. Should a government violate rather than protect the natural rights of the people to their life, liberty, and property, Otis emphasized, then it could be overthrown by the people. Otis also condemned the abrogation of trial by jury, admiralty courts, restrictions on colonial trade, the discriminatory treatment of colonial troops during the war, and Negro slavery. Later in the summer, another Boston representative, the lawyer Oxenbridge Thacher, published a similar pamphlet, *Sentiments of a British American*. Thacher protested the various enforcement provisions in the Revenue Act, and again denounced the violations of the basic English right of taxation only by consent of one's representatives.

In the fall, the Massachusetts House held a special session called at the behest of Otis, Thacher, and the other Boston delegates. It approved and addressed to England a claim of exemption from any parliamentary taxes for revenue, on the essentially British right of no taxation without representation. The conservative Council, however, declined to approve, and a compromise address confined the protest to pragmatic grounds, implying that Parliament *did* have the right to impose "external" taxes on the colonies, and only denying its right to levy direct "internal" taxation. This was a grave retreat from principle, since all previous English "taxation" of trade had been designed for regulation rather than for revenue.*

The way was now, unfortunately, open to unlimited taxation of American trade. The person responsible for weakening the Massachusetts stand was Thomas Hutchinson, lieutenant governor, chief justice, councillor, and head of the "Court Party" oligarchy in Massachusetts. Hutchinson understood the issue clearly enough, but he imposed a distinction between internal and external taxation that he knew to be unsound, for fear of jeopardizing his position as royal favorite in Massachusetts. In addition, the pernicious influence of

*Indeed, in 1764, before the Revenue Act came into force, gross annual revenue from all the trade acts on the colonies amounted to less than two thousand pounds a year, while the cost of collecting it totaled over seven thousand pounds.

Richard Jackson helped to sabotage Massachusetts' stand on principle. It was Jackson, in fact, who propounded the spurious distinction between internal and external taxation. Jackson was undoubtedly motivated in his advice to the colonists by his powerful post as secretary to the British prime minister.

Despite the crucial role played by Otis and especially by Adams in triggering colonial protest at the Sugar Act, the radical liberal party in Massachusetts suffered troubles by early 1765. For one thing, Boston, the center of radical liberalism in the province, was grievously underrepresented in the Massachusetts Assembly. The House was represented by the *number* of towns rather than by population, and as a result the disproportion against populous Boston grew ever greater as the colony expanded and more towns arose in western Massachusetts. In this period, Boston had only four representatives out of 120 in the House. Moreover, rural Massachusetts had not been really aroused against British tyranny. In fact, western Massachusetts was then dominated by such leading Tories as Colonel John Murray of Rutland, the largest landowner in Worcester County, and by Colonel Timothy Ruggles of Hardwick, another leader of the Court Party.

9

Reaction in Rhode Island and Connecticut

As the Revenue Act was being passed, Colonel Eliphalet Dyer of Windham, a member of the Connecticut Council, attacked the revenue bill for supporting a standing army, and called on the colonies to unite in protest. If they failed to do so, they may "bid farewell to freedom and liberty, burn their charters, and make the best of thralldom and slavery. For if we can have our interests and estates taken away, and disposed of without our consent . . . and by those whose interests as well as inclination it may be to shift the burden off from themselves under pretense of protecting and defending America," then England can insist on America's paying the expenses of any wars, past or present.

Connecticut's legislature of May–June 1764 appointed a protest committee that included Governor Thomas Fitch. The committee's address to England, approved by the legislature in October, strongly protested the molasses tax, but again it retreated from principle to the artificial distinction between internal and external taxation. Once again Connecticut's perfidious London agent, Richard Jackson, was instrumental in ensuring a suitably weak stand in the colonies.

Rhode Island, with its large interest in trade, took a similar but a more bitter stance toward the molasses tax. In July the legislature chose a committee to confer with other colonies on protesting the tax. The committee included the merchant Nicholas Brown and was headed by Governor Stephen Hopkins. Hopkins, a prominent storekeeper and popular politician, had founded the *Providence Gazette*, and as early as January had written an "Essay on the Trade of the Northern Colonies," urging united colonial action for repeal of

the old Molasses Act. The Hopkins committee, however, took no action until instructed by the legislature in September to confer with neighboring colonies. The committee then wrote to other colonies, significantly suggesting an intercolonial conference to launch a united protest. In October the legislature also appointed a committee to frame a protest, and sent it to England the following month along with a draft of Governor Hopkins' pamphlet *The Rights of the Colonies Examined*. The address and the Hopkins pamphlet strongly protested the trade restrictions and enforcement provisions of the Revenue Act, but explicitly denied only the right of Parliament to levy *internal* taxes. However, both Hopkins and the Assembly went beyond other colonies by denying the right of Parliament to legislate for the colonies except for the general good of the whole empire. The Hopkins pamphlet was popular in America and was soon reprinted in every colony; the radical *Massachusetts Gazette* hailed it as a pamphlet that "breathes a true spirit of liberty."

The following February, however, the Hopkins essay was attacked in a pamphlet by Martin Howard, Jr., a leading Rhode Island Tory, who invoked the "transcendent" sovereignty of Parliament. Under pressure, Hopkins retreated from his denial of the right of Parliament to pass laws governing America, and also hinted that colonial representation in Parliament after the manner of Scotland would remove colonial grievances.

Not only was Hopkins pressed into retreat; so too was James Otis of Massachusetts. In March 1765, Otis, in *A Vindication of the British Colonies*, attempting to defend Hopkins, wound up retreating to a repudiation of his own pamphlet of a few months earlier. Otis's virtual surrender to Howard was soon completed in another pamphlet, *Brief Remarks*. But in the same pamphlet, Otis lashed out in bitter and hard-hitting denunciation of Howard and his small but powerful clique of Tories, known as the Newport Junto. Otis attacked the Junto as that "little, dirty, drinking, drabbing, contaminated knot of thieves, beggars, and transports, or the worthy descendants of such . . . made up of Turks, Jews, and other Infidels, with a few renegade Christians and Catholics. . . ."

The formation of the Newport Junto in late 1764 was undoubtedly one of the reasons for Governor Hopkins' precipitate retreat from liberal principle. The Junto had had the gall to petition England for revocation of Rhode Island's precious liberal and self-governing charter. Leader of the Tory Junto was Martin Howard, Jr., an Anglican lawyer, the son of a Newport town councillor, and a delegate to the abortive Albany Congress of 1754. Samuel Hall, printer of the *Newport Mercury*, one of the two newspapers in the colony, supported the Junto and made his paper a spokesman for Junto views. Other leading members were Dr. Thomas Moffat of Edinburgh; George Rome, an agent and debt collector for an English mercantile firm; probably Augustus Johnston, attorney general of Rhode Island; and the king's officers

in the colony, especially John Robinson and his roommate, Lieutenant Benjamin Wickham. The Junto called for strict Crown control over fractious and democratic Rhode Island and for suppression of the abusive protests against English measures.

The citizens of Rhode Island were understandably incensed at the Junto and at Howard's pamphlet against Hopkins. Freedom of speech and press was hardly purely upheld in eighteenth-century America, and Deputy Governor Joseph Wanton, Jr. urged the Assembly to move against the Tory pamphlet and its printer. Fortunately, the Assembly voted down the zealots. The superior court, under Governor Hopkins' control, did call up and intimidate the printer Samuel Hall for a while, but did nothing further. Hall's *Mercury*, in reply, thundered that liberty of the press and freedom itself were in grave danger.

Rhode Island and Connecticut were uniquely fortunate; both had democratically elected executives and therefore were free of an appointed oligarchy of royal officials, their friends, and their favorites. In Rhode Island, the Newport Junto had nuisance value but not political power. Instead, Rhode Island was torn between two political factions, both of which were relatively liberal and opposed to British exactions. One faction was led by Stephen Hopkins of Providence and the other by Samuel Ward of Westerly, in south Rhode Island.

Historians have unfortunately woven around the Ward-Hopkins controversy the neo-Marxian myth that the two sides waged a class struggle, the Hopkins group representing the "radical farmers" and the Ward faction the "conservative merchants." Actually both parties had similar liberal principles and both were equally democratic in a highly democratic colony—where nearly eighty percent of the adult males were eligible to vote. In addition to personal disputes, the two factions roughly represented sectional interests: the Hopkins forces represented Providence and the north, and the Wardites, Newport and the south. The controversy was *sectional* but not *class*; each group represented a similar economic congeries of agriculture, trade, and finance. This should not be surprising when we remember that *on the market*, farmers, merchants, and financiers are not in conflict or even competitive with each other; each occupational group is interdependent, and together they form a harmoniously integrated network of production and exchange, each benefiting from the others' activities. Competition, not conflict, existed between two such commercial complexes as rising Providence and relatively declining Newport. Both factions, then, were interclass. Thus Hopkins was backed by the influential Brown brothers, leading merchants of Providence, and by the wealthy and aristocratic Wantons of Newport. Samuel Ward, on the other hand, was a farmer and small-town merchant who was no more wealthy than his rival, Hopkins. As Professor Lovejoy puts it: "Farmers and merchants

alike supported Ward or Hopkins for reasons not directly related to the position either candidate or voter held in society.”*

What then did the Hopkins and Ward groups quarrel about? About the essentials of government in any era or any country: allocation of the privileges to be derived from government, and of the burdens to pay for these privileges. The essence of government is an exploitative rob-Peter-to-pay-Paul process, and the jockeying of factions is to become as much of the Paul and as little of the Peter as possible. The perquisites of government in the Rhode Island of that day were largely: public funds for bridges, lighthouses, schools, and public works; letters of marque to allow ships to be privateers upon the enemy (during wartime); grants of monopolies to businesses; and grants of permission to businesses to build dams, or to towns to hold lotteries.

Particularly important was the allocation of the tax burden. When the Hopkins faction came to power, the colony's taxes fell more heavily upon the southern towns and more lightly on the northern; and the reverse was true when the Ward group was in the saddle. A general atmosphere of local rebellion against taxation then began to permeate the colony. The northern towns began to refuse tax payments during a Ward regime, and the southern towns became delinquent during a Hopkins period. Each set of towns could wait for an *ex post facto* vindication when political fortunes would change. Seeing this, the towns of the factions *in* power began to take advantage of the situation and quietly cease to pay. As a result, tax refusal and tax delinquency permeated Rhode Island. Here was a particularly strong reason for Rhode Island's bitter resistance to the prospect of parliamentary taxation. The Rhode Islanders were paying very little colonial taxes at all, and neither the Ward nor the Hopkins faction had any wish to disturb this idyll by becoming subject to levies from England.

Thompson, "The Ward-Hopkins Controversy and the American Revolution in Rhode Island: An Interpretation," *William and Mary Quarterly* (July 1959): 363-75.

10

Reaction in New York

Neither was New York laggard in protesting the molasses tax. The New York Assembly appointed a committee in September 1764 to draft a protest against infringing the right to be taxed only by consent. The Assembly approved the committee's statement the following month and, unlike Massachusetts, Connecticut, and Rhode Island, made absolutely no concessions to a supposed expediency. The historian Bernhard Knollenberg justly called the New York Assembly's addresses (one each to the Houses of Commons and Lords, and the king) "among the great state papers of the pre-revolutionary period."* Thus the Assembly's "Remonstrance and Petition" to the Commons took its stand against taxation without representation squarely on the *natural right* of private property. The exemption from such taxation was not simply a privilege but a "natural right of mankind . . . a Right . . . inseparable from the very idea of property, for who can call that his own which can be taken away at the pleasure of another?" The petition expressly repudiated the artificial distinction between internal and external taxation, since "all impositions, whether they be internal taxes, or duties paid for what we consume, equally diminish the estates upon which they are charged."

The New York petitions were prepared by three New York City lawyers, the liberal leaders of New York: John Morin Scott; William Smith, Jr., who wrote the drafts; and the eminent liberal William Livingston, the leading theoretician. As early as March, Livingston had written of his implacable hostility to the "deep-formed and steadily prosecuted plan of the British ministry . . . to reduce us by degrees to perfect vassalage." A judiciary appointed by the Crown, "a standing army among us (a measure absolutely inconsistent

*Knollenberg, *Origin of the American Revolution*, p. 205.

with civil liberty),” “and . . . now . . . the crushing the trade of North America in such essential articles, as must . . . [reduce] us to beggary. Should they also carry another favorite point . . . subjecting us to the payment of the national tax, we should certainly . . . envy the superior political happiness of the French. . . .”

The boldness and daring of New York’s action was undoubtedly traced to the shock of a recent message by Governor Cadwallader Colden, ordered by the Board of Trade. Colden urged the unilateral annulment of a huge land grant of eight hundred thousand acres that had been given by Governor Cornbury to thirteen grantees in 1708. Underlying Colden’s urging was a threat of further parliamentary coercion to annul the grant. By 1764, ownership of this tract—the Kayaderosseras grant, between the Hudson and Mohawk rivers—was widely distributed through all the leading families of New York Province. The sudden suggestion for abrogation of the grant, almost a half-century later, came as a severe blow to New Yorkers, who also scented a precedent for other reevaluations of land titles. The questioning of the Kayaderosseras grant was ostensible altruism in behalf of the probably defrauded Mohawk “sellers” of the land. But the Assembly correctly suspected chicanery behind the altruistic mask. All the Crown officials involved stood to gain handsomely by the annulment. Governor Colden stood to earn ten thousand pounds, his fee for regranting the Kayaderosseras land; Colden’s son, Alexander, four thousand pounds in fees as surveyor general of land in New York for the regranting; the Crown itself would gain from an increased annual quitrent payment of over one thousand five hundred pounds for negotiating the lands; and Sir William Johnson, the Crown’s superintendent of the northern Indians who pushed the Mohawk claim, had received overlapping land grants—from the Crown and from the Mohawks—of over one hundred thousand acres in the same area. Colden agreed to back Johnson’s highly dubious Indian claim after Johnson offered him ten thousand acres from the tract. The New York Assembly swiftly and angrily rejected the whole scheme and no doubt its reaction radicalized the assemblymen into taking a firm, principled stand on the molasses tax.

11

Reaction in Pennsylvania

Pennsylvania's protests were among the most anemic in the colonies. A major reason was undoubtedly the restraining influence of Franklin and Jackson. The Pennsylvania Assembly, in September 1764, declared its opposition to taxation by Parliament, but was too timid to follow its sister colonies and send the protest to Parliament or the Crown. Instead the Assembly quickly, quietly, and privately sent its conclusions to Richard Jackson. For a while, it even promised to send Jackson an alternate plan for raising a colonial revenue, probably the scheme of the ever-helpful Franklin that would pay interest to the Crown on a new all-colonial paper currency.

Perhaps the major reason for Pennsylvania's timidity as well as Franklin's, was the scheming of the (nonpacifist) Quaker oligarchy of eastern Pennsylvania, with whom Franklin was allied, to perpetuate their control of the colony. As the Germans and the Ulster Scots poured into western Pennsylvania, the older Quaker settlers became a distinct minority of the population; yet their districts still commanded a majority representation in the Assembly. Thus, the three Quaker counties of Chester, Bucks, and Philadelphia (excluding the city of Philadelphia) had far less than half of Pennsylvania's population in 1760; yet they sent twenty-four representatives to the Assembly out of thirty-six. Demands for correcting the increasing inequity of Pennsylvania representation were mounting, and the Quaker oligarchs calculated that if the province shifted from proprietary to royal government, they could manage to dominate a Crown-appointed Council and thereby keep control of the government. Hence, Benjamin Franklin, appointed as Pennsylvania's agent in London in the fall of 1764 to press for a change to royal government, wrote from London that English Quakers would back the cause and thus prevent

"their friends in Pennsylvania falling totally under the domination of Presbyterians."

Seeking important favors from the Crown, the Quaker-dominated Pennsylvania Assembly felt that it could not press any opposition to a favorite measure of the Grenville administration. Principle yielded to the subservience of the courtier:

With Franklin, Jackson, and Franklin's close ally Joseph Galloway committed to a pro-Crown position as against the proprietary, Pennsylvania politics were in danger of being sidetracked by a struggle over the proprietary system. In the midst of this trend, one great leader arose to take a determined libertarian position: against *both* Crown and proprietary. The lone voice was John Dickinson, a young lawyer, who in May 1764 warned of the "blaze of royal authority" that would follow replacement of the proprietary. Only Dickinson warned clearly of the impending aggrandizement of the imperial power and of the dangers of a British standing army. He also pointed out that the proprietors had cooperated closely with royal policies and therefore that the Crown could hardly serve as a relative paladin of liberty. While denouncing the exactions and evils of proprietary rule, Dickinson hailed Pennsylvania's unique liberties: complete religious freedom, absence of test oaths, a unicameral elected legislature unhampered by an appointed Council, absolute Assembly control over its own meetings, and *annual* elections. In contrast, Joseph Galloway sought the blessings of "royal liberty," and Ben Franklin proudly and accurately proclaimed that he had constantly and uniformly "advanced the measures of the Crown, ever since I had any influence in the province."

John Dickinson's emergence as head of the liberal opposition to the tyrannical moves of the British Crown occasioned a new political lineup in Pennsylvania. On one side was an antiroyal coalition of western Ulster Scot Presbyterians, urban Philadelphians, and a handful of proprietary men; on the other was a conservative party headed by Galloway and Franklin based on the (nonpacifist) Quakers of the eastern counties surrounding Philadelphia. Professor Jacobson concludes: "For John Dickinson 1764 marked the beginning of his important political leadership. . . . His arguments in 1764 showed not essential conservatism, as historians have so frequently charged, but a belief in the more radical idea that fundamental rights could not be altered without the consent of the governed, an idea that clearly foreshadowed the American position in the Revolutionary crisis of succeeding years. Dickinson's early and perceptive analysis . . . supports his own later claim that his stand against royal government marked the beginning of the Revolutionary struggles in Pennsylvania."*

*David L. Jacobson, "John Dickinson's Fight Against Royal Government, 1764," *William and Mary Quarterly* (January 1962): 85.

12

Reaction in New Jersey

New Jersey sent no official protest whatever to England. Robert Ogden, Speaker of the New Jersey Assembly, was, during August, inspired by the June 1764 circular letter of the Massachusetts Assembly urging "all the colonies to unite and exert themselves to the utmost to keep off the threatening blow of imposing taxes, duties, etc. so destructive to the liberties the colonies hitherto enjoyed. . . ." Ogden pressed for a special session of the legislature, but none was called, perhaps because of the recalcitrance of New Jersey Governor William Franklin, son of Benjamin. However, in September, two members of the New Jersey Council, Samuel Smith and Charles Reade, and a member of the Assembly, Jacob Spicer, formed themselves into a "Committee of Correspondence for West Jersey" and sent off a protest to the colony's London agent. The committee asserted that "we look upon all taxes laid upon us without our consent as a fundamental infringement of the rights and privileges secured to us as English subjects, and by charter."

In a letter to the Governor of South Carolina, Attorney General Cortlandt Skinner of New Jersey riddled the defense argument used by Great Britain. The British troops in the Indian country, "far from protecting, . . . are the very cause of our Indian wars, and the monstrous expenses attending them. . . . All we want with [the Indians] . . . is their trade, which we can never enjoy . . . until we remove their [suspicion]." When that is done, Skinner pointed out, the colonies will enjoy the security of the days they knew before the war, when there were virtually no English troops stationed in America. Skinner also noted that the French and Indian threats were now removed and therefore even fewer troops were needed for "defense."

13

Reaction in the South

Virginia was also inspired by the Massachusetts circular letter of June 1764, and the House of Burgesses appointed a committee of notables of the province to draft a protest to England. The committee was headed by Peyton Randolph and included Richard Henry Lee, Landon Carter, George Wythe, Edmund Pendleton, Benjamin Harrison, Richard Bland, and Archibald Cary. The Virginia protest, sent in mid-December, asserted freedom from parliamentary taxation as a right, although the application of this freedom to *external* (as against internal) taxes was not clearly defined. The protest also moved to reject one solution that was already implicit in James Otis's position: colonial representation in Parliament. This was an alternative to continuing colonial home rule most emphatically rejected by most Americans, and the Virginia resolves were the first to make this clear.

In a private letter, young Richard Henry Lee expressed sentiments portentous for the future. He asserted the "unquestionable right" of Americans to "the free possession of property," and to laws and taxes made by their own representatives. He sensed a design by the mother country to "oppress North America with the iron hand of power, unrestrained by any sentiment, drawn from reason, the liberty of mankind, or the genius of their own government." Finally, he warned that "possibly this step of the mother country, though intended to oppress and keep us low, in order to secure our dependence, may be subversive of this end. Poverty and oppression, among those whose minds are filled with ideas of British liberty, . . . may produce a fatal resentment of parental care being converted into tyrannical usurpation."

The North Carolina House, during its October session, protested the imposition of taxes without colonial consent "and against what we esteem an

inherent right and exclusive privilege of imposing our own taxes. . . ." The protest was drawn up by a committee headed by Thomas McGuire. No distinction was made between internal and external taxes, but the boldness of the stand was greatly vitiated by the fact that the protest was only addressed to the governor and that none was sent to England, even privately to the colony's London agent.

The first southern assembly to protest the American Revenue Act was the South Carolina House, which, in August 1764, ordered its Committee of Correspondence to instruct its London agent to oppose any parliamentary tax as violating the "inherent right of every British subject not to be taxed but by his own consent or that of his representative."

No official protests, apparently, emanated from New Hampshire, Maryland, Delaware, and Georgia.

14

Enforcement Troubles

In addition to protesting the molasses duty, the colonists denounced the aggrandizement of the vice admiralty courts and the further weakening of the safeguards of trial by jury. They also protested other provisions for tighter enforcement of the trade laws. The creation of the new overall court at Halifax seemed particularly threatening: not only was the new court remote from friendly pressures by the merchants, and not only was a Briton instead of an American appointed to the post, but Halifax was costly to travel to and suffered from a shortage of lawyers to represent the accused. Accordingly, merchants in Massachusetts, Rhode Island, and New York petitioned their assemblies for relief and complained of the new enforcement procedures. The pamphlet of Oxenbridge Thacher, a leading lawyer, placed particular stress on objection to the aggravated jurisdiction of the admiralty courts. The protest of the Massachusetts Council and House put it succinctly: "The extension of the powers of the courts of vice admiralty have . . . deprived the colonies of one of the most valuable of English liberties, trials by juries."

Southern merchants were particularly disturbed at the red-tape regulations crippling the coastal trade and their protests were strongly backed by Lieutenant Governor William Bull of South Carolina.

After the Revenue Act came into force, merchants tried their best to avoid the regulations. Sometimes action was forceful indeed. In late November 1764, Robert Heron, a customs collector of Maryland, seized a ship with a cargo of molasses. The cargo was condemned in a vice admiralty court and duly advertised for auction sale at the local tavern. The owner of the condemned vessel, a chap named Graham, got the merchants to promise to boycott any purchase of the goods. And at the auction Graham assaulted Heron and threw him out of the tavern.

Such forcible measures were rare. But the temper of America was plain enough, so plain that the British officers thought it more prudent *not* to anger the colonists by taking cases to the general court in Halifax. As a result, Judge Spry languished at Halifax with little to do. As staunch a Tory as Governor Bernard of Massachusetts urged Britain to move the admiralty court from remote Halifax to the American mainland. Indeed, the Crown prepared to abolish the Halifax court and substitute three appellate vice admiralty courts, one each at Boston, Philadelphia, and Charleston, but the reorganization plans were lost in the furor over the Stamp Act.

One collector, however, had no scruples about the wisdom of hauling defendants to Halifax. He was John Robinson, the new collector of customs in Rhode Island. Robinson's turn toward Halifax was prompted by a legendary record of heroic obstruction by Rhode Islanders in the colonial courts. Rhode Island indeed proved a thorn in Britain's side from the time the new enforcement policy went into effect. When Robinson first arrived in the colony from England in the spring of 1764, he sternly refused to play by the old lax rules of colonial officials, and therefore did not accept a huge annual seventy-thousand-pound bribe from the merchants for allowing them continued freedom of trade. Instead, Robinson began a rigorous enforcement of the trade laws. However, he soon found himself blocked in the courts, even in the local admiralty court.

The Newport Case

Enforcement troubles in Rhode Island began promptly. The Assembly forbade the governor from swearing in any customs officials. And after John Temple, surveyor general of the Customs at Boston, seized the ship *Rhoda* at Newport for engaging in illegal trade, a party of citizens loaded the cargo at night and put the ship to sea. The *Rhoda*, incidentally, was owned by a judge of the Rhode Island Superior Court.

In a more important case, John Robinson, in the spring of 1764, seized a vessel and a cargo of sugar that had in turn been seized by a British naval officer. Robinson took the cargo to Rhode Island's admiralty court, which superbly thwarted the collector by selling the sugar back to its owner at a low price, and somehow never collecting the amount. In March 1765, moreover, Robinson and his deputy, John Nicoll, seized the vessels *Wainscott* and *Nelly* for possessing illegal molasses, and took the case to the Rhode Island Admiralty Court. The judge, John Andrews, and the prosecutor or king's advocate, James Honeyman, were both native Rhode Islanders and both highly sympathetic to the merchants; they did their best to thwart the whole proceeding. Witnesses were not summoned and were permitted to escape, Honeyman refused to attend the trial, and finally Judge Andrews acquitted both of the ships.

When Robinson and Nicoll complained to England of this treatment, Judge Andrews retaliated swiftly, suing the customs officers in common-law court for defamation. Judge Andrews won the case and proceeded to sue Robinson for complaining to the governor. Such cases being typical in Rhode Island, the judge and the king's advocate effectively stymied the royal customs officials in that province.

When, therefore, John Robinson seized the ship *Polly* in April 1765 for smuggling molasses, he should not have been surprised to receive the full treatment—from populace and judiciary alike. In fact, here was an excellent example of cooperation in obstruction between the citizens of Rhode Island and neighboring Massachusetts. The vessel was seized at Dighton, on the Massachusetts side of Narragansett Bay. The first step for Robinson and his aides was to have a crew bring the *Polly* to Newport to be condemned in court. But they could find no one in Dighton to serve on such an obnoxious voyage. That night a large group of citizens carried away the whole cargo and grounded the sloop. Robinson's two aides found it healthier not to interfere, and when warned by the local justice of the peace of further rebellious action by the mob, they scurried back to Newport. And a crew sent by Robinson to bring the *Polly* to Newport was sent fleeing back by a turbulent crowd of about a hundred people.

Hearing the news of the popular resistance, John Robinson gathered an armed force of British soldiers and marines, and marched to meet the rebellion at Dighton. In Massachusetts, the local justices of the peace refused to grant him writs of assistance and warned him that the "whole country" would defeat his "handful of men." At Dighton, Robinson found that his prize capture, the *Polly*, had been run aground, stripped of sail rigging and other equipment, and her bottom drilled full of holes.

No sooner had Robinson arrived in Dighton than he was arrested and sued for three thousand pounds in damages by Job Smith for seizing his vessel, the *Polly*, and its cargo. The suit would eventually be superseded by justification for probable cause in vice admiralty court, but meanwhile Robinson was taken to Taunton, Massachusetts, to the jeers and threats of the populace. Without friends to stand bail, Robinson was forced to spend the night in jail until bailed out by John Temple; meanwhile, Robinson ranted that the "wretch" Smith was "deserving of the severest treatment that the law could inflict."

At Taunton it was again justices of the peace who obstructed Robinson's efforts at enforcement. Finally, Robinson called on a British warship and resealed the *Polly*. Backed strongly by Temple, he then lashed out at the Rhode Islanders by taking the case to court at Halifax, Nova Scotia. Not only remote, Halifax was in a militarily held domain as well.

Resentment in the colony also piled up against the British fleet, both for its enforcing activities and for impressing colonial seamen into the royal fleet. The impressment issue burst forth in the summer of 1764. Three crew members of the British naval schooner *St. John* came ashore and stole some pigs and chickens from Newport citizens. The Newporters were incensed to find that the sheriff, rowing out to arrest the thieves, was prevented from boarding the *St. John*. The same day, one of the ship's impressed seamen managed to escape to Newport, and the *St. John* sent out an armed party to recapture him on the charge of "desertion." This outrage was too much for the people of

Newport. When the armed party landed, a Newport mob promptly seized the commanding officer—giving him a little taste of impressment-in-reverse—and stoned and drove off the rest of his men. In retaliation for the warship's defiance of the civil sheriff, two members of the Rhode Island Council ordered the gunners at the fort to shell the *St. John* as it left port that day, and fifty other Newporters enthusiastically joined in the firing. Such incidents polarized the conflict on both sides. Thus the Rhode Island Council chastised the gunners for not trying conscientiously to sink the warship. In the meanwhile, Captain Richard Smith of the Royal Navy was urging the British government to use this act of insurrection as "a means of a [coerced] change of government in this licentious republic."

At about the same time, the British schooner *Chaleur* impressed some fishermen off Long Island in New York. The *Chaleur's* master was threatened with death if the men were retained, and so the victims were released the next day. Notwithstanding, a New York City mob seized a boat from the *Chaleur* and burned it ceremoniously in front of city hall. Thus, the impressment issue kindled opposition to Britain in the colonies.

The explosive issue of impressment, or at least forced conscription, into the navy was also involved in a clash off New England in December 1764. Officers of the British warships *Cygnets* and *Jamaica* forcibly boarded a passenger ship off New England, looking for deserters from the navy. The passengers rose to their own defense and managed to throw several of the officers overboard. The fight ended when an officer ran through one of the passengers with his sword, a finale that incensed the citizens of Newport when the *Cygnets* put into port shortly afterward.

A more directly rebellious act by Newporters against the Crown over impressment occurred in the spring of 1765. The royal ship *Maidstone* had arrived at Newport at the end of the previous year, and proceeded to conscript colonial sailors at a furious pace. Indeed, the *Maidstone* men even broke an agreement not to seize Newport townspeople. Trade was crippled out of fear of losing crews to impressment, and fishermen refused to venture forth about their business.

Peaceful persuasion and protest having failed, the people of Newport decided to take positive measures to defend life and property against these outrages by England. On June 4, the *Maidstone* officers impressed the full crew of a ship; a furious mob of five hundred seized one of the *Maidstone's* boats and burned it completely. Lieutenant Jenkins of the royal vessel was seized by the crowd and almost killed until cooler and more timorous heads prevailed. A few weeks later, the *Maidstone* finally bowed to pressures coming from the masses, up to and including Governor Samuel Ward, and released all the impressed and kidnapped Rhode Islanders.

The British officials—the *Maidstone's* captain and the customs officers—wrote to England complaining of the fomenting of violent resistance to Eng-

land by the Rhode Island officials, who, being democratically elected, would be turned out of office if they behaved otherwise. The attack on the *Maidstone* stemmed from the lawlessness of the people and "from the principles of the constitution of the government, which is the most popular that can be formed."

The merchants also reacted to the Sugar Act and the enforcement of mercantilist restrictions, by trying to encourage self-sufficiency in manufacturing in the colonies. This reaction at first was meant not as pressure on Britain to repeal the Sugar Act, but simply as a means of reducing dependence on a foreign trade that was now crippled. Wealthy merchants of New York and Boston formed associations and advanced capital for spinning factories and whiskey distilleries to replace rum, and planned to increase wool manufacture. Concerted movements arose in Boston, New York, New Haven, and Elizabeth to abstain from luxury imports and substitute American products. In Boston, an association formed by some councillors, representatives, and others, pledged a boycott of British manufactures and of the consumption of lamb, in order to help domestic woolens. Leading liberals in New York formed in late 1764 a Society for the Promotion of Arts, Agriculture, and Economy of New York City to promote these aims. Included among the founders was the eminent radical triumvirate of William Livingston, William Smith, Jr., and John Morin Scott, as well as Philip Livingston, Frederick Philipse, and James Duane. All these popular actions tended to unite the people against British legislation. The upshot of the trade restrictions, aided by the check on inflation imposed by the British Currency Act of 1764 in areas south of New England, was a severe business depression in the colonies. Evidences of severe depression appeared by the spring of 1764 in Rhode Island, Connecticut, New York, Boston, New Hampshire, Philadelphia, Maryland, and Virginia. In Boston, the bankruptcy of Nathaniel Wheelwright, one of New England's leading merchants, in January 1765 was a severe blow to business confidence. The Virginia planters, heavily indebted to English merchants, were in particularly bad straits, with the price of tobacco declining sharply.

PART III

Ideology and Religion

16

The Threat of the Anglican Bishops

During the first half of the eighteenth century, there were sporadic schemes to impose Anglican bishops upon the American colonies. The schemes had been bitterly resented by all the non-Anglicans in America, and even opposed by most of the Anglicans themselves, who were generally low church and happy to be governing themselves free of English control. The schemes had died down during the war with France, but even then Bishop Thomas Secker, who had assumed the post of archbishop of Canterbury in 1758, quietly laid plans to revive the scheme as soon as the war was over. His installment was the occasion for the Reverend Samuel Johnson of New York, a long-time advocate of an American episcopate, to join with a group of Anglican ministers in New York and New Jersey to petition for this innovation. Secker replied with the assurance that he had long had at heart the idea of American bishops. He added that the matter must remain in abeyance, but that the powerful Lord Halifax, president of the Board of Trade, was enthusiastic over the scheme.

As soon as the war was over, Secker launched his campaign. The Grand Design for imperial assumption of power over the colonies was well under way, Secker informed Johnson, and the time was therefore right for pushing the project for American bishops. The imperialistic Duke of Bedford was, not surprisingly, quite willing, but Secker continued in secrecy until plans could fructify.

It was in an atmosphere of fear and rumor engendered by these machinations that agitation against an American bishopric resumed in the colonies. The controversy burst to the fore in early 1763 when the great libertarian divine of Massachusetts, Jonathan Mayhew, was provoked by an Anglican

minister's spirited defense of the Anglican Society for Preservation of the Gospel. The Reverend Mr. Mayhew's famous reply "Observations on the Charter . . ." strongly attacked the SPG's long-standing and dangerous agitation for an American episcopate. Against this scheme Mayhew thundered: "When we consider her [Church of England] enormous hierarchy ascending by various gradations from the dust to the skies," and the threat "that all of us [will] be taxed for the support of *bishops* and their *underlings*," can we avoid crying out:

Will they never let us rest in peace? . . . Is it not enough, that they persecuted us out of the old world? Will they pursue us into the new to convert us here?—*compassing sea and land to make us proselytes* . . . what other new world remains as a sanctuary for us from their oppressions, in case if we need? . . . Where is the Columbus to . . . pilot us to it, before we are . . . deluged in a flood of episcopacy?

Mayhew's stirring "Observations" performed the function of intensifying and polarizing the conflict, stirring interest and activity among his supporters and drawing bitter replies from several prominent Anglicans. Many of the replies called for a full-fledged Anglican establishment, while a rebuttal pamphlet by Archbishop Secker tried to be more moderate and to stress the simple administrative functions of American bishops. Jonathan Mayhew was unimpressed. Once they are here, Mayhew replied, the bishops will try to attain to the power of their English colleagues, and "ambition and avarice never want plausible prettexts, to accomplish their end." A gradual plan for bishops was in the long run as grave a threat as an extreme one. Indeed, Mayhew wisely commented, "people are not usually deprived of their liberties all at once, but gradually, by one encroachment after another, as it is found they are disposed to bear them." Furthermore, Mayhew expressed great distrust of the revival of "high-church Tory principles and maxims" under the new king, George III.

Jonathan Mayhew's pamphlets in 1763 and 1764 on the Anglican question had a profound effect in rallying colonial opposition to an episcopal scheme and in sowing distrust of and hostility to English imperial projects. The treasurer of Massachusetts wrote of the unprecedented "general approbation and applause" greeting Mayhew's "Observations." John Adams, writing later of these events, testified to the importance of the controversy that began with Mayhew's pamphlets:

It spread an universal alarm against the authority of Parliament. It excited a general and a just apprehension, that bishops, and dioceses, and churches, and priests, and tithes, were to be imposed on us by Parliament. It was known that neither king, nor ministry, nor archbishops, could appoint bishops in America, without an act of Parliament; and *if* Parliament could tax us, they could establish the Church of England, with all its creeds, articles, tests, ceremonies, and tithes, and prohibit all other churches. . . .

So influential were Mayhew's writings, indeed, that the conservative, Calvinist Congregationalists, who had been hostile to Mayhew's highly liberal views, now ranged alongside him and the other liberal Congregationalists and forged a new unity against the common danger.

So severe was the reaction that the frightened Archbishop Secker was soon willing to call off the whole thing. But the damage had been done. Furthermore, rumors tended to fly overseas of impending appointments of American bishops, thereby keeping America hostile and on the alert. Meanwhile, irritations against church and state accumulated in America. The Anglican governor of New York, James DeLancey, refused to allow Presbyterians and Lutherans to control their own property. And as early as 1761 the Crown had prohibited the emigration from England of any schoolteacher to New Hampshire who was not an Anglican and certified by the bishop of London.

17

The Parsons' Cause

A particular area of trouble with England over the Anglican establishment appeared during this period in the colony of Virginia. Of the seventy or so Anglican clergy in Virginia the bulk were moderate, liberal, and easygoing, in keeping with the low-church moderation of Virginia Anglicanism. In the western valley of Virginia, the local vestry—the important local political organ in that province—included Presbyterians and other Dissenters for many years, since the valley was almost exclusively Dissenter. Local vestries, furthermore, selected their ministers, who rapidly fell into the tolerant and liberal spirit of religion in Virginia.

A little knot of high-church Anglicans bitterly opposed this condition and strove to bring church and British control over ecclesiastical and other affairs of the colony. These men, largely English-born, clustered in and around the faculty of the College of William and Mary.

In the fall of 1755, Virginia passed the first of its Twopenny Acts. Since Virginia's major currency was tobacco, its dues, contracts, and obligations were generally payable in that commodity or in more convenient warehouse receipts for quantities of tobacco. In such a system, a poor tobacco crop and a consequent rise in tobacco prices injured debtors and advantaged creditors. In 1755, a year of high tobacco prices, there was inaugurated a Virginia practice of fixing tobacco at an arbitrary price of twopence a pound—this at a time when the market price of tobacco was far higher than that. Virginians generally approved the measure because the main "creditors" or receivers of fixed obligations (in tobacco) were the tax collectors and the receivers of government fees. The Twopenny Act caused a welcome reduction in the real economic burden of taxation and government spending on the Virginians, and

did this precisely during a time of economic crises when such relief was most needed.

Government bureaucrats receiving fixed fees in tobacco lost a heavy windfall as a result of the Twopenny Act. Particularly affected were the Anglican parsons, who each received a fixed sum of a little over seventeen thousand pounds of tobacco per year. The knot of high-church ministers zealously protested the Twopenny Law; a small clique of parsons (including four professors at William and Mary) sent several bitter protests to the bishop of London. They were led by the Reverend John Camm of York County, a professor of divinity at William and Mary.

The 1755 law was meant to be in force for ten months only, after which the crop crisis would be over. The most important of the Virginia twopenny laws was passed in the fall of 1758, amid a catastrophic drought that lowered Virginia's tobacco production by nearly ninety percent. A fixed maximum price of twopence a pound was placed on tobacco for the following year.

The Tory faction of the Virginia establishment was embittered at the loss of its windfall gains (the market tobacco price had risen to sixpence a pound). Half of the Anglican clergy of the colony convened and with dispatch sent John Camm to England to plead their "Parsons' Cause" for royal disallowance of the law. Camm took with him the ministers' "Representation of the Clergy of the Church of England." The "Representation" bitterly and incorrectly denounced the Twopenny Act as deliberately designed to injure the Anglican clergy, and angered the Virginians by warning that the royal prerogative was being violated by the colony. The Anglican clergy were thus urging a royal veto over the self-governing acts of the Virginians, and went from there to urge the *nullifying* rather than the mere setting aside of the law, so that the Twopenny Act would be null and void from the beginning. The importance of this stemmed from the short-term nature of the crisis and of the law; if it could be voided from the beginning, Virginia would be liable for a large retroactive salary to its established clergy.

The Virginia Assembly countered the appointment of Camm in early 1759, by appointing its own agent in London and selecting a Committee of Correspondence to carry on the struggle. The argument was now carried to England, where Virginians were further embittered by a vicious attack upon them by Bishop Thomas Sherlock of London (who had long been one of the prime movers in the scheme for an American episcopate). Sherlock leveled false accusations of a deliberate attack on the Virginia clergy, and then went on in a crescendo of calumny to charge the Virginia Assembly, in its passing of the Twopenny Act, with committing an act of "treason, and I do not know any other name for it in our law." Sherlock went on to denounce the increasing number of Dissenters (largely Presbyterians) in the colony.

The Camm petition, aided by Archbishop Secker, traveled favorably

through the ranks of the British bureaucracy; finally, in August 1759, the Privy Council disallowed the two Twopenny Acts. It also went beyond this to order the Virginia governor not to sign in the future any such law that did not have a suspension clause delaying execution of the law until the king should approve—a serious threat to the self-rule of the colony.

The Crown had merely disallowed the Twopenny Act rather than nullified it from the start. The outcome of the dispute was therefore still unclear, a fact that would rankle Virginia-British relations for eight more years. The Reverend Mr. Camm and a few other Tory parsons immediately decided to sue in the courts for the missing back pay, and if these cases were won, total nullification would be a fact. The Virginia taxpayers would then be burdened with huge windfall salary payments to the established clergy. The Assembly and its Committee of Correspondence decided to back the vestries in the court cases, and its Committee of Correspondence warned that the royal decision called into question the powers of the Virginia legislature to make temporary laws "for the public weal." The Assembly in late 1760 petitioned the Crown for power to pass such temporary measures, but in vain.

News of Bishop Sherlock's bitter blast particularly infuriated Virginians and set off a pamphlet war in the colony. Two of Virginia's leading planter oligarchs, Colonel Richard Bland, Jr. and Colonel Landon Carter, both burghesses and both Anglicans, attacked Sherlock and became involved in a series of exchanges with John Camm. The Bland family was intermarried with such eminent planter families as the Randolphs, and the Carters with the Randolphs, Byrds, and Harrisons. Bland's pamphlet, *A Letter to the Clergy* (1760), was notable for a sardonic statement on the royal prerogative: "Like the King of Babylon's decree, it may, for aught I know, almost force the people of the plantations to fall down and worship any image it shall please to set up. . . ." Moreover, "as *salus populi est suprema lex* . . . every consideration must give place to it, and even these [royal] instructions may be deviated from with impunity. . . ."

But the major threat lay in the court suits of the Reverend Mr. Camm and four of his fellow ministers. For their victory would mean that the Twopenny Act had been void from the start, and that the government would have to reimburse the ministers. The slow processes of the courts kept the whole issue alive and festering. The first case to be decided was that of Reverend Alexander White of King William County. White's case was turned over *in toto* in the fall of 1762 to the jury, which naturally found for Virginia. In the case of the Reverend Thomas Warrington, decided soon afterward, the Elizabeth City County Court, headed by George Wythe, sustained the original validity of the Twopenny Act. Furthermore, it also found for the defendant.

The third case to emerge was that of the Reverend James Maury of Louisa County, and was decided in Hanover County Court. On November 5, 1763, Judge John Henry decreed that the Twopenny Act had been null and void from the start. The only problem remaining was a jury trial fixing the amount

of damages due to Maury. The trial was held in December. To Maury's disgust, the jury included "the vulgar herd," two of which were ardent New Light Presbyterians. Dissenters had obvious reason to be hostile to levying taxes upon themselves for the benefit of an Anglican establishment.

The great significance of the Maury trial was the emergence upon the scene of the brilliant young lawyer Patrick Henry. Henry, son of Judge John Henry, a leading planter of Hanover County, was a nephew of a venerable Anglican minister, the Reverend Patrick Henry, who was one of the ministers filing suit against the colony. Young Patrick had every family incentive to be on the Tory-Anglican side of the dispute. Instead, hired despairingly at the last minute, Henry, presumably in a helpless situation, radicalized the atmosphere and captured the imagination of the colony in a dramatic speech to the jury. In short, Henry escalated the dispute straight up to the Crown. By annulling the good and necessary Twopenny Act, the king had violated the "original compact" between king and people, by which the latter had promised obedience in return for royal protection of their rights. Therefore, concluded Henry inexorably, "A King, by disallowing acts of so salutary a nature, from being the father of his people, degenerated into a tyrant, and forfeits all rights to his subjects' obedience." At that point, the Reverend Mr. Maury recounted that "the more sober part of the audience was struck with horror." Peter Lyons, the leading lawyer of the area and Maury's counsel, cried out at this that Henry "had spoken treason," and murmurs of "treason" arose from the audience. But Henry, unruffled, continued to denounce bitterly the Anglican clergy: "The clergy of Virginia . . . [on] refusing to acquiesce in the law . . . ought to be considered as enemies of the community," and Maury and his colleagues should be not rewarded but stripped of their appointments. In a stirring peroration, Henry warned that unless the jury "were disposed to rivet the chains of bondage on their own necks, he hoped they would not let slip the opportunity which now offered, of making such an example of him [Maury] as might hereafter be a warning to himself and his brethren, not to have the temerity, for the future, to dispute the validity of such laws. . . ."

The jury, swayed and moved, brought in a verdict for token minimum damages: one penny. Judge Henry, moved to tears by his son's great speech, upheld the verdict, and the happy crowd, "wild with delight, . . . seized their champion and bore him on their shoulders in triumph around the court yard."

John Camm's own case came to trial in April 1764. This critical case was decided by the Council of Virginia sitting as the Supreme General Court of the colony. The Council decided against Camm by a vote of five to four.*

*Voting against Camm were: John Blair of Williamsburg, sometime president of the Council; John Taylor; William Byrd III; Robert Burwell; and Pressley Thornton. Voting for Camm were: Richard Corbin; Robert Carter; Peter Randolph, surveyor general of the customs; and Philip Ludwell Lee. William and Thomas Nelson of York County excused themselves from voting as parishioners of the Reverend Mr. Camm.

White, Warrington, and Maury each had appealed their cases to the Council sitting as the Supreme General Court, and the Reverend Mr. Henry's suit was dismissed when the Camm case was decided. All the other cases were now ended, and the Parsons' Cause rested on Camm's further appeal to the Privy Council in England.

Meanwhile, the pamphlet war between Camm, on the one hand, and Bland and Carter, on the other, had renewed in 1763 and 1764. Finally, Richard Bland published in August 1764 his famous *The Colonel Dismounted*, which the historian Lyon G. Tyler has called "the great critical paper of the revolution." Colonel Bland began by asserting that the Virginians properly retain the rights of all Englishmen. He added: "Under an English government all men are born free, are only subject to laws made with their own consent." If then Virginians are freeborn and have the rights of Englishmen, then laws over them can be made only by their *own* representatives—this, Bland declared, applied to internal laws, whereas external laws are to be determined by Parliament. As for the royal prerogative, Bland warned that "submission, even to the supreme Magistrate, is not the whole duty of a citizen . . . : Something is likewise due to the rights of our country, and to the liberties of mankind. To say that a royal instruction to a governor . . . is to have the validity of a law, and must be obeyed without reserve is, at once, to strip us of all the rights and privileges of British subjects, and to put us under the despotic power of a French or Turkish government. . . ."

Thus, the strictures of Bland and Henry emphasized the importance of the Parsons' Cause in expanding the colonial conflict with Britain—from taxation by colonists themselves to legislation by the colonists. As historian Richard Morton puts it, "From the principle of 'no taxation without representation,' Virginians had moved on to no 'legislation without representation.' . . . During this debate, Virginians developed the great constitutional arguments which they were to use effectively a few years later to justify rebellion; and it started Patrick Henry on his eloquent and outspoken defiance of British authority in America."*

Nullifying the Twopenny Acts by the Crown irritated the Virginians in many ways; it involved using royal power to annul a law popular in the colony; it attempted to impose suspension clauses to restrict further Virginia legislation; it gave rise to the Parsons' call for rendering such laws initially null and void; it rendered obnoxious to moderate low-church Virginia an influential portion of the Anglican clergy devoted to high-church Tory principles; and it recalled the episcopal schemes of the leaders of the Church of England. Furthermore, the Parsons' Cause polarized Virginian opinion, aligning the Anglican and dissenting laity of Virginia against the reactionary wing of the local Anglican clergy, the English church, and the Crown itself.

* Richard L. Morton, *Colonial Virginia* (Chapel Hill: University of North Carolina Press, 1960), 2:819

The Parsons' Cause now rested on Camm's appeal to the Privy Council. To combat Camm's case, the Virginia Assembly's Committee of Correspondence, in July 1764, prepared argumentation against Camm. The main brief was drawn up by committee member Robert Carter Nicholas of Williamsburg, who had been chief defense lawyer against Camm before the General Court, and by George Wythe of Williamsburg. The case dragged on unresolved until the end of 1766, when the Privy Council dismissed Camm's appeal on a legal technicality. The Parsons' Cause was ended, but even then unclearly and inconclusively. It left a significant legacy of opposition and hostility by Virginians to the Crown.*

*Professor Tate's attempt to depreciate the importance of the Parsons' Cause in the brewing temper of colonial revolution is unconvincing. See Thad W. Tate, "The Coming of the Revolution in Virginia: Britain's Challenge to Virginia's Ruling Class, 1763-1776," *William and Mary Quarterly* (July 1962): 325-33.

Wilkes and Liberty, 1763–1764

In June 1762, John Wilkes, a country squire who was high sheriff of Buckinghamshire and a member of Parliament, set up his weekly newspaper, the *North Briton*, in opposition to the Tory Bute regime in Great Britain. Wilkes took the Newcastle-Whig line in opposition to the harshly expansionist peace terms the British were exacting from the French, especially their insistence on ousting the French completely from the North American continent. At the end of December, the *North Briton* denounced the purge of the Newcastle Whigs from the administration and called for a determined popular opposition to Tory rule. Out of power for the first time in two generations, the disoriented Whigs polarized: the more conservative moved to make their peace with the Tory administration; the younger and more radical members, led by the young Marquis of Rockingham, formed an opposition "club" with the tentative and worried blessing of Newcastle.

On April 11, 1763, Lord Bute was driven from office by the revolt in Parliament against the tax on cider, a revolt joined by Whigs and West Country Tory gentlemen.

With his old enemy Bute ousted from office, John Wilkes felt that his task was done, and he suspended publication of his radically liberal *North Briton*. But the Tory regime continued virtually unchanged, and the king's speech at the opening of Parliament on April 19, 1763, inspired by the new prime minister, George Grenville, goaded Wilkes into publishing a harsh comment in the famous Number 45 of the *North Briton*. The Crown decided to take the opportunity to crack down on the annoying Wilkes as a libeler of the king, and issued a general warrant for the arrest of everyone connected with the publication of the "seditious and treasonable" *North Briton*. In doing so,

the Crown also hoped to discredit the opposition by associating them with a notorious rake and libertine like Wilkes. Wilkes was summarily arrested, along with forty-eight others connected with the publication of his journal, and sent to the Tower. Those most closely implicated in the Crown's decision, aside from Grenville and the king, were the powerful secretaries of state, Lords Egremont and Halifax; Charles Jenkinson, the secretary of the treasury; Jenkinson's counsel, Philip Carteret Webb; and the Crown's law officers, Sir Fletcher Norton and the renegade Whig, Attorney General Charles Yorke.

The Whigs were now placed squarely on the spot by the summary arrest of Wilkes and the suppression of his paper. Wilkes' mentor and patron, Earl Temple, did not hesitate to rush to the aid of his beleaguered friend. But what would Newcastle do? The aging Whig leader was beset by conflicting advice on where he—and hence his party—should go. For on his position in the Wilkes affair rested the choice of whether the Whigs would subsist in moderate and respectable dissent from the administration, or whether they would become a party in radical opposition to the status quo in behalf of liberty. The Whigs were again being polarized by the larger polarization occurring in England as a whole: between the aggressive Tory imperialists in power, and the rising agitation of the people, as expressed in the rebellion against the cider tax, for "Liberty, Property and No Excise!"

The younger and more ardent Whigs pressured Newcastle to declare for Wilkes. These liberals were headed by Newcastle's nephew George Onslow and, particularly, Lord Middleton, another nephew, who, like Temple, declared his intention to visit Wilkes in the Tower. But on the other side, the older and more tired Whigs counseled caution. These were led by Lord Hardwicke, the father of Yorke, who bitterly denounced Wilkes' "audacious . . . libel" as "not only unjustifiable but inexcusable." Hardwicke carefully concealed the secret role that he himself had played in the affair, when he had advised the Crown to proceed with the stamping out of its most ardent opposition. Pitt, of course, remained cool to the Wilkes cause. Newcastle finally was persuaded by his old friends not to plunge into the Wilkes imbroglio.

Wilkes, undaunted, fought on brilliantly, his first success being to win a writ of habeas corpus and a release from the Tower. Wilkes carried on his fight on two levels: the legal level, aided by his counsel, Serjeant John Glynn; and the political level, aided by his own appeal at the London trial. At his trial in early May, a cross section of Londoners—gentlemen, shopkeepers, craftsmen—packed the courtroom and first raised the thunderous shout: "Liberty! Liberty! Wilkes forever!" The Wilkite cause had been swiftly adopted by the people of London. In his argument at the trial, Wilkes made sure that his London followers got the point: "The liberty of all peers and gentlemen, and, what touches me more sensibly, that of the middling and inferior set of people, who stand most in need of protection, is in my case this day to be finally decided. . . ." Chief Justice Charles Pratt ruled general warrants to be

legal but freed Wilkes on his privilege as a member of Parliament. The crowd (which included George Onslow) on hearing the verdict burst into loud cheers, and Wilkes was borne home by many thousands of Londoners shouting "Whigs forever, no Jacobites" and the new slogan of the radicals, "Wilkes and Liberty!"

John Wilkes followed up his victory by a direct challenge to the Crown. After his arrest, his house had been ransacked for evidence, and Wilkes now boldly and heroically called upon Lords Egremont and Halifax to return his "stolen" papers. Receiving the expected angry reply, Wilkes now magnificently brought suit against Halifax, Egremont, and Undersecretary of State Robert Wood for theft, and against Webb for perjury. With widespread support in the press, and numerous bonfires and rejoicings among the people at every Wilkite victory, Wilkes and the printers associated with the *North Briton* won numerous damage suits against Wood and other government officials during the remainder of 1763. The sympathetic juries took care to award heavy damages to the Wilkes forces.

But the big question to be decided was the legality of general warrants. The Crown case rested on precedent; for nearly a hundred years it had issued similar general warrants against persons suspected of "seditious libel" against the government. Until Wilkes, their validity had not been challenged. Hardwicke and Newcastle regarded such warrants as perfectly legal. But Chief Justice Pratt was now increasingly taking the position that both general and specific warrants for seditious libel were illegal. The Whig-oriented city councils of London, Dublin, and Exeter voted their gratitude to Pratt for his new stand. In the end, Wilkes won his point and a significant victory for individual liberty; by 1765, Pratt was able to win over the bench and to rule such general warrants null and void.

As Wilkes piled up victories in the courts during 1763, he became the idol of the London populace. He was mobbed by cheering throngs, and the merchants and financiers of the City expressed ardent support for his cause. From the City of London to Surrey County and to English sailors at port, "Wilkes and Liberty" was the common cry.

In a short time John Wilkes had sparked a libertarian mass movement in England; the possibilities for the movement and for Wilkes himself were limitless. But Wilkes, besides a leader, was a man of personal irresponsibility of the kind fatal to the leadership of a great cause. And this flightiness was to lay him low. For as he prepared to bind and reprint the *North Briton*, he also blithely and frivolously decided to print for private circulation an obscene parody of Pope's *Essay on Man*, which had been written a decade before. While Wilkes, in the autumn of 1763, was lightheartedly visiting in Paris, Philip C. Webb bribed Wilkes' printer and fellow victim of the general warrant, Michael Curry, to turn over to him the proofs of the obscene *Essay on Woman*. The Crown now eagerly prepared to proceed against Wilkes for

obscenity and blasphemy, and at the same time to split and neutralize the Wilkite forces, especially the respectables who were sure to place aesthetics and propriety above the great principles of liberty. Ironically, the leading role in the prosecution was played by the Earl of Sandwich (successor to the deceased Egremont), who until recently had participated with Wilkes in the frequent orgies of a notorious and exclusive club, "The Monks of Saint Francis." In mid-November, Sandwich, with enthusiasm, read the *Essay on Woman* aloud to the scandalized House of Lords. All the shocked respectables seized the opportunity to abandon a cause to which their devotion was at best questionable, and took turns in denouncing the harried Wilkes. Pitt's denunciation was typical: the *North Briton* series was "unmanly and detestable" and Wilkes "did not deserve to be ranked among the human species." Wilkes, in short, was the "blasphemer of his God and the libeler of his King."

As the Crown had hoped, the irrelevant *Essay on Woman* was used to turn opinion against and to condemn Number 45 of the *North Briton* and to vanquish the Wilkite movement. Frederick Lord North of the Treasury led the attack for the government in the House of Lords, charging the *North Briton* with being false, seditious, insulting to royalty, and intending to excite the people to insurrection against the government. Wilkes objected only to the charge of falsehood. Thirty-five noble lords managed to hold their ground to vote for him. They included Temple, and the Whigs Devonshire, Grafton, and Portland. Pitt's man Lord Shelburne naturally voted to condemn John Wilkes. The House of Commons condemned Number 45 as "false, scandalous, and seditious libel" by a vote of 273 to 111, and Parliament ordered it burnt by the common hangman.

The middle- and lower-class supporters of Wilkes, however, were not as easily swayed from principle by irrelevant aesthetics. At the appointed time of the burning on December 3, a large crowd of over five hundred Londoners gathered, pelted the sheriffs with wood, attacked their coaches (wounding the high sheriff), and rescued the *North Briton* from the bonfire. Instead, the mob burned a boot and a petticoat in the bonfire, items symbolizing the hated Lord Bute and the king's mother, who had been a long-time friend of Bute. The Common Council of the City of London demonstrated its solidarity with Wilkes by pointedly refusing to thank the sheriffs for their part in the proceedings. And when the king went to the theater, instead of the customary applause there arose a general shout of "Wilkes and Liberty!" It was in the same month that Wilkes was awarded one thousand pounds damages from the Crown by a London jury—to the cheers of great London crowds and shouts of "Wilkes and Liberty!"

Probably Wilkes could still have remained and forged a successful libertarian mass movement. But wounded in a political duel, deliberately provoked by an enemy in Parliament, and knowing that Parliament was about to expel

him, Wilkes, at the end of December, again showed his irresponsibility by departing the country for France. With Wilkes gone, his enemies could now proceed at will. In January he was expelled from Parliament; in February he was found guilty of blasphemy and seditious libel by a grand jury in printing the essay and reprinting the *North Briton*; and on November 1, 1764, while still in France, he was declared an outlaw. And with Wilkes gone, the great Wilkite movement in England necessarily collapsed, at least for the time being. Many Wilkites were dismissed from public office, including the Whigs Colonel Isaac Barré and General Henry Conway. But Wilkes and his cause still remained high in the hearts of the people. When the liberal Whig Edmund Burke was elected to Parliament two years later, the people toasted "Burke and Wilkes" and "Wilkes and Liberty." And though Wilkes himself was gone, the people could and did take revenge on his tormentors: Sandwich was generally derided; the informer Michael Curry was scorned as a renegade and blacklisted by all the master printers; and Philip Webb lost his post at the Treasury in mid-1765 as a direct result of his ill fame in the persecution of John Wilkes.

The sudden flowering of the Wilkite movement had a profound influence on the accumulating tensions between Britain and the American colonies. There were many reasons for this. For one thing, the bursting forth of the Liberty and Property agitation against the cider tax, merging into the Wilkes and Liberty movement, articulated the grievances of the colonies—against taxation and against invasions of liberty. In short, the Whig ideals of liberty and property were under attack for citizens in England, as well as in the colonies—and under attack by the same imperial Tory government. In fact, the same persons—the Grenvilles, the Halifaxes, the Jenkinsons, etc.—were reviled as despotic at home as well as abroad. In brief, the Tory oligarchy was busy aggrandizing the royal prerogative against the liberty and property of the people at home and abroad. In these circumstances, it is not surprising that the Americans should eagerly follow and be inspired by the Whigs and radicals of England. Second, the theorists most cherished by the Americans (Locke, Algernon Sidney, John Trenchard, Thomas Gordon, the Commonwealthmen) were precisely the patron saints of radical Whiggism and had been for a century. Third, the radical Whigs reciprocated American interests and staunchly championed American liberties in English politics. And fourth, the particular tactics, especially the spirited mob actions by the English of London and of the West Country, also provided inspiration to Americans of what direct *mass* action could accomplish, above and beyond mere legalistic petitioning of Parliament or the Crown. Fuse these current examples of revolutionary mass action in England with those of the great colonial revolutions against English tyranny in the middle and late seventeenth century, and an explosive mixture was at hand. In short, what the Marxists call the "objective conditions" and the "subjective conditions" for any American revolution were

now virtually imminent. The “objective conditions” were a crescendo of despotic actions by Great Britain striking hammer blows against “constitutional,” economic, and individual rights and liberties of Americans. The “subjective conditions” were nurtured by their own revolutionary traditions, by the libertarian ideals common to the English Whigs and themselves, by the inspiring example of the libertarian Whig rebellion in the home country, and by an increasing willingness of the American people to embark on mass civil disobedience, and on even more violent forms of revolutionary overthrow of tyrannical British rule.

PART IV

Edge of Revolution:
The Stamp Act Crisis

19

Passage of the Stamp Act

Upon introducing the American Revenue Act in Parliament in March 1764, George Grenville strongly hinted that a stamp tax on the colonies might become necessary. He asked for postponement of any such tax for a year, but still induced Parliament to resolve that it "may be proper" to levy the tax. By doing this, Grenville carefully paved the way for a stamp tax the following year, prepared the colonies for the severe blow, and put Parliament on record of its constitutional right to levy such a tax. In this way, he shrewdly brought Parliament's strong sense of its own unchecked prerogatives into play while presumably allowing time to soften the blow for the colonies.

Grenville tried to cover his tracks and assume a mask of benevolence by hinting to, but never officially informing, the Americans that he was willing to listen to alternative modes for the colonists to raise the money themselves. But preparations for a stamp tax proceeded apace. We have already seen the leading role of Henry McCulloh in drafting a proposed stamp act in late 1763, and now Grenville assigned Thomas Whately, secretary of the treasury, the task of drawing up the bill. In this task, Whately was aided by McCulloh. Too, Grenville was particularly enchanted with the idea of a stamp tax; it would be uniform throughout the colonies, affecting not only merchants in seaport towns but farmers as well. Moreover, it would be in a sense self-executing, since instead of search and seizure for contraband goods, every document and paper would require a specially stamped paper the citizen would have to buy himself. As early as August 1764, the Earl of Halifax, the powerful secretary of state for the Southern Department, sent a circular letter to all the colonial governors announcing the parliamentary resolution for a potential stamp tax, and asking for a list of instrumentalities and transactions that

might require a stamp. On the basis of the replies, Whately prepared a detailed list of stamp duties, and the list was approved by the Treasury Board in mid-December. The die for a stamp tax had been cast. Most of the proposed rates were lower than those of the English stamp tax, since the rates could later be raised after the Americans had become accustomed to the tax. But the taxes on entry into college and to the bar were far higher than in England (the taxes for matriculation and college degrees were set at two pounds in America, but two shillings in England; for entry to the bar, ten pounds in America and six pounds in England). Whately's reason for setting such high rates in America was brutally frank: "It would be better indeed if they were raised . . . considerably in order to keep mean persons out of those situations in life which they disgrace."

While these preparations were secretly under way, the colonies did their best to explore Grenville's hint that he would forgo a stamp tax if the colonists were willing to raise an equivalent sum themselves. But when Grenville met with the colonial agents in mid-May 1764, he pushed aside the crucial question of how much he wanted the colonies to pay to England. Dismissing the possibility of self-taxation, he proposed instead that they simply give their advance approval to the stamp tax. So much for the sincerity of the Grenville offer! When Israel Mauduit, representing Massachusetts, gently asked how the colonies could possibly give advance approval to a bill they knew virtually nothing about, Grenville answered that the details were unimportant since the bill was to follow the model of the stamp tax in England. It was clear that Grenville was interested only in securing an advance blank check from the colonies, and not in soliciting any colonial criticism of his plan.

Yet the bemused colonial agents could not bring themselves to face the iniquity of George Grenville, and they clung to the hope that his hinted offer had been genuine. The Boston members of the Massachusetts Assembly asked Governor Bernard for a special session to forestall an English stamp tax by imposing one themselves. Bernard realized that no such alternative tax could be enacted until the Crown decided how much it wanted the colonies to pay—a disclosure it kept refusing to make. In fact, many of the colonies, including Franklin-Galloway-dominated Pennsylvania, signified a willingness to tax themselves any sum that might be requested. But the Crown, of course, never bothered to make such a request. Grenville's state of mind at this point has been acutely summed up by the Morgans:

It is evident . . . that Grenville was determined upon a stamp tax. Though he was willing to make magnanimous gestures, he had no intention of allowing the colonies to prevent passage of his measure. . . . They would not thwart him by levying a substitute tax themselves; by withholding the necessary information he made sure of that. Nor would he be troubled by the objections: thanks to his foresighted resolution he could safely predict Parliament's unsympathetic reaction here. Grenville must have felt com-

fortably satisfied with all his maneuvers. He made it useless for the colonies to attempt any action to avert the tax, and yet he had carried out his interview so smoothly, and expressed his affection for the colonies so convincingly, that the agents did not perceive . . . the hopelessness of their efforts.*

In addition to a few pathetic efforts to appease Grenville by offering to tax themselves, many colonies sent protests against any projected stamp tax along with their reactions to the Sugar Act. The Connecticut resolution of May–June 1764, selecting a committee of protest, singled out a stamp tax as the gravest threat on the horizon. The South Carolina House's instruction of protest, in August, against the American Revenue Act singled out a stamp tax for special hostility. And the Rhode Island legislature's protest of November was confined to "stamp duties and other internal taxes."

Colonial protests, general and specific, against a stamp tax came not only from official bodies but from private sources as well. Jared Ingersoll, an influential Tory lawyer from Connecticut and one of that province's agents to England, warned Whately in the summer of 1764 that the people were "filled with the most dreadful apprehension" over any stamp tax. Ingersoll warned of the great difficulty that would be met in collecting a tax that was "in the opinion of most of the people contrary to the foundation principles of their natural and constitutional rights and liberties." Even some of the wealthiest citizens, he added, threatened to emigrate in the event of such a tax. The other colonial agents joined in the advance agitation, but the protests only succeeded in hardening the Crown's determination to put the annoying colonies in their supposedly appointed place. The agitation also made it easier to appeal to Parliament's sensitivity to its own power and right to impose such a tax.

By early 1765 the year of grace was over, the colonists had presumably had time to absorb the shock, and the Crown was set to ram the hated stamp tax down the throats of the colonies. A last-minute attempt to head off the stamp bill occurred on February 2, at a conference between four official and unofficial colonial agents and George Grenville. The four agents—Charles Garth, MP, agent for South Carolina; Richard Jackson, now agent of Connecticut, Pennsylvania, and Massachusetts; Benjamin Franklin; and Ingersoll—made a final try at appeasement by offering a self-imposed tax by the colonies. Jackson voiced a common and perceptive colonial fear that the Crown would be able to use colonial funds to support its armed forces and the royal governors in America, and thus free the governors from the Assembly control so precious to the colonies. Grenville replied with the same hocus-pocus and double-talk of the year before, now revealed as patently insincere.

But Benjamin Franklin proved indomitable in his determination to toady

*Edmund S. and Helen M. Morgan, *The Stamp Act Crisis*, rev. ed. (New York: Collier Books, 1963), pp. 83–84.

to the Crown. Franklin had three alternative plans of his own devising to offer—each of which would have yielded to the principle of English taxation of the colonies, and each of which would also have aggrandized central imperial control at the expense of American home rule. One was a cute way to make a mockery of the principle of colonial self-taxation: to provide some colonial representation in Parliament. A second was to return to his imperialist and centralizing Albany Plan of 1754, which would have imposed a royally appointed American council to levy taxation on the colonies. A third plan—which Franklin strongly urged—called on Parliament to establish a single loan office in America to issue a common colonial paper currency, part of which would go to Britain as a hidden and therefore less provocative form of taxation on the colonies. In that way, centralization and imperial control in America could make giant strides; paper-money inflation would recover nicely from the hard blow of Parliament's rather restrictive Currency Act of the previous year; and Franklin, if luck went his way, would have a healthy share in the lucrative contract for printing the new paper issues. Indeed, Franklin persuaded his old friend, former governor Thomas Pownall of Massachusetts, to propose the plan and to present it jointly with him to Grenville. Pownall and Franklin also eagerly offered their services in the well-paying task of putting their grandiose scheme into operation.

Thomas Pownall incorporated Franklin's proposal into the second edition of his influential book, *The Administration of the Colonies*, originally published in 1764. In view of Pownall's close collaboration with Franklin, it is instructive to note the views expressed in Pownall's work on imperial-colonial relations. Pownall's crucial objective was to reimpose imperial control by making the governors and other Crown officials independent of the elected assemblies for their salaries. Without such independence, the officials' actions would remain subservient to the people of the colonies. The means to accomplish this end would be the levying of a British tax on the colonies, which tax could then be used to pay the salaries of the Crown officials. In that way, the American colonists themselves would be forced to pay for the subversion of their own rights by the British rulers. A neat trick indeed!*

But Grenville scorned evasions and halfway measures. Sure of victory in Parliament and anxious to smash signs of self-reliance in the colonies, Grenville finally introduced a stamp bill into Parliament on February 6, 1765.

Opposition to the bill in the Commons was mobilized by the hard-core Whigs. The Whigs did their best, but were demoralized by the recent death of their leader, the Duke of Devonshire, and by one of the periodic bouts of insanity of William Pitt, who held the narrow view that Parliament should

*On Pownall's goals and strategy, see Robert E. Brown, *Middle-Class Democracy and the Revolution in Massachusetts, 1691-1780* (Ithaca, N.Y.: Cornell University Press, 1955), pp. 201-3. On Franklin's plotting with Pownall, see Verner W. Crane, *Benjamin Franklin and a Rising People* (Boston: Little, Brown, 1954), p. 109.

not impose *internal* taxation on the colonies. The early opposition was led by Alderman William Beckford, from the City of London, who alone and courageously denied the right of Parliament to tax the colonies. The others were content, doubtless for strategic reasons if no other, to deny the equity and expediency of the tax. The most eloquent and famous speech was delivered by the old Wilkite Colonel Isaac Barré. Barré had advocated no tax, or if a tax, at least the opportunity for the colonies to tax themselves. He had been answered by the renegade Whig Charles Townshend, who loftily and arrogantly asked: "And now will those American children planted by our care, nourished by our indulgence until they are grown to a degree of strength and opulence, and protected by our arms, will they grudge to contribute their mite to relieve us from the heavy . . . burden. . . ?"

Barré now rose and spontaneously gave a superb and prophetic rebuttal, one soon to resound throughout the American colonies:

They planted by *your* care? No! Your oppression planted 'em in America. They fled from your tyranny to a then uncultivated and inhospitable country—where they exposed themselves to almost all the hardships to which human nature is liable . . . actuated by principles of true English liberty, they met all these hardships with pleasure, compared with those they suffered in their own country, from the hands of those who should have been their friends.

They nourished by *your* indulgence? They grew by your neglect of 'em: as soon as you began to care about 'em, that was exercised in sending persons to rule over 'em, in one department and another . . . sent to spy out their liberty, to misrepresent their actions and to prey upon 'em; men whose behavior on many occasions has caused the blood of those sons of liberty to recoil within them. . . .

They protected by *your* arms? They have nobly taken up arms in your defense, have exerted a valour amidst their constant and labourious industry for the defense of a country, whose frontier, while drenched in blood, its interior parts have yielded all its little savings to your emolument. And believe me, remember I this day told you so, that same spirit of freedom which actuated that people at first, will accompany them still. . . . The people I believe are as truly loyal as any subjects the King has, but a people jealous of their liberties and who will vindicate them, if ever they should be violated—but the subject is too delicate and I will say no more.

Beckford and Barré moved to block consideration of the bill, but were defeated by a vote of 245–49. The bill itself came to debate in mid-February, as several Whigs tried desperately to present petitions against the stamp tax. Rose Fuller, a West Indies merchant, presented a petition of London merchants reflecting their alarm at drastic action that might be taken by their American debtors; Charles Garth, agent for South Carolina, worked up a petition that he induced a few South Carolinians to sign; Richard Jackson pre-

sented a Connecticut petition, but Parliament refused to hear any of them on the ground that the petitions questioned Parliament's authority. No one dared to introduce the New York petition, which was deemed "dangerous" and "inflammatory"; but the petition of Virginia's agent was submitted by a leading Whig, Sir William Meredith. Virginia's right to petition was defended by General Henry Seymour Conway, a Wilkite and the Whig leader in Commons, who had been one of the main Pelham innocents "massacred" at the end of 1762. Conway was the brother of the influential Lord Hertford and related to the Walpole family. Conway recalled that the colonies had been asked by Grenville to submit their proposals, and then he proceeded to deny the right of Parliament to tax the colonies at all. But Parliament, led by the renegade Whig Charles Yorke, rejected the Virginia petition by a large majority.

The rest was mere formality. The stamp bill easily passed Commons on February 27, the House of Lords on March 8, and became the law of the land on November 1.

The Stamp Act imposed a comprehensive schedule of taxes on all manner of colonial legal and commercial documents and transactions. These included court actions, wills, contracts, licenses, leases, deeds and land grants, mortgages, insurance policies, ship clearings from ports, pamphlets, newspapers, dice, and playing cards. The highest tax was ten pounds for a license to practice law. Also extremely high was the tax of two shillings apiece for all newspaper advertisements—often amounting to a huge 200 percent tax. In addition, a steep tax of one-half penny was levied on each copy of the newspaper itself. All payments had to be made in English sterling or its equivalent, valued at the very high rate of five shillings sixpence per ounce of silver.

Almost every transaction of the colonies requiring the use of paper now had to carry an official treasury stamp. Or rather, all transactions must be conducted on officially stamped paper, which had to be purchased by the user from officially appointed distributors selected by the Crown's Board of Stamp Commissioners. The corollary effect of this was to give the board a monopoly of the sale of all paper in the colonies.

The Stamp Act thus had a devastating impact on virtually the entire economic and social life of the colony; in short, on nearly everyone. No tax could have been better calculated to inflame nearly *everyone* in the colonies regardless of location or social position. The particularly heavy taxes on the legal and the newspaper professions, as well as the taxes on tavern licenses, were certain to mobilize the intense opposition of the most articulate opinion-molding groups in the colonies. Even Benjamin Franklin was alarmed, being sure that the new taxes would destroy half the circulation and advertising of the American newspapers. There were other ominous provisions in the act. For one thing, no newspaper or pamphlet could be published without bearing the name of the printer or author, obviously in order to intimidate critics of gov-

ernment by forcing them to publicize their names. In another area, the Stamp Act imposed taxes on documents in ecclesiastical courts. The specter of an ecclesiastical court presided over by an Anglican bishop was thus conjured up to arouse the colonies.

The penalties were severe. Unstamped evidence was inadmissible in any court. Violations could be tried in the colonial admiralty courts without trial by jury—and especially subject to prosecution were officials or lawyers not using stamps, and any sales of unstamped pamphlets or newspapers. In contrast, government officials sued for enforcing the Stamp Act could automatically collect triple damages from their victims! The vice admiralty courts, hitherto largely the concern of merchants, were now hated by all groups in America. Whereas the Navigation and Sugar acts could conceivably if tortuously be interpreted as dealing with the sea and therefore relating to admiralty courts, the stamp tax obviously could not. Thus, constitutional and economic questions, violations of political (and perhaps religious) rights, and economic prosperity, all merged in the Stamp Act into one comprehensive and massive assault on the liberty, property, and well-being of the colonists in America. Great Britain had smashed at America with a mailed fist. The die was cast. The colonists were faced with a fateful choice: abject submission or open resistance.

20

Initial Reaction to the Stamp Act

The time for mere protest had passed. The colonists were faced with a hard choice among a few stark alternatives. They could meekly submit and pay the stamp tax; but this, it soon developed, few Americans were prepared to do. Or, they could refuse to pay; but such refusal in turn could take two sharply contrasting paths. The conservative path was to keep within the law by simply ceasing to transact any business involving paper documents. But such a reaction, while "moderate" in the sense of remaining within the law, could only ruin the colony by bringing all trade and virtually all economic life to a halt. The only *practical* path was the radical one of outright defiance: to continue to carry on business, legal, and social life while ignoring the stamp law. Such a course was in effect mass civil disobedience; and civil disobedience to the broad scope of the stamp tax was tantamount to—revolution.

The colonies had some precious months before the law was to go into effect—time to work out their tactics and strategy, time to plan their reactions to the tax itself. The Stamp Act was passed in early March and received the inevitable signature of the king near the end of the month. The news reached America in April. The colonists had less than seven months to decide what to do.

All the conditions now existed in America for precipitating a revolutionary-crisis situation; in the midst of the rapidly accumulating, vast tinderbox of constitutional, economic, political, and even religious grievances, nothing could have been better calculated than a stamp tax to unify the bulk of the colonists against the British government and to spur the intense opposition of the opinion-molding groups in society. But now that the culminating blow had been struck, the final ingredient tossed in, one condition alone was still lacking: articulate leadership. This emphatically did *not* mean that leaders

were needed to *create* a revolutionary temper in the minds of the people. Contrary to the absurd conspiracy view of revolution, this is not the way that revolutions are or ever can be made. Ultimately, revolutions are mass phenomena, and cannot succeed without the support—indeed the active and enthusiastic support—of the great majority of the population. True, an existing government can indefinitely peg along in command of only the “support” of the passive resignation of the majority of its subjects. But the existing government *is already* in command of the power apparatus in society. In contrast, a revolution, an upheaval *against* the wielders of power, must command the active support of the great majority. Otherwise it will not even make a respectable showing, much less take and keep the reins of government. But the masses will not move, will not erupt, if they lack aggressive leaders to articulate their grievances and to point the path for them to follow. The leaders supply the necessary theoretical justification and analysis of the revolution’s short- and long-term goals. Unaided by leaders, the masses tend to accept each act of tyranny, not out of willing agreement, but from failure to realize that successful opposition can be mounted against the status quo. The articulation by the leaders is the final necessary spark that ignites the tinderbox of revolution.

At first, the general reaction was, naturally enough, a kind of numb despair and grudging resignation. In the beginning the colonists simply assumed that they would have to pay the stamp tax; open defiance seemed hopeless and out of the question. Only one or two scattered incidents broke the general colonial reaction of stunned silence. Many newspaper printers sullenly sent each other wooden shoes “as a proper badge of the slavery the Stamp Act must reduce all printers in America to.” The first thing to break the “silent consternation” was an article in the liberal *Providence Gazette* of May 11 under the pen name of “A Plain Yeoman.” The *Gazette* was the organ of retiring Governor Stephen Hopkins and it has indeed been intimated that the Plain Yeoman was none other than Hopkins himself.

The Plain Yeoman carried the theory of the protesting Americans to a far higher pitch, which was to resound and take hold in later years. After denouncing the parliamentary invasion of the American right to be free of English taxation, and castigating parliamentary refusal to hear American protests, the author went straight to the British charge that Americans were seeking independence. Here Plain Yeoman expounded the new theory that the colonies were indeed not dependents of Britain or the British Parliament; instead, America and Britain were only equal common subjects of the king. “I know of no *dependence* in relation, only that we are all the common subjects of the same King. . . .” The implication (though not yet openly asserted) was that Parliament had no right to impose any *legislation*—not merely taxation—upon the colonies.* The independence of not being taxed without consent

*A previous statement of this position appeared—also in the *Providence Gazette*—during the Sugar Act protest of the preceding August.

was to be maintained as part of the "birthright of all the King's free subjects without distinction."

The Plain Yeoman also leveled a brilliant blast against the argument of the Tories that various precedents already existed for parliamentary taxation of the colonists. He attacked the common legal notion that a precedent clearly establishes a point "whether the *precedent* be footed on justice and reason or on whim and arbitrariness." And here he quoted, as Hopkins was wont to quote, from the witty and perceptive *aperçus* of Dean Jonathan Swift: "It is a maxim among these men [lawyers], that whatever has been done before, may legally be done again, and therefore they take special care to record all the decisions formerly made, even those which have, through ignorance or corruption, contradicted the rules of common justice, and the general reason of mankind. These, under the name of *precedents*, they produce as authorities, and thereby endeavour to justify the most iniquitous opinions. . . ."

The ringing article of the Plain Yeoman drew some attention in the colonies and was reprinted in such papers as the *Maryland Gazette*, but it remained for a brief time an isolated expression. Meanwhile, a leader was about to arise in Virginia who was destined to blow the whole explosive situation apart.

21

Patrick Henry Intervenes

Like other colonists, Virginians had no notion at first of how to meet the new situation; and by assuming that they simply *must*, they began to bear the new burdens with pacific resignation. The protests of the previous year had been unsuccessful; what was there now to do but submit? The powerful House of Burgesses, the elected lower house of the legislature, felt it could do nothing, and one by one the burgesses drifted back home as the House occupied itself with minor business. By the third week in May, only about a third of the burgesses remained, and a merchant of Falmouth, Virginia, reported that talk about the Stamp Act had "subsided much." Into this sleepy situation stepped a new member just admitted to the House, the brilliant young lawyer and orator Patrick Henry, Virginia's champion against the Anglican establishment in the Parsons' Cause battle. Admitted to the House on May 20, Henry quickly mobilized the young members against the naturally conservative and staid elder statesmen of Virginia's planter oligarchy.

In nine short days, Henry drafted and introduced five resolutions of vigorous protest against the Stamp Act. A furious debate ensued over the resolutions. The conservative and timid ruling planter oligarchy of the burgesses—led by Speaker John Robinson, former Speaker Peyton Randolph, Judge John Randolph, Judge Wythe, Colonel Richard Bland, Edmund Pendleton, and Robert Carter Nicholas, furiously opposed the resolutions. Against them was arrayed a lesser group of landowners, to be sure, whose main distinction was relative youth and daring. Leading the Henry group were young Robert Munford and John Fleming. It was not that the older leadership in any sense favored the Stamp Act; it had led the protest of the year before and would not be particularly opposed to the revolutionary movement in later years. If

there was any "class struggle" involved here, it was largely a struggle of the "classes" of youth versus age, of daring versus a natural conservatism.

The highlight of the debates was a fiery speech by Patrick Henry, who impressed young Thomas Jefferson as appearing "to me to speak as Homer wrote." Henry cited the principles of English liberty and self-taxation as the fortress of freedom. Finally, Henry darkly and courageously laid down this famous warning: "Tarquin and Caesar each had his Brutus, Charles the First his Cromwell," and, as for George III, "he did not doubt that some good American would stand up, in favor of his country." Speaker Robinson indignantly exploded that this was "treason," as indeed it was to anyone who deemed the British king a proper sovereign thus "betrayed." Robinson also denounced the other members of the House for not stopping Henry's treasonable remarks earlier. Henry, seeing that tactically he had gone too far, apologized, protested his loyalty to the king, and attributed the error to his passionate interest in "his country's dying liberty." When other burgesses then moved to accept Henry's apology, Robinson finally dropped his clear threat to proceed against the young representative.

Although the five resolutions—the "Virginia Resolves"—were voted upon separately by the burgesses, they actually formed a coherent and related whole. The first two of Henry's resolutions merely asserted the rights of every Virginian to the time-honored liberties and privileges of Britons. The third resolution declared the vital principle of self-taxation by the colonists as essential to the British constitution. The fourth resolution pressed the colony's right to be governed solely by laws passed by their own consent and approved by the royal governor; in short, it denied the right of Great Britain to govern the colony's internal matters. All of these resolves were passed by the House of Burgesses on May 30 by a vote of 20 to 17. The fifth resolution was more sharply edged but was actually implied in the third. It resolved that therefore the "General Assembly of this colony have the *only and sole exclusive* right and power to lay taxes and impositions upon the inhabitants of this colony" (emphasis added). Any attempt to place that power elsewhere "has a manifest tendency to destroy British as well as American freedom. A bitter debate raged around this final, action resolution, which passed by the narrowest of margins, 20 to 19, with Speaker Robinson anxiously ready to vote nay should the vote be a tie.

The Henry radicals then offered two culminating resolutions. The sixth flatly declared that Virginians were therefore not obliged to obey laws not enacted by their Assembly—an evident call for civil disobedience to the stamp tax—whereas the seventh went so far as to label anyone maintaining the right of Parliament to tax the colonies a traitor and an enemy to the colony of Virginia. If the far milder fifth resolve could pass by only one vote, it is no surprise that these two were handily defeated.

At this point, Patrick Henry, thinking that the five resolves were safely

passed, made the grave tactical error of leaving for home. Taking advantage of Henry's departure, the old guard, on the next and final day of the session, moved to rescind all of the resolves and did manage to expunge the vital fifth resolution.

The conservatives had been able to defeat the sixth and seventh resolves and to expunge the fifth from the record of the House of Burgesses, but they were not able to keep any of them from the minds and hearts of the American people. News of the seven Virginia Resolves spread like wildfire through the colonies, providing the needed spark that aroused them from their stolid resignation to active resistance to the hated Stamp Act. By mid-June copies of the Resolves were being passed around in Philadelphia. From there they were sent to friends in Newport, and on June 24 the *Newport Mercury* became the first newspaper to publish these rousing and exciting resolutions. The other colonial papers quickly picked up the news from the *Mercury* and reprinted the Resolves.

Virginia's stirring example to the other colonies was not just the mild first four resolutions, but the entire seven, including the dramatic and fiery last three. The colonists, taking their cue from the *Newport Mercury* and all the other newspaper accounts, were under the firm impression that *all seven* resolutions had been passed by the House of Burgesses. This misunderstanding came about by a supreme irony: Joseph Royle, the reactionary editor of Virginia's only newspaper, the *Virginia Gazette*, was so offended by even the mild first four resolutions that he refused to print any of them. As a result, the papers in the other colonies could only receive their information unofficially, and Henry and his radicals, in a masterstroke of tactics, took care to feed all seven resolutions to the press as if they all had passed the House. As the Morgans have phrased it: "Henry and his friends, having failed to secure passage of their most radical items in the House of Burgesses, were able to get them passed unanimously in the newspapers. . . ."*

The Virginia Resolves, aided by the Henrician codicils, were important less for themselves—that is, as protests by a colonial assembly—than as a clarion call to the American people. For in the final analysis, the colonial assemblies, protest all they might, could do nothing to defeat the stamp tax. And this would have been true even if the assemblies had taken the unlikely step of moving not to enforce the tax and moving to withhold the salaries of the judges who did so. For the enforcement officials were mostly royal officials, beyond the power of assemblies; especially out of reach were admiralty judges and customs officers. To be defeated now, the stamp tax would therefore have to be *nullified* by the direct action of the American people—by mass civil disobedience. The tax, in short, could not be actually resisted in the assemblies; it could only be resisted and nullified *in the streets*. Assembly resolves would be important now only as a call to revolutionary mass action.

*Edmund S. and Helen M. Morgan, *The Stamp Act Crisis*, p. 132.

22

Sam Adams Rallies Boston

The vital question, then, was what the reaction of the *people* of the several colonies would be to Patrick Henry's trumpet call. A preponderance of the people were clearly delighted. Most of the colonists found out about the Virginia Resolves by early July. By mid-August, Governor Francis Bernard of Massachusetts was warning the Crown that "two or three months ago I thought that this people would submit to the Stamp Act without actual opposition. . . . But the publishing of the Virginia Resolves proved an alarm bell to the disaffected." And the British general Thomas Gage, stationed in New York, called the Resolves, "The signal for a general outcry over the Continent."

But if most of the people were awakened and stirred by Henry and Virginia, who would lead them? For the masses cannot act without some form of organization and articulate leadership.

No help, of course, could be expected from the arch Tory and opportunist, Benjamin Franklin. Franklin, predictably, adjusted meekly and easily to the Stamp Act: "We might as well have hindered the sun setting . . . let us make as good a night of it as we can." Franklin proceeded to make a good night of it indeed. Having happily filled the colonial post office with his relatives, he advised his fellow colonial agents to get themselves or their friends appointed as stamp masters, the Crown officers in charge of distributing the stamps in the colonies. Acting on this advice, Jared Ingersoll, Connecticut's agent in London, accepted the post of Connecticut stamp master, and Franklin was able to get his henchman, John Hughes, appointed stamp master in Pennsylvania. Franklin's reaction, on reading the Virginia Resolves, is therefore not at all surprising. Denouncing the rashness of the Virginia leaders and the

madness of the populace, Franklin advised Hughes to act as a faithful and loyal servitor of the Crown in enforcing the stamp tax. And Franklin's friend and ally in dominating Pennsylvania politics, Joseph Galloway, wrote many newspaper articles in favor of the Stamp Act.

If no help was to be expected from such Tories as Franklin in rallying popular opposition to the Stamp Act, what of the popular liberal leaders? A grave problem was the defection of erstwhile and future radical-liberal leaders. Thus, stunned and temporarily alienated by the bold courage of Henry's Resolves, Alexander McDougall and John Morin Scott of New York, generally radical leaders of that colony, pronounced the Resolves to be treasonable.

But the major blow to the libertarian cause came in Massachusetts. There James Otis, Jr., long-time leader of the Boston liberals and sparkplug of American protest, began to defect from the liberal cause. Otis showed increasing signs of deviousness and instability, and perhaps of the insanity that was to plague him in later years. It is true that as early as June 8, when Massachusetts received word of the Stamp Act, Otis proposed that the Massachusetts Assembly send a circular letter to the other colonial assemblies inviting them to a general congress to be held in New York in October to ask Britain for relief. But, on the other hand, in May Governor Bernard had happily reported to the Crown that Otis "now repents in sackcloth and ashes" for writing *The Rights of the Colonies*, and that a new pamphlet of Otis's humbly begs Britain's pardon for his former stand.

Furthermore, Otis's call for a Stamp Act Congress was all well and good; but it would, after all, be another if larger Assembly ineffectually petitioning Parliament for relief. The important thing was the popular reaction to the Virginia Resolves, and here Otis showed his change of heart by denouncing them as treasonable. And while Otis erratically continued to denounce the British in anonymous contributions to the radical *Boston Gazette*, his public statements lauded the power of Parliament and went so far as to ask for British troops to put down the rebellious Americans. If salvation was to come, it would not be from James Otis or from a Stamp Act Congress.

Massachusetts and especially Boston had for years now been the great center of libertarian resistance to the depredations of Great Britain. But now its old spokesman, James Otis, was no longer fit to lead the liberal cause. Oxenbridge Thacher, who had written Massachusetts' original principled protest against the Sugar Act before being watered down by Hutchinson, exclaimed when he heard of the Virginia Resolves, "They are men!" And Thacher or a friend immediately wrote in the *Boston Gazette* a fervent defense of the Resolves against conservative Massachusetts critics:

The people of Virginia have spoke very sensibly, and the frozen politicians [of Massachusetts] . . . say they have spoke treason . . . pray gentlemen, is it treason for the deputies of the people to assert their liberties, or to give them away? . . . We have been told . . . that it is not prudence for us to

assert our rights in plain and manly terms. Nay, we have been told the word RIGHTS must not be once named among us! Cursed prudence of interested designing politicians!

But Oxenbridge Thacher lay on his death bed. Was there then no one to rouse the people, no one to lead the Boston masses into the streets to serve as the spearhead and vanguard of an American revolution against the Stamp Act? Yes, there was one man. If Otis was a dependable radical leader no more and if Thacher lay dying, there was still the magnificent Sam Adams.

Adams saw clearly that the real fight against the stamp tax would have to take place in the streets. He saw that the locus of pressure and unrest must be the appointed royal officials, the enforcers of the Stamp Act; in particular, that popular pressure should focus on the stamp distributors, the royal appointees who were in charge of selling the stamped paper and who were happily preparing to assume their lucrative posts.

In the early summer of 1765, Sam Adams gathered together a group of Bostonians to lead and direct the people of Boston in the streets. The group was called the Loyal Nine. Like the membership of Adams' Caucus Club, which comprised a cross section of the town's occupations from shipyard workers to wealthy merchants, the Loyal Nine was a diverse group. It included two distillers, Thomas Chase and the wealthy John Avery; Benjamin Edes, printer of the *Boston Gazette*, the liberals' party organ; small businessmen—artisans like the braziers Stephen Cleverly and John Smith, the jeweler George Trott; and Henry Bass, a cousin of Adams. The headquarters of the group was Chase's distillery at Hanover Square.

Adams rapidly worked out a remarkably efficient structure for the radical movement. The vulnerable public leaders of the fight—legislators, ministers, and others—were not directly identified with the popular mobs. The effective liaison and direction were maintained through the Loyal Nine led by Adams, even though he was not an official member. The Bostonian populace was unified into an effective force, with the various groups, from wealthy merchants to the bully boys of the taverns, playing complementary roles in the struggle. For the mass base of the popular mobs, Adams was able to utilize the gangs of the North End and of the South End of Boston. Every year on Guy Fawkes Day, or Pope's Day, November 5, Boston's celebration of the defeat of the Catholic Gunpowder Plot of 1605 was traditionally climaxed by a quasi-friendly but violent clash between citizens of the North End and the South End. In time, each section had developed a gang for this purpose and trained its members in paramilitary fashion to a finely honed edge. Every year, also, the quasi-friendly fighting became a bit bloodier. Particularly effective was the South End gang, which had been victorious in the 1764 brouhaha. The gang was headed by the shoemaker Ebenezer Mackintosh, whose South End forces totaled two thousand men.

Adams was able to press Mackintosh and the South End into action as his mass base, and by August 14 the radical liberals, smoothly organized by Adams, were ready to strike. Adams was ready to give the signal for the first mob action against the Stamp Act, a deed that set the pattern and furnished the inspiration not only for further riots against the stamps, but for all the riots down to the American Revolution.

Adams realized that the focus of attack must be the stamp master. On the morning of August 14, a Boston mob, directed by Adams and the Loyal Nine, hung an effigy of Andrew Oliver on a tree—dubbed the Liberty Tree—in Newbury Street. Oliver, a brother-in-law of the Tory lieutenant governor, Thomas Hutchinson, had been appointed stamp distributor in Massachusetts. Alongside Oliver hung in effigy the symbol of the hated Lord Bute—a large boot with an image of the devil crawling out of it.

The affair was a challenge flung at the royal government. Some of the shrewder members of the Council advised Governor Bernard to dismiss the whole episode as ostensibly a silly prank, but Bernard, furious at the hard-hitting attacks in the *Boston Gazette*, decided to accept the challenge. He was also advised to do so by Lieutenant Governor Hutchinson, an able theoretician and the chief beneficiary of the Tory cause in Massachusetts. As chief justice, Hutchinson ordered the sheriff to cut the effigy down, and the Council washed its hands of responsibility by turning the problem over to the sheriff.

There was a considerable slip, however, 'twixt order and execution. The sheriff, to his amazement and dismay, found that the effigy could be cut down only by risking the officers' lives at the hands of the populace.

The effigy was, so to speak, the opening gun of the struggle; the radicals now decided to hammer the point home. By evening, a large crowd had gathered at the Liberty Tree. They cut down the effigy and, bearing it up, began to march in a mock funeral procession. The mob included wealthy merchants, many disguised in the work clothes of a laborer, and was led by Ebenezer Mackintosh at the head of his South Enders. First the mob went to the Council building, where they made their presence felt, and where they shouted the stirring slogan "Liberty, Property and No Stamps!" The slogan was evidently patterned after the "Liberty, Property and No Excise" of the cider tax rebellion in the west of England two years before. After impressing the Council, the mob proceeded to serious business. Andrew Oliver had just finished constructing a building at his dock, and it seemed plausible that from here he would distribute the stamped paper. There, at the Kilby Street dock, the mob quickly razed the menacing building completely to the ground. From there the disciplined crowd moved on to Oliver's home, where they put on an impressive show for that worthy by beheading Oliver's effigy. The graphic lesson did not escape the stamp master's understanding—especially as it was promptly followed by a shower of stones. From there the mob climbed a

nearby hill, and ritualistically stamped Oliver's effigy and burned it in a huge bonfire.

At that point, the more gentlemanly members of the crowd, lacking taste for more violence, quietly went home. Ebenezer Mackintosh was left to do what had to be done next. Mackintosh and the crowd now returned to Oliver's home and smashed into the house, calling loudly for Oliver and threatening to kill him on the spot. Finding that Oliver had fled to the military post on the island of Castle William, the mob did the best it could by destroying the interior of his home.

Governor Bernard ordered the militia to beat the drums to sound an alarm, only to find, to his consternation, that the drummers were all in the mob. Hastily, Bernard, realizing that discretion was the better part of valor, also skipped town to the safety of Castle William.

Thomas Hutchinson, the Tory *ultra*, was made of sterner stuff. He walked with the sheriff to the Oliver home to order the mob to disperse. Seeing them, one of the mob's leaders shouted: "The governor and the sheriff! To your arms, my boys!" A hail of stones fell upon the august officials as they hurried away.

August 14! Here was a day to live in song and story! The first revolutionary blow had been struck by the colonists against the tyranny of the British Grand Design. For many years, August 14 was celebrated throughout America as "the happy day, on which Liberty arose from a long slumber." Or, as Sam Adams thundered: "The people shouted; and their shout was heard to the distant end of this Continent."

The next day, the liberal leaders pressed their advantage, and continued the work that the mob had begun so skillfully. They visited Oliver and informed him that the previous night was just a sample of what he could expect unless he resigned his office immediately. Here, then, was the main point of the mob action: revolutionary pressure on all stamp masters to resign their offices, and thus make impossible the distribution of any stamped paper and hence any enforcement of the stamp tax. Oliver promised to ask the Crown for permission to resign, and meanwhile to take no action to enforce the stamp tax.

This reply satisfied the radical leadership and the Loyal Nine, but the radical masses sensibly wanted to make very sure: to dot the *i*'s and cross the *t*'s. In short, they demanded nothing less than Oliver's immediate resignation. On the evening of the 15th, the mob built another large bonfire and threatened to raze Oliver's house to the ground. The leaders were able to dissuade them, and the rank and file contented themselves with surrounding the house of Thomas Hutchinson. They called for his presence, but in vain. Hutchinson had fled. He knew that this time the mob meant business.

Adams and the Loyal Nine were jubilant. Their mass pressure had forced the stamp master to resign, and his example was a standing warning to anyone with the temerity to take his place. When one Tory declared that *he*

would not have been as spineless as Oliver, the Loyal Nine taught him an instructive lesson by publicly fixing the date when *his* house would be destroyed. The Tory quickly came to his senses and retracted his statement.

The leaders now saw that mass action need not stop with the intimidation of Oliver; that more could be and needed to be done. In particular, they saw that it was necessary to cow not only the stamp master but also the whole clique of Tory officials appointed by the Crown. *They* were the enemy and not simply an isolated stamp distributor. Particularly, the suspicion grew, with good reason, that Thomas Hutchinson had secretly favored the stamp tax, and that he was their most dangerous enemy within Massachusetts.

The leaders also saw the sweep of public opinion on their side; few people criticized the events of the 14th, and the leading Congregational ministers of Massachusetts—liberals all—blessed the mob action and virtually called for more. Especially ardent in favoring resistance to the stamp tax were the Reverend Andrew Eliot, the Reverend Charles Chauncy, the Reverend Samuel Cooper, and, doubly especially, the great libertarian Reverend Jonathan Mayhew. These men were friends of the secular leaders of the people—Adams, Otis, the wealthy Boston merchant John Hancock, the brilliant young lawyer from Braintree, John Adams, etc. Mayhew was particularly ardent in attacking arbitrary power, in battling the Stamp Act, and in championing the right of resistance by the people. He warned menacingly that the Stamp Act could not be enforced in Massachusetts without bloodshed, and he emphasized that there were “sixty thousand fighting men in this colony alone.”

On the night of August 26, the radicals struck again, escalating their revolutionary blows. The mob gathered in full force around a bonfire in King Street, blowing on whistles and horns, and shouting enthusiastically for “Liberty and Property!” Then, revealing striking discipline and coordination, the mob, under the generalship of Ebenezer Mackintosh, split into several sections—each with its assigned tasks. One group went to the home of William Story, deputy register of the admiralty court. Story, suspected of writing reports to England denouncing the Boston merchants, received treatment befitting his actions and status. The mob destroyed his papers, including his public papers that would list the violators of customs regulations, and wrecked his home and office. Another group went after another key enemy, Benjamin Hallowell, the controller of the customs, who had angered the Boston merchants by rigorous enforcement of the trade laws. Hallowell’s house was also wrecked and his papers (containing written records relevant to enforcement of the British regulations) carried away.

Mackintosh now united two sectors of the mob, and marched on to the *pièce de résistance* of the evening: the home of Thomas Hutchinson. Before the 26th, several opportunities had been given to Hutchinson by the liberals to deny his complicity in passing the Stamp Act. But Hutchinson stood on his offended dignity and repeatedly refused to make the denial. Even on the day

of the 26th, Hutchinson was given a final opportunity to deny the charge, but he refused to do so. The people could only interpret the lieutenant governor's lofty silence as assent; so they proceeded to wreck his house with a zeal and thoroughness surpassing their ardent work of the night of August 14.

The attack on the home of Thomas Hutchinson served to polarize the political conflict in Massachusetts. It was one thing to use the mob to put the fear of God into the stamp distributor and the customs collector; no one, after all, could sympathize with these bureaucrats but their own families. But an attack upon Hutchinson was a different story. Hutchinson was the nucleus and the leader of the small but powerful clique of oligarchs who were privileged by the royal government. An attack against him could only be interpreted as an attack upon the clique as a whole. The struggle against Great Britain had now become, as a corollary, a domestic struggle as well. And this was not surprising, since the domestic ruling clique governed as a creature of the Crown.

The government grew emboldened by the protests of the Hutchinson cabal at the treatment to his home, and was fooled by the tactical camouflage of Adams and the Boston Town Meeting in publicly repudiating the riot at Hutchinson's. The Council therefore boldly ordered the arrest of Mackintosh—only to find that Adams, backed by the leading merchants of the city, promptly demanded Mackintosh's immediate and unconditional release. If not, they warned, no one would stand guard in the whole town of Boston, and the customhouse would be pulled to the ground. The disillusioned rulers saw that Adams and the liberals were still fully in control of the town of Boston and of the hearts of its people. Ebenezer Mackintosh was set free and rewarded by the people of Boston with a town office.*

No revolution advances in uniform, straight-line fashion; instead it always proceeds in zigs and zags. Adams and his allies saw clearly that it was now in order to slow down the movement. After all, the point had been beautifully made. Mass action had virtually forced the stamp master to resign, and intimidated any potential successor; it had intimidated the royal officers, Governor Bernard having been forced to flee to Castle William, where he was governor in name only; Mackintosh had been freed, and the whole process had placed *de facto* power in the hands of Adams and his allies. There was at this point no need for violent actions. All that needed to be done was to wait in readiness for the fateful day, November 1, when the Stamp Act would go into effect. A minor crisis occurred at the end of September, when Governor Ber-

*The "class-struggle" view that the Boston riots were lower-class outbursts directed against "the rich" is rebutted by the multiclass nature of the liberal movement. Wealthy merchants backed and even participated in the mob violence, which was directed only against *those particular* men of property engaged in enforcing British policy. The latter, not the "rich" or "the merchants," virtually constituted the ruling oligarchy of the colony. See Brown, *Middle-Class Democracy*, pp. 214ff.

nard received the stamped papers from England and housed them in Castle William. The Loyal Nine threatened to storm the castle and destroy the papers, but the group was mollified when the governor assured it that he had no power whatever to distribute the stamped papers.

Adams spent the intervening weeks constructively: perfecting his organization and strengthening his apparatus. The Loyal Nine expanded its organization into the Sons of Liberty, a name proudly taken from the great speech of Colonel Isaac Barré, which had warmly referred to the Americans by this noble name. The Sons of Liberty consisted of a cross section of the occupations of the town, from poor laborers to wealthy merchants. For its mass base, Adams induced the North End and the South End to channel their rambunctious energies into more constructive deeds, and united them to the Sons. For Guy Fawkes Day 1765, coming at a strategic time for the stamp tax, Adams prepared to hold a "Union Feast" celebrating the newfound unity of the two sections. Mackintosh was given a cadre of 150 militarily trained men to lead his mobs. The Sons of Liberty busied themselves by drawing up a list of Tory oligarchs whose homes might be sacked should the need arise.

Governor Bernard now placed his hopes on the Assembly, convening at the end of September. Remembering the Sugar Act agitation, Bernard believed that the rural farmers would again prove a conservative force. But he found, to his astonishment, that the stamp tax had truly radicalized and unified the whole colony. He wrote home that the rural people seemed even more violent than the annoying Bostonians: "They talk of revolting from Great Britain in the most familiar manner, and declare that . . . the British forces . . . never will subdue the inland." Furthermore, Oxenbridge Thacher had died, and Bernard now found his nemesis Sam Adams in the House as leader of the liberal forces. To Bernard's urging of the General Court to enforce the Stamp Act as the law of the supreme Parliament, the House replied firmly that only the Massachusetts Assembly had the right to tax and to make internal laws for the American colonies.

By mid-October, Governor Bernard was wailing to the Crown that Massachusetts was in a state of outright rebellion: the militia refused to obey his orders; "the real authority of the government is at an end; some of the principal ringleaders in the late riots, walk the streets with impunity; no officers dare attack them; nor Attorney General prosecute them; and no judges sit upon them."

If Patrick Henry had sounded the clarion call for resistance, Sam Adams, the Loyal Nine, and the Sons of Liberty had now blazed the path for action. August 14 raised the standard for mass rebellion against the enforcers of the Stamp Act.

Rhode Island Responds

The question now arose: Would Boston remain isolated and hence fall victim to English might? Would Massachusetts be vulnerable as the only colony to take the issue to the streets and rebel against British power? Or would the bulk of the American colonies follow and press on to victory?

The question was soon answered. As soon as the inspiring news of August 14 was heard, Rhode Island, always libertarian, always indomitable, leaped to follow Boston's example. Rhode Island, enjoying a flourishing and extensive trade, had been spared the burdens of an executive oligarchy chosen by Britain. Its governors were popularly elected and were fully as hostile to British tyranny as the populace. Aside from a few royal appointees, such as the customs collector and naval officers, the wrath of Rhode Islanders was directed against the ultra-Tory Newport Junto, which had petitioned for an end to Rhode Island's charter as a home-rule colony.

Agitation began in earnest on August 24, when William Goddard published a special "extraordinary" issue of the *Providence Gazette*. It was an all-resistance issue. On the masthead were inscribed two mottoes: "Vox Populi, Vox Dei" and "Where the Spirit of the LORD is, there is LIBERTY." Articles filled the issue attacking the British regulations, stamp masters, and Jared Ingersoll (the Connecticut stamp master), and praising the Boston rebels. The issue also reprinted the hard-hitting resolves of the Providence Town Meeting, which denied Parliament's right to tax the colonies, and urged indemnification of all Rhode Island officials refusing to obey the Stamp Act. Moreover, the mob actions in Boston, as well as in New London and Norwich, Connecticut, were described in loving detail. Two days later, the *Newport Mercury* acquainted its readers with the mob actions in Boston and Connecticut.

On August 27, the people of Rhode Island followed in the footsteps of Boston: Massachusetts was no longer isolated. Leading the action were three prominent merchants of Newport: the educated William Ellery, Robert Crook, and Samuel Vernon. On the morning of the 27th, a mob of Newporters marched through the streets carrying three effigies with halters around their necks, and finally hanging them upon the gallows in front of the town courthouse. Guarding the scaffold were the three leading merchants of Newport, carrying clubs. The three marked men hanging in effigy were carefully selected, all members of the Newport Junto: Augustus Johnston, appointed stamp distributor for Rhode Island; Martin Howard, Jr.; and Dr. Thomas Moffat. Their effigies were appropriately and suggestively strung together. Hung with the effigies was a copy of a song beginning with the warning verse:

He who for a Post or Base sordid Pelf,
His Country betrays, makes a Rope for himself.
Of this an Example for you we Bring
In these Infamous Rogues, Who in Effigy Swing.

The three marked men quickly took the hint: Moffat fled town, and Howard and Johnston fled to the safety of the British ship *Cygnets* in the harbor, where they were joined by the hated customs collector John Robinson. For Robinson knew, as he put it, "the disposition of the people towards all King's officers." The crowd then cut down the effigies and burned them in a bonfire.

Nothing more was done that night, and the Tories returned to a supposed calm. But the next day news of the second great Boston riot reached the Newporters, who determined not to lag in the libertarian cause. That evening, a group of men headed by Samuel Crandall buffeted Robinson a bit on the street. When the group was then arrogantly chastised by Martin Howard, he thereby provided the needed spark for provoking the Newporters into direct action. A mob quickly gathered and gave Howard's house the treatment that their Boston confreres had meted out to Hutchinson's.

The mob had tasted action. They proceeded to the houses of their other mortal enemies. Dr. Moffat's house was razed. Each house, in turn, of the British and Tory leaders was visited, and each of the men was eagerly sought by the mob. But all of them had escaped to the *Cygnets*. Augustus Johnston wanted to stand fast, but thought better of it and fled when informed that the crowd would present him with a choice of resigning his post or being lynched on the spot. Johnston's house was visited, and only spared when his friends assured the mob that the absent stamp distributor would resign his office the next day.

The revolutionary upsurge of August 28 proved brilliantly effective. His friends and family threatened as well as himself, Johnston kept his pledge

and resigned his post the next day. Howard and Moffat decided to leave the dust of Newport behind them and sail back to England without even returning to shore.

Thus, by August 29, the people of Newport had succeeded in forcing the stamp distributor to resign and the two leaders of the Newport Junto to leave the colony. But some of the mob now threatened to get out of hand. John Webber, a young Englishman recently arrived in Rhode Island, had actually led the mob the night before, and he now wanted more action. Webber began to insult the very merchants who had induced him to lead the previous night's riot. Apprehensive of potential blind violence by Webber and some of the mob, the other leaders turned Webber over to the *Cygnets* as a kind of sacrificial offering.

This betrayal of their former comrade to the British was a grave tactical as well as moral error by Ellery, Vernon, and others, who were soon to form the Newport Sons of Liberty. Webber's followers among the mob gathered quickly and threatened immediate destruction of the houses of the betrayers if Webber were not released. Faced with the prospect of a dose of their own medicine, Ellery, Vernon, and the others capitulated, and told the naval officers that Webber was not guilty of leading the riots. The triumphant Webber, back ashore, resumed his bravado and continued to threaten destruction of the houses of the Sons of Liberty leaders.

The Sons of Liberty leadership was now thoroughly frightened of a mob commanded by the aimless, hotheaded Webber. They offered bribes to Webber but to no avail. A threat of armed self-defense by the leaders got the mob to disperse that night, but the next day Webber returned to the attack, threatening plunder and destruction. Finally, none other than Augustus Johnston saved the day by courageously seizing Webber and carting him off to jail. The mob surprisingly did not react, and for a while Newport was safe from the wanton destruction threatened by John Webber.

The stamp distributor had resigned, but the hated and inflexibly dictatorial John Robinson still remained, although aboard the *Cygnets*. The morning after the riot, Samuel Crandall sent a message to Robinson offering him something like the old pre-1764 arrangement of annual bribes to the customs officials for allowing the merchants freedom of trade. Crandall also demanded the return from Halifax of the sloop *Polly* and her cargo of molasses, seized the previous spring by Robinson and his aides. In return for Robinson's agreement he would also be guaranteed protection ashore from the wrath of the people.

Robinson reacted in characteristic fashion: by ordering the arrest of Crandall and offering \$100 reward for information leading to the arrest and conviction of any other rioters. The people of Newport would not be intimidated: the sheriff returned the warrant for arrest, stating that such was impossible to execute except at the risk of his life in the current popular climate; and no one appeared to serve as paid informer upon his colleagues.

Robinson now appealed to Governor Samuel Ward to guarantee his protection ashore and to arrest Crandall. But Ward, in obvious sympathy with the rebels, had left town during the rioting and now kept suavely assuring Robinson that all was calm, that no one was in danger, and that Crandall was a peaceful citizen. However, the merchants of Newport found themselves presented with a grave problem that was soon, in different form, to plague all the colonies when the stamp tax came into force. For if Robinson remained on the ship with the customhouse closed, no ship leaving port could have official clearance papers. And without clearance papers, any ship was subject to seizure on the high seas by the British fleet. The British navy, dedicated to the Crown and unchecked on the seas by the American populace, loomed as the preeminent menace to mercantile trade. Within a week, therefore, Ward provided Robinson with a bodyguard and the customhouse opened once more.

The port might be open, but as November 1 approached, John Webber remained in jail, a constant potential of trouble to the citizens of Newport. The sheriff, indeed, was repeatedly threatened with harm if Webber were not released. On November 1, the Sons of Liberty organized a peaceful demonstration against the Stamp Act, taking care to avoid any mob violence that might be channeled into a movement to free John Webber. A mock "grand funeral of Freedom" was organized that day, with Old Freedom arising triumphantly from its coffin. When no rescue party came, Webber, now two months in jail, tried to commit suicide in his cell. This attempt touched off a rather feeble effort to rescue Webber, resulting in but two of his followers being arrested. The Webber threat was over, but from that time on, the Sons of Liberty made sure of tight control over any direct mass action in Newport.

The town of Providence was inspired by the rebellious actions of Newport, and on August 29–30 a crowd hung and burned an effigy of Augustus Johnston. However, with the British officials and Tory Junto both in Newport, Providence was on the fringes of the struggle, and could by such action only demonstrate its solidarity with its sister city.

24

Response in New York

The people of Massachusetts and Rhode Island had now set the example. The other colonies were not slow to follow. Neither was the lesson lost on the appointed stamp distributors in the remaining colonies. As early as August 26, New York's stamp master, James McEvers, threatened with the same fate as Oliver, hastily resigned his post before mob action surfaced. On September 2, the frightened William Coxe, stamp distributor for New Jersey, hastily resigned his post even though he had received no threats from the populace. In Maryland, stamp master Zachariah Hood refused to resign even after a mob razed his house on September 2, an act that followed the whipping, pillorying, hanging, and burning of his effigy. The people of Maryland saw that more drastic measures were necessary; they set upon Hood and forced him to flee for his life to New York City. There he was driven from an inn by New York radicals, but found congenial refuge at Fort George, run by Lieutenant Governor Cadwallader Colden. Hood had not yet resigned but he was no longer a present danger to Marylanders.

New York might be free of its stamp distributor, but the potential menace of the stamped paper remained. The paper arrived from England toward the end of October, but it found the people of New York ready to meet it, headed by the Sons of Liberty of New York, formed a few days before. The Sons organized a crowd of some two thousand New Yorkers to prevent the landing of the stamped paper. But the implacable Tory Cadwallader Colden arranged for a British warship to stand watch while the paper was unloaded at night at his fortress on Fort George. That night, October 26, the following warnings were posted throughout New York City:

Pro Patria

The first Man that either distributes or makes use of
Stamp Paper

Let him take Care of his House, Person and Effects.

Vox Populi

We Dare.

The evening before the Stamp Act was to take effect, a public meeting warned that the Stamp Act would be disobeyed. A crowd paraded through the city shouting "Liberty!" and threatening to bury alive Major Thomas James. James, commander of the troops at Fort George, had boasted that he "would cram the stamps down the [New Yorkers'] throats with the end of his sword."

The following night, November 1, a mob of about two thousand New Yorkers, many of them former soldiers and privateersmen as well as seamen, carpenters, and rural folk, marched to the house of the hated Colden, carrying and then hanging and burning effigies of Colden and of the devil. The crowd, defying efforts of the mayor and Council to disperse it, broke into Colden's coach house and paraded around the coach, later hanging the two effigies on a public gibbet and then burning them along with the coach and other Colden carriages. The mob then broke into Major James' home, smashed the interior, and leveled the house.

The people had not yet attacked Fort George to seize the stamps. At this point conservative opponents of the stamp tax bitterly tried to dissuade the people from such a bold course. Led by Robert R. Livingston and James Duane, the conservatives gained the concession from Colden that he would not issue the stamps. But the radical-liberal leaders were not to be put off by this tactical retreat: the stamped papers themselves must be destroyed! Armed New Yorkers passed into the city to support an attack on the fort, and posters signed by such Sons of Liberty names as "Sons of Neptune"—an organization of seamen—and "Free Sons of New York" threatened an all-out assault on the fort on the night of November 5 unless the stamped papers were surrendered. Under this threat, Governor Colden, on the advice of the British general Thomas Gage and the New York Council, finally capitulated and turned the paper over to the municipal authorities. In mid-November, a second shipment of stamps was again turned over to the municipal corporation.

The Sons of Liberty, the indomitable leaders of the radical resistance in New York City, were unsurprisingly led by wealthy merchants and lawyers, and rested on a mass base of artisans, small businessmen, and laborers. Its original leaders had been the liberal lawyers William Livingston and John Morin Scott, but they were soon replaced by better and more radical organizers, who were also wealthy merchants: Isaac Sears, a privateer; John Lamb, a manufacturer of mathematical instruments; and Joseph Allicocke.

25

Response in Virginia

In some of the colonies, the stamp distributors had not yet arrived at the time of their appointment. Here the task of the colonists was to await their arrival with vigilance. Thus, George Meserve, appointed stamp master for New Hampshire, faced as he sailed into Boston Harbor a hornets' nest of trouble. He found there a letter from the leading citizens of Portsmouth warning him of grave danger should he attempt to set foot in New Hampshire before resigning his commission. More immediately, he found a Boston mob that prevented his ship from landing for two days until they were convinced no stamped paper was aboard.

It did not take Meserve long to size up the situation. He publicly announced his resignation before going ashore, and was feted and cheered by the Bostonians in return. But in New Hampshire, Meserve found less willingness to forgive and forget. He lived in fear of popular retaliation until he agreed to hand over his royal commission to be burned publicly by his neighbors.

George Mercer, a leading Virginia planter and former aide of George Washington, happily received his colony's stamp appointment in England without realizing the temper of the province. Mercer arrived in Virginia on October 30, shortly before the deadline, to find Virginia in an uproar. In the Northern Neck, Mercer had been burned in effigy; upcountry threats abounded of marching in to destroy the stamped paper; and two country justices had already resigned in protest against the Stamp Act. Mercer's old friend George Washington, though opposed to the stamp tax as unworkable, was cool to the resistance, calling it "ill-judged," but this had no effect in stemming the tide.

When Mercer arrived at Williamsburg, a crowd, which included almost all the leading merchants and "gentlemen of property" in the colony, met him on the street and demanded his immediate resignation. When Mercer, asking for time to think until November 1, was greeted warmly by Governor Fauquier, Speaker Robinson, and the Virginia Council, the crowd rumbled and demanded an immediate decision: "Friday is too late . . . the law goes into effect then. . . . Let us rush in!" Under this severe pressure, Mercer reluctantly agreed to give his decision by the next day, October 31.

Despite the urging of Governor Fauquier to stand his ground, George Mercer reevaluated his position, and by the next morning he assured the large throng that he had not approved the Stamp Act and that he would never directly or indirectly help to enforce it. The gladdened mob feted Mercer, and bore him in triumph around the streets of Williamsburg.

Response in Connecticut

Jared Ingersoll, a high Tory of Connecticut, proved not as easy to convince as his fellow stamp masters. Ingersoll, as Connecticut's agent in London, had learned to move amiably in high Tory circles there. He had become a close friend of Benjamin Franklin, Richard Jackson, John Temple, surveyor general of the New England customs, and Thomas Whately, secretary to George Grenville and the author of the final draft of the Stamp Act.

News of Ingersoll's appointment as stamp distributor did not at first arouse much wrath, but by the time he arrived at New Haven in early August the popular temper was beginning to rise. The attacks began with an article in the *Connecticut Gazette* of August 9, by Naphtali Daggett, professor of divinity at Yale, who denounced Ingersoll as a traitor, and trenchantly ridiculed the idea that "since 'tis decreed [the country] must fall, who can blame me for taking a part in the plunder?" Throughout the colony in Lebanon, Norwich, Windham, and New London, Ingersoll was hung in effigy during the latter part of August; and the last three counties launched a movement to force Ingersoll's resignation. Armed companies in Windham, Norwich, and New London in eastern Connecticut, threatened to march on New Haven against him. A troop of five hundred easterners armed with staves, and including militia officers, formed themselves into the Sons of Liberty and marched westward to meet Ingersoll at Wethersfield on September 19. Ingersoll argued and ranted, but severe threats of lynching finally changed his mind, and he was forced to confirm his resignation in front of the Connecticut Assembly.

As a rationalist Old Light Presbyterian in a colony of growing adherence to a now diluted evangelical New Light cause, Ingersoll dealt his religious group

a severe blow by becoming a stamp master. The blow was compounded by the conservatism of most of the Connecticut Old Lights on resistance to the hated Stamp Act. With the notable exception of the Reverend Ebenezer Devotion, Old Light minister in Windham, most of the resisters and Sons of Liberty in Connecticut were New Lights. Furthermore, Governor Thomas Fitch, an Old Lighter, though elected by the people of Connecticut, announced his intention to enforce the stamp tax, and thus put paid to the Old Light cause in the colony. Only four members of the Connecticut Council supported Fitch in this most unpopular stand.

Response in Pennsylvania

John Hughes, Franklin's lieutenant in Pennsylvania, also resisted resignation from the post of stamp distributor in Pennsylvania and Delaware. In early September, the people of Pennsylvania began to insist on Hughes' resignation. Hughes lamented to Franklin that "the spirit or flame of rebellion" is now at "a high pitch" in America, a spirit that he termed "a sort of frenzy or madness." Hughes' determination not to resign was stiffened by Franklin's admonition from his privileged sanctuary in England to carry out his office "whatever may be the madness of the populace [or] their blind leaders." The favor of the colonial people must always be sacrificed in any clash with the authority of Great Britain.

The pressure against Hughes had not yet reached a peak, since the stamped papers had not arrived in the colonies. In the meanwhile, the Pennsylvania Assembly, dominated by conservative Quakers and their Tory allies from the increasingly overrepresented eastern counties, decided by only one vote on September 10 to send delegates to the intercolonial Stamp Act Congress called by the Massachusetts Assembly. Hughes, of course, led the fight against the move.

The pressure of the people continued to mount, however, and on September 16 the radical-liberals, led by Samuel Smith and aided by the New York Son of Liberty John Lamb, determined to reduce Hughes' house to ashes. But in Philadelphia the principal Tory leaders, Hughes and Joseph Galloway, were able to organize a gang of seven to eight hundred to guard the house. The gang consisted largely of Galloway's mass base in the city, the clubs of Philadelphian tradesmen known as the White Oaks and the Hearts of Oak. The governor and the municipal officials, like the proprietary, sympathetic to

the resistance and more particularly hostile to the pro-royal Franklin party, remained neutral in the struggle and prudently left town. Confronted with Galloway's gang, the popular mob contented itself with burning John Hughes in effigy.

For the next three weeks, Hughes was ill and *hors de combat*, but the conflict came to a climax on October 5 with the arrival of the stamped paper and of Hughes' official commission. The people could wait no longer. The radical leaders met at the coffeehouse of the printer William Bradford, and summoned the people by tolling all the church bells and beating muffled drums throughout the city. A great crowd collected at the State House, particularly including Presbyterians. William Allen, Jr., son of the chief justice of the colony, headed the crowd. The governor and mayor took care to be absent from the scene. Only the Quaker alderman Benjamin Shoemaker attempted, vainly, to order the crowd to disperse. The crowd deputed seven of the prominent citizens of Philadelphia to demand Hughes' resignation, with a threat of the extreme penalty should he refuse. The seven included Bradford, attorney James Tilghman, and merchants Robert Morris, Charles Thomson, Archibald McCall, John Cox, and William Richards. The stubborn Hughes resisted the demand even when learning of the threats of Virginia and Maryland mobs to kill him should he ever set foot there. Finally, the rather timid delegation agreed to a face-saving modification for Hughes. Hughes agreed only to defer executing the Stamp Act in Pennsylvania or Delaware until it was executed in the neighboring colonies. Still full of ginger, Hughes continued to harangue his enemies about their supposedly grievous crimes. He persisted in attacking the governor for not enforcing the tax, and the Presbyterians of the colony (recently united under New Light control) as rebels "as averse to Kings, as they were in the days of Cromwell, and some begin to cry out, *no King but King Jesus*."

Response in the Carolinas and Georgia

In North Carolina and Georgia, no stamp distributors had been appointed by November 1. In Georgia, radicals had to content themselves with demonstrating with nameless effigies. The appointment of George Angus was announced to the Georgians on November 7, but Angus, alone of all the colonial distributors, was a native Englishman, and had not yet set sail for America. The people of Georgia could only keep vigil to mete out similar treatment as in the other colonies; meanwhile, the Stamp Act was not being enforced there.

In North Carolina, Henry McCulloh had naturally been the original appointee, but he prudently declined. The appointment then went to Dr. William Houston, who only heard the news by mid-November. When Houston arrived at Wilmington on November 16 to claim his commission, he was confronted with a determined crowd headed by the mayor and forced to resign immediately.

South Carolina provided a notable example of radical resistance to the Stamp Act. Its leader was the great statesman Christopher Gadsden of Charleston, a leader in the House and one of the wealthiest merchants in the colony. For his mass base, Gadsden, as in the case of Massachusetts and New York, relied on the small businessmen, the artisan-manufacturers of Charleston, the bulwark of the Sons of Liberty.

South Carolina's appointed stamp distributor, Caleb Lloyd, arrived at Charleston on October 18, along with the stamped paper. Immediately, lamented Governor William Bull, "The minds of men . . . were . . . universally poisoned with the principles which were imbibed and propagated from Boston and Rhode Island. . . ." The next day, the people erected a high gal-

lows at the center of Charleston; hanging there was an effigy of Lloyd, with a devil effigy at one side and the symbol of a boot at the other. Written on the display were various mottoes and warnings, including "Liberty and no Stamp Act" and "Whoever shall dare attempt to pull down these effigies, had better been born with a stone about his neck, and cast into the sea."

That evening the crowd took down the effigies, and two thousand people paraded them around town in a mock funeral procession. They arrived at the house of George Saxby, appointed inspector of stamps for the Carolinas and the Bermudas, and still on the high seas. The crowd searched the house but could find no telltale stamped papers, which had been placed at Fort Jackson. Over a hundred Sons of Liberty, however, stormed Fort Jackson and destroyed the papers. After burning the effigies and burying a coffin dubbed "American Liberty," the crowd proceeded to search the houses of Tories and British officers for more stamped paper.

Caleb Lloyd fled for his life to Fort Johnson, and there he was joined by Saxby a week later. In Charleston, threats to the British officers and posters asserting the natural rights of the colonists filled the town. Finally, on October 29, under threat of death, Saxby and Lloyd agreed to suspend execution of their offices until Britain decided whether to enforce or repeal the stamp tax as a result of colonial protests.

By November 1, then, the popular liberals of the colonies had done their work well: not one stamp master remained ready, willing, or able to enforce the Stamp Act. Virtually all had either resigned or publicly pledged not to support the act. Only two ambiguities in status remained, and these were cleared up quickly. At his refuge in Flushing, New York, Zachariah Hood, the Maryland stamp distributor, was visited on November 28 by an angry crowd of three hundred Sons of Liberty from New York City carrying banners inscribed with the slogan "Liberty, Property and No Stamps." Hood was persuaded to resign forthwith. The New York Liberty Boys were thanked for their effective work by the Sons of Liberty of Baltimore, who assured them that Hood had escaped "the just resentment of his injured countrymen."

George Angus finally arrived to assume his post in Georgia on January 4. Spirited to the home of Governor James Wright, Angus distributed some paper to the customs officers. But within two weeks, angry crowds persuaded Angus to flee the country. Plans for a march of some six hundred men on Savannah induced the governor to send the stamped paper back to England on a British warship.

Thus, the ambiguities of stamp distribution in Maryland and Georgia were quickly resolved. The New York Sons of Liberty also exercised due vigilance in pursuing current and potential stamp masters. In late November, the Sons of Liberty of New York forced the retirement of Peter DeLancey from his post as inspector and distributor of stamps in Canada and Nova Scotia. A few days later, James McEvers was forced to repeat his public resignation as stamp

distributor for New York. In early January, the Albany Liberty Boys warned prospective stamp distributors, and some four hundred of them pulled down the house of one such candidate, Henry Van Schaack. Van Schaack, seeing the handwriting on the wall, hurried to a Sons meeting the following day to promise never to accept the post of stamp master. He was duly cheered by the throng. And in Rhode Island, Augustus Johnston was again forced to resign as stamp distributor, at the end of December. When a little later the stamped papers arrived, the Sons of Liberty of Newport ceremonially burned the papers.

29

Official Protests

By November 1765 the stamp distributors and the stamped paper had been put out of action by the direct revolutionary mass action of the people, who increasingly formed themselves into Sons of Liberty in the separate colonies. Even if the various colonial assemblies had not been so timorous and conservative, there was little that they could have done. To nullify the Stamp Act, the first essential step was to put the stamp masters out of commission. This was a revolutionary act that the assemblies could hardly have done openly—especially since they were in most cases subject to the veto of a royal governor.

But one function the assemblies *could* perform: send off official protests to Britain asking for repeal of the noxious Stamp Act. Not much importance should be laid to these official resolves, which could only play a minor supplementary role in the great American struggle against the stamp tax.

The exception to the minor importance of official resolutions was, of course, Patrick Henry's Virginia Resolves, which, helped by the shrewd publication of the final resolutions, ignited the spark of the whole resistance struggle. The first colony to imitate Virginia's example of official protest was, not surprisingly, Rhode Island, where the Assembly adopted the call to disobedience that everyone *believed* the Virginia Assembly had passed. The resolution also denied Parliament's authority to tax the colonies at all, although it modified the disobedience clause to include only an internal tax such as the stamp tax. Moreover, the Rhode Island Assembly went further—directing all officers of the colony to proceed as if the stamp tax did not exist, the Assembly promising to indemnify them for any penalties incurred in following such a course. Rhode Island's courageous resolutions, passed in September, were touched off in mid-August by similar resolves of the Providence Town Meeting, followed

by several other towns, including Newport. The Rhode Island Resolves were largely drawn up by Henry Ward, secretary of the colony, and Moses Brown, a leading merchant of Providence. They represented a living embodiment of the unity on this question of the Ward and Hopkins factions in Rhode Island.

None of the other colonial assemblies, however, had the courage to go as far as little self-governing Rhode Island. None dared either to call for disobedience or to order officials to disregard the Stamp Act. Almost all the assemblies, however, issued resolves during the last third of 1765, denying the authority of Parliament to levy taxes (internal or external) upon the colonies, and most of them denied the authority of Parliament to extend the domain of the hated admiralty courts. Colonies such as Rhode Island, Connecticut, and Massachusetts, which had not in the previous year strongly challenged the parliamentary authority to tax, now took steps to correct their former hesitation. The only colonial assemblies that did not issue such resolves were Georgia, Delaware, New Hampshire, and North Carolina, and the last was not allowed to meet by edict of the royal governor.

The Stamp Act Congress

The major effort of official protest was the Stamp Act Congress, called in June by the Massachusetts House at the behest of James Otis and the Boston Town Meeting. The congress, which met in New York City on October 7, consisted of delegates from each of the colonial assemblies—with the exception of those of Virginia, North Carolina, and Georgia, whose governors prevented the assemblies from meeting, and of New Hampshire, which declined to attend. Delaware and New Jersey met the same obstruction from their governors, but their assemblymen defied the governor by meeting informally and selecting delegates anyway. All in all, twenty-seven delegates from nine colonies attended this early example of united intercolonial resistance.*

Massachusetts could have been expected to give the leadership to the congress, but its delegation consisted of trimmers and renegades to the colonial cause. Otis was in one of his conservative phases, having recently called for British troops to put down rebellion. Ruggles' and Partridge's election had been craftily engineered by Governor Bernard, and this manipulation paid off when Ruggles was chosen as chairman of the Stamp Act Congress. Ruggles had secretly agreed with Bernard to try to bend the congress to ask England for repeal solely on pragmatic economic grounds, and to recommend, in the meanwhile, passive submission to the Stamp Act.

*The delegates to the Stamp Act Congress were as follows: *Massachusetts*: James Otis, Jr., Timothy Ruggles, and Oliver Partridge; *Rhode Island*: Henry Ward and Metcalf Bowler; *Connecticut*: Eliphalet Dyer, William Samuel Johnson, and David Rowland; *New York*: Robert R. Livingston, Philip Livingston, William Bayard, John Cruger, and Leonard Lispenard; *New Jersey*: Robert Ogden, Joseph Gordon, and Hendrick Fisher; *Pennsylvania*: John Dickinson, George Bryan, and John Morton; *Delaware*: Thomas McKean and Caesar Rodney; *Maryland*: Edward Tilghman, Thomas Ringgold, and William Murdock; *South Carolina*: Christopher Gadsden, Thomas Lynch, and John Rutledge.

Fortunately for colonial liberty, Ruggles was not able to prevent and cripple the movement for colonial resistance. The first struggle in the congress was waged over a declaration of principles, which occupied the delegates for twelve days. Over the bulk of the principles there was general agreement: the right to be taxed only by one's own representatives; the impracticality of any American representation in Parliament; the inherent right of trial by jury; and the evils and invasions of rights committed by the Stamp Act. The big struggle was waged over the definition of the scope of Parliament's authority over the colonies. All the delegates privately admitted that Parliament had the authority to regulate colonial trade, but the radical-liberals—led by Christopher Gadsden and Thomas Lynch of South Carolina—strongly objected to any explicit admission of parliamentary authority. Such admission might leave a loophole for implied consent to such external parliamentary taxation as the Sugar Act.

The first draft of the congress's declaration, composed by Dickinson, pledged colonial obligation to "all acts of Parliament not inconsistent with the rights and liberties of the colonists." But Gadsden insisted throughout on taking a stand on "the broad and common ground of those natural and inherent rights" that all Americans possessed, not only as Englishmen but as *men*. A second Dickinson draft then changed "rights and liberties of the colonists" to "the principles of freedom" in an attempt to appease the radicals. But here too the radicals saw that such phrasing would commit the colonists to obey all parliamentary legislation that did not violate principles that remained highly vague. The final wording, then, only committed the Americans to "all due subordination" to Parliament, which of course conceded nothing to England since the word "due" remained undefined.

This solution was bitterly opposed by the ultraconservatives in the delegation, especially by Ruggles, Robert Ogden, speaker of the New Jersey Assembly, William Samuel Johnson of Connecticut, and Robert R. Livingston of New York. Ruggles and Ogden, indeed, went to the length of refusing to sign any of the proceedings of the Stamp Act Congress.

The next step for the congress was to draw up petitions of protest to England, based on its declaration. Gadsden and the radicals urged that no petition be sent to Parliament, as this would imply an admission of parliamentary authority. But the others would not go that far, and Gadsden could be happy in knowing that the main radical point—no explicit admission of parliamentary authority—had been carried. The petitions were drawn up and approved in only four days. By late October, the Stamp Act Congress had been concluded. Every one of the colonial assemblies, even those that had been absent, hastened to approve the actions of the congress, and Ruggles and Ogden were censured by their respective assemblies for not going along. Ogden, furthermore, was burned in effigy in almost every town in New Jersey, and was forced to resign his seat in the Assembly. Only the Virginia House of Bur-

gesses, prevented from meeting by the governor, could not meet to approve the congress's resolves; but it had made its position clear months before.

It must be noted, however, that the radicals were not able to generate a call for open resistance by the congress. Rhode Island remained alone in this courageous stand. Nor was Gadsden able to carry, in the congress's petition, a position grounded on natural human rights, rather than one confined to the mere rights of Britons. Of the colonial resolves, only the assemblies of Pennsylvania and Massachusetts expanded their groundwork to include these libertarian natural rights. Pennsylvania referred to "the Natural Rights of Mankind," which later helped form the groundwork of Pennsylvania's constitution.

By far the most eloquent statement of the natural-rights position was the Massachusetts Resolves of October 29. These logical and incisively libertarian resolutions were drawn up by Sam Adams, who had replaced Thacher in the Massachusetts Assembly. Squarely in the tradition of John Locke's *Essay on Civil Government*, Adams began by explicitly grounding British rights on "the law of God and Nature, and on the common rights of mankind." Therefore, Adams continued, the people of Massachusetts "are *unalienably* entitled to those essential rights in common with all men: and that no law of society can consistent with the law of God and Nature divest them of those rights." Crucial to these natural and inalienable rights was the right of property: "*Resolved*, that no man can justly take the property of another without his consent." And from this Adams presumed to derive the right of representation in levying taxes.

31

Ignoring the Stamp Tax

Immobilizing the distribution of stamps, supplemented by official protests to Britain, could only be the first step in the peoples' nullification of the Stamp Act. For once the act went into effect in November 1765, the colonists, devoid of stamped paper, faced a critical choice: either to carry on normal transactions as if the Stamp Act did not exist, or to stop all business so as not to violate the law. The latter, the conservative path, avoided any breaking of the law, but would have meant a suicidal stoppage of trade and of the courts that would have quickly brought the colonists to their knees. Many of the royal governors, gravely underestimating the fighting qualities of the resistance movement, confidently expected the latter result. They could not dream that the colonists would make open defiance of the Stamp Act a continuing way of life. Thus, as the enforcement date drew near, Governor Bernard smugly expected that famine would soon bring Massachusetts to a standstill. Jared Ingersoll calmly predicted that "the distresses which the want of the stamp papers will occasion will put the people . . . to desire . . . to introduce and distribute them." But having disposed of the stamp masters, the colonists were in no mood to submit meekly to economic suicide rather than defy the hated stamp tax.

For the work of nullifying the Stamp Act, ordinary business transactions within the colonies presented no problem. Contracts and exchanges could be made with the simple refusal of bothering about the Stamp Act's existence. The major problem in domestic business was faced by the newspapers, who were in an exposed position. As November approached, the press reluctantly prepared to close up in obedience to the stamp law, but their courage was buoyed by threats, especially in New York and Boston, to the person and

property of the printers should they dare thus surrender to the law. The pattern of press courage was set on November 1, with the bold appearance of the *New London Gazette* and the *Connecticut Gazette* without stamps. The great radical organs of liberty, the *Boston Gazette* and the *New York Gazette or Weekly Post-Boy*, swiftly followed suit. John Holt, editor of the New York paper, emblazoned on his newspaper the motto "LIBERTY, PROPERTY AND *no* STAMPS," which was soon picked up by other leading papers. Other northern newspapers continued to publish, first hedging with such partial disguises as changing their titles or leaving out the printers' names, but soon they resumed publication full blast.

Only in the South did the bulk of the press display cowardice by suspending operations rather than publishing unstamped. In some cases, courage returned and printing resumed: for example, the (Annapolis) *Maryland Gazette* and the (Williamsburg) *Virginia Gazette*. However, the publisher of the latter paper was not trusted by the liberals, who induced another printer to establish a rival *Virginia Gazette*, which corralled the coveted public printing contract from the House of Burgesses. Neither Charleston paper could be induced to reopen, so that the radicals of that city inaugurated a new unstamped newspaper there. In Wilmington, North Carolina, the radicals turned to violent methods of persuasion—a mob forced the publisher of the *North Carolina Gazette* to resume publication unstamped, "at the hazard of life, being maimed, or have his printing-office destroyed." The publisher, however, found himself whipsawed between two masters, the governor and Council finally removing him as public printer for "inflammatory expressions." The only southern paper that defied the Stamp Act from the start was the *Georgia Gazette*, which, however, was closed by pressure from the royal governor in late November.

Internal transactions and even the press thus successfully defied the stamp law. The real problem for the colonists was transactions necessarily involving government agencies, which could not easily sanction the continuance of illegal activities. The most vital question was foreign trade, on which many economic activities, especially in the port towns, depended absolutely. For merchants needed clearances from the royal customs officials to ship out of port; without such clearance they were liable to seizure on the high seas by the British navy, which did not have to worry about colonial opposition or rebellious activity on the Atlantic. Domestic transactions requiring government stamps presented a much lighter problem. Marriages, wills, and diplomas could be and were informally recorded, and criminal court procedures did not require stamped paper. Furthermore, a positive advantage accrued to the colonists: the closing of the hated admiralty courts, which were not supposed to function without stamps. Only the civil courts posed a problem for the colonies.

On the crucial question of foreign trade, which could make or break the resistance movement, the colonists could either greatly increase their smug-

gling operations or put pressure on the royal customs officials to grant the merchants clearance papers. Both methods were widely used.

The great trading center of Boston particularly had to face the port problem. The Assembly had first thought to make unstamped trade legal on the ground that no stamps existed, and guaranteeing to indemnify officers who might be penalized by Britain for such action. But the Assembly shrewdly decided that such a stand would compromise the cause, for it would concede the legality of the Stamp Act *if there were* a stamp master in the colony. Instead, the Massachusetts Assembly, unwilling to go so far as to encourage open resistance, left the whole matter to the Sons of Liberty, who were quite willing to assume the responsibility.

The first step was to gain time, and this the Boston merchants (as well as the merchants of all the colonies) did by putting every possible ship out to sea before the November 1 deadline. In the meanwhile, the royal officials—the governor, controller, collector of customs, advocate general of the admiralty court, attorney general, and surveyor general of the customs of New England—engaged in a complex farce-comedy of passing the buck in deciding on clearance policy for the port. Cutting through this confusion were the Sons of Liberty, which put intense pressure on the customs collectors and threatened to storm the customhouse with a mob by December 17. Then the radicals showed their power by again forcing a public resignation from stamp master Andrew Oliver. A mob of two thousand such as pressured Oliver could not be ignored, and the customs officials promptly capitulated, agreeing to provide ship clearances without stamps.

On the night of December 17, the Sons of Liberty celebrated their highly significant victory, and it was particularly fitting that the brilliant organizer of the radicals, Sam Adams, was feted as the guest of honor.

The earliest—and easiest—resolution of the problem came in Virginia, which had the good fortune of having a liberal and understanding surveyor general in Peter Randolph, of the eminent Virginia family. As early as November 2, Randolph advised all the customs collectors to clear all vessels without stamped paper. Governor Fauquier of Virginia was also intelligent about the issue, and quickly seconded Randolph's stand. The customs officials in Rhode Island promptly followed. The merchants of Philadelphia used an ingenious device of adding clearances to partially loaded cargo ships before November, to extend their time of grace through that month. Governor John Penn induced the collector to go along with the scheme. By early December, however, the Philadelphia harbor was filled with vessels and the customs officials faced squarely the problem of clearances. Writing to England, the Philadelphia collectors admitted their fear of the populace should they enforce the Stamp Act, and they soon began to issue ship clearances.

In a few days, the Philadelphia breakthrough was enormously widened by Charles Stewart, surveyor general of customs for the Eastern Middle District

(New York, New Jersey, Pennsylvania, and Delaware). Stewart authorized all the customs officials to issue ship clearances without stamps, and again gave the threat of popular force as his justification. New York customs officials were especially relieved; they had suffered the growing pressure of the populace, particularly of the seamen unemployed by the stoppage of trade.

New England's ports were in effect blasted open by the surrender of the Boston customs officials in mid-December. Duncan Stewart, collector at New London, Connecticut, was forced to give way a few days before Boston; New Haven, Connecticut, and Portsmouth, New Hampshire, followed a few days after. There was a little resistance by customs officials at Portsmouth, but this was arrested by a mob demonstration on December 26, and there was no clearance trouble after that.

Except for Virginia, the main customs difficulties were experienced in the South. Maryland did not finally issue clearances without stamps at the main port of Annapolis until the end of January. The courageous Peter Randolph tried his best to open up the Carolinas as he had Virginia, but he was foiled for a long time by the zeal of the governors and local customs officials. In South Carolina, Randolph joined with the Assembly, the merchants, the ship-owners, and the rest of the people to battle the stubborn Governor William Bull. Finally, the resigned stamp master Caleb Lloyd reaffirmed his resignation, and began to issue certificates of unavailability of stamps to attach to clearance papers. By mid-February, ships were sailing legally from South Carolina without stamps.

Meanwhile, North Carolina's reactionary governor, William Tryon, tried a particularly shrewd maneuver in attempting to induce submission to the Stamp Act. While blocking any meeting of the Assembly, Tryon convened a private meeting of fifty leading planters and other gentlemen of the colony, and tried to sell them on abandoning resistance. Assuring them that he personally strongly opposed the Stamp Act, Tryon urged them to submit to the tax and enjoy untrammelled trade, while he personally would appeal to Britain for special favors for North Carolina. As a further inducement, he promised to pay personally for the cost of the stamps required on papers issued by him.

The leading citizens, however, spurned this shrewd appeal to ease and short-run cupidity, and firmly refused the offer. North Carolina suffered from closed ports until February, when the customs officials finally gave in. The one exception was the port of Cape Fear in extreme southern North Carolina. There, a particularly reactionary set of royal officials cracked down rigorously to enforce the Stamp Act. Captain Jacob Lobb of the Royal Navy had had the gall, in early January, to seize several vessels coming into Cape Fear, because their clearance papers officially issued in other American ports were unstamped. When William Dry, collector at Brunswick, North Carolina, proposed to present the confiscated vessels at the Halifax Vice Admiralty Court, a group of citizens from Brunswick, New Hanover, and Bladen Counties gath-

ered at Wilmington on February 18 to form an association to prevent operation of the Stamp Act. The association quickly amassed a thousand men and marched on Brunswick, capturing control of the town and the port. Seizing the recalcitrant William Dry, the association searched for the ships' papers, and won from Dry and Captain Lobb the release of the three vessels and a promise to open the port from then on. On February 21, the citizens rounded up all the court and customs officials and forced them to swear an oath not to execute the Stamp Act. North Carolina at last was free of Stamp Act tyranny, and the happy citizens sailed back to Wilmington on the liberated ships.

Georgia, the southernmost of the rebellious colonies, also had its troubles. Georgia allowed ships to clear without stamps until the end of November, when Governor James Wright and the customs officials closed the ports. Governor Wright persisted in his dictatorial course despite the pleas of merchants and shippers. When George Angus distributed stamped paper during his brief term of office in January, the Savannah merchants earned the hatred and contempt of all other merchants and colonists for selling out to the stamp tax by applying for stamped paper. The rural people throughout Georgia, similarly outraged, gathered in arms six hundred strong on January 27, ready for an angry march on Savannah. For Governor Wright, too, discretion proved to be the better part of valor; on hearing news of the threatened march, Wright hurriedly shipped the papers onto a British vessel, where they were effectively out of circulation. Very shortly Savannah was operating without stamps. Thus, by the end of February, even the most recalcitrant officials in the South were all permitting open ports, while the northern ports had all been opened by the end of 1765.

If the customs officials could be successfully intimidated, what about the British naval officers beyond the reach of colonial harassment—at least while at sea? Generally, the colonists found that the British navy did not much bother to enforce the Stamp Act. Astute entrepreneurs in Philadelphia began to issue insurance policies to shippers against British seizure, at the low rate of two and one-half percent, thus indicating the lax state of enforcement. Moreover, American shippers soon began to find that they could land unmolested without stamped papers at English-run ports that themselves were obeying the stamp rules—including ports in Quebec, Nova Scotia, Florida, the West Indies, and even England itself! During the period of the temporary closing of American ports, illegal smuggling increased greatly, thereby generating further contempt for English authority. Indeed, the customs officials began to issue clearances partly out of fear that they would soon be ignored completely by the colonists. The Philadelphia officials wrote perceptively that "we must now submit to necessity, and do without them [the stamped papers], or else in a little time, people will learn to do without either them or us."

Once in a while, a rigorist naval officer persisted in plaguing the colonists.

Captain Archibald Kennedy, for one, insisted on stopping all vessels leaving New York, even after the port was officially opened, and blocking the path of any whose clearance papers were unstamped. Since Kennedy allowed all entering ships to proceed, New York City soon accumulated a large population of discontented, unemployed seamen ready to rebel against the laws of trade.

One reason for the lax naval enforcement, ironically enough, was the forced closing of the admiralty courts for lack of stamps. Only the Halifax court was now open. With these courts closed, the naval officers were reluctant to detain ships for any length of time.

The civil courts were not opened so quickly, but then the need was not nearly as pressing as in the case of the ports. We have seen the positive advantage of the closed admiralty courts as well as the informal substitutes for domestic legal transactions. Moreover, as long as the civil courts remained closed, English merchants could not collect on the substantial sum of debts owed them by Americans. This blockage could only lead British merchants to put pressure on Parliament to repeal the Stamp Act. George Washington, Richard Henry Lee, and other Virginia tobacco planters, generally in heavy debt to English merchants, saw the importance of this method of creating pressure. As a result, the pressure to reopen the courts was far less than that to reopen the ports.

Pressure for reopening the courts came mainly from the Sons of Liberty and other radicals who wanted the opening to symbolize judicial repudiation of the Stamp Act. Thus, as soon as the ports were opened in Massachusetts, the Sons of Liberty went to work on the courts. The Massachusetts Council was openly warned:

Open your Courts and let Justice prevail
Open your Offices and let not Trade fail
For if these men in power will not act
We'll get some that will, in actual Fact.

This popular pressure was succeeded by arguments by leading lawyers of Boston. Young John Adams argued before the Council that the Stamp Act was "utterly void," for it violated colonial "rights as men and our privileges as Englishmen." When Parliament errs, declared Adams boldly, it need not be obeyed, and it had no right to impose taxes on the colonies. James Otis, Jr. this time backed the Adams' view. The Council worriedly passed the buck to the judges of the colony, attempting to wash its hands of the entire problem.

The Massachusetts Superior Court was not scheduled to convene until March, but two lower courts in Suffolk County, containing Boston, were supposed to meet in January. The Probate Court of Suffolk County was being held up by Thomas Hutchinson, judge of the court; Hutchinson was soon told that his only viable alternatives were "to do business without stamps, to

quit the country, to resign [the] office, or ——.” Keeping the stampless court closed, it was made clear, was not a healthy path for Hutchinson to choose. Faced with this threat, Hutchinson consented to have his more pliable brother, Foster, replace him as judge of the probate court, which promptly opened its doors, followed by the inferior court of the county.

Having secured the opening of their own county courts by mid-January, the Boston radicals put pressure on the Massachusetts Assembly to open the other courts in the province. The House passed a resolution to open all the courts of justice by the overwhelming vote of 81 to 5, but again the Mephistophelian Thomas Hutchinson blocked its passage in the Council. The radical *Boston Gazette*, spearheaded by Otis, denounced Hutchinson bitterly, but the Council, not wanting to take any positive stand, also blocked the proposal of Governor Bernard to arrest Otis for his seditious essay. Finally, the Council again passed the buck to the judges of the colony, who in turn passed it over to the lawyers to decide. Faced with such responsibility, the lawyers, including Otis, began to stall. After a token hearing of one case in the crucial superior court during March, the court adjourned without taking action, to await passively the now rumored imminent repeal of the Stamp Act.

Virginia displayed the same vacillation and hesitancy in opening its courts. Edmund Pendleton, a judge in Caroline County, and one of Virginia’s most respected lawyers, urged keeping the courts open on the same hard-hitting grounds as the Boston libertarians. Justice Littleton Eyre of the Northampton County Court took the same stand. But other judges were far less courageous, and they dithered along without taking the decisive step. The Virginia lawyers, tough in talk and in theory, also balked at taking the public step of reopening the courts. As a result, the courts of Virginia, as in Massachusetts, largely remained closed, with the exception of Accomack County. In Accomack, on the eastern shore, the courts defiantly reopened, but few other lower courts joined in.

The story in most of the other colonies was much the same. In colony after colony the lawyers approved the high libertarian principle of keeping open in disregard of an invalid stamp tax, but timorously continued to delay putting their high ideals into practice. The judges likewise continued to stall until the thrilling news of repeal of the Stamp Act reached the colonies in early April, and took them all off the spot. This was conspicuously the case, for example, in Pennsylvania, New Jersey, and New York. In New Jersey and Pennsylvania, however, a few lower courts managed to remain open. In New York, an attempt by judges of the court of common pleas to reopen was harshly crushed by a threat of Governor Henry Moore to fire any judges who dared to open without stamps. The courts of South Carolina also dithered throughout the period, but by March justices of the Charleston Court of Common Pleas attempted to reopen. They were responding to pressures by merchants, traders, and their associated Sons of Liberty in Charleston, and backed by the

South Carolina Assembly. However, the judges were blocked in this effort by the court clerk Dougal Campbell and by Governor Bull.

Among the colonies, then, only four—New Hampshire, Maryland, Delaware, and Rhode Island—opened all of their courts before the repeal came through. Meeting in early February, the New Hampshire Superior Court overruled the obstructionism of its clerk, and the victory was promptly hailed by the Portsmouth Sons of Liberty. Some of Maryland's lower courts opened as early as November, but the superior court did not open until forced to do so in early April by repeated demands at a mass meeting at Annapolis of the Sons of Liberty from all over the colony. The courts of Delaware were opened in February under severe pressure from its grand jury, which refused to perform its task of making criminal indictments (which were not subject to the stamp tax) until the civil courts agreed to reopen.

Little Rhode Island was unique among the colonies. There all the courts remained open without interruption. In this colony, the backbones of the judges were fortified by the Assembly's pledge to indemnify all officials who ignored the Stamp Act, and all the courts continued happily to function. In one case before the superior court, the hated ex-stamp master Augustus Johnston refused to prosecute in his capacity as king's attorney. The court expressed its contempt for British rule by replacing Johnston as attorney general with Silas Downer, secretary of the Providence Sons of Liberty.

While most of the colonial civil courts, especially the superior courts, remained closed during the Stamp Act era, it is clear that legal and judicial shilly-shallying could not have continued forever. Mounting popular pressure undoubtedly would soon have forced a general reopening of the courts had not repeal intervened. However, it is likely, from their attitude, that the judges would have proceeded timorously on the practical ground that stamps were unavailable rather than have taken a stand on constitutional principle.

Government Replaced by the Sons of Liberty

The Stamp Act was, in effect nullified throughout the period of its *official* enforcement in the colonies. It was nullified by the official bodies of the colonies, but even more so by the direct action of the people in forcing the stamp masters to resign, in carrying on business and trade as usual in defiance of the Stamp Act, and in forcing the royal customs officials to allow ports to remain open to ships without stamps. Corollary to this process of revolutionary mass nullification of the Stamp Act was a highly significant phenomenon that increasingly occurred in the colonies: a withering away of the authority of all organs of government, and a virtual shift to a condition of quasi-anarchism.

The revolutionary situation rendered the royal executive impotent and the colonial assemblies ineffective. The judges did not usually meet, and when they did it was at the behest rather of the radical organizations of the people than of the legally constituted authority. In short, effective rule of the colonies passed from the organs of government to voluntary organizations: to the Sons of Liberty and their popular allies. Such a shift of rule and of majority obedience from state organs to voluntary organizations is certainly a hallmark of a situation of near anarchism. The conditions differed, however, from those of the earlier anarchism in late-seventeenth-century Pennsylvania in two ways: one, *local* governments in this case remained in existence; two, the anarchism was not, as before, totally pacifist and devoid of all institutions of *defensive* force against criminal invasions of person or property.

As in all revolutionary situations, the breakaway of popular allegiance to constituted government implied a breakdown of that government into voluntary *self-governing* actions by each individual. It was indeed voluntary cooperative action among the people without benefit of official sanction—or of com-

pulsory revenue from taxation—that brought rule to such private organizations as the Sons of Liberty. The philosophical meaning of this process has been brilliantly elucidated by the late-nineteenth-century libertarian constitutional lawyer from Boston, Lysander Spooner. Spooner's analysis, dealing with the American Revolution, in a sense applied far more aptly to the Stamp Act crisis, in which no new governmental forms intervened to alter the course or the meaning of that crisis. Spooner wrote:

The . . . Revolution was declared and accomplished by the people, acting separately as individuals, and exercising each his natural rights, and not by their governments in the exercise of their constitutional powers. . . .

Each declared, for himself, that his own will, pleasure, and discretion were the only authorities he had any occasion to consult, in determining whether he would any longer support the government under which he had always lived. And if this action of each individual were valid and rightful when he had so many other individuals to keep him company, it would have been, in the view of natural justice and right, equally valid and rightful, if he had taken the step alone. He had the same natural right to take up arms alone to defend his own property against a single tax-gatherer, that he had to take up arms in company with three million of others, to defend the property of all against an army of tax-gatherers.

Thus, the whole Revolution turned upon, asserted, and, in theory, established, the right of each and every man, at his discretion, to release himself from the support of the government under which he had lived. . . .*

From this spontaneous repudiation of the authority of the government under which the people lived, emerged voluntary organizations to lead the popular struggle, and throughout the colonies they took the name Sons of Liberty. The Sons directed strategy, led the pressure of the crowd when intimidation became necessary, and prepared also for armed defense should the British government try to enforce its laws with *force majeure*. For, as the governors saw their authority crumble, it became clear that the British government was now faced with a fundamental choice: to abandon enforcement of the stamp tax or to send an army to suppress colonial resistance. Open rebellion against the royal governors was very near, and they realized that they could not rely on the militia, which sided with the popular resistance. Seeing the Sons of Liberty in control of Boston, Governor Bernard was on the point of fleeing Massachusetts. Governor Penn revealed in mid-December that Pennsylvania was "not more than one degree from open rebellion." And New York's Governor Colden hardly dared stir outside Fort George. If Colden had refused to turn over the stamps to the crowd, open war would have broken out. The prudent British troops knew that if the Fort had fired on the people, the Sons of Liberty could have assembled an overwhelming force of fifty

*Lysander Spooner, *No Treason, No. 1* (Boston: privately printed, 1867), pp. 12–13.

thousand men from New York and New Jersey alone. The royal governors, then, kept very quiet about the stamp tax. As Governor William Franklin of New Jersey wrote his father, Benjamin, "For any man to set himself up as an advocate of the Stamp Act in the colonies is a mere piece of quixotism." The governors were not disposed to being quixotic.

But what of the British? Would they use an army to enforce the tax? It was clear that the scattered army in America, not yet up to authorized strength, would have to be supplemented by a new army sent from England. But English threats of cramming the stamps down American throats made Americans aware that they must be prepared to face such a challenge. Accordingly, the Sons of Liberty held meetings throughout the colonies during the winter of 1765–66 to proclaim the defiance of the citizens.

The meetings of the Sons of Liberty proclaimed views that were far more revolutionary than those of the colonial assemblies. The lead was taken by the Sons of Liberty of Windham at New London, Connecticut. This meeting, "of a large assembly of the respectable populace" of New London on December 10, frankly proclaimed an uncompromisingly revolutionary natural-rights position, namely,

That every form of government rightfully founded, originates from the consent of the people. . . .

That whenever those bounds [on government, set by the people] are exceeded, the people have a right to reassume the exercise of that authority, which by nature they had, before they delegated it to individuals. . . .

That every tax imposed upon English subjects without consent, is against the natural rights and the bounds prescribed by the English constitution.

The meeting concluded that it is the duty of every colonist to oppose execution of these invalid acts, and if necessary "to reassume their natural rights, and the authority the laws of nature and of God have vested them with." The New London meeting threatened every officer neglecting the peoples' trust with the peoples' resentment, and hoped for no ministerial preaching of any doctrine of passive obedience.

Connecticut saw the earliest and most fiery public meetings held by the Sons of Liberty, which was quickly emerging from its initially secret status. A meeting at Pomfret soon followed, and the citizens of Wallingford on January 13 promised to oppose the Stamp Act "to the last extremity, even to take the field." Sons of Liberty in other colonies were soon inspired to follow suit and similar meetings ensued during early 1766 in Providence; New York City, Oyster Bay, and Huntington in New York; New Brunswick, New Jersey; Cecil County, Maryland; Leedstown and Norfolk, Virginia; and Wilmington, North Carolina—all pledging resistance to the uttermost and "with our lives and fortunes." The eminent liberal Congregationalist divine, the Reverend Charles Chauncy, thundered that regardless of cost the colonists will continue

the fight from the interior against any British army of repression until the invaders have been driven into the sea. "Daughters of Liberty" arose, who swore to marry no one who was not willing to resist the Stamp Act "to the last extremity." Marylanders swore to "fight to the last drop of their blood," and armed resistance was deemed inevitable even in Quaker Philadelphia.

Advanced strategists among the Sons of Liberty realized that revolutionary armed conflict against a British force would require coordination among the rebels in all the colonies. To this end, they moved toward a union of the various Sons of Liberty organizations. Mock funeral processions for liberty appeared on November 1, 1765, in Sons of Liberty demonstrations in Portsmouth, Newport, Baltimore, and Wilmington, perhaps by coordination. But the first formal step toward unity took place in a December 25 meeting at New London, Connecticut. There two delegates of the New York Sons met with the Connecticut Sons and ratified an agreement of mutual military aid against any British armed attack. They also pledged attempts to seek similar agreements from the Sons of Liberty in all of the colonies.

For the next few months, correspondence flew back and forth between Sons organizations throughout the colonies, pledging mutual assistance and proposing boycotts against any colony that might submit to the Stamp Act. Colonel John Durkee and Colonel Israel Putnam of the Connecticut militia promised the aid of ten thousand well-armed men should New York be attacked by the British. Massachusetts and New Hampshire were also able to command an armed force totaling forty thousand. The two New York agents, in the meanwhile, proceeded to Boston, where they procured the allegiance of the Boston Sons to the mutual aid association. Boston soon wrote to Portsmouth and all the towns in Massachusetts urging them to join the Sons of Liberty association. The Providence Sons of Liberty sent out circular letters to other Sons pledging aid to any other harassed colonies. The Providence Sons pledged three thousand men to the cause and eagerly approved a union of the various Sons organizations throughout the colonies.

In early February, the New York Sons appointed a committee headed by John Lamb to correspond with all other Sons of Liberty for mutual aid, and with a view to wielding united action against a possible British attack. The Lamb committee corresponded with Sons organizations as far away as South Carolina. The South Carolina Sons, furthermore, pledged five hundred men to assist Georgians if necessary to get rid of their stamped paper. Connecticut soon organized a unified colonywide Sons of Liberty in a convention at Hartford on March 25, which called for an intercolonial association. This was followed by unified colonywide Sons organizations in Maryland and New Jersey. The New Jersey organization of a unified Sons of Liberty was the most elaborate. Each town was to elect delegates to a county convention, which would in turn select delegates for a convention of the colony. On both county and provincial levels, the Sons appointed committees of correspondence.

Sons of Liberty organizations also expanded throughout New York, especially in Albany, Huntington (which appointed a correspondence committee), Oyster Bay, and Fishkill. By March, the New York City Sons were in command of a sizable armed militia. Local organizations were also stimulated in all the other colonies by active and urgent correspondence from the New York, Boston, and Connecticut Sons. Only in Pennsylvania were the Sons of Liberty relatively weak, with no correspondence committee established and no firm response to the growing intercolonial revolutionary movement. Governor Penn reported in late March that though attempts by the British to enforce the Stamp Act would probably meet with united armed resistance from all the Sons of Liberty, traveling agents of the Sons had met little response in Pennsylvania. The cause of this weakness was admittedly the strength of the Franklin-Galloway Tory faction in Philadelphia and environs.

From committees of correspondence and mutual associations of aid, the next obvious step was a unified central Sons of Liberty organization for all the colonies. The first concrete proposal for such a union came from the New York City Sons, which on April 2 urged a "Congress" of the Sons "to form a general plan to be pursued by the whole. . . ." But there was no chance to weld such a unity, for soon the happy news arrived of the repeal of the Stamp Act.

Britain's choice to repeal staved off what undoubtedly would have been an American revolution in 1766. It is idle to speculate on what the result of such a revolution would have been, but it is very likely that the colonies would have been more united against the universally hated Stamp Act than they would be a decade later. On the other hand, since the focus was on just a single tax grievance, it would be far easier, as events later proved, for Britain to end the revolutionary resistance by simply repealing the tax.

Repeal of the Stamp Act

Considering the tough ultraimperialist policy Britain had been pursuing toward the American colonies, we may well ask: How did it finally come to choose the alternative of appeasement and repeal? And when every imperialist instinct certainly called for a tough crackdown on the presumptuous, impertinent, and presumably traitorous colonists?

The chief clue to the answer was the fall of the arch-imperialist Grenville ministry in July 1765. King George had never liked Grenville personally, and Grenville's attempt to exclude the king's mother from being selected regent in case of the monarch's incapacity from illness was just about the last straw. Grenville's open insult to the king's mother was caused by her long-time liaison with the generally hated Earl of Bute. Accordingly, King George removed Grenville and replaced him with an ultra-Whig ministry headed by the Whig leader, the Marquis of Rockingham, and including the venerable Duke of Newcastle as Lord Privy Seal. The bulk of the rest of the cabinet was new and young blood, headed by the fighting liberal General Conway as secretary of state for the Southern Department.

But the liberal millennium had scarcely arrived in Britain. The new ministry was held in general contempt. Clearly, Rockingham commanded nothing close to a majority in Parliament, and only the king's whim kept him in office. Everyone expected Rockingham's imminent fall. In this context, repeal of the Stamp Act was scarcely assured, but at least there was now a fighting chance.

Charles Watson-Wentworth, Marquis of Rockingham, was at this point a young man in his thirties and the political leader of the wool-raising district of Yorkshire, as well as of the Whig movement. From his early years, his mentor in Lockean ideas of liberty had been Sir George Savile. Under Savile's

guidance, Rockingham had studied at a center of liberal thought, St. John's College, Cambridge, under John Newcome and Bishop Samuel Squire, at one time secretary to the Duke of Newcastle. The young, shy, and gentle Marquis was not, however, cast in a heroic mold.

The Rockingham ministry, friendly to the Wilkite cause, quickly quashed general warrants and the persecution of the Wilkite press, and removed the persecutors from office, while the "massacred innocents" were restored to their public posts.

The chief test of the Rockingham ministry, however, would come in December when Parliament would meet. Newcastle, as usual, tried desperately and fawningly to get William Pitt to join the cabinet so as to ensure a parliamentary majority, while Pitt as usual scornfully refused to enter any cabinet where he did not enjoy absolute power. Grumbling about the lack of a warlike spirit among the Whigs, Pitt remained aloof—in effect aligned with Grenville and Temple in maintaining opposition to the Whig ministry.

Several factors joined to enlist the Rockingham ministry in a drive to repeal the Stamp Act. There was, in the first place, the liberal ideology of the Whigs, and, in particular, the long and honorable record of the Duke of Newcastle's salutary neglect of the colonies. Second, the Whigs were close to many of the merchants of England, and the merchants who traded with America were especially eager to repeal the Stamp Act.

The English merchants trading with America had been hurt by the American Revenue Act and by the whole program to enforce mercantilism upon the colonies. They suffered directly as traders and indirectly in the loss of American markets caused by the British restrictions. Their devotion to repeal of the Stamp Act was further strengthened by the decision of the leading American merchants to boycott importation of English goods. The boycott was shrewdly designed to pressure the English merchants. It began shortly before November 1, when two hundred New York merchants and retailers signed an agreement to cease importing from Britain until the Stamp Act was repealed. They were followed by four hundred Philadelphia merchants and traders a week later, supported by Philadelphia retailers and then by two hundred and fifty merchants and traders of Boston. These agreements were joined by merchants in Albany, in rural Pennsylvania, and in Salem, Marblehead, Plymouth, and Newburyport, Massachusetts.

Compliance with the boycott was remarkably widespread. Only a few violations occurred. But in these cases, the radical merchants turned to violence to enforce their policy. The first breach occurred in late April in Philadelphia. There, the Committee of Merchants ordered imports from Liverpool seized and locked up until news of repeal should arrive. Shortly afterward, goods from Bristol arrived at New York and were seized by the Sons of Liberty, to be returned promptly to England.

The principle of the secondary boycott was also applied against any exports

to American ports where the stamp tax was being observed. Thus, for the short while that Georgia was using stamped paper, the Charleston Fire Company, consisting of small businessmen-artisans, organized a boycott of all exports to Georgia. In late February, the Charleston Sons of Liberty, growing out of the fire company, threatened destruction of a ship about to export rice to Georgia, as well as murder of the exporters. The offending merchants thought it wiser to submit. The people of Newburyport, Massachusetts, after threats had failed, informed customs officials of violations in order to stop a schooner from sailing to Halifax, a port using stamped paper.

Joined to the slackening of imports due to the restrictions and taxes, the boycott helped to cement and intensify the clamor of British merchants to repeal the Stamp Act. Another aid, as we have seen, was the stoppage of some of the civil courts that enforced debt payments to English creditors. The clamor was joined by the newly burgeoning English manufacturers, who were in danger of losing their American markets, and the merchant-planters in the West Indies, who, in contrast to their vested interests in restricting the molasses trade, wanted the incubus of the stamp tax on their markets removed. This was the first time in English history that manufacturers were mobilized for a political cause.

The Duke of Newcastle had long been one of the best-informed Englishmen on American affairs, and he was always in close touch with merchants in the American trade, especially their leader, the radical alderman Sir William Baker. As early as May 1765, the London merchants in the American trade had chosen a Select Committee to battle oppressive legislation and taxation of the colonies. During August and September, the merchants of Liverpool petitioned the government to repeal Grenville's oppressive acts in order to relieve the depressed state of trade, and they were followed by the manufacturers of Manchester and of the Yorkshire cities.

All this pressure had particular meaning for Rockingham. The Marquis was the political leader of Yorkshire and close to the wool manufacturers there. He was also a relative of the powerful Wentworth family of New Hampshire, and was therefore very likely to favor their presentation of the American point of view. One of the joint agents for New Hampshire in arguing against the stamp tax was John Wentworth, nephew and future successor of Governor Benning Wentworth, and John exerted considerable influence upon Rockingham. Also close to Rockingham was former Boston merchant and now MP John Huske, who had been born in New Hampshire. Other influential New Hampshire agents were the John Thomlinsons, senior and junior, who were close associates of Newcastle.

The Rockingham ministry was inclined not only for reasons ideological, social, and economic to work for the repeal of the Stamp Act and other repressive restrictions on the colonies, but for compelling political reasons as well. For one thing, the merchants and manufacturers, joined to the London

radicals, could provide the Whigs with a mass base for influence upon Parliament. For another, the focus could then be on discrediting Grenville by highlighting the evil consequences of the actions of his administration.

The British press kept the public well informed of the developing opposition to stamps in America. Patrick Henry's resolves received full publicity in England. When news of the numerous American riots and actions of the Sons of Liberty began to be published in mid-October, Newcastle made a swift decision: to drive for outright repeal of the Stamp Act, a decision backed by Sir George Savile.

In early December, the London merchants, led by Barlow Trecothick, an eminent merchant born in Boston, organized a committee to mobilize mercantile and manufacturing sentiment and to pressure Parliament, then in the process of opening, for repeal of the Stamp Act. Trecothick was selected for this task by Rockingham, Newcastle, and the Whig ministry. Trecothick was another joint agent of New Hampshire, as well as a partner of the Thomlinsons in the American trade. He was also a radical alderman from London and an important adviser of Rockingham. Trecothick sent a crucially important circular letter, inspired by Rockingham and William Burke, to thirty of the leading trading and manufacturing towns in Great Britain. Letters were also sent to individual Whig leaders in the various towns, urging them to take the lead in organizing the various petitions to the government. This letter, which has been called "The Principal Instrument in the Happy Repeal of the Stamp Act," soon bore fruit in a deluge of petitions to Parliament for repeal of the Stamp Act, from over twenty towns and cities including Bristol, Liverpool, and Manchester. The petitions, of course, stressed not the moral or political rights of colonies, but the grievous economic effects of the measure for trade in the colonies and at home.

While Parliament would have to decide on repeal, there were many good deeds that the Rockingham administration could perform strictly on its own. Above all, it could return to the policy of salutary neglect, including a seemingly bungling failure to enforce the Stamp Act. This was precisely what it did. Instructions to the royal governors on the stamp tax were deliberately tardy and vague, and confined to cloudy advice to do their duty within the limits of "prudence." No British army was sent or mobilized, and the navy did not bother about the lack of stamps on the clearance papers of American ships. Furthermore, under the influence of Newcastle, the Rockingham ministry applied salutary neglect to the rest of Grenville's restrictive program. Laxity was again encouraged. In particular, the useful Spanish bullion trade from South America to the British West Indies in exchange for English manufactured goods, which helped repay debts to American and English merchants, was again looked at benignly even though it was illegal. Laxity was particularly welcome after Grenville's repressive enforcement had disrupted transatlantic trade habits of over a century.

Moves were also undertaken to legalize informally or formally the vital American molasses trade with the foreign West Indies. Influence to this end was exerted by William Burke, the young undersecretary to Conway. Burke, who had been the leading publicist, at the end of the Seven Years' War, for the Whig peace terms of keeping the West Indian islands and letting France keep the American colonies, was himself involved in the molasses trade from Guadeloupe to America. Burke was a partner in this vital trade, repressed by Grenville's program of rigor, as were his cousin Richard Burke and Richard's brother Edmund, the brilliant young private secretary to Rockingham.

In originally formulating its plans for the opening of Parliament, the Whig ministry had been misled into underestimating the colonial reaction to the Stamp Act, and therefore had planned to repeal or revise the Grenville trade acts gradually *before* taking up the stamp tax. They were misled largely by the special situation in Pennsylvania—including the overoptimistic reports received from Benjamin Franklin, the support for the Stamp Act by Franklin's Pennsylvania ally Galloway, the actions of the counterrevolutionary White Oaks mob in Philadelphia, and the September elections in Philadelphia won by the royalist party—with the aid of some twenty-six hundred Germans naturalized and enrolled by Galloway just before the election. The Rockingham ministry was at last becoming disillusioned about the quality of Franklin's reports and about the position of Mr. Franklin himself. The radical and rebellious temper of the colonies was becoming clear, and Franklin's cool treatment of the Bristol merchants opposed to the Stamp Act called his whole attitude into question. The administration now realized that Stamp Act repeal must be the first order of colonial business in Parliament.

By the December opening of Parliament, then, it was clear that the most pressing problem before the government was the stamp tax. The Whigs, merchants, manufacturers, and London radicals formed the liberal party facing the opposition of Grenville, Bedford, Halifax, Bute, the King's Friends—in short, all of the various Tory factions. The ideological battle raged in the press; typical of the liberal view were articles by "Rationalis." Rationalis warned that Britain's harsh measures might well drive the American colonies out of desperation into independence. He argued, as had Robert Walpole decades before, that refraining from taxing the colonies would leave them free to use the money to buy British goods, an advantage to both peoples. Rationalis cited Walpole's famous aphorism: deliberately neglecting to enforce taxes and regulations in the colonies "is taxing them more agreeably both to their own constitution and to ours."

Parliament opened on December 17 with the administration urging another month's postponement to allow time for public opinion, spurred by Trecothick's campaign, to mobilize behind repeal. Grenville and Bedford, suspecting an eventual plan for repeal (which had been kept secret by the ministry), issued a violent attack on the colonies and called for suppression of the Stamp

Act rebellion. But the large block of Tory King's Friends were willing to go along with the king's ministers, so Grenville did not put his views to a test in Parliament. Significantly, Charles Townshend and Lord George Sackville, conservative members of the ministry, both called for enforcement of the Stamp Act, although doing so while speaking against Grenville's motion. Leaders for the government in the debates were London aldermen Beckford and Baker, Rose Fuller, and Sir George Savile in the Commons, and Grafton and Dartmouth in the Lords. Leading the Tory attacks were Bedford, Halifax, Sandwich, and North in the Lords, and Grenville in the Commons. Finally, the administration was successful; the House agreed to adjourn until January 14.

The parliamentary task of the ministry was made all the harder by the untimely death at the end of October of the influential Duke of Cumberland, the king's uncle and the Whig's one friend at court. It was Cumberland who had persuaded the king to choose the Rockingham ministry. The ministry was now clearly shakier than ever, and Newcastle began to press upon Rockingham without success his old disastrous tactic of fawning upon William Pitt. Pitt, now pressured by both sides, continued to refuse to support any government dominated by Newcastle. Indeed, Pitt gave strong indications of favoring the exercise of British sovereignty over the colonies. However, the fawning upon Pitt was intensified by Newcastle as a result of the growing defection of the King's Friends, who were rapidly learning with alarm of the great extent and depth of the colonial rebellion. Thus, as the crucial January session of Parliament approached, the Whigs saw their two potential sets of allies, the Pittites and the King's Friends, drifting strongly toward opposition to repeal.

Amidst the growing political crisis at home and in the colonies, the cabinet met on December 27 to decide finally upon government policy. Rockingham, Lord Dartmouth, Henry Seymour Conway, and William Dowdeswell, chancellor of the Exchequer and representative of the instinctively liberal wing of the country gentry, came out foursquare for outright and total repeal of the Stamp Act (there was no need to invite Newcastle, perhaps the most "pro-American" of them all). The big surprise, however, was a determined drive by Attorney General Charles Yorke, a conservative renegade Whig, against any "undignified" concessions to the colonies. Whether or not the repeal was pushed, Yorke insisted particularly on a declaratory act, which would affirm conclusively the unbounded sovereign power of Parliament over the colonies. Yorke also called for a penalty of high treason against anyone who might dare to attack the proclaimed sovereignty of Parliament in speech or in writing. Yorke's stand was attacked by Conway and later by an angry Newcastle. Instead, Newcastle proposed the usual Whig game, which had worked so well in the days of Walpole—namely, a meaningless declaration as sop to the King's Friends, the Pittites, and the conservative Whigs. The declaration could then serve as a formal camouflage for the reality of conciliation, salutary

neglect, and virtual *de facto* colonial independence from British rule. Rockingham himself was thinking along similar lines. But once again Pitt threw a monkey wrench into the proceedings, calling for a firmer stand against the colonies and insisting on his personal control of the cabinet. Earl Temple trumpeted that Pitt agreed that the Americans must be crushed and, to make matters worse, Conway and Grafton, personally loyal to Pitt although liberal, repeatedly threatened to resign unless Pitt were brought into the cabinet. In the meanwhile, Bute and the King's Friends, violently disturbed at the colonists' disobedience, were secretly given the green light by the king himself to vote against his own ministry, which he was already preparing to dump. What the king desired as the Tory ideal of his maneuvers, was a coalition ministry with Bute and the King's Friends dictating domestic affairs, while leaving foreign affairs to the arch imperialist Pitt. In Parliament, the King's Friends, without joining Grenville's organized opposition, would vote against repeal, thereby toppling the ministry and permitting the king to ignore the Grenvillites (whose leader he personally hated) in forming his desired ministry.

As the decisive January session of Parliament drew near, success of the repeal program seemed distant indeed. Borne down by defections within and without, harassed by intrigue, alarmed at the mounting rebellion, the Rockingham Whigs yet coolly and rationally stayed firm on principle, insisting on removing the oppression instead of sending force to crush the colonies. With only the merchants and manufacturers to support the Whigs, the power of the latter in Parliament was minimal. Yet the Whigs refused to temporize, and continued to press for repeal.

Parliament opened on January 14 and the expected immediate assault on the ministry was launched by the Grenvillites and some King's Friends demanding enforcement of the Stamp Act, as well as the sending of troops to the colonies to crush the rebellion and to impose the brutal model of British policy in conquered Ireland on the Americans.

At this point William Pitt, ill and erratic as usual, exercised his charisma once more. Pitt, felled by illness and insanity, had not appeared in Parliament for two years. Now Pitt played his pivotal role to maximum dramatic effect, after having kept everyone in the dark about his position. Staggering to his feet, Pitt stunned everyone with a fiery defense of the Americans and a scathing attack on Grenville: "As to the late ministry, every capital measure they have taken, has been entirely wrong." The Whigs were criticized by Pitt, in an odd turnabout, for hesitancy in treating the problem. As for the Americans, Pitt averred that they had "all the natural rights of mankind and the peculiar privileges of Englishmen." Only American assemblies have the right to tax the colonies; any other dispensation would be "slavery." Pitt concluded that "this kingdom has no right to lay a tax upon the colonies," although sovereign over them in every field of legislation or regulation. Pitt therefore

urged immediate repeal of the Stamp Act on the grounds that it was an unconstitutional tax on the colonies. The repeal was to be accompanied by a declaratory act asserting Parliament's sovereignty (limited by a lack of taxing power) over the Americans.

After Grenville answered with one of his typical legalistic speeches, Pitt's reply rose to the heights of eloquence:

I have been charged with giving birth to sedition in America. They have spoken their sentiments with freedom against this unhappy act, and that freedom has become their crime. . . . The gentleman tells us America is obstinate; America is almost in open rebellion. I rejoice that America has resisted. Three millions of people, so dead to all feelings of liberty as voluntarily to submit and be slaves, would have been fit to make slaves of the rest. I come not here armed at all points, with law cases . . . to defend the cause of liberty. I am passed the time of life to be turning to books to know whether I love liberty or not. . . . Will you sheath your sword in the bowels of your brother, the Americans? You may coerce and conquer, but when they fall, they will fall like the strong man embracing the pillars of this constitution, and bury it in ruin with them. . . .

Pitt's brilliant speech was a mighty blow for the American cause. Yet it is surely ironic that this, one of the few libertarian stands of Pitt's career, was to make this Johnny-come-lately a supposedly libertarian hero to the American colonists. Rockingham's thankless role was forgotten, even though Pitt had refused to coordinate his moves with the ministry, and even now *continued* to refuse cooperation with Rockingham. In fact, Pitt, erratically, continued to insist on Earl Temple's inclusion into the cabinet as the price of his support, even though Temple was ardently defending the Stamp Act in the House of Lords.

Still, Pitt *had* drastically changed his mind. Three weeks before, he was ready to impose British authority on the colonists. Now he stood fast for repeal. What, apart from inherent instability, had changed him? The answer lies in the Trecothick agitation among the merchants and manufacturers, shrewdly directed from behind the scenes by the Rockingham ministry and spurred by the depression and the trade boycotts waged in the colonies.

During December and January, the merchants' agitation received a great boost from the temporary suppression of American shipping because of the lack of stamped clearances, and from the closing of the civil courts to British creditors. The English agitation for repeal was also joined to great effect in the public press: the leading Whig publicists in the campaign were William Burke, Edmund Burke, and, particularly, David Hartley, a lifelong friend and adviser of Savile's who had first urged Sir George, the previous fall, to press for complete and immediate repeal.

Foremost in influencing Pitt was the unanimous clamor for repeal among the merchants. All his life Pitt had been the spokesman of the merchants,

especially those engaged in West India planting, but now all the merchants, whether in America or West India trade, united to urge repeal. Of the fifty-two merchants sitting in Parliament in February 1766, forty-six voted for repeal (of the maverick six, two were members of the king's Scots bloc; two were agents of the East India Company, headed by the Tory Earl of Sandwich; and two were indebted to Grenville). Of the West Indian planting interests, Beckford, the Lascelles family, and the Fullers, as well as the West Country gentry, were all ardent opponents of the Stamp Act. It was therefore clear to Pitt that there was only one way for him to reattract his old mercantile, West Country, and West India support, and to wean them from their attachment to the Whigs over the Stamp Act. That way was to make a grandstand play, to shout louder than the Rockingham Whigs for the American cause. No matter that the Whigs had to engage in subtle and often silent strategy to maneuver a repeal through Parliament. Never mind destruction of the Whig's well-laid plans. By thundering dramatically in Parliament Pitt could seem to be *the* heroic champion of American liberty, and make the Rockinghams *seem* pale and timorous by comparison. Such is precisely what Pitt did in his irresponsibly designed speech.

Having tried and failed to induce Pitt to join the cabinet, the Rockingham ministry met on January 17 to decide the strategy for repeal. Within the cabinet a fierce struggle raged, with Attorney General Yorke reluctant on repeal and insistent on the harshest possible declaratory act asserting the absolute sovereignty of Parliament over the colonies. Yorke pressed alone for a specific declaration of Parliament's right to tax the colonies, but was overruled by Rockingham and the final version of the Declaratory Act.

In the meantime, a flood of petitions for repeal by merchants and manufacturers was deluging Parliament. Their zeal was intensified by the sharp drop in exports to America caused by postwar depression, trade restrictions, and boycotts by American merchants. Exports to America had fallen by seven hundred thousand pounds from 1764, a drop of over twenty-five percent. Furthermore, unemployment was now severe in the export industries, especially in shipping, and fears grew of riots by the restless unemployed. Above all, Americans owed English merchants and financiers a mass of debt, and fears of default bestirred almost every merchant in England. Total American debt to England at this time has been estimated at nearly five million pounds. And all this to be sacrificed for the sake of a stamp tax designed to yield an annual revenue of only sixty thousand pounds! Skillfully timed, petitions for repeal poured into Parliament on January 17 from the merchants of Bristol, Lancaster, Liverpool, Leeds, and Halifax, from the manufacturers of Manchester, Leicester, and Bradford, and from the wool manufacturers of Yorkshire. Additional petitions soon came from Jamaica and from over twenty towns and cities, including Birmingham, Coventry, Nottingham, and Glasgow.

The Rockingham ministry's almost exclusive stress on the *economic* reasons for repeal and its blurring and playing down of constitutional reasons, while perhaps effective in the short run, stored up great trouble for the future. William Pitt's speech was generally misinterpreted as only denying Parliament's power of *internal* taxation of the colonies; whereas Pitt, as well as the colonists, denied all taxation imposed by the mother country, and agreed only to the latter's power to regulate the trade of the colonies. The Rockingham ministry, anxious to appease its vehement opposition, decided to stress the weaker limits, and to give the impression that the arbitrary internal-external distinction was that of the colonists also. Thus, when Pitt and his friend George Cooke tried to bring the petitions of the Stamp Act Congress—which clearly denied the right of *all* parliamentary taxation—before Parliament, the administration managed to suppress their hearing.

In keeping with this soft-sell strategy, of the forty or so administration witnesses appearing before the House on the Stamp Act, the featured American was none other than Benjamin Franklin.* The deft and witty Franklin pleased the administration, not only by stressing the economic consequences rather than moral or political rights, but also by raising and stressing the old arbitrary and flimsy distinction between internal and external taxation that he and his friend Richard Jackson had originated over two years before. Nor was that all. Franklin changed the terms of the debate by his mendacious assertion that his was the dominant American argument. A completely rejected and bizarre distinction of Franklin's and of a few of his cronies was elevated by the wily Franklin to become in the eyes of the English the official stand of the American colonies.

On February 3, two weeks before introducing the motion for repeal, the Rockingham ministry introduced some sugarcoating for the forthcoming pill, the Declaratory Act. This bill asserted full parliamentary authority over the colonies. The crucial question of whether the power extended in full or in part to taxation was deliberately left ambiguous, as sop to all factions. Here Rockingham overrode the objections of the arch-conservative Whigs Attorney General Yorke and his brother, the Earl of Hardwicke, who urged that the right to tax the colonies be inserted into the bill. From the other side, Newcastle believed that the declaratory bill went too far. In Commons, Colonel Isaac Barré and William Pitt made a tactical error and tried to weaken the declaration; by losing they gave the impression to all England that the bill did include the power to tax the colonies. The Declaratory Act passed Parliament overwhelmingly, with only Pitt and a few hard-hitting liberals opposed in the Commons, and Lord Camden leading the handful of opponents in the Lords.

*The Whigs were not above using bribery. None other than Major Thomas James, the anti-American hard-line commander from New York, was bribed with a very large sum to testify in Commons in favor of repeal of the Stamp Act. See Bernhard Knollenberg, *Growth of the American Revolution, 1766–1775* (New York: Free Press, 1975), p. 23.

At this point, however, the Tory opposition counterattacked with a resolution calling for armed enforcement of the Stamp Act in the colonies. On February 6, the Lords carried the resolution by three votes, and Bute's vote in favor was a clear signal of the king's true wishes. The vote, ominous to the administration, reflected an alliance of the Bedford, Grenville, and Bute forces. The next day, the elated Grenville introduced a similar enforcement resolution into the House of Commons. Grenville's motion was roundly defeated by a vote of 274 to 134. Its defeat indicated a critical turning point in the entire parliamentary struggle. The leading arguments in opposition to Grenville varied from those of the cynical Townshend, who favored force but first wanted troops to be built up in America, and of Pitt, to those of the impassioned Whig generals Conway and Howard, who threatened to maim or kill themselves before killing fellow men who were, in the words of Howard, "contending for their liberty."

The opposition had used poor tactics. The sight of their defeat on the enforcement issue staggered the politicians, and paved the way for the repeal of the Stamp Act. The motion for repeal was introduced on February 21 and passed early the next morning by a vote of 275 to 167. This was the decisive though not the final vote, and the people of England rejoiced throughout the land. The government had feared an insurrection at home if repeal had not passed; the industrial towns had threatened to send mobs to Westminster to enforce their demands for repeal. As it was, the throng of merchants outside Parliament cheered Conway and Pitt and hissed and threatened George Grenville. The bells of London's churches rang all day at the happy news; ship captains broke their colors; manufacturers began to rehire their workers; and merchants put their ships to sea once more.

The debate in the Lords opened on March 11. The lead for repeal was taken by Whig Lords Dartmouth, Newcastle, Grafton, Richmond, and Camden, and against by Halifax, Temple, Bute, and Bedford. The repeal passed the Lords by 105 to 71, with thirty-three Lords issuing a special public protest against it as weakness and surrender. The repeal was officially signed on March 18, to the accompaniment of more celebrations throughout the country.

Despite this signal victory, as well as such other accomplishments for liberty as making general warrants illegal and repealing the hated cider tax, the Rockingham ministry was close to collapse. The king hated the repeal and during the Revolutionary War was to recall it as his only political regret. Most of the King's Friends had voted against the repeal. Pitt was refusing to back the administration; by his grandstand play he had succeeded in making himself rather than the ministry the hero of the merchants and of the Americans.

Aftermath of Repeal

The glorious victory over the Stamp Act was of course celebrated throughout the American colonies. Houses were lit, songs composed, and toasts drunk to the English champions of repeal. Throughout the colonies, the Sons of Liberty triumphantly directed the celebrations, and in later years were to celebrate the anniversaries of this and such other great occasions of resistance as August 14. The victory was generally interpreted as a victory also for the right of the colonists to tax themselves. Moreover, the vague Declaratory Act was not thought to assert the right of taxation over and above the right to legislation and regulation. The various colonial assemblies drew up addresses of thanks to the king and Parliament for the repeal, but did not at all yield their constitutional stands.

But amidst their rejoicing, the more farsighted colonists saw the evils inherent in the Declaratory Act, harbinger of taxation to come. George Mason, a leading Virginia planter, replied sharply and trenchantly to a condescending letter by leading English merchants warning the colonists to behave themselves and not exult over their victory. The colonists, answered Mason, were tired of being treated as schoolboys, who are to "do what your papa and mama bid you." The Americans have been fighting for their "birthright" as freemen, and have only gained common justice. Mason reminded the merchants that the stoppage of trade brought by resistance was a critical factor in repeal. He also detailed the infinite cost and trouble, perhaps including international war, that total military enforcement would have brought. Mason also warned of the suspect vagueness of the Declaratory Act, which failed to exclude taxation from the parliamentary domain.

In Charleston, Christopher Gadsden and the Sons of Liberty—one of the

hardest-hitting and most-uncompromising Sons groups in the colonies—were not taken in by the general rejoicing. In a prophetic speech to the Sons at Charleston's Liberty Tree, Gadsden warned of "the folly of relaxing their opposition and vigilance," or of indulging the fallacious hope that Great Britain would relinquish "her designs and pretensions." Gadsden noted the ominous implications of the Declaratory Act, and the Sons all joined hands and swore to eternal defense against tyranny. Furthermore, by mid-July, Silas Downer, a lawyer and secretary to the Providence Sons of Liberty, was writing to the New York Sons urging the need for maintaining the Sons' effective intercolonial organization, as well as the intracolony one, especially in view of the Declaratory Act and the consequent need for vigilance to preserve the rights of Americans.

But men like Downer, Mason, and Gadsden—as well as writers in such papers as the *Boston Gazette*—were voices crying in the wilderness. Americans were all too willing to relax and abandon themselves to the general rejoicing at victory. The Sons of Liberty organization largely evaporated, although the leaders continued to be active, especially on ceremonial occasions.

Despite the general lull among Americans, a strong residue of revolutionary radicalism remained from the Stamp Act crisis. People began to call into question more examples of existing British tyranny. For instance, in New York, some began to call for abolition of the customhouse and the royal post office as being unconstitutional and oppressive. And in Massachusetts the Whigs cemented their political hold on the province: the Council was purged of pro-Tories and a blacklist of thirty-two supporters of the Stamp Act in the Massachusetts House was drawn up—men whom John Adams scorned as "stamp men" and trimmers—and those thereon were largely purged in the elections of 1766. Sam Adams' continuing popularity was shown by his receiving the largest vote of the four Boston representatives, and the radicals' purge cleansed the Council of such Tories as Hutchinson, the Olivers, and Benjamin Lynde. The embittered Tories denounced the liberal victors as subverters and "scum," while John Adams exulted at the total triumph. From this point on, the Council, dominated by the wealthy liberal merchant James Bowdoin, marched with the House on the side of American liberty.

In August 1766, trouble flared up with the British; the redcoats summarily cut down the Liberty Pole in New York City. Swiftly, the Sons, though largely disbanded, rose to the occasion and engaged in a protest meeting of several thousand people. During the meeting, British troops fired into the crowd, wounding several people. Finally, the Sons triumphed by building another pole and refusing to allow the soldiers to patrol the streets. A minor incident perhaps, but indicative of strong latent resistance beneath the new surface of imperial harmony.

For the moment, however, relations with Britain would continue to look rosy, and the Rockingham ministry, spurred on by Trecothick, Fuller, and the

English merchants, managed to lower the molasses duty from threepence to one penny a gallon—another great boon to American trade and prosperity. Export duties on British West Indian sugar were removed, lowering its price on the American mainland. Still, American trade was at the same time hobbled by requiring that all colonial products shipped to northern Europe had to clear through British ports. Free ports were opened to colonial trade in the West Indies. But here Alderman Beckford, the Fullers, and the West Indian merchants, backed as usual by Pitt, sharply opposed the end of their monopolistic privileges. Pitt's maneuverings on this issue, indeed, helped to pull down the Rockingham administration. Pitt's enmity was also fueled by his vehement opposition to Rockingham's long-run plans for the repeal of the crippling restrictions on American trade embodied in the Navigation Acts.

The Whig idyll of peace and noninterference was indeed doomed to be only an interlude, though a highly important one. The king, more eager than ever to dump the Whigs but anxious to avoid the resurgence of Grenville, selected William Pitt to head the cabinet in August 1766. The king could now select Pitt as head of a Tory imperialist cabinet, while the deluded Americans would cheer the appointment of a supposed libertarian and champion of the colonies. Pitt's maneuvering and intrigues had finally paid dividends. His appointment was in fact hailed by the misguided Americans, but the colonists were not to remain under illusions about William Pitt for very long.

PART V

The Townshend Crisis,
1766–1770

The Mutiny Act

Though the Stamp Act crisis was over, an important irritant in Anglo-American relations remained. During 1765, Grenville had passed the Mutiny Act, which gave the British army the right to quarter its troops in private American dwellings. Originally the troops were to be quartered in private homes, but the final bill, which Benjamin Franklin helped to draw up, limited houses open to seizure to inns, unoccupied buildings, and barns. The act also forced the colonial governments to furnish the soldiers with specified supplies.* The object of the Mutiny Act was to conscript the houses of the colonists so as to allow large bodies of British troops to be stationed in the seaports. Since any possible enemies of the colonists were on the frontiers, the purpose of quartering troops in the seaports could only be to intimidate and coerce the colonists. For this "service" the colonists would be forced to yield their dwellings to the redcoats!

During the Stamp Act crisis the Mutiny Act was forgotten and went unenforced, but after repeal of the stamp tax problems under the act came to the fore. Aside from the threat inherent in quartering the British troops, many colonists realized that the coercing of supplies was a tax in kind every bit as bad in principle as any tax levied in money. Was this new tax in kind to perform the work of the hated stamp tax—to compel the Americans to pay for British troops amongst them?

The earliest and most important resistance took place in New York, the

*At the time, Franklin proudly proclaimed for the amended bill; two years later, however, amidst colonial resistance to the measure, he had a convenient lapse of memory about his role in the affair. See John Shy, *Toward Lexington: The Role of the British Army in the Coming of the American Revolution* (Princeton, N.J.: Princeton University Press, 1965), p. 188.

headquarters for the British army and its commander in chief, General Thomas Gage. New York refused to obey Gage's request for supplies under the Mutiny Act, and insisted on complying only partially with royal requisitions while demanding that England recompense the colony. Other colonies hedged on following suit. Most did not comply fully but did not challenge the law as openly, and voted some supplies. Understandably, there was, so soon after the vigorous resistance to the Stamp Act, a general desire for respite. Notwithstanding, when the Massachusetts Council voted supplies and quarters to a British artillery troop, its action was met by a storm of denunciation from James Otis and the Assembly, and Sam Adams asked whether the Mutiny Act "is not taxing the colonies as effectually as the Stamp Act." Otis called for a purge of the Council, and the Assembly refused to vote supplies, but in the end it voted for partial compliance.

Partial noncompliance also occurred in New Jersey. There the Assembly denounced the Mutiny Act as being "as Much an Act for laying taxes on the inhabitants as the Stamp Act," but then voted funds. However, it officially evaded full compliance by vaguely instructing a new set of commissioners to act according to the custom of the province. South Carolina partially complied, but refused to include such specified supplies as salt and beer in its requisition. Apart from New York, the most principled resistance occurred in an unlikely—because generally the least revolutionary—colony, Georgia. Georgia demurred on even partial compliance until its 1767–68 session, when it followed the course of its neighboring sister colony, South Carolina.

To the new Tory administration in England, this partial defiance of the Mutiny Act was a red flag to the English bull. Now English troops as well as Parliament were being defied! The new prime minister, a supposed friend of American Liberty, William Pitt—now the Earl of Chatham—lost no time in displaying his true feelings toward the colonies. Bolstering Pitt's anger toward Americans was a petition of 240 New York merchants, in late 1766, asking for free trade and for the virtual removal of the restrictive trade and navigation laws. Arch-mercantilist and imperialist that he was, Pitt responded by inducing Parliament, in the Restraining Act of June 1767, to suspend the New York Assembly completely until it was brought to heel, and complied with the Mutiny Act.

Other British Tories ranted and raved even more aggressively than Pitt. Grenville was hailed in Parliament as a prophet of the dangers of appeasement. The Duke of Bedford and his clique shouted for more regiments to be sent to teach the New Yorkers a lesson.

William Pitt had scarcely assumed the ministry, however, when his chronically intermittent insanity took hold, and he lost *de facto* control over the course of the English government. Stepping into virtual power was a flashy playboy-opportunist and unstable epileptic, the renegade Whig Charles ("Champagne Charlie") Townshend, chancellor of the Exchequer in the Pitt

cabinet. This embodiment of opportunism, who had opposed repeal of the Stamp Act, soon decided upon a tough imperialist line toward the colonies. Part of this line was the crackdown on the New York Assembly. Here Townshend pursued a far shrewder course, for example, than Bedford, who wanted to send a military force to crush the resistant colonies. Townshend saw that this could only unite the colonies once again into another and perhaps successful rebellion; if, on the other hand, one colony alone were singled out for suppression, then would not the other colonies be too shortsighted to rally round? New York, as the most important and most defiant colony on the mutiny issue, was the obvious focal point.

In making his move, Townshend decided on suspension of the Assembly rather than outright military action. He was backed by Pitt, Grafton, Camden, and Shelburne. In the cabinet only the redoubtable liberal General Conway opposed the measure as coercion of the Americans.

The potential crisis over New York was eased when, at the same time that Britain was cracking down, the Assembly itself was deciding to surrender. Over the opposition of the radicals and by only a single vote, the Assembly decided to comply fully with the Mutiny Act. Parliament's order for suspension never had to be enforced. New York capitulated easily, and with it the bulk of American resistance to the Mutiny Act.

One reason for New York's flagging courage was the failure of two of its neighboring colonies, Connecticut and Pennsylvania, to give it any support. Connecticut, indeed, quartered the troops that New York had refused to supply.

The New York Land Revolt

Undoubtedly one of the main reasons for the collapse of resistance in New York was the gratitude of the New York landed oligarchy for the prompt use of British troops in suppressing a widespread tenant rebellion in 1766.

By the middle of the eighteenth century, rising resentment against the manorial lords of New York—recipients of huge government land grants—had begun to set off tenant uprisings against their masters. In 1750 a tenant-settler revolt occurred in Dutchess County, and in the early 1760s, similar revolts erupted on the giant manors of Albany and Westchester counties. Discontent centered in the largest ones, the big four manors, and the movement of the New York “peasantry” culminated in the general Hudson River rebellion, or “Levellers Uprising,” of 1766.

This revolt began over land in the Philipse manor (highland patent) in southern Dutchess County (now Putnam County), where Philipse tenant-settlers (largely from New England), concentrated in the eastern end of the county, were buying their land titles from the local Indians and ignoring the Philipse land claims. By 1756 the Philipse proprietors had seized the lands from the Indians and had brought ejectment suits against the rebellious tenants. In 1763 the tenants renounced the Philipse leases and refused to pay rent to their designated landlords. A chancery court case reached trial in the spring of 1765, but the judges—including members of the Colden, Smith, and DeLancey families of the New York oligarchy—were all great landlords. One judge, William Smith, was even connected with the Livingston family, which was involved in similar lawsuits with the Indians. Not only were the judges packed against the Indians and the tenants, but the grand Indian sachem, Daniel Ninham, was unable to retain a lawyer because every attorney in the province had been bought by the landlords. Furthermore, not only was

Ninham not allowed to speak in court, but the tenants were ordered arrested for the high crime of depriving the Crown of its due inheritance. And while Ninham appealed to England, Van Rensselaer took ejectment action against many of his tenants claiming Indian titles. The settler cases were brusquely thrown out by the courts, except for those won by the Philipse proprietors on the strength of obviously forged bills of sale from the Indians.

Deprived of their lands by the aggression of packed and landlord-dominated courts, the tenants looked for other means of defending their property. At the end of 1765, the tenants of New York, undoubtedly inspired by the stamp tax fight for liberty, decided to strike out for liberty for themselves. The Philipse settlers advertised publicly for tenants to meet in order to reinstate the evicted tenants by force. The Dutchess County rebels moved to "stand by each other with lives and fortunes," to force their landlords to grant them security of tenure and at least to lower their rents. Their main methods were by refusing to pay rent and defending themselves against any forced ejections. They pledged to rescue any tenants arrested for refusing to pay rents. Recalcitrant tenants were now forced to join the rent strike. William Prendergast, one of the more prosperous tenants, was chosen as leader, and militia companies were formed. Judges were forced by the rebels to swear never to prosecute them.

In the spring of 1766, the Leveller rebels on the Van Cortlandt manor in Westchester refused to pay rent, and demanded their land in fee simple. When three of them were arrested by the New York government, over a thousand assembled Westchester tenants threatened to rescue the prisoners from the New York City jail. The Dutchess rebels, who had been leery of the radicalism of the Westchester movement, now eagerly joined in the demands for rescue. The armed tenants marched on the city, naively expecting aid from the New York Sons of Liberty. When this help never materialized, the tenants disbanded and returned home before reaching the city. As the conflict polarized, the alarmed governor, Sir Henry Moore, called out the militia to suppress the tenants.

Five hundred rebels now gathered, and threatened to burn the house of Pierre Van Cortlandt if he did not grant their demands. A mob of five hundred also freed John Way from a Poughkeepsie jail, where he had been confined for nonpayment of rent. But a show of military force and a proclamation for the seizure of tenant leaders managed to disperse the rebels. The Dutchess County rebels, led by William Prendergast and Samuel Munroe, moved against the Philipse proprietors. At Livingston manor, several hundred Leveller rebels marched on Livingston's house, threatening to destroy the lord and his property unless they were at last freed from rent and taxation. They were dispersed, however, by an armed Livingston troop. Seventeen hundred armed rebels also fought at Van Rensselaer manor. By the summer of 1766, jail rescues of tenants flourished throughout the eastern Hudson Valley.

Despite proclamations and orders for arrests for high treason, the provincial government could not begin to suppress the rebellion. The militia, including many small farmers, proved completely unreliable, and British troops had to be called in by the governor to quell the uprising. Ruthless suppression by the pillaging British troops continued for four months. Finally, about eighty of the rebels were captured, including the great leader of the Philipse rebellion, William Prendergast. Significantly, so far was Prendergast from being a radical partisan of debtors or heedless of the property rights of creditors, that he made it clear that payment of debts in general must be strictly enforced. Only debts for the unjust exactions of quasi-feudal rents drew Prendergast's fire.

Prendergast and the eighty other or so rebel leaders were brought to trial. The judges were all great landlords and land speculators. Moreover, two of the judges were directly related to the manorial lords involved in the struggles. The rebels were indicted on charges of riotous assault and some for rescuing prisoners; they were variously sentenced to fines, imprisonment, and the pillory.

Prendergast's trial was different. *His* indictment was for high treason. Prendergast, highly popular in the colony and known to be a "sober, honest, and industrious farmer," was ably defended by his wife, Mehitabel Wing. At one point the prosecutor moved to oust Mehitabel "lest she might too much influence the jury" by "her very looks." The court sharply remarked that they might as well cover the prisoner with a veil, "lest the distress painted on his countenance should too powerfully excite compassion." The jury quickly brought in a verdict of guilty with a recommendation of mercy, but the court sentenced Prendergast to be hanged and quartered.

Meanwhile, butchery continued in the field, where British troops burned, pillaged, and plundered the still recalcitrant Philipse tenants. Dispossessed Van Rensselaer and other tenants fled to Massachusetts and Connecticut where they continued their quest for the land via guerrilla warfare, aided by Massachusetts and the Indians.

Because of the great popular sympathy for Prendergast, the sheriff could find no one willing to carry out the brutal sentence upon him, despite the sheriff's promise to disguise and reward the collaborator. Finally, after keeping Prendergast in prison for several months, the Earl of Shelburne, secretary of state for the Southern Department, recommended a pardon in view of the prisoner's great popularity, and the king agreed. Prendergast, incidentally, had bravely refused several chances to escape from prison in order to spare his family from having their property confiscated. He now returned home to great rejoicing.

As for the rebellious settlers, many of them left either for cheap and available land in virtually unsettled Vermont or for nearby Massachusetts. The Indians, despite the Crown's sympathy for their land claims, were forced to

plead their case before a packed court—a Council consisting of great landlords, some of them directly involved in the dispute. The Indians could not find a lawyer in the province, their witnesses were arrested, and judgment was concluded against them.

The failure of the liberal forces in New York was the failure of groups like the Sons of Liberty to merge with the tenant liberation movement. But given the conditions of the day, no further link was possible between these two libertarian groups. For the landlord leadership of the struggle against British oppression could hardly join hands with their own tenantry. The zeal of the Livingstons for liberty always stopped well short of extending such liberty to their own tenants. Too, the bulk of the Sons of Liberty was urban and artisan, and had little appreciation of the problems of the tenantry, or perception of how the mutually beloved concept of liberty could have forged a link between the two movements. Hence the indifference or hostility of the urban radicals toward the tenants; the radicals even applauded the calling in of British troops. And hence the lack of enthusiasm among the New York tenants for the Sons of Liberty and their cause. A pity—since the tenants had been firm supporters of the Stamp Act rebellion, and were inspired by that very revolt to struggle for their own particular liberty. A grave split thus developed among the radical forces of New York, weakening the whole resistance drive in that critical province.

An example of this split was the case of John Morin Scott, an early founder of the Sons of Liberty. It is true that Scott was early superseded in control of the Sons by such radical leaders as Isaac Sears, John Lamb, and Alexander McDougall, but it is also significant that this merchant, land speculator, large landlord, and political ally of the Livingstons was viciously antitenant, and was one of the personally interested judges who condemned Prendergast to death. On the other hand, an arch Tory like Lieutenant Governor Cadwalader Colden counseled against the massive use of force that crushed the tenants. General Gage chortled at the comeuppance being given to the “rich and most powerful people” who had fought the Stamp Act. Gage wrote trenchantly that these leaders had “first sowed the seeds of sedition amongst the people and taught them to rise in opposition to the laws. . . .”

Passage of the Townshend Acts

The Mutiny Act was one of the lesser of the major irritants imposed by the Pitt-Townshend administration. In early 1767, Townshend, with the consent of Pitt, decided to crack down on the Americans by making use of Franklin's strained distinction between internal and external taxation of the colonies. Townshend decided to levy "external" duties on the colonies, and to execute the law by ending salutary neglect and by instituting measures to enforce imperial customs and trade regulations. These were the "Townshend Acts" of 1767, which were passed at the end of June and which would become effective on November 20. Designed to bring in forty thousand pounds annually, the most fateful of these acts imposed new import duties on glass, lead, paint, paper, and tea. This money would be used to quarter British troops in the colonies, but primarily it would go for increased "support of civil government"—an obvious threat to the jealously guarded power of the colonial assemblies to appropriate the salaries of the executive officials.

To ease complaints against the heavy tax burdens in England, and to expand English power over the colonies, Townshend had decided to make use of the internal-external dichotomy. After all, he reasoned, if Americans, as he thought, could believe in this absurd distinction, let Britain make good use of this foolishness. Such proved to be the folly of England's taking Benjamin Franklin as representing the American people!

Parliament, piqued at the Americans and eager to shift tax burdens onto others, overwhelmingly supported the Townshend Acts; indeed, the chief opposition came from the Tories, led by Grenville, who argued against the acts for not going far enough. Among the Whigs, Edmund Burke, at this time one of their leaders in Parliament, led the opposition from the liberal

side; he astutely pointed out that the acts were not essentially different from the stamp duties and that the Americans would resist the former as they did the latter.

As a companion to the new duties, another Townshend Act radically increased the enforcement powers of British officialdom. Until this time, the various customs collectors and surveyors had been loosely controlled by commissioners of the customs in England. Now a new five-man American Board of Commissioners of the Customs was established at Boston, to exercise direct central control of American customs and trade act enforcement. The idea for the customs board had been given to Townshend by his protégé, Charles Paxton, surveyor of Boston, marshal of its vice admiralty court, and one of the newly appointed commissioners. Another Townshend Act authorized the appointed supreme courts of the colonies to issue writs of assistance—general search warrants—to enforce the customs regulations. A companion measure, to increase the effectiveness of admiralty-court enforcement, took effect the following year; it expanded the number of super vice admiralty courts from the single Halifax court to four, each of which would have both original and appellate jurisdiction in its own region. These courts were now located at Halifax, Boston, Philadelphia, and Charleston.

The Nonimportation Movement Begins

The arrogant encroachments of the Townshend Acts immediately rekindled American resistance to British oppression. With the exception of tea, much of which was handled by the British East India Company, the commodities taxed by the Townshend Act were all manufactured products imported almost exclusively from Great Britain. The Americans therefore decided to employ the nonimportation weapon, which had proved so effective in pressuring the British merchants to have the stamp tax repealed. A nonimportation boycott promised to be the best means of fighting the Townshend duties as well.

Boston, the major port for reception of the newly taxed goods, was a natural point of origin for the resistance, and this vigilant and libertarian-oriented town did not disappoint anyone's expectations. The first public resistance came in the Boston Town Meeting of October 28, 1767, led by James Otis. The meeting drew up a lengthy list of British products that Americans were to pledge themselves not to purchase after the end of the year; colonists were to patronize local manufacturing instead. Copies of the resolutions were sent to all the towns in Massachusetts and to the principal towns in the other colonies. Twenty-four Massachusetts towns backed Boston's action enthusiastically, with only Salem refusing. The following month Boston petitioned for the constitutional rights of the colonists against the new duties.

This original phase of the nonimportation movement was organized by Massachusetts town meetings and pledged the public not to consume certain British imports. These actions were partially spurred by a commercial depression triggered by the restrictions and burdens of the Townshend Acts. Clearly, they would help those caught by the depression to retrench their expenses and hence their purchases of imported goods.

Massachusetts towns were not alone in following Boston's example. Rhode Island, in fact, not only followed but went one better: on December 2 a Providence Town Meeting pledged the town's *merchants* not to import a list of imported goods after the first of the year. Such a pledge of a nonimportation boycott by merchants was far more concrete and finely edged, and far easier to maintain than a vague and unwieldy pledge by the mass of consumers. Providence's action was really the first effective move for a mercantile boycott to pressure England for repeal. Any merchant failing to sign or to conform to the boycott was himself to be boycotted by the people. Two days later, Newport followed suit, and then small Rhode Island towns. In Connecticut, town meetings, led by Norwich, adopted nonconsumption agreements after the pattern of Boston's.

Historians have made much of the fact that popular resistance to the Townshend duties early took the form of boycott agreements, whereas resistance to the Stamp Act had stressed armed rebellion. This has been interpreted as a significantly conservative shift led by merchants fearful of popular mob actions. But this view ignores the crucial difference between the two threats. The stamp tax, being internal to all colonial transactions, *had* to be fought by dismantling the new Stamp Act bureaucracy and then immobilizing the stamped paper. This could be done only by the armed action of the aroused people. But the Townshend levies reverted to the more orthodox import duties, and early mob action would have been pointless. What was needed now was *mercantile* action: smuggling in defiance of the duties, and boycott pressure on English merchants. Mob violence at that point would have been ineffectual and even absurd, and hence was not embarked upon. As would soon be seen, neither the American liberal leaders nor the public had become more timid or conservative since the stamp crisis; different methods of oppression simply called for different means of resistance. The change was one of tactics, not of spirit.

As in the case of the Stamp Act, popular local action was supplemented by petitions and resolutions of the assemblies. A clarion call was sounded in the form of a letter drawn up by the indefatigable Samuel Adams and presented to the Massachusetts General Court. Adopted on February 11, 1768, themissive was sent out as a circular letter to the assemblies of all the other colonies. The letter acknowledged the power of Parliament to regulate the colonies, but categorically denied any power of taxation, internal or external. Furthermore, not only the constitutional but the *natural* rights of Americans were charged to have been violated by such a tax, because the doctrine of consent to taxation was an "unalterable right in nature ingathered into the British constitution." Hence the Townshend duties were spurned, along with any move to make executive (including judicial) offices independent of Assembly appropriations, and united action was called for. The Massachusetts circular letter was approved by the assemblies of New Hampshire, New Jersey, Connecticut,

Maryland, Virginia, Georgia, and South Carolina during the spring and summer, and Virginia reinforced it by a circular letter of its own against British taxation.

Another powerful and widely influential statement of the American case against the Townshend duties was delivered by the eminent leader of the Pennsylvania liberals, the young lawyer John Dickinson. Dickinson's *Letters from a Farmer* appeared in the *Pennsylvania Chronicle* around the turn of the year 1767–68. It denied the right of any parliamentary taxation and hence of the Townshend duties, although it conceded the right to raise a revenue incidental to regulation of American trade (as under the Sugar Act). Dickinson also called for a determined nonimportation campaign to effect repeal of the Townshend taxes.

It soon became clear that official petitions and individual protests and even uncoordinated local boycotts were not enough; more concerted and unified efforts were evidently necessary. On March 1, the merchants of Boston, led by Captain Daniel Malcom, pledged to cease importing *all* goods from Great Britain for one year, provided that the merchants in New York and Philadelphia, the two other major American ports, would agree to join. Almost all the merchants of Boston signed this agreement, as did the merchants of Salem, Marblehead, and Gloucester (although the merchants of Portsmouth, New Hampshire, refused). After several meetings, almost every merchant and trader of New York agreed to import no British goods after October 1, 1768, and until repeal of the Townshend duties, provided that Boston continued its boycott and Philadelphia concurred. The Boston merchants accepted these terms in early May, but Philadelphia was a different story.

The city of Philadelphia, scarcely hit by the trade depression, was more heavily ridden with Tories than any other city in the American colonies. Here the Tory machine of Joseph Galloway was in control, and was able to overrule John Dickinson. During meetings in Philadelphia in March and April 1768, Dickinson eloquently reminded the merchants of the numerous attempts by Great Britain to cripple the trade and the nascent manufacturing of the colonies. The Townshend Acts were an invasion of liberty; and liberty, property, and industry went hand in hand. Therefore, Dickinson urged the merchants to forgo present advantage for principle and for long-run self-interest. But the Philadelphia merchants, taking their cue from Galloway, remained unmoved, and the great and imaginative project for a nonimportation league of merchants from the leading American cities collapsed.

Philadelphia's betrayal was a severe blow to the colonial cause. Notwithstanding, nearly all the merchants of Boston fearlessly agreed on August 1 to go it alone, and to discontinue imports of all goods from Great Britain for the entire year of 1769, as well as imports of all goods on the Townshend duty list until those duties were repealed. The heroic example of Boston's merchants inspired others; soon the merchants of Salem, Plymouth, and other

towns followed suit. On August 27, the New York merchants decided to go far beyond their Boston confreres. Almost unanimously they agreed to cease *all* importation after November 1, 1768, and until the Townshend duties were repealed. Any subscribing merchants violating the agreement would be publicly designated "Enemies to their Country." Furthermore, the retail tradesmen in New York signed an agreement to refuse to buy from any merchants who themselves refused to sign or follow the merchants' agreement. The merchants of Albany and other towns of the province also concurred. The following April, New York's Assembly, on motion of Philip Livingston, merchant and leader of the liberal wing of the landed oligarchy, voted its thanks to the New York merchants for their patriotic decision for a boycott.

Once again, in the fall of 1768, the merchants of Philadelphia were on the spot. And once again they coolly ignored the pressure for a boycott, and confined themselves to their own petitions, supporting a request to England by the Pennsylvania Assembly for repeal of the Townshend Act. Finally, however, the Philadelphia merchants pledged themselves to nonimportation effective next spring, if the Townshend Act had not then been repealed. With no sign of repeal in mid-March of 1769, the great bulk of the Philadelphia merchants at last agreed to import virtually no goods from Great Britain after April 1, 1769, until the Townshend duties should be repealed. Any violator would be publicly stigmatized as an "Enemy of the Liberties of America." Thus, by the spring of 1769, the three great ports had joined in a boycott until repeal. After a year of shilly-shallying, Philadelphia was at last permitting concerted American pressure upon Great Britain. The boycott movement was over the top.

39

Conflict in Boston

Meanwhile, during 1768, the British government managed only to stiffen American resistance by its frenzied reaction to the circular letter of Massachusetts. Charles Townshend had died suddenly in early September 1767. The Townshend Acts of course remained; the evil that he did lived after him. The subsequent reshuffle of the cabinet swung the balance of forces sharply to the right, with new power accruing to the followers of the arch-imperialist Duke of Bedford. Townshend's post as chancellor of the Exchequer was filled by the arch-Tory Frederick Lord North, who also replaced the liberal Conway as leader in the Commons. A critical new post of secretary of state for the colonies—in charge of colonial affairs—was filled by the imperialist Lord Hillsborough, formerly president of the Board of Trade.

Hillsborough reacted in horror to Massachusetts' circular letter. At the end of April 1768, he countered that mild action with a circular letter of his own, ordering the royal governors to dissolve any colonial assemblies that would dare to endorse the Massachusetts letter. For Massachusetts, Hillsborough ordered special punishment: its cherished Assembly was not to be allowed to meet again until it repudiated its circular letter. Here Hillsborough had been anticipated by Governor Bernard of Massachusetts, who had condemned the circular letter as seditious and dissolved the Assembly in early March.

Lord Hillsborough's bombshell was issued too hastily on several counts. For one thing, it had been sent without consulting the cabinet, where it was severely denounced by the liberals. But the fat was already in the fire. Second, several of the assemblies had already endorsed the letter by the time Lord Hillsborough's order was received in America. In any case, Hillsborough's effrontery was enough to influence Americans once more against British tyr-

anny. The colonies were incensed at this ferocious attack on their elementary right to petition, something enjoyed even by the slaves in America. Even someone as conservative as George Washington began to think of taking up arms in defense of American liberty.

Repression had only lit the spark of resistance in America. Colony after colony rushed to commend the Massachusetts circular letter. The spirit of resistance even stirred in Pennsylvania, although here Joseph Galloway was able to table any endorsement of Massachusetts. Massachusetts itself stood firm; Otis demanded that Britain promptly rescind its actions. The Massachusetts Assembly on June 30 defeated the royal order to rescind by the overwhelming vote of 92 to 17. The Assembly was then promptly dissolved by Governor Bernard. Throughout America the "glorious 92" were hailed as heroes of American liberty, while the seventeen rescinders were condemned as traitors and tools of Great Britain. Of the seventeen, twelve had been appointed officials under the royal governor. The town of Marblehead, Massachusetts, in unanimously voting to thank the ninety-two, trenchantly warned that the British were seriously miscalculating in thinking of the resistance as the product only of a minority faction rather than of the bulk of the people. The radical Massachusetts engraver, Paul Revere, depicted the seventeen in an influential cartoon as marching into hell. Sam Adams and the Sons of Liberty mobilized against the rescinders, and no less than twelve of them lost their seats in the elections of the following May.

Meanwhile, Boston was being particularly scourged by the presence of the new Board of Commissioners of the Customs, which began operations at the end of 1767. The customs board soon found to its horror that salutary neglect had indeed been in operation: violation of the imperial trade laws was rampant. Only six seizures of shipping had been made in New England since 1765; and of these violations, only one court case had been won by the Crown. Of the five other cases, two had been acquitted in Rhode Island under severe public pressure, and the three other ships in Massachusetts and Connecticut had been rescued by mobs.

The customs board swiftly and radically transformed the customs service. The old customs officials, who had settled into a mutually pleasant and profitable arrangement with the merchants, were dismissed and replaced by eager and unfortunately incorruptible Scotsmen. The new bureaucracy, led by a network of paid informers, swept down upon ships and managed to suppress the bulk of smuggling, and hence of shipping, in Boston. Boston's economic depression was thereby greatly intensified. The board did not succeed in suppressing smuggling, and hence shipping, in the other ports, but Boston was seriously crippled. The Massachusetts merchants were understandably embittered; and the customs commissioners were denounced as robbers, miscreants, and "bloodsuckers upon our trade."

Confronted with the oppression of customs and of Navigation Acts

enforcement, the people of the colonies, especially in the northern seaports, were forced to turn once again to their most powerful weapon: rebellion in the streets. The armed rioting was directed against the oppression of the customs officials. First, ships and cargoes were recaptured from the clutches of the government, under cover of night; second, as a supplement, stern warnings were issued to customs officials and their hired informers. Throughout 1768 and 1769, stripping, tarring, and feathering by mobs proved to be highly useful devices for intimidating the enemies of the people. Informers quickly learned a valuable lesson and abandoned their underhanded profession, while customs officials promptly fled the colony. Despite arrogant demands by the governors, local sheriffs and magistrates happily refused to do anything to stop the people's resistance. And even when officials were foolhardy enough to track down the mob leaders and bring suit, the sympathetic juries invariably freed the resistance leaders. Prosecution of rebel leaders could only take place in common-law courts, and here juries were eager to protect their heroes.

The customs commissioners, like Lord Hillsborough and most of the British officialdom, were nothing if not hard-line scorers of any "appeasement" of the colonies. In this they were aided by the arrival of a British man-of-war sent in answer to their request for armed help. The consequence, each step of the way, was to inflame and redouble the popular resistance. The customs board decided to repress the resistance by concentrating on and crucifying a man who was the leading financial angel of the Massachusetts radicals: John Hancock. Hancock, one of the wealthiest merchants in New England, symbolized the popular struggle. He had refused to lead a parade in honor of the commissioners' arrival, and had snubbed them socially. More important, he had early and energetically announced in the Assembly that he would not permit any customs officials to board any of his ships.

The first skirmish between the commissioners and John Hancock came in April 1768. He refused to let customs officials search his ship *Lydia*, and backed up this refusal with the presence of himself and numerous followers. The commissioners tried to bypass a jury trial in prosecuting Hancock, but the attorney general of Massachusetts ruled for Hancock and was upheld by the Treasury in England. Thwarted here, the board struck again on June 10: seizing Hancock's sloop *Liberty* in Boston harbor for loading without a license, a regulation hitherto unenforced. Knowing that for months no seized vessel in New England had gone unrescued by the people, the customs men towed the *Liberty* out close to the British man-of-war *Romney*.

To the people of Boston this act of oppression was the last straw. The Townshend taxes, the repression by the commissioners, the attempts by the British navy to impress Bostonians as sailors on the *Romney*—all fused to provoke mob action to defend their popular leader Hancock. In addition, the new customs regime was hated personally by Americans: one commissioner

was the execrated John Robinson, formerly of Rhode Island; another, Charles Paxton, was a friend of Hutchinson and an organizer of the customs board.

It was for Boston the time of the Stamp Act all over again. A mob threatened and set upon the customs officers, stoned their houses, and burned one of their pleasure boats. Leaflets were distributed urging the people to rise and clear the country of the customs officials. The commissioners promptly fled to Castle William and continued their operations from that privileged sanctuary.

Four days after this successful riot, James Otis led a tumultuous town meeting in Boston. The meeting demanded that every British naval commander in Boston be under the orders of the Massachusetts General Court, that the *Romney* be removed, that the customs board be dissolved, that impressments cease, and that anyone who sought British troops in Boston be branded a traitor and a disturber of the peace.

Impressments, incidentally, had been causing intensified bitterness and opposition in Boston during 1768. A Boston mob attacked boats from the *Romney* that were impressing fellow townsmen. Sailors were treated as criminals by the press gangs, and conditions and pay were poor on the naval vessels. The vice admiralty court went so far as to acknowledge that Americans who killed a British naval lieutenant during impressment, had killed in justifiable self-defense against an invasion of their persons.

The customs commissioners, it was true, had been driven temporarily out of Boston. But what about the *Liberty*? Under the protection of the *Romney*, Hancock's ship was quickly tried in the vice admiralty court without benefit of jury, and condemned. But this was only the first step in the vindictive plan of the commissioners. The *Liberty* had been seized on a picayune technicality, but the commissioners were out to get Hancock personally. One of their officials, Thomas Kirk, suddenly changed his story and now told a wild tale of casks of Madeira wine being unloaded from the *Liberty* without payment of duty. Despite a lack of evidence or corroboration of this testimony, the Crown proceeded to try Hancock and five others for the alleged violation. Hancock was jailed by the vice admiralty court and his bail set at the huge amount of three thousand pounds sterling. Hancock's trial was launched at the beginning of November 1768.

British officialdom and the people of Massachusetts were now at the point of armed conflict, a point brought nearer by further requests for British troops to put down the Bostonians. News of the Boston resistance fanned the flames of an aggressive tough-line attitude towards the Americans. Tories thundered that measures must be taken to show "those braggarts their insignificance in the scale of the empire," and to reduce the great metropolis of Boston to "a poor smuggling village." Even Lord Rockingham regarded Boston's resistance as "most dangerous and offensive." The fatal decision was made to send four regiments of troops to occupy Boston and to put down its virtual rebellion. Few yet had the courage or insight to call for escaping from Britain's

dilemma by repealing the Townshend Act structure. Still, pro-American opinion among the English public was very much alive, and newspaper articles hailed the American "spirit of liberty" in "struggling against oppression" and unconstitutional coercion, and in fact mentioned that the bulk of the British people were wholehearted believers in the American cause. Furthermore, the eminent Whig Sir George Savile perceptively wrote Rockingham that "it is in the nature of things that [the] . . . colonies . . . must assume to themselves the rights of nature and resist those of law; which is rebellion." And the great Newcastle remonstrated with Rockingham about coercing the colonies: "For my own part, whoever is for it, I must in conscience enter my protest against it; and I hope our friends will well consider before they give in to so destructive a measure."

40

Wilkes and Liberty: The Massacre of St. George's Fields

The bonds between the popular libertarian causes in England and those in America, and in their respective struggles against the British government, were in fact greatly strengthened during the critical year 1768. For 1768 saw the resumption of the libertarian Wilkite movement in England, and its attendant rioting inspired and strengthened the American and especially the Bostonian will to resist, just as the English cider tax rebellion had helped to inspire the stamp tax resistance in the colonies.

John Wilkes had been fretting in exile in Paris since the end of 1763. Wilkes was unable to persuade the sympathetic but shaky Rockingham ministry to let him back into England; it had enough troubles without him on the scene. Rebuffed coldly by Chatham, Wilkes took the bull by the horns and boldly returned to England in early February 1768, to find a highly receptive climate among the people. Unhampered by the Crown, Wilkes stood for Parliament from the City of London, backed by Sir William Baker, Newcastle's friend and an alderman, and by numerous craftsmen, with the cry of "Wilkes and Liberty!" Defeated in London, the bulk of the liberal votes having gone to their spokesmen Beckford and Trecothick, Wilkes decided to run from Middlesex County in the general elections of late March 1768. His leading supporters in the election were the Reverend John Horne, and the counsel at his trial in the old *North Briton* days, Serjeant John Glynn, MP. The inspired public rode in hundreds of coaches, bedecked in blue and carrying "Wilkes and Liberty" cards, out to Middlesex to campaign. The eager Wilkites were anxious to be peaceful, but were confronted by a crowd supporting the Tory incumbent Sir William Proctor. Armed with placards proclaiming "No Blasphemers" and "No French Renegade," and hurling insults, the crowd briefly scuffled with the Wilkites. At the Middlesex election, Wilkes led the

poll by a sizable majority. The joyous Wilkite masses celebrated by rioting for two straight days in London and Westminster, chalking every door with "Number 45" and breaking the windows of the leading Tories, including Lord Bute. Particularly roughly treated was the house of Wilkes' old enemy Thomas Harley, now lord mayor of London, whose windows were broken to the shouts of "Wilkes forever!" Among those arrested as leaders of the mob were Matthew Christian, a wealthy gentleman from the West Indies, and Robert Chandler, a London teabroker. Notwithstanding the arrests, the Wilkites continued to riot and to control the streets for several nights thereafter.

The sudden resurgence of John Wilkes and the mass libertarian movement posed a critical problem to the politicians of Great Britain. How should they react to the Wilkite movement? The range of opinion was what ought to have been expected. The new turn of events was favored by the Whig leaders. The Duke of Richmond hailed Wilkes' election as demonstrating to the administration that "though they may buy Lords and Commons, . . . yet they are not so much approved of by the Nation." The venerable Duke of Newcastle agreed, and wrote that "Wilkes' merit is being a friend to Liberty; and he has suffered for it." His old friend Earl Temple was still favorably disposed. And such as the Duke of Grafton and Lord Chatham shrewdly favored a royal pardon for Wilkes (still under the old sentence of outlawry) and letting him take his seat in Parliament, thus quelling the Wilkite agitation. But the right wing of the government—the Bedfords, including Lord Hillsborough, and the king himself—wanted full punishment for the rebel Wilkes.

The decision on how to handle Wilkes came before the government at the same time, April, that it was confronted with the Massachusetts letter against the Townshend Act. The British government saw the radical-libertarian philosophical link between the two rebellions, and the instinct of the dominant Tories was to maximize royal power by crushing both.

Not receiving a royal pardon, John Wilkes was tried for escaping punishment for his old offense. When the Tory judge Lord Mansfield imprisoned Wilkes without bail on April 27, the London crowd liberated Wilkes, but he put on a disguise to sneak back into prison in order to obey the royal command. In reaction to the arbitrary imprisonment, the Wilkite mobs rioted continuously for two weeks, especially outside the prison where Wilkes was being held. The prison lobby was demolished to the shouts of "Wilkes and Liberty!" But Wilkes himself at one point persuaded the crowd to disperse.

On May 10 Parliament opened, and a large crowd gathered in front of the House to demand that Wilkes be allowed to assume his rightful seat. In St. George's Fields a huge crowd of twenty to forty thousand people from all over London gathered ominously in front of Wilkes' prison. Wilkes' old enemy Robert Wood, undersecretary of state, had persuaded the secretary, Viscount Weymouth, to put a troop of infantry and cavalry into the Fields that day.

As the day wore on, the huge crowd and the troops confronted each other, each growing more restive. The crowd managed to paste on the prison walls a poem including the line: "Venal judges and Ministers combine, Wilkes and English liberty to confine." When the paper was torn down on magistrates' orders, the crowd became more radical, shouting not only, "Give us the paper" and, "Wilkes and liberty forever," but also, "No Wilkes, no king!" "Damn the king, damn the government, damn the justices," and, "This is the most glorious opportunity for a revolution that ever offered." At this point Justice Samuel Gillam read the riot act to the crowd, which responded with a volley of stones. One hit Gillam, and he ordered the soldiers to pursue the stone-thrower. The soldiers did not catch the assailant, but managed to kill William Allen, an innocent bystander. Finally, the soldiers were ordered to fire into the crowd, killing five or six and wounding fifteen—an act of brutality that became widely known as the "Massacre of St. George's Fields." Many of those shot were innocent bystanders. One policeman wrote that the soldiers "seemed to enjoy their fire; I thought it a great cruelty."

The massacre did not succeed in repressing the people's movement. Two of the magistrates implicated in the massacre had their houses pulled down, but the magistrates called the troops into play and dispersed the crowd. Throughout the metropolis, houses of leading Tories and anti-Wilkites were attacked. The next day several thousand sailors were posted before Parliament. With the encouragement of Parliament, the magistrates redoubled their repression, arresting thirty-four persons for participating in the riots. Of these, however, only a half-dozen were convicted and sentenced. Of those arrested the great bulk were of the poorer classes, mostly laborers and the rest artisans.

Grand juries tried their best to strike blows for the people against the government. The jurors tried to indict the troops responsible for the murder of the innocent man mistaken for a stone-thrower, and indeed indicted Justice Gillam for "willful murder," but these culprits were all acquitted.

The charge of outlawry against Wilkes was dropped on technical grounds. But on June 18, Lord Mansfield, surrounded by troops, ordered Wilkes to serve a twenty-two month imprisonment on a variety of minor charges. The Wilkite movement was now in good shape. It had the memory of the authentic martyrs of St. George's Fields, and it had a leader whose continuing imprisonment was a standing reproach to the government and a standing inspiration and rallying point to the popular libertarian cause.

The Massacre of St. George's Fields and the incarceration of John Wilkes were a goad and an inspiration to the liberal movement in America. As early as the first Wilkite agitation in 1763, Americans recognized their kinship to liberty and their enmity to the tyranny of British rule. In commemoration of Colonel Barré's famous pro-American speech in Parliament against the Stamp Act, Pennsylvanians named a new town Wilkes-Barré in honor of the two heroes. Now on June 6, 1768, a committee of the Boston Sons of Liberty,

including John Adams, Benjamin Church, Joseph Warren, and others, wrote to the "Illustrious Patriot" Wilkes as "the Friends of Liberty, Wilkes, peace and good order." The Bostonians hailed Wilkes' fight for the true British constitution, commended John Dickinson's pamphlet to his attention, and sent a monetary token of their esteem. On July 19, Wilkes significantly replied from prison that his dedication to liberty had no local confines, and that he was "a friend to universal liberty." Wilkes warmly commended Dickinson's "generous and rational . . . *Farmer's Letters*, in which the cause of freedom is perfectly understood," and never so ably defended. Such was the beginning of a more formal linkage between the libertarian movements in Britain and America, and of a voluminous correspondence between John Wilkes and the Boston Sons.

The American press had closely followed the events of Wilkes' European exile, and followed still more closely the drama of his return, imprisonment, and rioting by the people. In New London, Connecticut, in August 1768, the popular toast was, "May we never want [lack] a Wilkes and may Wilkes never want liberty." The speeches of Wilkes and his supporters were included among the radical ideas propagated by Adams, Otis, and the other popular leaders in America. The harsh treatment meted out to Wilkes and his followers helped intensify the feeling of resentment in America against the Crown. The Wilkite uprising also greatly raised American hopes, for any American resistance to British troops would be much aided by any distraction provided by the London radicals.

41

British Troops Occupy Boston

Perhaps these events helped build the optimism of Sam Adams and Dr. Benjamin Church, of the Boston radicals, who called for resistance to any invasion by British troops on the ground that Britain was a "tottering empire." The erratic James Otis also took heart. In late June, at a meeting of the Massachusetts Assembly, Otis extolled the memory of Oliver Cromwell and the execution of King Charles. Aroused from shock, Governor Bernard denounced Otis's speech as "the most violent, insolent, abusive, treasonable declaration that perhaps was ever delivered." A few weeks later Otis urged one and all to "defend our liberties and privileges . . . even unto blood" and to don the sword and musket in that cause.

Thus, by the latter half of 1768, Americans were pursuing two courses of resistance against the exactions of the Townshend-Hillsborough program. The first was general (though it concentrated necessarily on the port towns): expansion of nonconsumption and, especially, nonimportation agreements in boycott of British goods. The second was largely limited to Boston: resistance against a crackdown on illegal trade by the new Board of Commissioners of the Customs stationed there. This reign of rigid enforcement was primarily aimed at Boston; against *such* measures mere boycotting was not enough, and had to be supplemented by direct mass action. The decision to send troops to Boston made that port the acute center of conflict in the colonies.

Word of the decision to send an army of occupation to Boston galvanized the people of Massachusetts into action. Sparking the opposition to heights of revolutionary fervor was Samuel Adams. Rather than submit to military rule, Adams proclaimed, "We will take up arms and spend our last drop of blood." He promised that thousands of Massachusetts farmers would sweep down to

aid the embattled people of Boston. Rumors spread of two secret meetings of the Sons of Liberty, which plotted to incite the people of Massachusetts against the troops, and to seize the Boston harbor fortress of Castle William in behalf of the Sons of Liberty.

With the May Assembly dissolved by Governor Bernard for disobedience, the Boston Town Meeting took the lead in organizing the resistance. (Other assemblies that would eventually be dissolved by the royal governors for favoring pressure against the Townshend laws were those of New York, Maryland, Virginia, North Carolina and Georgia.) The town meeting was now the only legal body that could serve as a focus of resistance against Great Britain.

Accordingly, the Boston Town Meeting met on September 12 in a session planned and organized by radical leaders Otis, Sam Adams, Joseph Warren, and other Sons of Liberty. The meeting again stressed that taxation without their representation violated the British constitution and natural law; and sending an occupying army to enforce such unconstitutional acts was all the more unconstitutional. The Boston Town Meeting also used the clever excuse of an "approaching war with France" (a cherished policy of Chatham and Shelburne) to order all citizens to bear arms so as to resist any "French invasion." The Bostonians knew very well *whose* invasion they had in mind.

With a meeting of the Assembly denied to it, Boston summoned a newly created convention of delegates from all the towns to take proper action. In this way an extralegal, revolutionary institution was created by the people of Massachusetts to aid them in their struggle. Meanwhile, preparations continued for armed uprising against the British invasion. Before it was removed by the Council and sheriff, a beacon was set on top of Beacon Hill in Boston, which was to be burned as a signal to armed farmers to rally to Boston's aid.

The Massachusetts Convention met on September 22, with most of the towns—ninety-six in all—sending delegates and instructions of support. Its composition was very similar to that of the regular lower house. It is not clear what the radicals desired the convention to accomplish. Having imitated the proscribed Assembly by selecting the conservatively inclined Thomas Cushing as chairman, the convention confined itself to issuing a protest against the British troops. The arrival of these troops on September 29 caused the convention to disband in haste, after doing little more than setting a useful revolutionary precedent by its very existence. Also, the Sons of Liberty talked of mounting an armed resistance, but it never materialized. It is doubtful that all-out armed resistance by Boston at that time would have drawn in other towns and colonies, and an isolated Boston uprising would have had very little chance of succeeding.

The Massachusetts Council, the town of Boston, and later the new Massachusetts Assembly refused to permit the British troops to quarter in the town, but General Gage quartered them there nevertheless. The Council was con-

trolled by the House and by the popular forces, and the governor could not dismiss any magistrates without its approval. With the military refusing to enter civilian disputes, the popular liberal party still controlled the town of Boston. Furthermore, despite herculean efforts, smuggling was still far from being stamped out.

The settling of an armed occupation did not cow the town or the province. The liberals swept the Massachusetts spring elections of 1769, and Boston condemned the British and praised the American merchants for their boycott of British goods. A distinguished liberal Congregational minister, the Reverend Samuel Cooper of Boston, wrote that the entire province was united in its stand against the British troops and the Townshend Acts. The radical-dominated Assembly proceeded to purge four Tories from the Council. The conservatives were now routed from the Assembly and in the court of public opinion.

The popular liberals won another signal victory in the winter of 1768–69 in connection with the prosecution of their leading merchant, John Hancock. In his trial for smuggling, Hancock was defended by the brilliant young Boston lawyer John Adams, who moved from technical issues to the unconstitutionality of the statute, since the colonies had not been represented in Parliament, and the unconstitutionality of trial without jury. As months went by in the lengthy trial, Thomas Kirk became an increasingly flimsy and untenable witness, and John Hancock became a hero among the press and throughout the colonies. Finally, at the end of March 1769, the prosecution dropped the case. Hancock was free, and the popular forces had triumphed again.

Nonimportation in the South

Undoubtedly, the coercion against Boston helped to expand the nonimportation movement; and it had, by spring 1769, induced the merchants of the three great American ports to adopt such boycotts. From New England, New York, and Philadelphia the boycott movement now spread to other colonies. However, the situation in the South, especially the tobacco colonies of the upper South, was more difficult than in the North. In those southern colonies, commerce was conducted mainly by English and Scottish factors or independent merchants. These were not likely to turn against Great Britain and their own possibilities for trade. In the South, therefore, there was a tendency to stress nonconsumption agreements—as in the early New England boycotts—and thus to go over the heads of the merchants to the people. The boycott movement was led by the leading consumers in each province, the large tobacco planters.

In Virginia, organizers of the boycott were the large planters George Washington and George Mason, joined by Peyton Randolph, Richard Bland, Patrick Henry, Thomas Jefferson, and Richard Henry Lee. When the House of Burgesses met in May 1769, it proclaimed that it alone had the right to levy taxes in Virginia, and attacked Britain's reaction to the Massachusetts circular letter. It also denounced a British threat to haul Massachusetts' patriot leaders to England to stand trial for treason. When the Virginia governor dissolved the House in reaction to these resolutions, the members met privately on May 18 and formed the Virginia Association, pledging nonimportation and nonconsumption of all British goods subject to a duty, with the exception of paper, as well as of a long list of imported fineries. The agreement was devised by Mason and Washington, and Randolph was selected chairman of the association. Back in their home counties, the planters persuaded many of the public to sign the agreement.

In neighboring Maryland, the merchants of Baltimore joined their confreres in Philadelphia to adopt a nonimportation agreement at the end of March. Outside Baltimore, however, the traders and factors refused to join, and so planters led the way in bypassing them, signing a nonimportation agreement in Annapolis and Anne Arundel County on May 23. Most Maryland counties soon followed suit, and this led to the Annapolis leaders calling a meeting of "Merchants, Traders, Freeholders, Mechanics and other Inhabitants" for June 22. The Maryland Association added more luxuries to its taboo list. It also went beyond previous agreements by pledging a business boycott of all persons not adhering to the agreement; such were to be treated with contempt as "enemies to the liberties of America."

The largest mercantile town in the South was Charleston, South Carolina. But Charleston lagged badly in joining the boycott movement. The "mechanics" (artisans) of Charleston and the planters of the province favored resistance, but the merchants proved apathetic. Receipt of the circular letter of the Boston merchants in the fall of 1768 galvanized the South Carolinians, and the Charleston artisans won seats in the Assembly on the cry of supporting the "glorious 92" antirescindors of Massachusetts. The leader of the South Carolina boycott movement was the noted merchant-planter Christopher Gadsden, who welded the planter-artisan alliance. Spokesman for the alliance was the (Charleston) *South Carolina Gazette*, printed by Peter Timothy. In early February, Timothy urged nonconsumption of imports on the people of the province, and printed letters by planters urging such a boycott as a means of bypassing the reluctant merchants. Charleston artisans met around the Liberty Tree in March, calling for nonimportation. By mid-June 1769, "Societies of Gentlemen" had sprung up in Charleston, pledging themselves to buy no British goods that could be manufactured in America.

Thus, rich and poor united in favor of resistance. Still, despite the army in Boston and the widespread nonimportation movement throughout the colonies, the Charleston merchants hung back and did nothing. The time had come for sterner measures by the popular liberal forces. Accordingly, Christopher Gadsden kicked off a new phase on July 22 with a denunciation in the *Gazette* of importers of British goods, most of them newcomers in the colony. Gadsden and Timothy pushed for a formal nonconsumption agreement, one pledging an all-out boycott of *all* imports from Great Britain until the Townshend Acts were repealed. A boycott was also threatened of all citizens who did not sign the agreement within a month.

Heading the struggle for a boycott was Christopher Gadsden. Accused of advocating independence for the American colonies, Gadsden replied that independence would be bad, but added that losing their rights and liberties would be far worse. Aiding Gadsden in the fight were his old colleague at the Stamp Act Congress, Thomas Lynch, and the radical planter John MacKenzie. The original nonconsumption agreement was also signed by twenty-five members of the South Carolina Assembly. On July 3 and 4, 230 mechanics of

Charleston met under the Liberty Tree and signed the agreement, and even strengthened it by adding a pledge to buy no British goods from transient traders, and to import no slaves from British traders. Some of the mechanics also proceeded to pledge to deal only with merchants who signed the non-importation agreement.

The merchants railed at these agreements as worse than those of a despot, ignoring the vital distinction that such boycotts were purely voluntary decisions rather than coercive acts backed by the state or by any other force. Reluctantly, the merchants were dragged to the radical position. At first, on July 7, they signed their own, weaker nonimportation agreement limiting the boycott to the year 1770 and permitting certain articles to be imported. Further friction and severe pressure finally brought the merchants around. A joint committee of merchants, planters, and artisans drafted a uniform agreement, and on July 22 Christopher Gadsden triumphantly read this final agreement to a great audience under the Liberty Tree. Over four hundred signers in this General Meeting of Inhabitants formed an association headed by a thirty-nine-man General Committee of thirteen representatives each of merchants, planters, and artisans to supervise the workings of the agreement.

The joint agreement was largely a victory for the radicals. Signers agreed to import no goods from Britain; to maintain previous prices; to buy no imports from transient merchants, or Negro slaves for a year's time. Any nonsigning South Carolinian would be boycotted, and any violator was understandably to be "contemptuously advertised as being inimical to American rights." Of particular importance was the pledge to continue the boycott not only until the duties were repealed, as was usual, but also until repeal of the entire Townshend Act structure, including the customs board and the new powers of the vice admiralty courts. Most enthusiastic of the advocates were the artisans, who, it must be noted, had a distinct economic interest in nonimportation. As local "manufacturers" of domestic products, they were the ones who stood to gain most from the patriotic boycott banning the products of their British competitors.

Georgia suffered from the same occupational split on the Townshend measures as did her sister plantation colony. But a letter from the South Carolinians galvanized fraternal feelings in Georgia, and the radical "Amicable Society" met at Liberty Hall, Savannah, and called a meeting of inhabitants. The timorous merchants of Savannah tried to head off the association movement by proposing a weak substitute of their own—an agreement to boycott imports of only the *dutied articles*. But the mass meeting of September 19 followed the South Carolina principles closely, and overruled the merchants without even a pretense of gaining the merchants' approval.

North Carolina was still a holdout, with the merchants the main obstructive force. But the dam broke when Cornelius Harnett led the Sons of Liberty of Wilmington and Brunswick into nonimportation resolutions at the end of

September 1769. A provincewide association emerged after the manner of the Virginia Association a half-year earlier. The North Carolina Assembly adopted the Virginia resolutions on importation, and was promptly dissolved by Governor Tryon. The assemblymen quickly met as private citizens, and on November 7, 1769, drew up an association for nonimportation. The agreement was much like Virginia's; violators, furthermore, were "to be treated with the utmost contempt."

Rhode Island Joins Nonimportation

One by one the other colonies joined in the boycott movement. The grand jury and then all the freeholders of New Castle County in Delaware followed Philadelphia's lead, at the end of August 1769. In New Jersey the Assembly, in mid-October, passed a vote of thanks to the noble conduct of the merchants and traders of New Jersey, New York, and Pennsylvania for stopping the importing of British goods. Mass meetings in Essex County and at New Brunswick pledged nonimportation and a boycott of all nonsigners and violators. Connecticut merchants heeded the appeals of their fellow merchants from the large port cities. The merchants in New Haven agreed in mid-July 1769 to purchase no British goods, except for certain commodities excluded in the Boston and New York agreements. Violators were to be boycotted as "enemies of their country." Merchants at Groton and New London followed suit in August. The farm-dominated Connecticut House, in mid-October, gave its enthusiastic approval of the nonimport agreements. The boycott was joined by the towns of Wethersfield and Norwich at the end of the year. Merchants and some other citizens from all over Connecticut met in late February 1770 and drew up a uniform agreement for the entire colony. Violators were to be boycotted whether they were individual merchants or entire provinces.

Two continuing recalcitrants were Rhode Island and New Hampshire. Of these Rhode Island, a leading mercantile center, was by far the more important. Rhode Island's merchants took the golden opportunity to reap trade while their fellows were renouncing profits in behalf of principle. Thus, Rhode Island imports of British goods grew during 1769, and much new trade in these goods was conducted in western Massachusetts. Providence merchants and its town meeting, it is true, extended an old but loose nonimportation agreement. Newport merchants, however, were far more stubborn. Severe

pressure descended upon Newport from the other colonies: the Philadelphia Merchants Committee threatened to sever commercial relations; Boston shut off all trade with Newport; and Charleston was preparing to enter the fray. Even a nonimportation agreement drawn up by Newport merchants, at the end of October 1769, proved unsatisfactorily lax, and Philadelphia and New York merchants proceeded to boycott Newport. Finally, in late January 1770, Newporters surrendered and agreed to a strong nonimportation agreement.

By no means all Rhode Islanders, it should be noted, lagged behind in the resistance movement. As early as September 1767, an article in the *Providence Gazette* spoke eloquently of the natural rights of mankind, declaring it a self-evident truth that all were by nature equal in rights. The obligation to obey man-made laws rested on the consent of men. Therefore, it concluded, Parliament not only had no right to tax unrepresented Americans; it had no right to regulate them either. Leader of these logical advances in libertarian thought in Rhode Island was Silas Downer, a lawyer and a leader of the Sons of Liberty of Providence. In a speech to the Sons at the Providence Liberty Tree in July 1768, Downer, while admitting allegiance to George III, denied the right of Parliament to make "*any laws whatsoever* to bind us. . . ." He went on to apply this principle, denouncing royal post office charges in America as a tax and therefore illegal. Moreover, Downer attacked the British laws of trade and manufacturing as violations of the natural rights of men.

At least one Rhode Island writer trenchantly called for extending the libertarian doctrine to one group often neglected by the Americans: Negro slaves. If the cry for liberty is sincere, why is not the principle extended to the Negro slaves at home, the writer challenged? The only way to prevent enslavement from abroad, he declared, was to end "that hellish practice of . . . enslaving another part of the human species," for Negroes were surely Sons of Liberty, too.

New Hampshire's failure to join the resistance had a simpler and far different cause. An agricultural province lacking a large trading town, this small royal colony was a virtual fief under the thumb of the Wentworth family. As merchants, landowners, and top executive officials in the province, this family, uniting formidable political and economic power, was able to dominate the affairs of New Hampshire for decades. At the apex of this cozy pyramid was Sir John Wentworth, the royal governor and the surveyor of the King's Woods for all the colonies. Wentworth astutely named numerous new towns and counties in New Hampshire after his friends at the British court—for example, Rockingham, Grafton, and Hillsborough counties—and founded in 1770 a new college that he named after his friend the Earl of Dartmouth. Also in 1770, eight of the nine members of the appointed Council of New Hampshire, as well as a judge and a clerk of the superior court, were members of Governor Wentworth's family. In this situation, no nonimport association could be formed in New Hampshire.

Boycotting the Importers

By late 1769, merchants of every province but New Hampshire had organized to support nonimportation agreements, of varying comprehensiveness and scope. How were they "enforced"?

The merchant associations generally appointed committees to watch over vessels and shipments, and to promote the public boycotts of offenders. In New York the boycott was remarkably effective: total imports from Great Britain to the port fell from over four hundred and ninety thousand pounds in 1768 to about seventy-five thousand pounds the following year. Once in a while, the overeager New York Sons of Liberty strayed beyond the colonists' scrupulous limits of using strictly voluntary methods of pressure upon non-cooperating merchants. Thus, in the fall of 1769, a blend of boycott and mass intimidation induced the silversmith Simeon Cooley to flee New York; a jeweler, Thomas Richardson, confronted by a scaffold and a mob at the Liberty Pole, was forced to pledge his cooperation. The following June a transient noncooperating merchant named Hills had his goods seized and burned by a mob. Hills promptly fled New York. But these dishonorable instances were few and far between, and the Merchants Committee of Inspection denounced the mob action against Hills as the work of "lawless ruffians."

Philadelphia's record of compliance was remarkable, when one recalls that city's original reluctance to join the boycott. The merchants' main efforts were to weaken the agreements to the looser terms enjoyed by the Albany and Maryland merchants. Philadelphia imports fell from four hundred and forty thousand pounds to some two hundred and five thousand pounds the following year. No coercion or intimidation of the merchants appeared in Philadelphia. Connecticut, New Jersey, and Delaware also cheerfully complied with the

agreement and gave little trouble. Apart from the caldron of Boston, which will be treated below, only reluctant Newport in the northern colonies gave the nonimport movement much trouble. Indeed, there is evidence that even prominent members of the Newport Sons of Liberty, as well as the Merchants Committee itself, connived at virtually open violations of the nonimportation covenant.

Compliance with the boycott in the southern provinces was another story. The indifference or hostility of the merchants caused imports from Britain actually to increase during 1769, particularly in Virginia. The opposition of the British factors and their agents in Virginia forced the resisters to modify the boycott agreement, and attempts at enforcement by the Merchants Committees of Inspection or county associations were few and feeble. Enforcement efforts were far more successful in Maryland, where many more of the merchants were native-born and hence more enthusiastic about resistance. Too, and not unimportant, the Philadelphia merchants kept a watchful and suspicious eye upon their Baltimore confreres.

The boycott movement was not more successful in North Carolina and Georgia than in Virginia. The merchants ignored the provincial associations instituted by the North Carolina Assembly in late 1769. Finally, in early June 1770, the Sons of Liberty called a general meeting at Wilmington comprising many planters and others from six of the larger counties. The meeting agreed to boycott and publicly condemn all noncompliers with the agreement, and Merchants Committees of Inspection were selected in each county, concentrating on the towns of Brunswick and Wilmington. By the fall of 1770, enforcement had become effective as a result of these efforts.

In contrast to the strenuous if belated efforts at enforcement in North Carolina, Georgia made no attempt whatever to pressure compliance with the boycott. Fortunately, Georgia's trade was so negligible that its desertion had little effect. Nevertheless, a general meeting of inhabitants of Charleston, at the end of June 1770, unanimously urged the total boycott of all trade with Georgia, which ought "to be amputated from the rest . . . as a rotten part that might spread a dangerous infection. . . ."

The most interesting southern reaction, and one potentially explosive, to the problem of compliance occurred in South Carolina. There Christopher Gadsden and his vigilant band of radical-liberals stood alert to exert maximum pressure on reluctant merchants. These men, with their great ardor and zeal for liberty, were comparable only to the embattled libertarians of Boston. Like their comrades in Boston, the popular liberal forces of South Carolina confronted organized and articulate opposition, which was led by the wealthy young planter William Henry Drayton. Battling in the pages of the *South Carolina Gazette* during August 1769, Drayton denounced Gadsden as an advocate of enslavement masquerading as a libertarian; for private associations to brand noncompliers with the boycott as traitors, was a usurpation of the

function of the legislature. Here Drayton confused the vital distinction between voluntary and coercive actions, and hence between private and governmental actions. It was typically "conservative" for Drayton to believe that a state branding and punishing a man for treason was somehow legitimate and not really coercive, whereas *private* denunciation and peaceful boycott *were* illegitimately coercive. Also typically conservative, Drayton advocated jailing Gadsden for the latter's views.

The famous Gadsden-Drayton debate finally led the people of Charleston to publish and distribute handbills in early September containing the names of the recalcitrants. (The original motto of the Charleston General Meeting establishing the boycott had been "Sign or Die," but this proved to be braggadocio, as no attempt was ever made to go beyond boycott and public ostracism to such violence.) The leading nonsigners, aside from the inevitable royal officials, were Drayton, William Wragg, and John Gordon. Again, Drayton and Gadsden engaged in debate on the fundamental nature of liberty. Drayton asserted that the Gadsden liberals were "laying illegal restraints upon the free wills of free men" — that is, of the nonsigners. Gadsden retorted that the association violated not a single law and that free men had the right to associate—and hence *not* to associate—with whomsoever they pleased. Drayton replied by falling back on such cant as the old Tory doctrine of "conspiracy," which supposedly made such boycotts punishable by law. Wragg was more explicit in pointing out that such boycotts should be as illegal as combinations of labor to raise wages. In his rebuttal, Gadsden transcended the preceding debate to proclaim the right of a people, where their rights have been invaded by government, to reassert their inalienable natural rights, those "*inherent* rights of SOCIETY, which *no climate, no time, no constitution, no contract* can ever destroy or diminish."

Drayton did try to suppress the boycott at law. He could not go to the courts, for most of the judges (to say nothing of the juries) were signers of the association. And the South Carolina House summarily rejected his plea, which testified to the effectiveness of the boycott. Finally, the boycotters won. Drayton left in defeat for England in early January 1770, sailing, appropriately, on a ship carrying unsold boycotted goods back to Britain. Editor Peter Timothy of the *Gazette* thereupon exultantly listed among the unacceptable goods sailing back to Britain one "William Henry Drayton, Esquire."

The Charleston General Committee, enlivened as it was by mechanics and planters, vigorously enforced the boycott, aided by the alert Merchants Committee of Inspection. Slaves imported by British traders were promptly sent back. Indeed, so effective was the boycott that total English imports in both Carolinas fell from over three hundred and five thousand pounds in 1769 to slightly over one hundred and forty-five thousand pounds in 1770.

Particularly significant was the nonimportation movement in Boston, for here the struggle for the boycott coincided with Boston's necessarily more

acute conflict with the customs board and with the British army. The first town to organize the boycott, Boston had to face the hostility of the British customs officials and troops. They also had to face the effective organized opposition of John Mein, the Scottish publisher of the new newspaper, the *Boston Chronicle*. The *Chronicle* was not only the most typographically advanced paper in the country; it was also the only one to advance from weekly to semiweekly publication.

The *Chronicle* had recently begun as a newspaper above partisan stands in the political fray. But the customs board shrewdly saw an excellent opportunity for a propaganda coup and secretly set about subsidizing Mein's paper. Mein profited handsomely from the subsidy of being the stationer to the customs board, and after a year his stationery—or rather his vitriolic championing of the Tory cause—was so appreciated that the board made him its sole supplier. Mein also had clandestine help in writing his material from William Burch of the customs board, and from the richly hated customs officer Samuel Waterhouse, whom John Adams denounced as “the most notorious scribbler . . . and libeller, in the service of the conspirators against the liberties of America.” Yet Mein jealously maintained in public that he was completely “unbiased” and not connected with the government.

The major confrontation between Mein and the liberals began in the spring of 1769. On May 8, the Boston Town Meeting praised the bulk of the merchants for abiding by the nonimportation agreement. In the next few weeks the Committee of Merchants of Boston, headed by John Hancock, helped to distribute thousands of handbills urging a boycott of the few merchants who had not complied. The list included three relatives—two sons and a nephew—of the leading Tory Thomas Hutchinson, lieutenant governor of the province. (Another nephew of Hutchinson, later added to the list, quickly recanted his position.)

To tighten enforcement, the Boston merchants in late July appointed a committee to inspect any vessels from Great Britain with goods condemned by the agreement, and to publish the names of violators. Another committee circulated a pledge among Boston inhabitants to boycott any merchant so publicized in the handbills as violators. Governor Hutchinson was outraged by the effectiveness of these measures. He was particularly outraged by such regular and vital functions being conducted by *purely private*, nongovernmental bodies: in short, by nonstate, revolutionary institutions springing up directly from among the people. So effective were the committees that in early August most of the merchants named in the original handbills hastened to recant, and to promise to abide by the agreement.

Pressing their advantage, the Boston Committee of Merchants in mid-August condemned the remaining recalcitrants as “Enemies to the Constitution of their Country” and urged their boycott. The list now included John Mein, who stepped up his attacks to a level of continuousness. One unfair and mis-

leading charge said that the signing merchants themselves, including the eminent Hancock, were secret violators of the nonimportation agreement. Anguished and lengthy denials by the victims of Mein's smear attacks did not at all deter him from compiling his charges into a large book, which was then widely distributed by eager customs officials throughout the colonies. Mein's shrewd aim was to split the libertarian movement, and to sow distrust of the Boston leaders in the other provinces.

John Mein's widely disseminated libel had a chilling effect in the colonies, and gravely weakened the zeal of the nonimportation movement even among the radical cadres in New York, Newport, and Philadelphia. Mein's campaign also emboldened the nonsigning merchants and heartened Hutchinson's consistent attempts to induce Parliament to outlaw boycott agreements.

The liberals reacted by stepping up their pressure campaign. The Boston Town Meeting, in early October, condemned the seven recalcitrant merchants, and resolved to enter their names on the town records so that "posterity may know who those persons were that preferred their little private advantages to the common interests of all the colonies. . . ." The merchants, backed perhaps by hints of destruction of the recalcitrants' property, then forced the sons and nephews of Hutchinson into line. Now there remained only three merchants, including Mein, whose names were advertised as "Those (who) AUDACIOUSLY continue to counteract the UNITED SENTIMENTS of the body of merchants throughout North America." Of these, of course, the most hated was John Mein. The Free American Fire Company expelled Mein from membership, and the seniors of Harvard College resolved never again to have dealings with him. Finally, harsher measures were taken and his property was defaced and his person threatened.

Mein, it should be noted, was the inevitable focus of a growing climate of violence in Boston. In the first place, Mein had never been forgiven for the brutal and sudden clubbing of John Gill, a co-editor of the *Boston Gazette*, a year and a half earlier, an attack that Sam Adams and James Otis denounced as a "Spaniard-like attempt" on a free press. A far more precipitating event was a brutal crime that stunned the whole town of Boston. The liberals' popular leader James Otis had denounced the customs board commissioners in the *Gazette* of September 4, 1769, for maligning the liberals as rebels and traitors. The next night, in brutal retaliation, John Robinson, one of the commissioners who had been so cordially hated a few years earlier in Rhode Island, set upon Otis with a gang of toughs and beat him unmercifully. From this assault Otis never recovered, having been rendered permanently insane. Boston's beloved leader had fallen martyr to Tory violence, to what the aggrieved Sam Adams and the *Gazette* charged was an "intended and nearly executed assassination." The people of Boston were ready to retaliate.

And so on October 28 a street crowd gathered against Mein and his co-editor John Fleeming. The frightened Mein shot into the crowd, wounding an

innocent bystander. Some angry citizens swore out a warrant against Mein "for having put innocent people in bodily fear." Mein fled for his life to his spiritual home on a British vessel and thence to England, where the grateful King George awarded Mein a handsome pension for his diligent services.

The hated Tory Mein had finally been routed, but his venomous work went on. His faithful ally Fleeming continued to publish the *Chronicle*, and to publish and distribute updated editions of his and Mein's compendium of charges against the nonimporting merchants of Boston. Finally, however, Mein's heavy debts and the dwindling of subscriptions and advertisements caught up with the enterprise. John Hancock was able triumphantly to take possession of the paper in behalf of Mein's creditors. By late June 1770, the voice of the most dangerous Tory organ in America, the *Boston Chronicle*, had finally been stilled.

The Boston Massacre

The Boston nonimport movement, however, still faced grave problems. The original Boston agreement was scheduled to expire at the beginning of 1770. But in mid-October the merchants had joined their brethren in other colonies by continuing the agreement until repeal of the Townshend Acts. Many of the reluctant merchants grew restive at this turn of events and at the turn of the year eight began to bolt the agreement. A mass meeting of non-importing merchants began in mid-January to sit in continuing session, the better to put pressure on truants. The eight offenders were unanimously condemned by the more than a thousand persons present, as having forfeited all confidence of their fellow men. The whole crowd then quietly visited each delinquent in turn, but four still refused to yield. By January 23, the merchants voted to withhold from the stubborn four "not only all commercial dealings but every act and office of common civility."

Governor Hutchinson seized the occasion of the meeting to precipitate a test of strength with the merchants. He sent a message to the meeting denouncing it as illegal and its actions as terroristic. He ordered them to disperse and ban "all such unlawful assemblies for the future." Later Hutchinson was able to induce the Council to approve his actions by a slim majority. The merchants, however, continued undaunted as before and the justices of the peace refused to act against them.

It is important here to distinguish between two *types* of violence: violence committed by the people against their oppressors or the allies of their oppressors (for example, the Stamp Act riots against Hutchinson, the intimidation of John Mein), and the violence used by the oppressors against the people or their leaders (for instance, the assault on Otis, the Massacre of St. George's Fields). The difference is not simply a question of which side one may favor.

The former is the eruption of the people in indignation or rebellion against that minority that has arms of the state apparatus concentrated in its hands. *This* use of violence is a casting off of the unwanted rule-by-violence of a ruling clique. On the other hand, violence *against* the people by the (invariably better armed) ruling clique is a panicky attempt to stem the rising tide of indignation by the people, and to use the state's means of violence to yoke its unwanted rule even more burdensomely to the neck of society. Violence by a rebellious populace is an attempt to overthrow the camouflaged everyday violence of rule by the state over the people. Open violence by the state is an attempt to use extra measures to sit on the shaky lid. The former violence is therefore in essence *defensive*, whereas the latter is offensive or *aggressive* beyond the everyday norm.

Violence against *individuals* is also very different in the two cases. Violence against state officials is an attempt by a rebellious people to cast off their rule. Violence against individual leaders of the people (Otis, for instance) reveals the unending tendency of oppressors to think of a revolutionary movement as being not a genuine mass movement based on real grievances, but a frenzied mob whipped up by a few radical and obstreperous demagogues. Violence against customs officials was an *inherent part* of the revolt against tyranny. The assault on Otis not only was purely vindictive, but also reflected the tyrannical Tory error of shifting blame from mass grievances to supposedly diabolic leaders who were seducing a people otherwise happy and content with their rulers and their lot. This error, of course, is a highly convenient one for the rulers to make, for it allows them to state that the hearts of a seemingly rebellious people *really* belong to their masters.

Violence had been building up in Boston since the arrival of the British troops in late 1768. Boston had to contend with troops and customs commissioners as well as with reluctant merchants. The liberals had not succeeded in mounting resistance to the landing of the troops, but, once there, they waged an unremitting campaign for the liberation of Boston. Sam Adams and James Otis led a campaign of persistent and indefatigable agitation and struggle. Particularly significant was the widening of the campaign beyond the weekly readership of the *Boston Gazette*. The campaign was superbly planned. An inner group of radical leaders wrote a daily account of the pettiness and brutality committed by the troops upon the people of Boston, and each week a record was sent to New York City, to John Holt, libertarian editor of the *New York Journal*. Holt published these items as the *Journal of Occurrences* or *Journal of the Times*. He then distributed the *Journal* widely throughout the colonies; it was reprinted in numerous newspapers from Massachusetts to Georgia. Authors of the *Journal* included Sam Adams; William Cooper, Boston town clerk and brother of the libertarian clergyman the Reverend Samuel Cooper; and the radical councillor James Bowdoin, a wealthy merchant of Boston.

During the summer of 1769, two of the four British regiments were removed, and Thomas Hutchinson replaced Bernard as governor. But the lessened power of the troops did not endear them more. Furthermore, the rumor spread that England planned to alter the precious Massachusetts constitution. The Boston Town Meeting again insisted on the repeal of the Townshend and other duties, as well as the recall of the customs commissioners and troops. The popular radical leaders continued their pressure. Numerous festivals (such as on the anniversary of the great Stamp Act riots) were promoted by Adams, Otis, and the Sons of Liberty to rally the people for liberty against its enemies; at such gala events toasts were drunk to commemorate the hal- lowed numbers 45 and 92, and calls were issued for "*strong hal- ters, firm blocks, and sharp axes* to all such as deserve them."

Agitation against the troops was supplemented by sterner measures. The people of Boston made it clear to the troops that they were unwelcome there. Occasionally, isolated soldiers were beaten up on the streets by groups of Bostonians. Soldiers aggressing against citizens were promptly hauled into court.

As a result of the persistence and fortitude of the Bostonians, the British troops began to grow ineffectual in enforcing the trade acts. For fear of popular upheaval, the civil authorities grew wary in calling on troops for their support. Thus, in late October 1769, Governor Hutchinson wanted to use troops against a mob that had seized a hated customs informer, but was warned off by the advice of the Council, sheriff, and justices of the peace. Also in late October, a crowd attacked a British troop with sticks and stones and forced it to disperse. The agitated Colonel William Dalrymple, commander of the troops, blustered that this incident was "but a prelude" and that "never was the popular insolence at such a pitch."

Nonimportation, British troops, liberal agitation, mounting climate of violence, increasing edginess and ineffectuality of the soldiers—all culminated and came fatefully to a head in early 1770.

The culminating crisis unsurprisingly arose from the pressuring of the four mercantile holdouts against nonimportation: John Taylor, Theophilus Lillie, William Jackson, and Nathaniel Rogers, nephew of Governor Hutchinson. On February 22, some schoolboys led a crowd in placing an effigy of the four importers at the door of Theophilus Lillie. Seeing this, the "infamous informer" Ebenezer Richardson denounced the boys and tried to destroy the effigy. The appearance of the reviled customs informer was just what was needed to inflame the crowd, which pursued him to his house crying "Informer! Informer!" There the boys threw rocks at his house, whereupon the panicky Tory Richardson fired repeatedly into the crowd, killing eleven-year-old Christopher Snider and wounding the eleven-year-old son of Captain John Gore. The effect of this massacre of the children on Boston public opinion can readily be imagined. Richardson himself barely escaped being hanged on the spot. The four miscreant importers either left town or mounted an

armed guard. The funeral procession for little Christopher Snider, organized by the Sons of Liberty, was two miles long, perhaps the largest ever gathered in America. The huge funeral, significantly enough, was patterned after the Wilkite funeral in England for the innocent victim of the Massacre of St. George's Fields. To the Boston liberals the murder of young Snider recalled the tragic assault upon Otis, "the object of the fury of the cursed cabal." But Snider was "the first, whose LIFE has been a victim to the cruelty and rage of oppressors!" The *Boston Gazette* thundered that "the blood of *young Allen* [the victim at St. George's Fields] may be covered in *Britain*. But a thorough inquisition would be made *in America* for that of *young Snider*, which crieth for vengeance, like the blood of the righteous *Abel*."

The killing of young Snider would not be the final incident. In less than two weeks, on March 2 and 3, clashes occurred between Bostonians and the troops. British complaints were to draw retorts by the Massachusetts Council that the evident solution was to withdraw the troops. For their part, the populace believed the customs commissioners (the bosses of Richardson) to be implicated in the child murder, and were indignant at the soldiers being used to guard the hated commissioners at the customhouse.

The final crisis arrived on the night of March 5. The troops began the day by printing an insulting handbill. A small riot was then precipitated by a fist-fight between a soldier and a ropewalk worker; there had been bad blood between ropewalk laborers and the troops before. As night fell, a soldier struck, with his musket, a young apprentice, who had been denouncing British officers and rousing ugly memories of the child killing of two weeks before. A crowd now gathered before the barracks of the Fourteenth Regiment and pelted the sentries with snowballs.

Meanwhile, the meeting bell was rung and a crowd gathered at the customhouse on King Street, where the main body of troops was stationed. Someone recognized the soldier who had assaulted the young apprentice—a sentry at the customhouse—and the crowd attacked him with sticks of broken ice and snowballs. At this critical juncture, the customs officials at the customhouse called for the main guard headed by a Captain Thomas Preston to come to the rescue of the honor of the sentry, the army, and the commissioners who had brought the troops to Boston in the first place. Captain Preston and his guard of seven men stalked through the crowd, pricking the people with fixed bayonets. The crowd pressed in courageously on the bayonets, and when the gun of one soldier was knocked to the ground the soldiers emptied their muskets into the crowd. Joining in the shooting were customs officials, who fired upon the crowd from the privileged sanctuary of the upper floor of the customhouse. Five men fell dead or dying from that murderous volley, and six other Bostonians were wounded. The incident swiftly became known far and wide as the "Boston Massacre." The first to fall dead was Crispus Attucks, a tall Negro sailor, who had been one of the most zealous front-fighters in the Sons

of Liberty. The others killed were a sailor, a ropemaker, and two young apprentices. At the sound of firing the townsmen fell back, but soon advanced again to take away their dead and wounded. The panicky soldiers got ready to fire again, but Captain Preston struck their guns out of position. Soon the Boston crowd began to form in earnest, and the streets rang with the cry of "To arms! To arms! Turn out with your guns!" Nearly five hundred people assembled, swearing to kill every British soldier who had fired upon the people. Preston and his men thereupon retreated rapidly to the safety of the guardhouse.

This was it. The people of Boston and of Massachusetts had had enough. The Boston Massacre was the final straw that sent this most sensitive spot in the American colonies once again to the brink of revolution. The next day, an extraordinarily large town meeting was held in Boston. Challenged by the rousing speech of Sam Adams, the meeting unanimously demanded the immediate withdrawal of British troops from Boston. Adams and Hancock were selected to head a town committee to present the demands before Hutchinson and the Council. The governor's offer to withdraw one of the two regiments was scornfully spurned. Unless there was total evacuation, warned Adams, the troops would be destroyed. Fifteen thousand armed citizens, thundered Adams, were ready and eager to pour into Boston to eliminate the hated soldiery. When Adams made these threats, he noticed that Hutchinson trembled and grew pale, and he "enjoyed the sight." The Council unanimously advised surrender, and warned Hutchinson that all New England would soon rise in arms against the troops and that "the night which was coming on would be the most terrible that was ever seen in America." Before night fell, Hutchinson yielded, and promised speedy and complete evacuation of the troops. Soon the soldiery left, to the hooting of the crowd, for the safety of Castle William.

Sam Adams' threats were not idle ones. Forty thousand New Englanders were ready to march for the liberation of Boston. Ten thousand were set to march from Portsmouth, New Hampshire, alone, led by the Portsmouth Sons of Liberty, who proclaimed that the "bloody work in Boston calls loud for VENGEANCE." The Liberty Boys of Salem, Massachusetts, promised thousands of yeomen from Essex County to destroy a "licentious and bloodthirsty soldiery." Indeed, armed men had already begun to march on Boston, until stopped by Bostonians with the word that the crisis was over.

Expulsion of the troops accomplished the first objective of the popular forces. The next goal was to bring those responsible for the massacre to the bar of justice. As early as March 6, Captain Preston and his men were arrested by the civil authorities of Boston and indicted for murder. The Crown authorities dragged their feet, however. The royally appointed superior court judges delayed the trial for as long as they could—actually until October. The prosecution was deliberately weak, and permitted a jury of which no member came

from the town of Boston. Preston and most of the soldiers were acquitted; two of the soldiers were convicted of manslaughter, but their punishment was absurdly limited to being branded on the hand. The historian Oliver Dickerson has brought out that one of the reasons for acquittal of the soldiers was the angle of the bullets killing Attucks and others, indicating a firing from the upper story of the customhouse, that is, by customs officials.*

The people were understandably resentful of the acquittal and the light sentences. Was a slight brand on the hand to be the full payment made for five murders? The judges were bitterly reviled, and one eager young radical, the son of a chancellor, posted a notice urging assassination of the judges. Sam Adams, as "Vindex" in the *Gazette*, attacked the verdict and spread the liberal account of the massacre far and wide. Adams made March 5 an annual observance, to keep fresh in the minds of the people the "bloody work" of the "butchers" of King Street.

The obstruction by the judges was used by Adams to show that it was futile for the people to look to the (royally appointed) courts for redress of their grievances. Even the juries were unreliable. Only an armed people's militia could be relied upon to deal successfully with the enemy, the British redcoats. With rumors flying of new British landings to punish Boston's uprising, the Sons of Liberty trained a militia and resolved to fight and resist any future landing. "Innocence is no longer safe," declared Adams in the *Boston Gazette*; "we are now obliged to appeal to God, and to our ARMS for defense."

Despite the dereliction of the judges in the massacre case, popular pressure did force them to proceed with the trial of the child killer Ebenezer Richardson. Richardson was tried and convicted of murder, but pardoned by the Crown and allowed by the authorities to flee the country. Though they did not manage to bring the soldiers to justice, the popular forces were able to drive the hated customs commissioners as well as the troops out of Boston. John Robinson, the assaulter of Otis, fled to England and secured the pardon of Richardson, as well as a handsome reward by the Crown for the patriotic work of the judges in seeing that the soldiers and customs officials escaped punishment.

The Boston liberals still faced the task of enforcing nonimportation, and increased pressure was now put on the few recalcitrant merchants. The mob finally forced Nathaniel Rogers to flee Boston. The Sons of Liberty sent a message to their brethren in New York to be ready for him, and the New York Sons prepared a tarring-and-feathering party for Rogers. Driven from New York too, and having learned a rough lesson, Rogers returned to Boston in May to sue fruitlessly for restoration to good standing. The Boston Town Meeting also redoubled its efforts to help the merchants agitate for compli-

*Oliver M. Dickerson, "The Commissioners of Customs and the 'Boston Massacre,'" *New England Quarterly* (September 1954): 307-25.

ance with the agreement. The result of the merchants' nonimportation campaign was to lower imports from Britain into Boston from four hundred and thirty thousand pounds in 1768 to less than two hundred and twenty-five thousand pounds the following year. Overall in the American colonies, imports from Great Britain fell substantially from 2.15 million pounds in 1768 to 1.33 million pounds in 1769.

The revolutionary temper of the people of Boston in the months after the Boston Massacre may be gauged by the instructions given on May 15 by the Boston Town Meeting to its representatives in the General Court. The town attacked Britain's "deep laid and desperate plan of imperial despotism . . . for the extinction of all civil liberty in America." The town meeting also challenged any "pretended right or power of . . . any exterior authority" to limit any American constitutional or natural rights or liberties. To an earlier Boston challenge to the right of Parliament to regulate any colony by statute, it now added the far-reaching rejection of the power of the Crown to instruct the colonial governors. To these, Hutchinson reacted in horror, believing they were "designs . . . to bring about a revolution, and to attain to independency."

46

Conflict in New York

Boston was not the only place where armed conflict exploded between the citizens and British troops. We remember that the New York Assembly had been forced by British threats to comply with the British Mutiny Act, and therefore voted to supply British troops in New York in June 1767. At the end of 1768 the Assembly, under pressure from the Sons of Liberty and coming under control of the radical-liberals, resumed its resistance and bravely refused to vote for the supplies during 1769. Finally, the Assembly yielded in mid-December 1769 by a thin majority. The agitation of the people, aggravated by the economic depression of the day, was led by the Sons of Liberty. Spearheading the attack was the merchant Alexander McDougall, one of the radical leaders of the Sons of Liberty of New York. McDougall, in the pamphlet "To the Betrayed Inhabitants" of New York, attacked the Assembly's capitulation and urged imitation of the deeds of the "brave Bostonians." At a popular meeting of fourteen hundred people led by John Lamb of the Sons of Liberty, a committee of Sons was appointed to pressure the Assembly. The Assembly lashed back at the McDougall broadside "as a false, seditious, and infamous libel" and called for the author's arrest. Lamb and Benjamin Prince, a friend of McDougall's, were accused of authoring libel, but the Assembly could find no evidence against them.

In mid-January 1770, resentment against the British soldiery came to a head. Since 1766 the British troops in New York had repeatedly cut down the Liberty Pole, which had been built by the Sons of Liberty to commemorate repeal of the Stamp Act. One of the grievances against the British soldiers was that they offered themselves as cheap civilian labor, thus undercutting the regular laborers. This was a major reason for the clashes between

ropewalk laborers and soldiers (who sometimes worked as civilians there at low rates) in the days before the Boston Massacre. In New York the Sons of Liberty, on January 16, issued an attack on those who employed British soldiers, and called a meeting at the Liberty Pole. The soldiers promptly cut down the pole and contemptuously deposited the pieces at the doors of the Sons of Liberty. The enraged Sons held a mass meeting of three thousand people, who protested the destruction of the Liberty Pole and the employment of British troops in laboring work. In retaliation the British troops issued a handbill denouncing the Sons of Liberty as dangerous enemies of the country. As some soldiers tried to post the leaflet on January 19, they were seized by Isaac Sears and a group of Liberty Boys and taken to the mayor's office. An attempt by the British to effect a rescue led to a clash between the troops wielding bayonets, and the crowd armed only with chains and sticks. Several citizens were wounded at this, the Battle of Golden Hill.

A clash with occupying troops thus antedated Boston's by nearly two months. But the consequences were considerably different. New York was ruled not by a popular leadership of radical-liberals but by factions of a conservative land-based oligarchy. In New York, the Sons of Liberty were not the vanguard of a dominant movement, but a radical group trying to work its way into position to crack open an oligarchic power structure. The armed clash, instead of cementing libertarian control here, intensified a conservative backlash and made the conservatives determined to crush the Sons of Liberty. Broad­sides appeared, supporting the granting of money to the British troops and ridiculing the Liberty Boys, McDougall being attacked as an Irish upstart. His authorship of the "seditious" pamphlet criticizing the Assembly having been betrayed by an informer, Alexander McDougall was arrested by the Assembly during February and turned over to the common-law courts to be indicted for "seditious libel." Consciously emulating the courage and career of John Wilkes, McDougall remained in jail rather than post bail, and was visited by adoring crowds and hailed as the "Wilkes of America." The radicals even used the talismanic Wilkite number 45. To the New York conservatives, McDougall was indeed a Wilkes who sought to "trample down all legal authority, and shake the government to the foundation." He was defended by John Morin Scott as well as by the Liberty Boys; but with the prosecution's major witness (the informer) dying, the government decided not to press the case further. McDougall was released from prison to great popular rejoicing.

His freedom was short-lived. At the end of the year McDougall, on the same charge, was hauled before the vindictive Assembly, acting by its own authority. First, the Assembly tried to force McDougall to testify against himself. When he refused, it threatened him with torture to force him to testify. Still refusing, McDougall was asked to write out his reasons for doing so. Typically, the Assembly decided that this statement contained fresh libels in contempt of the Assembly, and demanded that he beg its pardon. When McDougall still refused, the Assembly sentenced him to indefinite imprison-

ment for “high contempt,” and ordered the sheriff (as in the Smith-Moore case in Pennsylvania in the 1750s) to disregard any writ of habeas corpus. Only five members of the Assembly voted against this brutal suppression of freedom of criticism, by a government body that acted as its own complainant, judge, and jury. McDougall was finally released at the end of the Assembly session, in April 1771, with the government dropping all charges against him.

Wilkes and America

It was no accident that Alexander McDougall tried to emulate Wilkes. Wilkes had indeed been the hero and the inspiration of the libertarian movement on both sides of the Atlantic. This was particularly true in the period since his incarceration in June 1768, an imprisonment which continued until the spring of 1770. During his term in jail, Wilkes' supporters ran him successfully four times for Parliament in Middlesex; but four times he was denied his seat by Parliament itself. After the third rebuff, a mob surrounded the royal palace shouting, "Wilkes and no king," and was dispersed by troops.

The connections between Wilkes and the American liberal movement enhanced each other's knowledge of events in the other land. We have seen that the Boston Sons of Liberty struck up an extensive correspondence with Wilkes in prison. On October 5, 1768, the Boston Sons wrote admiringly to Wilkes that he was "a martyr to universal liberty." Among the prominent Bostonians who wrote to Wilkes were Dr. Benjamin Church, Jr., John Adams, Sam Adams, Dr. Thomas Young, Joseph Warren, William Palfrey, and Josiah Quincy, Jr. One Bostonian reported that he had dined with Wilkes in jail and that they both had toasted, "To the King, to Liberty, the FARMER [John Dickinson], and James Otis, Esq. of Boston. . . ." The closest connection between Wilkes and the American liberals was Arthur Lee, a Virginian living in London. Keeping in close touch with the Wilkite movement through Lee were such leading Americans as John Dickinson and Arthur's brother, Richard Henry Lee. Arthur Lee was responsible for a clause in the Wilkite Middlesex petition denouncing the oppression of the colonies by Great Britain. Others who served as a liaison between Wilkes and the Ameri-

can libertarians were George Hayley, Wilkes' brother-in-law, who was the English commercial agent for John Hancock and William Palfrey; and Lord Sheriffs William Lee and Stephen Sayre, American-born merchants who were mercantile partners of a prominent Bostonian.

Wilkes then added oppression of the colonies to the catalog of oppressions for which he habitually denounced the British government. In February 1769, the Boston Sons wrote to Wilkes that "the fate of Wilkes and America must stand or fall together." Wilkes replied at the end of March that Britain had imposed an "Asiatic despotism" on Boston by sending in troops, and he pointed to a parallel between the actions of the soldiery in Boston and those in London.

Unlike the more timorous Whigs, the Wilkite radicals attacked the Declaratory Act and favored far more liberty for the colonies. As the Wilkite leader the Reverend John Horne eloquently declared: "When the people of America are enslaved, we cannot be free; and they can never be enslaved whilst we continue free. We are stones of one arch, and must stand or fall together."

On February 20, 1769, the supporters of Wilkes formed the Society of the Supporters of the Bill of Rights to raise funds to finance the Wilkite cause. Many prominent American liberals, including Samuel and John Adams, were members of this society.

Organizing a mass petition campaign to protest Wilkes' repeated expulsion from his rightfully won seat, the Wilkites went on to denounce the entire Parliament as unrepresentative and therefore corrupt, and this charge helped to radicalize opinion in America. The petition campaign, organized by the Society of the Supporters of the Bill of Rights, swept not only London, Westminster, and Middlesex, but also Essex, Surrey, Kent, and the West Country, including Devon, Cornwall, and the town of Bristol. The American Henry Cruger, head of the Independent Society of Bristol, organized a petition in mid-July, signed by half of the five thousand eligible voters of Bristol, protesting both the cruelties to Wilkes and the "unpolitic and unconstitutional taxations and regulations on Your Majesty's colonies." Protest against oppression of the American colonies was also made by the Middlesex and London petitions. Most of the petitions were brief and did not mention America, but nonetheless drew the hearty support of the colonists.

In close association with the Wilkite Society, the Whigs—including Rockingham, Savile, Dowdeswell, and Edmund Burke—successfully organized petitions in the northern and western counties of England. All in all, sixty thousand people, over one quarter of the voters of England, signed the Wilkite petitions—a true mass movement. Despite frantic attempts, the government was only able to organize counterpetitions in support of a hard line toward Wilkes and the Americans, from the two controlled universities, four counties, and two cities.

The enthusiasm of Americans for Wilkes and his cause was indeed enor-

mous. This rhapsodic credo of one American pamphlet, widely circulated in Boston in 1769, was typical:

I believe in Wilkes, the firm patriot, maker of number 45. Who was born for our good. Suffered under arbitrary power. Was banished and imprisoned. He ascended into purgatory, and returned sometime after. . . . I believe in the spirit of his abilities, that they will prove to the good of our country. In the resurrection of liberty, and the life of universal freedom forever. Amen.*

The Americans were wont to compare Wilkes to their seventeenth-century libertarian heroes Milton and Sidney; and their seventeenth-century Republican view was enlivened by the resurgence in Britain of such embodiments of tyranny as standing armies, arbitrary judicial procedures such as general warrants, and burdensome taxation. This harking back to the highly relevant seventeenth-century struggles was fueled by the publication of the multivolume *History of England* by the noted libertarian Catherine Macaulay. The work of Mrs. Macaulay, a correspondent of James Otis and an admirer of Dickinson, was well known and eagerly read in America, as was Wilkes' own published introduction to his projected history of England at the turn of the eighteenth century. Mrs. Macaulay was the sister of the prominent London Wilkite alderman John Sawbridge.

As 1769 wore on, the identification of American radicals with Wilkes intensified as the network of interwoven grievances expanded in Britain and in America. The Boston merchant William Palfrey wrote Wilkes in the fall of 1769 of the "unremitted ardor" of the Sons of Liberty for his cause, and their sympathy "in the distress brought by arbitrary ministers upon Great Britain and her dependencies." The petition movement of late 1769 drew great support in America. The South Carolina House showed its solidarity with the Wilkite cause in December by sending to the Society of the Supporters of the Bill of Rights fifteen hundred pounds sterling in behalf of the "just and constitutional rights and liberties of the people of Great Britain and America." A group of Maryland liberals sent Wilkes a symbolic "45" hogsheads of tobacco, and a similar action took place in Virginia.

This fellow-feeling deepened among the Wilkites too. The *London Public Advertiser* argued cogently that "the cause of Liberty in England and America is ONE COMMON CAUSE," because "the attacks on both have been made by *the same set of men, with the same views, and with the same illegal violence.*" Furthermore, the Wilkites began to make use of American arguments against Parliament, and many Middlesex freeholders refused to pay their taxes on the ground that since their elected representative John Wilkes was excluded from Parliament they had not consented to the taxes. The Wilkites also endorsed

*Quoted in Pauline Maier, "John Wilkes and American Disillusionment with Britain," *William and Mary Quarterly* (July 1963): 373.

and spurred the American nonimportation movement, aided by the continuing encouragement given to American nonimportation in the Virginia press by Arthur Lee.

The Americans were particularly interested in the petitions of Middlesex and London, which championed the colonial cause and which also came from the heart of English radicalism and from the city with which the American liberals most closely identified. King George's brusque dismissal of the London petitions in March 1770 had a sharp and chilling impact on opinion in America. Until then, the king had always been deemed sacrosanct and only his ministers or politicians in Parliament were held blameworthy for the regime of oppression. Now, for the first time, the king himself began to be a butt of libertarian attack in America. The great radical organs, the *Boston Gazette* and Peter Timothy's *South Carolina Gazette*, were particular harbingers of this new point of view.

The South Carolina radicals were certainly the leaders of this new and vital turn. Wilkesism had particularly flourished in South Carolina. As we have seen, only the South Carolina Assembly voted funds for the Wilkite cause. Christopher Gadsden had formed an active "Wilkes Club" consisting largely of Charleston artisans, and had led the successful Wilkes fund drive. The Wilkes fund movement was led by some of the most prominent men in the province: large planters Thomas Lynch and Thomas Ferguson; wealthy lawyers Peter Manigault, James Parsons, and John Rutledge; and the merchant Benjamin Dart. Of the prominent South Carolinians, only William Henry Drayton and the timorous Henry Laurens opposed the Wilkes appropriation.

South Carolina's Council and governor as well as the Crown were indignant at the Assembly's courageous action, and denied the right of the Assembly to appropriate money without their consent. The Assembly retorted, proclaiming its full power as the representative body to appropriate money in the province. The Assembly also pointedly requested that the Council be a body of independent men rather than one packed with British placemen.

On April 18, 1770, John Wilkes was finally released from prison to take up his duties as alderman of the City of London. The release was celebrated throughout the colonies, from Boston to Charleston. But American rejoicing in Wilkite successes was not to last long. The road of struggle against the imperial, feudal, and oligarchic structure of Great Britain was difficult enough in the best of circumstances; and essential to that struggle was unity within the radical camp. But in the autumn and winter of 1770 a tragic and irreparable split occurred deep within the leadership and cadres of the radical movement. The Wilkite organization, the Society of the Supporters of the Bill of Rights, split wide open with John Wilkes on one side and "Parson" John Horne and John Sawbridge on the other. Historians have attributed the split to personal frictions and petty quarrels over the disposition of Wilkite funds; but one important and neglected factor in the split was indeed of vital ideological significance.

Spain had suffered British intrusion into the Falkland Islands (off the tip of the southwest coast of South America) since Pitt's aggressive occupation four years earlier. Now, in June 1770, Spain moved to reoccupy the Falklands. Britain made ready for war with Spain, egged on by the warmongering cries of Chatham and Shelburne (both out of power). Chatham had always yearned for total victory over France and Spain, and now he saw another chance. Chatham denounced any negotiations with the Spaniards as appeasement of an inferior and untrustworthy race. He called for immediate war against France to achieve the total triumph that his (Chatham's) enemies had denied to England seven years earlier. Since England, to Chatham, had the God-given right to rule all the islands of the world, the Spanish occupation of the remote Falklands became a dagger poised at the heart of English hegemony. No concession to Spain, however minute, was tolerable; such would destroy the edifice of the British Empire by "disgraceful expedients" to avoid an ultimately unavoidable final conflict. To maintain Chatham's grandiose claims, England was supposedly duty-bound to build and support a navy larger than any other two world fleets combined.

Chatham's and Shelburne's war hysteria had particularly unfortunate effects on the radical movement. All of his political life, Chatham's erratic, charismatic, and ultraimperialist role confused and weakened the liberal and radical forces in England. When in opposition, and only then, Chatham characteristically made libertarian noises; and the liberals felt that they could not ignore an opposition alliance against the government with a man as popular and influential as Pitt. Since the autumn of 1768, when Pitt left the cabinet, Chatham had strengthened his ties with the London radicals, and now he was in a position to split their movement.

Specifically, in the autumn of 1770 the government, under the pressure of the war party, frantically began to build up its navy, and hence to press-gang sailors for its ships. John Wilkes, as an alderman of London, refused to sanction the use of press warrants in London, and obstructed navy impressment as an illegal action making slaves of free men. Thus, in a clash between liberty and the supposed requirements of empire and state, John Wilkes chose liberty. Not only did many other London magistrates follow Wilkes in refusing to honor press warrants; but he led the London Common Council in calling for the prosecution of any magistrates or constables who issued or executed such warrants for impressment. The new lord mayor of London, Brass Crosby, a Wilkite selected with the help of John Wilkes, refused to accept press warrants and thus prevented press-ganging within the City of London. To Chatham, all of this was treason; Wilkes and the radicals, he declared, were "laboring to cut off the right hand of the community" and to "shake the public safety," and should be tried before the House of Commons.

It is surely no coincidence that in the split that then developed within the radical movement, the radical leaders associated with Chatham and Shelburne

joined the anti-Wilkes camp, while Rockingham and the Whigs, who opposed the war agitation, sided with Wilkes.

The government finally reached a settlement with Spain in early 1771, restoring the English port in the Falklands. But soon afterward, England quietly withdrew from the port, therewith indicating a secret yielding to the Spanish claim. Wilkes, however, continued his antimilitarist stand and warned, upon becoming sheriff of London in late 1771, that he would no longer allow the army to interfere in civil functions in London.

The sharp decline in the Wilkite movement in the years after 1770, as well as the strength of Tory rule in Great Britain, served greatly to disillusion American liberals about the possibility of radical success in the home country. From now on they realized that Americans would have to rely principally on themselves. If the libertarian ideals of most Americans and of the submerged masses in England were ever to be realized, that realization would have to be primarily in America.*

*By late 1771, Sam Adams was writing Arthur Lee that brute force seemed to have made the English people afraid to compel redress of their grievances, and that therefore with "no great expectation" of "some happy event from your side of the water . . . America herself, under God, must finally work out her own salvation" (Maier, *loc. cit.*, p. 394).

Partial Repeal of the Townshend Duties

We have seen that British colonial policy took a sharp turn to the right when the cabinet was reshuffled in the autumn of 1767 upon the death of Charles Townshend. The arch-imperialist Bedford faction strengthened its posts in the cabinet and the Tories North and Hillsborough assumed critical positions in the ministry. Domination by the Tory right was confirmed and intensified with the departure of the erratic centrists Chatham (William Pitt) and Shelburne from the government in October 1768. The Bedfordites and other Tory factions now greatly consolidated their control under the nominal leadership of the weak Duke of Grafton. The Whigs staunchly attempted to delve into the causes of the American disorders, but Lord North succeeded in focusing Parliament's attention on the resistance in Britain and on the supposed need to assert imperial power over the colonies. Hillsborough, North, and Bedford pushed through resolutions denouncing Boston, pledging Parliament's support to all measures needed to impose supremacy on the Americans, and urging the transportation of James Otis and other American leaders to England to be tried for treason.

Lord Hillsborough, furthermore, had bolder plans for crushing the Americans. They especially included: imposing a royally appointed council on Massachusetts; and cancellation of the Massachusetts Charter if its Assembly should ever again question Parliament's absolute authority over the colonies. In addition, the Mutiny Act was to be strengthened to allow quartering of troops in private houses.

The Tories were now in control. The only gain to the liberal opposition was the accession of the Chathamites, who always tended to be liberal when Chatham was out of power. (In contrast, Grenville's opposition was character-

istically to attack the government for weakness and appeasement when dealing with the Americans.) In the cabinet only the liberals Camden and Conway opposed the harsh plans of Lord Hillsborough. So extreme were Hillsborough's proposals, however, that even King George balked at imposing them.

Political-economic developments in Great Britain during early 1769 soon swung the ministry to decide on the repeal of the Townshend duties. There was, in the first place, the threatening Wilkite agitation and the mammoth Wilkite petition movement—joined in by the radicals, Whigs, and Chathamites—which challenged the government and which was at least partly linked with the American cause. Secondly, the war crisis with Spain and France over the Falkland Islands, coupled with troubles in unhappy Ireland, made the government anxious to find some peaceful solution to the troubles in America. Beset by conflict at home and abroad, Britain was now anxious to secure her colonial flank. Third, British merchants and manufacturers were beginning to complain bitterly as a result of the success of the spreading nonimportation boycott in America. Total American imports from Britain had fallen from over 2.15 million pounds in 1768 to under 1.35 million pounds the following year.

All of this was a potent combination. The result was a decision by the Grafton ministry in May 1769 to repeal all the Townshend taxes except the duty on tea. Repeal would be moved in the forthcoming 1770 session of Parliament. The crucial and fateful vote in the cabinet was how far to go. The liberals, led by Grafton, Camden, and Conway, advocated total repeal of the Townshend duties. The Tories, led by North, Hillsborough, and the Bedfordites, insisted on keeping the tax on tea, and they prevailed in the cabinet by a one-vote majority.

North's arguments were shrewd enough. The other goods taxed were products of British manufacture, so that the duties lowered the sales of British manufacturers and merchants, and also dangerously stimulated the emergence of competing manufactures in the colonies. But tea was not of English manufacture and certainly could not be grown in America. Furthermore, tea furnished by far the major part of the revenue from the Townshend duties.

North's arguments were also cunningly strategic. Retention of the tea tax would continue to assert Parliament's sovereign right to impose such taxation; and the removal of all the duties except that on tea would split the American resistance movement, weaken its resolve, and wreck the boycott without yielding the principle or the major Townshend tax. The policy would thus deprive the radical American leadership of its mass base. The tactlessness of the proposed repeal was accentuated by Hillsborough's letter to the colonial assemblies, announcing the cabinet decision. Stress was laid on a provocative assertion of the power of Parliament rather than on a desire for conciliation with the colonies.

When Parliament opened again, in early January 1770, the debate over repeal became part and parcel of a determined liberal opposition mounted against the ministry. The opposition was also based on taking up the cause against Wilkes' expulsion from Parliament. The Whigs and the Chathamites launched the attack, and the ensuing polarization of opinion led to the resignation of the liberal-oriented cabinet members, beginning with Camden and ending with the Duke of Grafton, the prime minister himself. The determined opposition push failed and precipitated the backlash of a counterrevolution, with all the Tory forces in England banding together in a new unity born of fear for their entrenched positions against the American cause abroad, as well as against liberalism and radicalism at home. Lord North added the prime ministerial post to his own offices at the end of January, and this cemented Tory rule by coalescing the Tory factions. Unity was completed some months later by the death of Grenville, which permitted the old personal feud to end and the Grenvillite followers to join the cabinet. This outcome also served to discourage American faith in the English political outlook.*

On March 5, coincidentally the day of the Boston Massacre, Lord North moved the repeal of all the Townshend taxes except the tea tax. He scorned the idea of repealing the tea duty as appeasement of the colonies. America must fall at the feet of Britain before any further conciliation would be made. Parliament agreed to the repeal the same day and final action was taken in mid-April.

The liberals, however, had not given up in their defense of Americans against Great Britain. The Whigs, led by Barlow Trecothick and especially Edmund Burke, moved to censure British colonial policy when news of the Boston Massacre arrived in Britain. Burke charged that American rebelliousness was brought about precisely because of British severity and intransigence. Burke's and Chatham's censure resolutions, however, failed by a wide margin and provoked threats of impeachment or treason trials against Savile, Rockingham, Richmond, and other Whig leaders.

During June and July 1770, the North ministry consolidated its hard line against the colonies. The center of the British navy in America was deliberately shifted from Halifax to Boston harbor. The fort at Castle William was permanently garrisoned with British instead of American troops (although no troops were moved back into Boston itself). The Mutiny Act, however, was allowed to lapse without being renewed.

*See Charles R. Ritcheson, *British Politics and the American Revolution* (Norman: University of Oklahoma Press, 1954), pp. 133-38.

New York Breaks Nonimportation

The Americans were now confronted with a fateful choice: Should they be courageous, cleave to principle, and honor solemn pledges by continuing their boycott of British imports until all the Townshend duties were removed and perhaps the other Townshend Acts as well? Or should they cave in to the fact of repeal of the minor duties?

News of repeal came to the colonies in early May, although of course there were previous indications that the move was in the offing. First to react was the powerful multiclass, radically controlled General Committee of South Carolina. On April 25, the General Committee sent a circular letter to the other provinces urging every colony to strengthen its resolve and to maintain the general boycott until repeal of all the Townshend Acts, including the customs board and the vice admiralty courts. This general plea was repeated two months later.

Most of the colonies, however, lacked the iron determination of South Carolina and became mired in indecision. First to break the united front of the colonies against imports were the merchants of Albany, who on May 10 decided to confine their boycott henceforth to *tea* alone. In a few weeks, learning that they were alone, the same merchants rescinded the change and resumed nonimportation. The first breach had been healed.

The next attempted breach came in Rhode Island a few days later, when the merchants of Newport and Providence ended their agreement and discharged their Committees of Inspection. Nearly the last to join the movement and even then pressured by intercolonial boycotts, Rhode Island's merchants were eager to resume trade and to ignore the larger principles at stake. Newport proved especially eager to resume full trade. Rhode Island's action incensed the merchants and citizens of the other colonies, and these deter-

mined that if Rhode Island valued trade above all, its trade would suffer more from rescinding the boycott than from maintaining it. Within a week, mass meetings at Philadelphia and New York, and a meeting of Boston merchants pledged an absolute boycott against the merchants of Rhode Island. Providence quickly rescinded its action and joined the boycott against the importers of Newport. Providence merchants were kept in line by its town meeting, which repeatedly voted overwhelmingly to continue the general boycott. By the end of June, ports in Massachusetts, Connecticut, New Jersey, and the Carolinas, as well as Chester, Wilmington, New Castle, and Baltimore, had enthusiastically joined the boycott against Newport. Sloops from Newport were turned back from ports from one end of the coast to the other. Finally, under this pressure, Newport merchants, on August 20, resumed nonimportation and appointed a Committee of Inspection. The boycotts by other colonies were rescinded, but many were still reluctant to trade with Rhode Island and especially with Newport.

Newport was the center of mercantile defections in the colonies, and the blame devolved principally upon the leading Jewish merchants of that city. Jewish violators in Newport were apparently more significant than were Tories. Of particular importance was Aaron Lopez, one of the wealthiest merchants in the colonies. As a noncooperator in the boycott, Lopez received lavish favors from the royal customs officials: his captains, for example, were exempted from swearing their cargoes, and when Lopez violated customs regulations, the officials looked the other way.*

The first permanent break in nonimportation came in Portsmouth, New Hampshire, another late-comer to the boycott that needed colonial pressure. When it became known that Portsmouth merchants were merrily importing British goods, Boston merchants instituted a boycott in mid-June, and were followed by Connecticut towns and even unanimously by the inhabitants of neighboring little Rye, New Hampshire. But pressure proved vain. A Boston radical visiting Portsmouth was driven out of town for fear of tar and feathers. The Portsmouth Town Meeting voted overwhelmingly against a boycott.

Not Portsmouth, however, but the great port towns—especially Boston, New York, and Philadelphia—would be the decisive force for or against continuing the boycott movement. In Boston, the reaction was never in much doubt. The formidable Sam Adams saw clearly that the partial repeal was essentially a device to split and destroy the colonial resistance movement, and he urged continuing nonimportation until all British taxes were removed and the customs board and admiralty courts eliminated, and even until the Sugar Act, the Declaratory Act, and the other oppressive measures since the Seven Years' War were removed. The tea tax was rejected not only on principle, but also as by far the major revenue-earner of all the Townshend duties.

*See David S. Lovejoy, *Rhode Island Politics and the American Revolution, 1760–1776* (Providence: Brown University Press, 1958), pp. 145f.

The May elections in Boston returned nearly all of the radical leaders, and the Boston Town Meeting manfully denounced English attempts to destroy colonial liberty. It scoffed at any asserted prerogative of the king to violate natural or constitutional rights, or to impose his will upon the fundamental laws of the land. Some Boston merchants tried to abandon the boycott and restrict nonimportation to tea only, but the town overwhelmingly refused to grant its approval.

Governor Hutchinson, under instructions from Lord Hillsborough, tried to split the resistance movement during May by shifting the Massachusetts legislature from radical Boston to Cambridge. But in this attempt he failed, as town after town voted to support the boycott and the "patriotic" merchants of Boston. Hutchinson lamented that the resistance of the boycott was supported by "the whole body of the people" as well as by the elected government officials. Thus in Marblehead, Robert Jameson, a teacher, lost all his pupils for refusing to abide by the boycott, and his house was threatened late at night by mobs "calling out with a loud voice to kill that dog Jameson . . . a governor's man and a bastard of liberty."

Hutchinson asked for a strengthened riot act to punish a mob that had tarred and feathered a customs officer at Gloucester. The Assembly told the governor that he had better investigate the cause of the riots: grievances against oppression. Moreover, it incisively pointed out that far worse than isolated, uncoordinated acts of violence was violence committed systematically, and unpunished, against the people by the standing army of Great Britain. Penetrating sharply beneath the "righteous" veil that the existence of a state apparatus casts over *its* organized violence, the Massachusetts Assembly denounced the army as a continuing unlawful body that committed continuing assaults and massacres. To this flagrant subversion of royal and military supremacy, the governor replied by dissolving the General Court.

While Boston posed no problem to the resistance movement, sharp struggles over how to react to the Townshend repeal were waged within the other two crucial cities, New York and Philadelphia. In contrast to relatively democratic and liberal Massachusetts, both Philadelphia and New York were plagued by strong Tory factions. The Philadelphia merchants also suffered from lack of uniformity in the nonimportation agreements among the various colonies. Thus Maryland excepted imports of coarse woolens, and the Philadelphia agreement did not; this permitted the Maryland merchants to appropriate the Philadelphia trade in woolens. Of the nineteen members of the enforcing Committee of Merchants of Philadelphia, seven (headed by Chairman John Reynell, a Quaker) resigned and began to agitate for rescinding the boycott. But the artisans and retail traders of Philadelphia insisted on continuing the boycott, backed by encouragement from the merchants of Boston and New York. By the time of the June 5 general meeting of subscribers to nonimportation, the pressure on the merchants had succeeded in ending their

disaffection. In Boston, false news that the Philadelphia merchants had decided to abandon nonimportation led the Boston merchants to follow, but the Boston Town Meeting quickly forced the merchants back into line even before the falsity of the rumor was revealed.

One decisive factor in ending defection in Philadelphia was the letters by Benjamin Franklin to his Tory allies urging continued all-out adherence to the boycott. This body blow to Tory resistance by its erstwhile leader had several roots. In the first place, Franklin was very deeply involved in speculation in royal grants to western lands, and his chief enemy was Lord Hillsborough. The natural consequence of Hillsborough's enmity was to push Franklin into friendships and association with the opposition, and into disenchantment with government policies in general. Furthermore, Franklin always knew on which side his bread was buttered, and several colonial assemblies (Georgia, New Jersey, as well as Pennsylvania) had recently appointed him as their London agent. Now, in 1770, the key agency post from Massachusetts was vacant, and no Tory could hope to obtain *this* position. Franklin's call to Philadelphia to stand fast drew him closer, in Philadelphia, to Charles Thomson, iron manufacturer, distiller, and leader of the artisans' movement for nonimportation, and away from Galloway's Tories. The Tory press in England, not without justice, assailed Franklin as "Dr. Doubleface" and the "Judas of Craven Street" (Franklin's home in London), and this of course brought him newfound popularity in America. As a result, the Massachusetts Assembly chose Franklin as its main agent over the estimable liberal and Wilkite Dr. Arthur Lee, and over the strenuous objections of Sam Adams and the bitter attacks of the *Boston Gazette*. However, Lee was chosen as alternate or substitute agent and Adams kept up his correspondence with the libertarian Lee, an "able and staunch advocate for the rights of America," rather than with Franklin. Franklin was able to secure the appointment by splitting the liberal leadership and securing the support of the radical Congregational minister the Reverend Samuel Cooper. To do this, he changed his old tune and flatly denied any legislative sovereignty of Parliament over the colonies, conceding allegiance only to the king.

Philadelphia, then, also stood fast. New York was still to speak. When it did, this oligarchically dominated province sundered the united front of colonial resistance. The key to the difference in outcome was a grievous split within the liberal movement. Whereas the radicals were in total control of Boston, and Philadelphia was veering leftward, the Battle of Golden Hill had intensified a growing conservative reaction among erstwhile liberals, symbolized in the persecution of radical leader Alexander McDougall, a reaction sufficient to wreck radical influence in as oligarchically controlled a colony as New York.

As early as March 1770 the growing reaction had become evident. The annual festivities commemorating repeal of the Stamp Act had always been

cordially celebrated by all the liberal forces in the province led by the Sons of Liberty. The Sons suddenly found their claim to lead the celebration challenged by a secessionist organization, the Friends of Liberty and Trade, which organized its own. And so, while the Sons toasted the imprisoned McDougall and continuance of the boycott until total repeal, the Friends ignored the McDougall issue and drank ambiguously to "trade and navigation and a speedy removal of their embarrassments."* The list of Friends included the leading merchants and property owners in New York, especially the powerful Oliver DeLancey, John Alsop, Isaac Low, Leonard Lispenard, James Beekman, Gabriel Ludlow, and Peter Van Schaack.

When news of Townshend repeal arrived, the New York radicals were able to control matters by leading popular agitation. Tentative efforts of merchants to abandon the agreements were overruled. Recreant Boston merchant Nathaniel Rogers, who had come to a presumably more hospitable New York, was hanged in effigy and had to flee the province. A committee of the Sons informed Philadelphia merchants that New York would stand fast. They were right so far. Furthermore, a general meeting of New York inhabitants on May 30 voted by a large majority to preserve the boycott intact, and to boycott any who dared to violate it. Another mass meeting, on June 5, confirmed this decision.

But the people of New York were one thing, the merchants another. A committee of merchants headed by Isaac Low promptly rejected the popular resolutions, and called for an intercolonial congress of merchants to meet at Norwalk, Connecticut, on June 18 to adopt a uniform and, clearly, a far looser agreement. The idea of the Norwalk congress was promptly rejected by the merchants of the other colonies. The Boston merchants unanimously rejected any idea of deviation from the agreement, and the merchants of Essex County, New Jersey, would only consider meeting to *strengthen* the boycott. The Philadelphia merchants also stood firm. Of all the American port towns, only Hartford agreed to send delegates.

With the Norwalk congress necessarily abandoned, the New York merchants moved towards scuttling the boycott by themselves. They employed a cunning device: merchants went through New York City visiting each person individually and asking him whether he would vote for continuing the boycott provided Philadelphia and Boston concurred, or for removing it on all commodities except tea. The merchants triumphantly reported an overwhelming popular vote of confidence: 1,180 in favor of rescinding, 300 neutral or refusing to speak their views, and "few" in favor of the status quo.

The New York merchants then sent news of this "vote" to Boston and Philadelphia to win their agreement, but the other towns were singularly

*It must be noted that New York merchants felt aggrieved that New York had relatively the best record of abiding by the nonimportation agreement, and had therefore suffered the greatest loss of trade. See Knollenberg, *Growth of the American Revolution*, pp. 223-24.

uninspired by a canvass that encouraged the maximum of implicit intimidation of the "voters." Even the Hartford merchants refused to alter the boycott. The New York radicals also pointed out that the poll was composed of only one-fourth of the eligible voters and excluded rural folk entirely.

Undaunted by their inability to persuade the merchants, let alone the populace, of any other town to betray the nonimportation movement, the merchants of New York decided to do it themselves. Although a public meeting called by the merchants overwhelmingly rejected the idea of another poll of individuals, the merchants organized a second canvass on July 7, this time asking whether people favored rescinding the boycott even though Philadelphia and Boston had refused. The radicals, led by Isaac Sears and Alexander McDougall, organized a public meeting the same day that voted unanimously to retain the boycott. That night two mobs clashed; the radicals, parading with the inscription "Liberty and No Importation but in Union with the Other Colonies," were routed by a conservative mob armed with sticks led by Judge Elias Desbrosses, president-elect of the New York Chamber of Commerce.

Two days later, the merchants reported a popular victory in its highly irregular canvass. But the less than eight hundred yes votes were a minority as against abstentions among those polled. But the committee of merchants was interested only in token face-saving, and that night they hastened to announce their resolve to import every British good except tea. The mighty nonimportation movement had been shattered on the rock of New York reaction.

From that point on, the radical leadership in the colonies fought a valiant but doomed fight to preserve nonimportation. When the committee of merchants of New York gloatingly informed the other colonies of their deed, angry reaction was quick to pour in from all sides. In Philadelphia a great mass meeting of the city and county on July 14 condemned New York's action as a "sordid and wanton defection from the common cause" and announced a boycott against New York. The meeting of Boston merchants voted unanimously to burn the New York letter publicly. The Albany merchants blasted their New York City colleagues for "unaccountable duplicity." In New Jersey indignation was particularly rife. Students at Princeton College, including James Madison, publicly burned the letter in a funeral service for the betrayed cause. Mass meetings in the towns of Woodbridge and New Brunswick, and in Essex, Sussex, Burlington, and Somerset counties voted to censure and boycott New York; an unfortunate fruit peddler in Woodbridge hailing from New York was dumped into a pond to "cool his courage." In Connecticut, merchants and other individuals of New Haven resolved to boycott New York. An all-Connecticut meeting at New Haven on September 13, representing merchants and farmers from the great majority of towns in the colony, resolved to boycott all British imports from New York.

The southern colonies did not display as much zeal in denouncing New York's action, with the predictable exception of Charleston. There a mass meeting on August 22 unanimously voted to punish New York's "scandalous revolt from the common cause of freedom" by an absolute boycott. This was no idle talk—sea captains from New York were in subsequent months forbidden trading rights in Charleston's port. In the southern colonies reaction was much more diffuse; but Talbot County, Maryland, resolved to support an absolute boycott of New York, and the merchants and inhabitants of Wilmington and Brunswick, North Carolina, unanimously reaffirmed the boycott.

Although, as Arthur Schlesinger writes, "the patriotic indignation of the other provinces at the defection of New York was splendid to behold," the boycott could not survive the defection of a port as great as New York.* The strain of New York's merchants obtaining business that could go elsewhere was too much to bear. In Philadelphia, the seven dissident merchants joined with seven others to demand a house-to-house poll in the crafty New York manner. When a committee of merchants, headed by Charles Thomson, refused, the dissident merchants managed to call a small public meeting of subscribers to the boycott on September 20 to gain a majority for rescinding the agreement. On the flimsy pretext of this majority, the dissident merchants resolved to end the boycott except on tea, and this despite a virtually unanimous advance vote by a mass meeting of Philadelphia citizens to continue the boycott, and a similar vote of a Philadelphia grand jury.

With New York and Philadelphia now fallen, could even mighty Boston be far behind? In mid-September, a huge mass meeting of a thousand merchants and traders of Boston had urged on Philadelphia an intercolonial congress of merchants to strengthen the agreement. But the call came too late, and Philadelphia had irredeemably defected from the boycott. The bulk of Boston merchants had long been restive under the boycott and now they had their chance. On October 12, the Boston merchants unanimously voted to confine their boycott to tea. The great nonimportation movement, to all intents and purposes, was ended. General Gage exulted that "interests" had thus triumphed over "patriotism."

With the great ports brought low, the other colonies could put up no further resistance. At a meeting of the general committee of Maryland on October 25, the Baltimore merchants, led by Jonathan Hudson, affirmed their absolute determination to end the boycott, and duly ignored the resolution of the meeting (which included assemblymen, councillors, and planters as well as merchants) to abide by the agreements and to boycott any Baltimore violators. The merchants simply resumed all British imports except tea. In Virginia, never enthused about the agreements, nonimportation would be quietly

* Arthur M. Schlesinger, *The Colonial Merchants and the American Revolution, 1763-1776* (New York: Frederick Ungar, 1957), p. 229. The Schlesinger volume is indispensable for an account of the entire nonimportation movement.

repealed early next July. In North Carolina it simply disappeared without a trace.

But South Carolina died hard. Radical sentiment dwindled but was still strong. A general meeting of subscribers met on December 13 to decide South Carolina's course. Even now, though alone among the colonies, South Carolina's magnificent radical movement fought on. Thomas Lynch, planter and eminent radical leader, traveled fifty miles to plead with all his eloquence "for the expiring liberty of his dear country which the merchants would see like any other merchandise."* Lynch was backed wholeheartedly by fellow leaders Christopher Gadsden and John MacKenzie. The radicals urged continuing the boycott coupled with open importation of the banned goods from Holland, but their valiant effort was in vain, and even South Carolina surrendered. Notwithstanding, the Assembly considered boycotting the northern provinces in protest against their betrayal, but finally abandoned the idea as punishing every northerner for the sins of some of their merchants. Unstated was the realization that a one-colony boycott would not be very effective.

By the end of 1770, an uneasy stability had settled upon the American colonies. A few things had been achieved: the bulk of the Townshend duties were now repealed, and the British troops were out of Boston. The nonimportation movement had helped in the former (although its impact in Britain had been greatly lessened by coincidentally increased demands for British products on the Continent); and violent rebellion in Boston had accomplished the latter. But the major Townshend tax—on tea—remained, as did the customs commissioners (who returned to Boston in December), the vice admiralty courts and their new hierarchical powers, and the previous trade and Navigation Acts. British troops remained at Castle William and the navy was now stationed in Boston harbor, thus permitting Boston to remain as the potential center of future crisis. Ominous rumblings of threats against Boston and against the Massachusetts' charter were only temporarily dampened by the war crisis with Spain, as were intentions to make official salaries in the colonies independent of their assemblies. Peaceful resolution of the Spanish crisis in early 1771, by the way, further strengthened the hold of the Tory North ministry by discrediting the war hysteria of Chatham and Shelburne in opposition.

The experience of the Townshend crisis imparted certain lessons to the radical leaders in America. In the first place, it was clear that revolutionary violence was a powerful weapon against the British. Where it could be employed, as against stamp distributors, customs officers, or British troops, it either accomplished its task of getting rid of the oppressive officials or effectively mobilized mass support by raising popular indignation against the vio-

*Sam Adams, for his part, denounced the defecting merchants who "like a spaniel meanly cringed and kissed the rod that whipped them" (quoted in John C. Miller, *Sam Adams* [Stanford, Calif.: Stanford University Press, 1936], p. 225).

lence of the British. In some cases, it is true, as in the Battle of Golden Hill, violent rebellion led to a victorious counterrevolutionary reaction. But these two consequences were not contradictory; in any case, violence radically polarized public opinion, and the question to be weighed was which newly polarized side would be the stronger. Since the revolutionary movement was a mass movement of the American people, in most cases such polarization could only help the radical cause.

Second, while voluntary boycott of British goods was certainly a vital weapon, it had proved most effective when used in conjunction with violence, as in the stamp crisis. When the boycott dragged on for several years, as in the Townshend crisis, inevitable strains might lead to a breach in the agreement, and one important breach was bound to end the movement. Furthermore, it was realized that a boycott movement confined to merchants would be particularly vulnerable to breakup from within.

PART VI

The Regulator Uprisings

The South Carolina Regulation

While the quarrel with Great Britain was by far the main conflict in the American colonies from the mid-1760s on, internal conflict occasionally took center stage, as we have seen with the New York tenants' uprising of 1766.

The first of the great Regulator conflicts broke out in the back country of South Carolina in 1767. The dominant group in the back country was the small- and medium-sized planters, who had expanded rapidly into the upcountry after the Cherokee Indians had been driven out in 1761. The expansion of settlement naturally outran sluggishly moving governmental institutions, and this lag created grave social and political problems and grievances in the back country.

One important grievance was inherent in representative government: a tendency for *new* population centers to be underrepresented and *older* centers to be overrepresented; in short, a tendency for a formerly equitable structure of representation to cease reflecting social realities. Greatly reinforcing this natural tendency was a decree of the Crown forbidding South Carolina from expanding the membership of the Assembly, or even from creating new parishes—the units of representation. A second grievance stemmed from the peculiar tax system of South Carolina. Property outside Charleston was taxed *per acre* rather than in proportion to valuation. This was especially burdensome to and discriminatory against the lower valued land of the back country.

But the most urgent grievance of the back country was the rampant crime induced by the lack of organs of law enforcement. There were no courts, county or circuit, and no sheriffs in the back country. Hence the whole burden of law enforcement fell on a few constables and justices of the peace who could make arrests but could not conduct trials, which had to take place in

remote Charleston. The virtual absence of police or judicial protection for person and property led numerous outlaw gangs to plunder and ravage the back country at will; some went so far as to settle down in their own frankly outlaw communities. The few existing constables were generally in the pay of the outlaw gangs.

By the summer of 1767, the criminal gangs had so ravaged the country that economic effort in the back country was in danger of withering away. As one settler reported, "The lowest state of poverty [was] to be preferred to riches and affluence," which would only attract the criminals.*

As crime reached a peak of intensity that summer, the people of the back country, disgusted with a government that had abandoned them, decided to protect themselves. Led by the major settlers and planters of the area, the back-country men "rose in a body" and systematically attacked and razed the outlaw communities. Criminals were apprehended and speedily and effectively punished. Governor Charles Montagu, who had done nothing to protect innocent settlers, had the gall to order these "riots and disturbances" to cease. No one, however, paid any attention to his decree.

The outlaws responded by fighting back, burning houses and abducting justices of the peace. The back-country men now saw that haphazard pursuit and law enforcement against criminals could not work in the long run, that more systematic organization was necessary. And so, in the latter part of October 1767, the people chose a thousand men "to execute the laws against all villains and harborers of villains," and called them the Regulators. The Regulators also took oaths to support one another in their illegal but vital activities.

The Regulators swung quickly and effectively into action, whipping criminals and burning down outlaw villages. Again, Governor Montagu acted against the Regulators fighting in self-defense, rather than against the criminal gangs. The governor asked the Assembly to suppress the Regulator Movement. In reply, four Regulator leaders presented their case to the Assembly in a statement signed by four thousand men of the back country. The petition explained why "thus distressed; thus situated and unrelieved by government, many among us have been obliged to punish some of these banditti and their accomplices, in a proper manner." The Regulators were unfortunate, however, in having their petition written for them by their sympathizer, the well-known litterateur and Anglican clergyman, Charles Woodmason. Woodmason was generally unpopular for having supported the Stamp Act, and now angered the Assembly further with barbed remarks and attacks on the class of lawyers. The offended Assembly tabled the petition, but the Regulator leaders quickly apologized for the Woodmason invective, and appraisal of the facts made the government sympathetic to the Regulator cause.

*See Richard Maxwell Brown, *The South Carolina Regulators* (Cambridge: Harvard University Press, Belknap Press, 1963), p. 35 and *passim*.

The Assembly solved this dilemma during November, in effect by legalizing the Regulators. Two companies of paid rangers were created for a three-month period to ride against the outlaws, and were led and manned by leading Regulators. The ranger-Regulators did a yeoman job. At the end of the three-month campaign in March 1768, the back country had been cleansed of outlaws, the criminals had been killed, arrested, or driven away, many stolen horses and kidnapped girls had been rescued, and not one ranger-Regulator had lost his life. The Regulator campaign had ended in notable success.

If matters had ended there, all would have been well and Professor Richard M. Brown would have been correct in lauding the Regulators as the "most zealous champions of ('good order'). They believed in the rule of law. . . . By taking the law into their own hands the Regulators did defy the government. But they acted in the interests of true justice."* But power is a two-edged tool; power also corrupts. No sooner had the Regulators successfully wielded power in strict self-defense against predatory outlaws than they found that they enjoyed the taste of power and proposed to wield it for aggression instead of self-defense.

Specifically, there existed in the back country numerous lower-class people, individuals who were self-employed in unrespectable and often low-paying occupations. A few were petty thieves; most were honest but despised. Some were prostitutes, some gamblers, some squatters on unused land; some were vagabonds living by their wits; others were hunters selling furs and skins. All were hated by the respectable and the middling planters of the back country, and for several reasons. One was aesthetic; the lower strata were not pleasing to the eye of the respectable set. More important perhaps was *economic* dislike; these self-employed poor (a) competed with the respectables—for example, in hunting; and (b) seemed annoyingly "idle" when they *could* be supplying needed labor for the planters and traders of the region. The respectables were also distressed that the ancient (and modern) device for exploiting the self-employed poor by coercing them into the labor market—vagrancy laws—was peculiarly absent in South Carolina. Vagrancy laws are a method of dragooning people who prefer being outside the labor market into laboring for their supposed betters. The vagrant is supposedly to be punished for being of no use to "society"; but since "society," as Frank Chodorov has written, is "people," this really means that the vagrant is of little or no use to potential employers and to those above him on the social scale. One does not have to be a Marxist to conclude that vagrancy laws are class exploitation. The respectable classes in South Carolina could have tolerated the aesthetic qualities of the lower set had they at least been supplying the upper classes with needed labor. The lower classes failing to be laborers, there seemed to the solid citizens of the back country no excuse whatever for their continued existence. Typical of upper-class back-country sentiment toward the "low

*Brown, *The South Carolina Regulators*, p. 1.

people” was the complaint of the Reverend Charles Woodmason that “the country swarms with vagrants-idlers-gamblers . . . [but] if you want to hire a fellow for work, you’ll not raise one for money.”

And so the Regulators moved from self-defense to aggression against the “low people.” In June 1768, a large congress of Regulators adopted the Plan of Regulation, which was frankly designed “to purge . . . the country of all idle persons, all that have not a visible way of getting an honest living.” Flogging and scourging, or banishment, were to be meted out to the “baser sort of people” who did not work at what the respectables thought an honest occupation. The plan was carried out with enthusiasm throughout the back country. Those not engaged in work regarded as respectable were systematically flogged by the Regulators, and if not banished were forced to work a certain number of acres of land.

From forced labor the Regulators proceeded on their heady course to coercive supervision of everyone’s personal morals. “Immoral” women were publicly shamed and beaten, and two women were given 500 lashes each. Wives began to use the Regulators as a convenient way of flogging husbands who did not support them in the style to which they wanted to become accustomed.

Now that the Regulators had seized complete governmental power in the back country, they moved to exclude any judicial or police service, any execution of writs or warrants emanating from Charleston. In short, they sealed off the back country from any governmental influence from the coast, and seceded *de facto* from South Carolina. Only writs of debt were allowed to be served. The back country was now a separate land ruled at drumhead by Regulator militia.

One reason that Regulators were anxious to keep South Carolina law out of the back country is that they themselves had become aggressors and criminals, and they knew that they were subject to prosecution in the South Carolina courts. Indeed, victims of the Plan of Regulation soon brought charges in the court at Charleston. When the province tried to arrest leading Regulators, the latter captured and roughed up the law officers and even a troop of militia. Bodies of militia deserted to the Regulators.

Lieutenant Governor William Bull reacted to these armed clashes in early August by decreeing the suppression of the Regulators, combined with an amnesty for almost all existing Regulator lawbreakers. The back country ignored the proclamation, and the South Carolina government simply did nothing. It stopped trying to enforce its authority and its law in the back country, and thus virtually accepted Regulator rule over the entire region.

In the face of a clear challenge to its authority, why did the South Carolina government virtually abdicate its rule over the back regions without a fight? Principally because the low country of South Carolina had the greatest concentration of Negro slaves in the colony, and hence the whites of this region

were ever in fear of a slave revolt. Fighting against the Regulators would have stripped the white forces, weakened the strength of armed white rule over the Negroes, and permitted a slave revolt against a weakened low country. When faced with the choice of protecting citizens against Regulator violence, or wreaking continued violence upon the slaves, the South Carolina government unhesitatingly chose the latter course. As Bull put it, a military force against the numerous and respectable Regulators would have to be raised in the low country where "white inhabitants are few and a numerous domestic Enemy"—the slaves—had to be attended to. Besides, the lieutenant governor could hardly fail to be enthusiastic about the Regulator goal of suppressing and coercing the lower orders.

Thus, the governor of South Carolina abandoned the people of the back country to the violence and intimidation of the Regulators, just as the state had previously abandoned that tortured region to the violence and intimidation of the outlaw gangs. And just as private groups had to fill the function of defense against and suppression of the outlaws, so now a private group had to arise in the back country to defend the people against the Regulators.

As the Regulators tightened their control in the latter half of 1768, the oppressed lower people as well as many conscientious planters began to unite against the new despotism. The latter, especially the justices of the peace, had also felt personally the violence of the Plan of Regulation. The concrete incident that sparked a vigorous reaction to the plan was the Regulator beating and pursuing of John Musgrove, a leading planter and major of the militia. Along with his friend Jonathan Gilbert, a justice of the peace, Musgrove traveled to Charleston in late February 1769 to convince the governor and Council of the crimes and misdeeds of the Plan of Regulation. The Council was persuaded to deprive eleven leading Regulators of their commissions as justices of the peace or officers of the militia.

Having secured at least the sympathy of the governor and Council, Musgrove and Gilbert set about organizing a private armed force against the Regulators; by early March they had formed the Moderator Movement. Fire, they realized, had to be fought with fire, and force with force. The Moderators had several hundred followers in the back country. To organize them, the leaders found the tough, brash mercenary Joseph Coffell, who proved an effective head of the Moderator military force. A Charleston judge proceeded to give legal coloration to the Moderators by authorizing them to execute warrants against some of the Regulators. The Moderators arrested the leaders, but obviously were not able to travel through Regulator country to take them to trial at Charleston. Charleston was again reluctant to come to the aid of the beleaguered Moderators, who managed with no small effort to slip through the countryside and bring in the prisoners. Charleston's vacillation increased when news arrived of the criminal excesses of "Colonel" Coffell, who thought nothing of seizing provisions at will and imprisoning women and children as

well as actual Regulators. Charleston simply withdrew its legal coloration for Coffell—and with it, any support whatever in the developing conflict.

The Moderators remained undaunted, however. Charleston's support at best had never been more than perfunctory. On March 25, 1769, six or seven hundred armed Regulators and an equal number of Moderators assembled for a showdown conflict near the junction of the Saluda and Bush rivers. Just as the great conflict was beginning, a miraculous intercession appeared in the person of three notable emissaries of peace from Charleston. The three, large planters of the back country and led by the eminent Colonel Richard Richardson, had remained more or less aloof from the dispute and were thus uniquely qualified to serve as peacemakers. The peace agreement was in reality a total and bloodless victory for the Moderators, for in return for the Moderators' agreement to disperse, the Regulators agreed to dissolve and let the law take its normal course. The Regulator movement had effectively ended under the pressure of a Moderator counterforce.

The Regulators, however, could not have dissolved so quickly had they not been assured that their main grievance, and the main grievance of the entire back country, would be removed shortly. Accordingly, the Assembly and the Council, at the end of July, enacted the Circuit Court Act, which brought the approval of the governor and the Crown. The act established a regular system of circuit courts in the back country as well as sheriffs for each of the four newly created judicial districts. Two years later, the governor decided to liquidate the remnants of the controversy by pardoning seventy-five Regulator wrongdoers.

The North Carolina Regulation

Inspired by the success of the South Carolina Regulators, a group of citizens of St. George's parish in back-country Georgia formed an "Association" movement in the late spring of 1768. The aim of the Association was armed action against Indians in the locality. Fearful of a full-scale Indian war, Governor Wright promptly told the local militia captains to order the Association to disperse on pain of prosecution. The Associators apparently obeyed the order, as nothing more was heard of them.

The term *Regulator*, however, found its most important place in history in a movement that had only that name in common with the South Carolina organization. This movement, the Regulators of the North Carolina back country, also adopted the name in April 1768, but its nature and purposes differed radically from those of its southern neighbor.

One of the early roots of the North Carolina Regulation lay in land monopoly. Large tracts of land had been arbitrarily granted to one George Selwyn. In Mecklenburg County in western North Carolina, numerous settlers and squatters refused to acknowledge Selwyn's claim or to pay him for the land. When in May 1765 Selwyn sent his agent Henry McCulloh and a group of surveyors to Mecklenburg to enforce payment or eject the settlers, the latter rose up in defense of their land. A mob of settlers, led by Thomas Polk, set upon and severely whipped the surveyors and threatened McCulloh with death. The North Carolina Council refused the request of the governor to intervene against the settlers.

Another root of the Regulation emerged also in the spring of 1765. In Orange County and in Granville County near the Virginia border, disturbances arose from the exactions of excessive and even illegal fees by county

officials. The "Nutbush Paper," issued by George Sims, schoolmaster of Nutbush, Granville County, in June, denounced extortionate court fees imposed upon the public. The author pointed out that to pay a debt judgment of five pounds, a man had also to pay more than forty-one shillings, or over forty percent of the amount, to the county clerk, and thus was forced to contribute his labor to the clerk for twenty-one days. In addition, the debtor was enslaved for nineteen days to pay legal fees and a further nineteen days to pay the sheriff for prosecuting him. The climax arrived when the author peacefully drew up a petition protesting these outrages. Not only was the petition ignored, but the said government officials sued the petitioners for libel and imprisoned the author!

These incidents were illustrative of the intense resentments and grievances of the back country against the government of North Carolina. And the major grievances were specifically against *government*: against excessive taxes and quitrents, against extortionate fees, and against dishonest and extortionate sheriffs and other appointed government officials. Nearly all government officials in North Carolina were paid in fees, and the fees were of course exacted from the hapless inhabitants of whatever locality the officials ruled. Indeed, as the historian John S. Bassett wrote, as soon as frontier counties were organized, "sheriffs, clerks, registers, and lawyers swooped down upon the defenseless inhabitants like wolves."* The various ranks of fee-charging officials conspired together; for example, lawyers and officials of county and superior courts collaborated to delay cases and thus collect increased fees.

Another major grievance of the people of the North Carolina back country stemmed from poll taxes, which constituted virtually the only tax and the bulk of the revenues in the province. The poll tax bore most heavily upon the poor. The settlers were plagued with quitrents and high fees and taxes. To compound the evils, the people were plagued by dishonest and oppressive sheriffs. A common practice of the sheriff was to call upon a farmer without advance warning and demand that he pay his poll tax immediately. Refusing to give the farmer a chance to borrow in order to pay the tax, the sheriff would promptly seize the property and then quickly sell it cheaply to a friend of his before the farmer could come up with the money. To add grave insult to grievous injury, the sheriff charged the farmer an extra fee for the trouble of calling at the latter's house. As icing on the cake of the sheriffs' calling, the lawmen generally embezzled the revenues that they thus collected.

Conditions, in short, were becoming ripe for rebellion in the North Carolina back country by the mid-1760s. The conflict reached the stage of definite organization in the Sandy Creek movement of the late summer of 1766. In late August the leaders of the libertarian reform movement in Orange County, concentrated in the county seat, called a countywide meeting of the delegates

* John S. Bassett, "The Regulators of North Carolina, 1765-1771," American Historical Association, *Annual Report* (1894), p. 153.

from each neighborhood to meet at Maddock's Mills at Sandy Creek on October 10. No county officials sanctioned the "unauthorized" meeting, which nevertheless went ahead and hailed the recent victory of the Sons of Liberty against the Stamp Act, and called for extension of this concept of liberty closer to home. The meeting delivered a trenchant attack upon the corruption of power: "Take this as a maxim, that while men are men, though you should see all those Sons of Liberty (who has [*sic*] just now redeemed us from tyranny) set in offices and vested with power, they would soon corrupt again and oppress if they were not called upon to give an account of their stewardship." The Sandy Creek meeting called for annual meetings of such delegates, in a continuing voluntary association of the people to keep check on the activities of their representatives and appointed rulers.

Chief officer of the county and chief enemy of the Sandy Creek Association was the roundly hated Edmund Fanning. Fanning, a native New Yorker and a graduate of Yale, was a prototype of the provincial bureaucrat and the leader of the "courthouse ring" in his county. A favorite of Governor William Tryon, young Fanning had managed to acquire a justiceship of the peace and numerous important county offices: judge of the superior court, register of deeds, militia colonel, and member of the Assembly.

Colonel Fanning denounced the Sandy Creek meeting as "insurrectionary," and threatened its leaders with punishment. Yet the leaders of the North Carolina protest movement were at this early stage far from revolutionary. The main leader of the Sandy Creek organization was Hermon Husband, an intelligent and learned Quaker from Orange County and a man of considerable property. Husband, an active pamphleteer, led the agitation of public opinion, but shackled the movement by insisting strictly on Quaker nonviolence. Continually, Husband urged peace and nonviolence and denigrated any form of violent revolution.

During 1766 and 1767, the opposition to North Carolina government grew. Brunswick, Cumberland, and other counties refused to pay their taxes, and petitions similar to Sandy Creek's were submitted and similarly ignored in Anson, Granville, and Halifax counties, and in the Piedmont of North Carolina. But Orange County remained the focus of conflict. In 1767, a justice of the county court found a very scarce copy of the laws of North Carolina, and discovered that the extortionate court fees of the province were illegal. Rather than mend its illegal ways, the tight-knit bureaucratic oligarchy of Orange County threatened the judge with arrest for contempt of court. The judge quickly fell silent and was soon dismissed from his post. The power of the courthouse clique remained impregnable.

The contemptuous dismissal of the partially courageous judge disheartened the Sandy Creek Association and threw it into a disarray from which it never recovered. It became clear to the libertarian protesters that peaceful nonviolent protests of the Husband variety could accomplish nothing. The people had

protested at Sandy Creek and had suggested reforms; their protests had been brusquely ignored. It was now evident that stronger and more radical measures of protest were required. Leadership of the liberal protest movement of back-country North Carolina now passed into more vigorous and determined hands—those of James Hunter, the “general” of the movement; of William Butler; and of the poet and songsmith Rednap Howell, a former New Jersey schoolmaster.

The next phase of the protest movement was touched off in early 1768 when Sheriff Tyree Harris, of Orange County, posted the taxes for the coming year. Poll taxes had to be paid at a few centralized locations; any tax paid at a different location would be automatically raised. This penalty tax was soon raised even higher by Colonel Fanning. Public opinion was further inflamed by an Assembly appropriation of the large sum of five thousand pounds to build a “palace” for Governor Tryon, a boondoggle of which one of the chief sponsors was Edmund Fanning. In ensuing years, ten thousand pounds more was appropriated for a home for the governor.

The higher taxes and the generous perquisites granted to the governor initiated the development of a new association in Orange County, first known informally as “The Mob” and then borrowing the name of Regulators from the successful South Carolina movement. The first thing that The Mob did in Orange and other counties was to announce its refusal to pay taxes until its grievances were redressed and government fees and taxes lowered. Similar meetings were held in the spring of 1768 in counties west of the Haw River, and the various Regulator Associations took oaths to pay no taxes or illegal fees until redress was achieved. South and west of Orange County, sympathy for the movement was expressed in Anson and Rowan counties. The Sandy Creek organization, incidentally, far from leading the new Regulator movement, lagged behind this new radicalization, and refused to join the tax strike as “too hot and rash, and in some respects not legal.”

Orange County, however, remained the heart and center of the growing Regulator movement. Once again, as has happened so often in history, actual armed hostilities were opened by the men in power—by the panicky forces of counterrevolution. On April 4, a meeting of Orange Regulators asked the sheriff and vestrymen of the county to meet with a Regulator committee to give a full account of their use of public monies. The “reply” of Sheriff Harris was typically swift and brutal: the horse and saddle of a Regulator were seized and sold for nonpayment of some governmental levy. Here was the spark of armed rebellion in North Carolina. A crowd of nearly one hundred armed Regulators rode to the county seat of Hillsboro, seized the sheriff, rescued the horse and saddle, and returned them to their owner. After an official threatened to fire at the crowd, they shot up the roof of Colonel Fanning’s house.

Colonel Fanning was not the sort of Tory oligarch to take such an incident

lying down. First he had to gain the wholehearted support of Governor Tryon. Hysterically, Fanning falsely claimed to Tryon that the Regulators were insurrectionaries who had sworn to pay no more taxes, to kill all tax collectors, to burn Hillsboro, and to become "sovereign arbiters of right and wrong." Tryon and the Council then agreed to authorize Fanning to call out the militia to suppress the "rebellion."

Striking back with all the might of government, Fanning ordered the arrest of three leaders of the Regulator rescue party: William Butler, Peter Craven, and Norman Bell Hamilton. Seven companies of militia were now called up to suppress the Regulation. Only 120 people appeared, and very few of these could be relied upon to fight the people of the county. About one-half of the people of Orange County were ardent Regulators and the others were strongly in sympathy. Thus, an Orange Regulator petition of protest collected over four hundred signatures.

The Regulators called a confederation of inhabitants throughout the county, to maintain enforcement of their tax strike, and to prepare for a march in force on Hillsboro. But the Regulator resolve to press its advantage was tragically weakened by the advice of such men as the Reverend George Micklejohn, who counseled delay and the holding of a large peace meeting, on obtaining a promise of the county officials to meet with the settlers. The peace meeting was scheduled for May 11, but no officials deigned to appear. And while the bemused Regulators peacefully elected delegates and waited for the peace meeting, Colonel Fanning seized the opportunity to swoop down upon them. Denouncing the Regulators as "traitorous dogs," Fanning seized the startled Regulator leaders on May 2, arresting Butler and Husband. The two were given a quick kangaroo trial and promptly imprisoned at Hillsboro.

The seizure of Husband and Butler was enough to rouse the ire of all the populace, Regulator and non-Regulator alike. Seven hundred men marched to Hillsboro and forced Fanning to release the prisoners. Seeing the might of the Regulator uprising, Governor Tryon used his wiles to lure the Regulators again into passivity. He promised the Regulators that if they behaved properly and returned to their homes to confine themselves to drawing up a petition, he would seek redress of their grievances before the Assembly. The Regulators naively agreed, forgetting the great principle of the English rebels of old, that grievances must be redressed before the keen edge of protest is allowed to soften.

Once again the bemused Regulators allowed their movement to retreat to the naive petitioning of Sandy Creek days. At the end of May, the Orange Regulators drew up a petition signed by Hunter, Howell, and 450 others, and Hunter and Howell were selected to present it to the governor and Council. Meanwhile, Fanning had tried hard to split the Regulators and to induce them to sign a humble and contrite petition confessing their sins and errors and throwing themselves upon the mercy of the governor. Otherwise, he

threatened the protesters, he would urge Tryon to regard them as traitors. Fanning's efforts were partly successful in weakening the timbre of the Regulator petition.

But Governor Tryon and the Council, scenting weakness in the popular opposition and largely forgetting the governor's promises, replied on June 25 by hinting at treason and demanding total submission and contrition by the Regulators. All future meetings of Regulators were banned and they were ordered to pay their taxes. At the same time, local governmental fees were raised still higher.

Although the Regulators had been lured again into dispersing their armed force, they did hold a trump card: continued refusal to pay taxes. Though nonviolent, this step was far from passive; in fact, such refusal struck aggressively at the root of the oligarchic power structure of North Carolina. The Regulators continued to meet and continued to refuse taxes. At a Regulator meeting on August 1, Tryon sent a sheriff to demand submission and the payment of taxes, but the people continued adamant. Four hundred men quickly met and unanimously resolved to refuse tax payment and to kill any man who seized property for taxes due. Five hundred Regulators gathered a week later at Peeds, threatening to burn the county seat at Hillsboro, and began to march on the town. Rapidly the confrontation escalated: Tryon called out the militia and an alarmed populace gathered in a meeting of one thousand Regulators.

Cowed once again by *force majeure*, Tryon, on August 11, again turned wheedling and conciliating and promised that the sheriffs would now satisfy the people and give them an accounting at a general meeting on August 17, provided that the armed Regulators would again disperse. And once again the Regulators, at the brink of victory, gullibly gave credence to Tryon's promises. Once again they weakened their pressure to shift suddenly to peaceful and passive tactics. Once again, when the naively confident Regulators assembled on the 17th, they were stunned to find a severe condemnation by Tryon denouncing them as criminal and illegal insurrectionaries and demanding a bond to insure that no attempt would be made to rescue the imprisoned Butler and Husband. Tryon then proceeded to raise a mighty force of militia from all over the North Carolina back country.

But while Tryon was raising his counterrevolutionary forces far and wide, people from other counties were increasingly joining Orange in the Regulator protest. For instance, people from Anson County, in southwest North Carolina. Anson County was tightly governed by a ruling clique of three men: Samuel Spencer, county clerk, assemblyman and colonel of the militia; and two embezzling ex-sheriffs who had moved up to become county judges. A citizens' association was formed in early 1768 to oppose this oligarchy. The Anson Association of Regulators, headed by Charles Robinson, pledged to refuse payment of taxes, to rescue any imprisoned members, and to retake any

property seized for nonpayment of taxes. In April, 100 Anson Regulators gathered at the county court, drove the tyrannical judges off the bench, and made ready to run Robinson for Assembly.

Governor Tryon was also moved to promise Anson County Regulators redress of grievances if they would disperse. Turning to the Orange Regulation for advice, the Regulators received counsel that sowed dangerous illusions, disarmed the movement, and crippled its momentum; they were advised to abandon violence for a peaceful and friendly petition of grievances. One hundred and twenty people of Anson signed this petition during August, but Tryon's only acknowledgment was to hail Anson County's "submission." When Anson County found the governor calling out the militia in force, five hundred men of the county resolved on armed self-defense against the government forces.

Moreover, in Johnston County, close to the low country, a mob of eighty Regulators threatened to oust their judges, but here the judges were able to mobilize governmental forces to defeat the rebels. Another Regulator failure occurred in near-lowland Edgecombe County, where thirty men tried unsuccessfully to release an insurgent leader from jail.

Throughout the latter part of August and September 1768, both sides gathered their forces in the rapidly polarizing conflict. Rowan and Mecklenburg counties, in the southwestern back country, sent particularly ardent progovernment militia, which were all assembled at Hillsboro, in the heart of the Regulator rebellion. The counterrevolutionary militia were bolstered and egged on by four leading Presbyterian ministers of the back country, who called for steadfast support of government on principle, and in this call they were backed up by Baptist and German ministers. All in all, Tryon was able to gather by the beginning of September nearly fifteen hundred militia. The main clue to their recruitment was the enormous proportion of top-ranking officers (largely politicians and bureaucrats). Fully one-quarter of the assembled militia were officers and thirty-four officers were ranked at major or higher. Of these, twenty-four were assemblymen or councillors, consisting of one-quarter of the members of the legislature. Here was another indicator of how civil and military affairs of the province, whether local or central, rested in the hands of a small, tight bureaucratic clique.*

Ranged against the militia was a massive force of some three thousand seven hundred Regulators. But the Regulators, timorous and lacking determined and efficient revolutionary leadership, pleaded for negotiation. The only "terms" that Governor Tryon would consider were that the Regulators disarm themselves, agree to pay all taxes, swear oaths of loyalty and allegiance

*The thirty-four leaders of the North Carolina oligarchy who headed the assemblage at Hillsboro to defend their vested privileges against the Regulators included: John Rutherford, president of the Council; five other councillors; Edmund Fanning; Samuel Spencer; and a superior court justice, Maurice Moore.

to their rulers, and surrender nine of their leaders for trial, in addition to the still incarcerated Husband and Butler. The Regulators did not agree to these arrogant and insulting terms; but neither were they brave enough to use their overwhelming force. The Regulators dispersed, with thirty of them accepting the terms of submission. Pressing his advantage, Tryon quickly sent troops to round up and arrest the Regulator leaders. They met with no resistance from the demoralized Regulators, and thirteen leaders were placed on trial. The Regulators, moreover, resumed payment of their taxes.

The second phase of the Regulator protest movement had ended in total and abject failure. Governor Tryon's shrewd and cunning strategy had been met by bumbling confusion and ineptitude on the part of the popular opposition. Of the Regulator leaders, William Butler was convicted for riot and rescue of confiscated property and sentenced to six months' imprisonment. John Philip Hartso and Samuel Devinney received three months. Hermon Husband was acquitted on a charge of riot. James Hunter was convicted but freed at a new trial. The three convicted leaders had their sentences suspended, and were finally pardoned at the king's instructions in September 1769. Meanwhile, Edmund Fanning was convicted of extorting illegal fees, but was fined only one penny in punishment and shorn only of his post as register of deeds.

Governor Tryon had happily not followed the advice of various Presbyterian and other ministers who had preached triumphantly to the militia after the Regulators had slunk back to their homes. Particularly fiery was the Reverend George Micklejohn, whose speech was distributed by the public printer. Micklejohn had urged the government to hang at least twenty of the rebels, and he assured one and all that their souls would surely travel to hell.

The governor had promised to bring extortionate officials to trial. The trial of Fanning was, in particular, a mockery of that pledge. Other Regulator charges against officials were systematically obstructed by the government; complaining witnesses were driven away by the guards and ordered out of town; and grand juries were systematically packed with government officials themselves.

The abject crumbling of the Regulator movement did nothing of course to allay the grievances of the back country. After a lull of many months, Regulator agitation welled up once more. In the spring of 1769, Orange County sheriff John Lea, trying to arrest Ninian Hamilton and other Regulator leaders, was set upon and severely whipped by a mob led by Hamilton and Devinney. But this was an exceptional incident. The Regulators generally turned to concentrate on political action; specifically, to try to change Assembly policies in the July elections. The Regulators of Orange, Anson, and Rowan counties formulated their political program in petitions: asking for an end to poll taxes (and a shift to property taxes), drastic limitations on legal fees, payment of taxes in kind, lower quitrents, a cutback of land grants to

councillors and other governmental favorites, and a secret ballot for Assembly elections. In contrast was the petition of one thousand Presbyterians in back-country Mecklenburg County. The petitioners proclaimed their loyalty to the government and requested repeal only of the Anglican establishment in their counties.

The July elections did result in a general overturn of the North Carolina legislature; of seventy-seven assemblymen, forty-five were new. Only a handful of the new representatives were Regulators, but Regulators did sweep the elections in Orange, Granville, and Halifax counties in the northern back country and Anson County in the southwest. Rowan County also returned the ardent Regulator Christopher Nation. Orange County, for its part, elected Hermon Husband to the Assembly, while hidebound Mecklenburg County remained committed to the status quo.

After the flush of enthusiasm over their political victory, the Regulators found to their dismay that their victory had won them nothing. The Assembly did nothing to redress their grievances. Indeed, the elections of the spring of 1770 only weakened Regulator strength in the Assembly. The Regulators were neither the first nor the last revolutionary movement to become disillusioned with the fruits of political action, and to find that voting and politics were just another blind alley to blunt their effectiveness, deflect them from their course, and weaken their purpose. The Regulators, in fact, had tried every form of legal or nonviolent protest: petitioning, suits in court, tax strikes, and political action. Each in its turn had totally failed. The Regulators were finally learning that only one course of action remained to them: armed rebellion.

Matters came to a head (inaugurating the fourth phase of the North Carolina Regulation) in late September 1770. The incident began on September 24, when James Hunter and other Orange Regulators presented a petition at Hillsboro against the speculation and systematic bias of the county sheriffs, officers, and juries. Backing up the petition was a determined crowd of 150 Regulators led by Hunter, Butler, and Howell, who invaded the county courtroom. The crowd threatened Judge Richard Henderson, who fled town, and began to set upon its enemies: the courthouse lawyer, John Williams, was beaten up, and leading county bureaucrats were given a severe trouncing. The crowd also proceeded to the highly satisfactory whipping of their arch-enemy, Colonel Fanning. Fanning was generously permitted to flee town, and his new, pretentious house, reviled as being built from illegal fees, was thoroughly burned to the ground. The same treatment was meted out to Judge Henderson's house in Granville County some weeks later. Thus the Regulators followed the model of the Stamp Act rebels.

The Regulators were now feeling their oats. Determined violent action had redressed their grievances by forcibly stopping the machinery of government in the county. Although the two years' delay had reduced the movement from

several thousand to several hundred, the Regulators, growing stronger by the day, threatened to storm the capital, New Bern, to be joined by the Regulators of Bute and Johnston counties, to prevent the Assembly from seating Edmund Fanning from a newly created "rotten borough" of Hillsboro.

The Assembly, now genuinely alarmed, did a little to remedy the problems of the back country by increasing representation of the Piedmont in the Assembly and limiting governmental fees. But most of its panicky reaction centered around savage repression of the Regulator movement. Its resolve for repression was strengthened by a secret agreement with the Presbyterian leaders: in exchange for the Assembly's permission to perform the marriage ceremony, Presbyterian ministers pledged their support against the Regulation. With the back country thus split, the Assembly passed a law in January 1771, sponsored by Samuel Johnston of Edenton (in the low country), for suppressing riots. The death penalty was decreed for any assemblage of ten or more people that refused to disperse. Anyone ignoring subpoenas for rioting would be declared an outlaw. The militia was authorized to enforce these decrees. Furthermore, any uplander could now be tried in low-country courts. And anyone opposing the militia would be deemed guilty of treason. Furthermore, the Assembly arbitrarily expelled Hermon Husband for criticizing a reactionary assemblyman, and then had Husband summarily arrested. The Assembly finally released Husband after a couple of months, when a grand jury refused to indict him.

The release of Hermon Husband served to disperse a threatened Regulator rescue march on New Bern. But Tryon, furious at the release, determined to pursue a massive program of armed repression. There were several prongs to this campaign. First, Tryon called up the provincial militia, since the local back-country militia were now ineffective. Second, the governor mobilized a private force of "Redressers" organized by Fanning, Thomas Hart, and Alexander Martin (who had all been beaten up at Hillsboro) in an armed association against the Regulators. Particularly formidable was the aristocratic armed association of Cape Fear Loyalists, headed by General Hugh Waddell. Third, Tryon brazenly ordered the packing of all juries (for trying Regulators) with aristocratic "gentlemen of the first rank, property, and probity," who would take care to hear *only* pro-official witnesses.

The Regulators of 1771 were not the Regulators of three years earlier. Disappointments at suppression had radicalized them, and particularly infuriating was Tryon's raising of the massive provincial force against them. The people were incensed. Rednap Howell composed forty popular ballads to stir up the public. Edmund Fanning was declared an outlaw (who could therefore be shot on sight) by the Regulators. One gauge of the intensity of Regulation feeling was the refusal of militiaman Jeremiah Pritchett to obey military orders, and his attempt to "breed a mutiny" in support of the Regulation. Pritchett was sentenced to the huge total of 150 lashes. At Pritchett's public

flogging, one of the spectators tried to get the crowd to pelt the floggers with eggs. The man was immediately arrested and the colonel in charge threatened to run through any other heckler with his sword. Regulator forces sprang up in Halifax, Edgecombe, Bute, and Northampton counties. In Rowan County the people refused to pay fees and threatened to kill every clerk and lawyer in the area. The court at the Rowan County seat of Salisbury was threatened with the same treatment as at Hillsboro. Rowan County and other Regulators nevertheless proposed to arbitrate their disputes, but Governor Tryon adopted an implacably hard-line antiappeasement view. No negotiations were possible with rebels, he declared, nor would there be arbitration by any organization but the government. At this rebuff, the Regulators protested that every man would rise up and defend his just rights: "Our civil liberties are certainly more dear to us than the good opinion of a ruler. . . ."

Governor Tryon tried to raise an armed force of twenty-five hundred men. Despite determined efforts, including a subsidy to each volunteer, he could only raise less than eleven hundred men, who were supplemented by General Waddell's irregulars of less than three hundred men. Tryon's force had no fewer than one hundred and fifty officers and Waddell's nearly fifty. Most of Tryon's men came from Orange and Dobbs counties in the back country and Craven County in the lowlands.

Tryon's and Waddell's forces were supposed to meet at Hillsboro, but Waddell's column was stopped by a large body of Regulators on May 9 and forced to fall back to Salisbury. Waddell's ammunition had been destroyed by a heroic group of young rebels called the "Black Boys of Cabarrus." Going to the rescue of his ally, Tryon moved westward from Hillsboro to the Alamance River, reaching it with a little less than one thousand men. There he encountered a Regulator force of two thousand, of which only one thousand, however, were armed.

The final conflict was now at hand. The Regulators, though radicalized to the point of gathering an armed force, were still gravely undermined by the lack of firm and resolute leadership. There was no overall leader. The major leaders bickered among themselves and tragically weakened the movement by preaching against the use of armed force. Hermon Husband would not fight at all. The other leaders naively counseled a token fight to induce Tryon to negotiate. They did not realize the absurdity of threatening or beginning the use of force without being prepared to use it effectively. Moreover, it was incredibly naive of them to still believe Tryon would negotiate honestly. James Hunter, when asked to take command of the Regulators, replied in a magnificently individualistic but militarily ineffectual vein: "We are all free-men, and everyone must command himself." As a result, each company of Regulators had a captain, but there was no overall commander.

Shorn of any effective leaders on or off the field, the Regulator movement had therefore no effective field command and no theoreticians to define their

goals and purpose, their strategy and tactics. In such a case only one outcome was possible. On May 16, Tryon's forces advanced, demanded unconditional surrender, and then, after a two-hour fight, routed the disorganized Regulators into wild disorder. Thus ended the Battle of Alamance. Nine Regulators were killed and many wounded and captured. Surprisingly, the brief Regulator resistance also took a toll of nine killed and several score injured.

Tryon now had the opportunity to wreak his will on the routed and demoralized Regulators. One leader, young James Few, a prisoner of the battle, was executed the next day on the ground that he had been made an outlaw for ignoring a court subpoena for burning Fanning's house. Tryon, then joined by Waddell, marched unresisted through the back country, looting and burning the houses and plantations of the Regulator leaders, including the home of William Few, father of the hanged prisoner. In the brutal Tryon victory march, thousands of settlers were forced to take an oath of allegiance to him, promising to pay their taxes and obey the laws in exchange for the governor's pardon.

Tryon's largesse, however, was not at all extended to the prisoners taken in battle. Summary court-martials were held in mid-June, and twelve prisoners were sentenced to death for high treason. Six of the convicted were pardoned, but the other six were publicly executed on the spot. One of the executed Regulators was Captain Benjamin Merrill of the Rowan County militia, who died supposedly repenting in order to allow his family to inherit his property. But another of the executed, James Pugh, remained steadfast to the end and indeed was hanged in the middle of a rebuke that he was delivering to Edmund Fanning. Assemblyman Thomas Person, who had been sympathetic to the Regulators, was arrested by Tryon on his march but was ultimately acquitted.

All the major leaders of the Regulation had managed to escape capture. Rednap Howell fled north to Maryland and eventually settled in New Jersey. Hermon Husband fled north to western Pennsylvania. Other leaders escaped to South Carolina. And thousands of Regulators soon trekked westward, over the mountains.

The government quickly moved toward pardon of the Regulator leadership. The implacable enemies of the Regulators, Governor Tryon and Edmund Fanning, both left in the summer of 1771, Tryon to become governor of New York and Fanning to be his secretary. The new governor of North Carolina accelerated the pardoning of the wanted leaders. The latter petitioned for mercy, and when the Riot Act expired in 1772, they were allowed to surrender, come into court, and be pardoned. James Hunter returned from Maryland to general acclaim and remained free. The returning William Butler crawled to the authorities, proclaiming his "utmost abhorrence" of the Regulation. Soon, in fact, the king had pardoned all the old leaders except Hermon Husband, who remained in Pennsylvania.

The North Carolina Regulators, as we have seen, were far different from their namesakes to the south. The South Carolina group arose from lack of law enforcement in the back country, and the ensuing conflict was largely intra-back country, with the private Moderator movement finally checking the invasive acts of the Regulators. In North Carolina, however, the major grievance was *too much* government—specifically, too much revenue extracted from the public in taxes and fees. Hence the conflict was much more sectional than that in South Carolina, where the local courthouse oligarchies in the back counties were appointed by the royal provincial officials in Charleston. Within the back country, the bulk of the split was waged between the people and the oligarchy of bureaucrats.

The Regulator conflict cannot be properly interpreted—as many historians have done—in religious terms: for example, as low-country Anglican versus back-country Protestant. As we have seen, the Presbyterian church was very active in opposing the movement; its ministers wrote a circular letter urging Presbyterians not to join the Regulators. And of course the established Anglican church was also opposed to the Regulators. But so too were the Baptists, who were almost all opposed—indeed, pro-Regulator Baptists were excommunicated from the church. The German and Quaker sects also opposed the Regulation.

PART VII

Prelude to Revolution,
1770–1775

The Uneasy Lull, 1770–1772

While North Carolina was going through bloody internal conflict, the rest of the colonies had settled into uneasy stability with regard to Great Britain. The lull came with the repeal of the Townshend duties and the collapse of nonimportation in late 1770. But Boston and Massachusetts still served as the focal point of trouble and dispute. Massachusetts continued feeling restive over talk in England of such drastic changes as substituting a royally appointed Council for an elected one, and abolishing the Massachusetts town meeting. The stationing of British instead of provincial troops at Castle William, coupled with the British navy in Boston harbor, was seen as a harbinger of such an unwanted change.

Another feared change was that the British themselves would pay the salaries of American officials, thereby putting the latter beyond the control of colonial assemblies. This would lead to stricter enforcement of the trade and revenue laws. The first step in this crucial change was the decision of Britain in early 1771 to pay the full salary of Governor Hutchinson of Massachusetts. Hutchinson was of course jubilant over this development and over the stationing of the military in the harbor, but Sam Adams perceived that the governor was now independent of popular check or control.

There is no question that the grip of the radical-liberals on the people of Massachusetts declined considerably during this lull, this period of "sullen silence" (as Adams put it), and Adams could not succeed in rousing the people against the Hutchinson salary. But despite hints of defection by John Hancock and others, the liberal party held together in the 1771 elections, and the House strongly denounced the Hutchinson salary payment.

The Tories of course tried their best to exploit this period of quiescence by

splitting and weakening the liberals. The opposition to Britain, they thundered, was trying to lead the colonists into a "state of anarchy" under the name of "liberty." The grand old colony of the Puritans, the Tories warned, was now permitting itself to be misled by such "virulent opposers of our holy RELIGION" as Dr. Thomas Young and William Molineux, leading rationalists and deists. Sam Adams, a devout Congregationalist and an advocate of old Puritan virtues, could not be baited for his supposed atheism. Unassailable on this charge, he sprang to the defense of Dr. Young. Young, Adams reminded his readers, was an "unwearied asserter of the rights of his countrymen," a man who should be judged rather by his political than by his religious views. Of course, the man most hated by the Tories was Sam Adams, and Hutchinson charged that the "incendiary" Adams "wishes the destruction of every Friend to Government in America."

The crowning effort by Hutchinson and the Tories to crush the radicals during the lull period took place in the Massachusetts elections in 1772. A concerted effort to defeat Sam Adams failed, but it did succeed in reducing his vote to thirty percent below that of his colleagues, Thomas Cushing and John Hancock. And of these, Cushing had always been a conservative opportunist, and John Hancock was seriously flirting with desertion of the liberal cause. Hancock, indeed, had shifted toward a relatively neutral position. Furthermore, James Otis, in moments of sanity, drifted in the conservative direction; John Adams withdrew to the quiet of private life; a disheartened Dr. Thomas Young left Massachusetts for North Carolina; and another of Sam Adams' leading followers, Dr. Benjamin Church, secretly sold out his colleagues and attacked his own Whig writings in the Tory press. And Sam Adams was rebuffed by such other American leaders as John Dickinson of Pennsylvania, when he urged them to help him keep alive the spirit of opposition to British encroachments. Yet Adams remained undaunted, writing that "where there is a spark of patriotic fire, we will enkindle it." Perhaps he realized that no revolutionary movement has ever proceeded in a straight-line fashion; rather, it runs a zigzag course, with periodic bursts of intensity alternating with periods of lull and consolidation, and even partial retreat.

Indeed, just as the liberal movement was being forced into partial retreat, the seeds of the next great advance were being sown. It soon became clear that the British were laying plans. Following the wedge in the door achieved by their payment of Hutchinson's salary, the British would proceed to the far more serious step of paying the Massachusetts judges' salaries as well. In short, Great Britain claimed the right not merely to tax the people of Massachusetts without their consent, but also to make judges independent of the colonists by means of the very taxes extracted from them. This move by the Crown was also a reward for the judges' tenderness toward the British troops in the Boston Massacre cases. The British move was particularly unpopular because Hutchinson had filled the principal posts of the Massachusetts judi-

ary with his own Tory-minded relatives: Lyndes, Cottons, and Olivers. With Hancock and Adams now reconciled, the Boston Town Meeting promptly denounced this plan. The issue next went to the Massachusetts Assembly, which affirmed that such a proposal infringed the constitutional rights of the Assembly, and, at the end of June 1772, passed this resolution by a vote of 85 to 19. Typically, Hutchinson dissolved the General Court.

Although Massachusetts found itself in a period of troubled quiet, the resentment against Britain remained alive in that other radical colony: South Carolina. A long-continuing dispute arose over the appropriation by the House at the end of 1769 of a gift of 1,500 pounds sterling to the English radical leader John Wilkes. The enraged Crown ordered the governor of South Carolina to veto any further revenue bills that did not expressly delimit the uses of appropriated money and that failed to penalize the colony's treasurer if he should spend treasury funds without consent of the governor and Council as well as of the House. In short, the House was ordered to agree to stripping itself of its vital power over all appropriations in the colony. This the House, led by Thomas Lynch, Christopher Gadsden, and John Rutledge, flatly refused to do.

This impasse with the Crown, and with the royally appointed governor and Council pitted against the House, continued beyond the end of the Townshend Act crisis. The South Carolina House steadfastly refused to pass any revenue bill complying with the royal instructions, that is, any bill inconsistent with "the proper rights of the people." So radicalized was the South Carolina oligarchy by this bitter struggle that even a cautious trimmer like Henry Laurens wrote at the end of 1771 that he would rather have "no tax bill for seven years" and even "forfeit [his] whole estate" than surrender, for the issue involved was "nothing less than the very essence of true liberty." The royal instruction to South Carolina was, to Laurens, a threat equal to the hated Stamp tax.*

Lord Hillsborough, typically, was, determined to grant no concession to South Carolina, and the South Carolina House was repeatedly dissolved. Notwithstanding, the South Carolina House would not yield. The latter's resistance, in fact, was stiffened by a vote of confidence by the electorate in the spring 1772 elections.

*See Jack P. Greene, "Bridge to Revolution: The Wilkes Fund Controversy in South Carolina, 1769-1775," *Journal of Southern History* (February 1963): 32-33.

The *Gaspée* Incident

During the period of relative calm, trouble had not only been stirred by British aggressiveness against Massachusetts and South Carolina. The restrictive trade and Navigation Acts, to which were now added the sugar and tea duties, were always in danger of being enforced now that the era of salutary neglect was gone forever. Underneath the seeming calm there remained the inner contradictions of potential conflict over enforcement. Only a spark, only a minor incident, was needed to bring this potential to the surface.

Customs enforcement had intensified since late 1771. Already in November two incidents of resistance against the officials had occurred. The controller of customs at Falmouth, Massachusetts, had been forced by a mob to tell them the name of an informer. And off Philadelphia, thirty armed men captured the crew of a customs schooner and rescued a confiscated merchant vessel.

It is not surprising, however, that the culminating crisis should have burst forth in prickly, steadfastly independent little Rhode Island. Here was a colony that valued its trade so much as to have proved a poor security risk during the days of nonimportation. But this very spirit led the Rhode Islanders to resent with particular bitterness British customs collectors' trespassing upon their freedom of trade. Rhode Island had had a stirring recent history of conflict with customs officials. We have already seen its struggles with the hated John Robinson. After Robinson became one of Boston's customs commissioners in late 1767, he was replaced as Rhode Island collector of customs by Charles Dudley, Jr., and the Rhode Island resistance continued. In May 1769, the customs commissioners sent to Newport the *Liberty*, which had been converted to a naval sloop after being seized from John Hancock. The *Liberty*, commanded by the zealous captain William Reid, promptly began to seize merchant vessels right and left.

This intensification of customs enforcement in Rhode Island swelled the resentment of its citizens. In mid-June 1769, Dudley's deputy collector, Jessie Saville, was seized as an informer by an angry mob and nearly beaten to death. Whereupon the fiery *Providence Gazette* trenchantly declared that Saville "was treated with more tenderness and lenity than is perhaps due an *Informer*." In mid-July, Captain Reid called the attention of the townspeople of Newport to the depredations of his sloop. For, in the harbor, the *Liberty* fired brutally upon one of the ships it had seized, even firing upon the captain escaping in an open boat. The next night the angry people of Newport rose up; forcing Reid to remove his crew from the *Liberty*, they grounded, scuttled, and then burned the customs sloop to the ground. The seized vessels naturally took the opportunity to escape. True to Rhode Island tradition, nothing was done by the democratically elected government to apprehend the leaders of the mob. Finally, by the spring of 1771, Rhode Islanders were moved to proceed against Dudley himself; the highest representative of royal authority in Rhode Island was beaten almost to death.

Thus the stage was set in Rhode Island for the smashing of the relative lull of 1770-72. In March 1772, there sailed into Rhode Island waters the British naval schooner *Gaspée*, commanded by Lieutenant William Dudingston, known to Rhode Islanders for having savagely beaten up a defenseless fisherman in Pennsylvania three years before. Dudingston lost no time in impressing his personality upon the public. Without even notifying Governor Joseph Wanton, Dudingston illegally launched a systematic campaign of hounding local vessels. Soon Dudingston intensified the drive and arrogantly stopped, searched, or fired upon everything afloat on the pretext of rigorously enforcing the laws. Dudingston and his men also stole livestock from Rhode Island farms, and lumber from woodsmen. The public was understandably hard put to distinguish the British sailors from mere pirates. The Rhode Island merchants proposed to outfit an armed ship to rescue any vessels seized by the *Gaspée*, but Admiral John Montagu, based at Boston, scotched the plan by threatening to hang all concerned as pirates.

On June 9, 1772, the hated *Gaspée* ran aground off Warwick in the course of a fierce pursuit of a merchant vessel. When the people of Providence heard the good news, the town's wealthiest merchant and a Son of Liberty, John Brown, organized a joyous party of citizens to finish the job begun by nature. Brown and his party, which included James Sabin and Captain Abraham Whipple, sailed to the *Gaspée*, shot and wounded Lieutenant Dudingston, removed the crew, and burned the *Gaspée* to the ground. A satisfactory night's work done, the people of Providence then went about their business.

Ever since the attack on the British vessel *St. John* eight years earlier, Rhode Islanders had been steeped in the pleasant tradition of a lack of strenuous search by the government for the parties responsible for such incidents. But, in early September, the Crown suddenly decided to bypass Rhode Island authorities and to send the guilty parties to England for high treason. A

Royal Commission of Inquiry was appointed to find the culprits, deliver them to England via the Royal Navy, and to call on General Gage's troops, if necessary, for support. Appointed to the commission was Governor Wanton of Rhode Island, who could be depended upon not to search too hard. But he was more than offset by the other members: four of the top royally appointed judges in the colonies—specifically, Robert Auchmuty, who was the vice admiralty judge at Boston, and the chief justices of New Jersey, Massachusetts, and New York.

Now here, in the escalation of law enforcement into the hands of British authorities by setting up a star-chamber procedure and threatening trials for treason in England, was not only a dramatic incident of conflict, but also a serious threat to colonial liberties. The *Pennsylvania Journal*, representing American sentiment, warned that such a commission could make the lot of the colonists worse than the subjects of "the most despotic power on earth."

Thus, in June 1772, the people of Rhode Island burned the British schooner *Gaspée*, and the British reacted ominously by appointing a Royal Commission of Inquiry in early September. The latter move was followed later in the month by a step long feared by the citizens of Massachusetts: the announcement of a decision by the Crown to pay judicial salaries in Massachusetts out of customs revenue. No longer would judges be paid by and, therefore, subject to the control of the colonial Assembly. Specifically, the salaries to be paid permanently and securely by the Crown were those of the attorney general and the solicitor general of Massachusetts and the five judges of the superior court of the colony—a reward to precisely those officials who had shown their tenderness for the British troops responsible for the Boston Massacre. It is not surprising that these deeds—especially the appointing of the *Gaspée* commission—should have aroused the dormant radical movement in America, or that the first sign of revival should have come in Massachusetts, or that its first spokesman should have been Samuel Adams.

The Committees of Correspondence

As soon as the judges' salary decision became known, Sam Adams mounted a campaign of pressure for a Boston Town Meeting on the issue. Writing in the *Boston Gazette*, Adams asked whether it was "not high time for the people of this country explicitly to declare, whether they would be freemen or slaves." He concluded: "Let associations and combinations be everywhere set up to consult and recover our just rights." But Adams' campaign faced once again the opposition of his conservative colleagues, led now by John Hancock and other Boston selectmen. Finally, by October 28, the determined Adams had pushed through a town meeting. At a final meeting on November 2, and after great difficulty, Adams won support for his plan for a permanent committee of correspondence.

As a standing committee of Boston, it was to expound the rights of the colonists and to communicate its declarations to other towns and colonies. There had been several other committees of correspondence, especially as standing committees of colonial assemblies in America, but those had been *ad hoc*, for specific tasks of protest. Adams was the first to propose and secure a committee of correspondence on a permanent footing. Its purpose, as Edward Collins wrote, was "to organize, in such a way that it could be utilized, that spirit of suspicion, discontent, and rebellion which he had long been fomenting in Massachusetts."*

Election to the twenty-one man Committee of Correspondence was spurned by the conservative leaders of the American resistance—Hancock, Speaker Thomas Cushing, and several selectmen and wealthy merchants. As a result,

*Edward D. Collins, "Committees of Correspondence of the American Revolution," *American Historical Association, Annual Report* (1901), p. 247.

the leadership of the committee devolved upon determined radical spirits: Sam Adams, the returned Dr. Thomas Young, and William Cooper. Eighteen of the committee members were Sons of Liberty. James Otis, as front man, was made original chairman, but Otis's insanity soon forced Adams to take up the chairmanship. Assurances of support for Boston's militant leadership were secured by Adams from such eminent friends and allies as Elbridge Gerry of the town of Marblehead and James Warren of Plymouth.

Sam Adams was now in his element, and on November 20 this driving libertarian leader presented, from the committee to the Boston Town Meeting, the Boston Resolves. The Resolves consisted essentially of a "State of the Rights of the Colonists," written by Adams himself, and a "List of Infringements and Violation of Those Rights," drawn up by young Dr. Joseph Warren. Adams stunned the Tories by going beyond mere positive law to rest his case for liberty squarely upon that old clarion call to revolution, natural rights. For if rights were derived by man from his nature, then any body of positive law violating those rights can be and indeed must be challenged. Adams asserted man's natural rights bluntly and lucidly:

Among the natural rights of the colonies are these: First, a right to *life*; secondly to *liberty*; thirdly to *property*; together with the right to support and defend them in the best manner they can—Those are evident branches of, rather than deductions from the duty of self preservation, commonly called the first law of nature—

All men have a right to remain in a state of nature as long as they please: And in case of intolerable oppression, civil or religious, to leave the society they belong to, and enter into another. . . .

Every natural right not explicitly given up or from the nature of a social compact necessarily ceded remains. . . .

The list of infringements summed up the specific grievances of the colonists against the British for violations of their rights: assumption by Parliament of the power to legislate for the Americans without their consent, and to tax them without their consent; the appointment of a corps of royal customs officials, supported by fleets, and by troops quartered in Boston and New York without their consent; payment from taxes of gubernatorial and judicial salaries by Britain rather than by the assemblies; extension of the powers of vice admiralty courts; restriction of American iron and hat manufacturing; and attempts to impose an Anglican episcopate in America.

The determined opposition of the conservative patriots to Adams' campaign proved to be the peevish expression of a small minority of the people of Massachusetts. The 300 members of the Boston Town Meeting of November 20 voted unanimously to approve and disseminate these Resolves. What is more, the resolutions had immediate success in other towns throughout Massachusetts, and spread like wildfire, along with the idea of permanent commit-

tees of correspondence. Massachusetts opinion was set ablaze, and even as cautious a liberal as John Adams was moved to declare that "there was no more justice left in Britain than there was in Hell; that I wished for war." Town after town endorsed the Boston Resolves. Of the 240 towns in Massachusetts, eighty, including the major towns, quickly voted support, while most of the others prepared to follow. Along with this approval, each town appointed its own permanent committee of correspondence, led by Plymouth, then Cambridge, Marblehead, Charlestown, and Newburyport. And the town of Pembroke enthusiastically made the Adams resolutions even more explicit; the American people, it declared, "are warranted by the laws of God and nature, in the use of every rightful act and energy of *policy, stratagem, and force.*"

In that era, being poor was deemed rather a disgrace than a badge of merit. Hence Tories (such as Thomas Hutchinson, whose interpretation of the history of Massachusetts has greatly influenced later historians) were wont to pillory the resistance movement as a collection of poor and lowly rabble. In reality, however, this was a true mass movement led by the bulk of the propertied in almost every town of Massachusetts, small or large. Only a few towns of varying size, such as Salem and Weston, failed to join the ranks.

Alarmed by the rapid spread of popular rebellious agitation, and seeing the implication of the Resolves for revolution and independence, Governor Hutchinson called together the General Court in early 1773, and tried to browbeat it into acknowledging absolute parliamentary authority. But this only succeeded in fanning higher the revolutionary flames; the General Court and the Boston Town Meeting flatly repulsed his efforts. To Hutchinson's accusations of thoughts of revolution and independence, Sam Adams and Boston countered with the great and overriding natural law of self-preservation and liberty.

In the Massachusetts spring elections of 1773, the radicals swept all before them. No longer did Adams receive significantly fewer votes than his colleagues in the House; and the towns reaffirmed their instructions in behalf of liberty. In Andover, the wealthiest citizen, Councillor Samuel Phillips, led the popular movement for the Resolves, and even Hatfield replaced its Tory representative, Israel Williams, with an eminent liberal of the town. The popular liberals also ousted two Tories from the Council, asked to have Hutchinson and Lieutenant Governor Oliver recalled, and threatened to impeach the judges should they dare to accept salaries from the Crown. Hutchinson responded by dissolving the General Court.

The Boston Resolves and news of the creation of the Boston Committee of Correspondence, were spread to other colonies by the committee, and had immediate impact. Undoubtedly by this time Sam Adams and other farsighted radicals, realizing the implications of natural-rights theory, were toying with the idea of American independence. Samuel Parsons of Providence wrote to Adams, in March 1773, that the "idea of unalterable allegiance to any prince

or state is . . . inadmissible." Our seventeenth-century ancestors, he added, were virtually independent of Great Britain; was this not a useful hint for the future?

Adams intended to urge the sending of a circular letter to all the other colonies, calling for committees of correspondence in all the provincial assemblies. But here he was anticipated by the radical leaders of Virginia, who were inspired by Boston's committee to establish a committee of correspondence of the provincial House. Six years earlier, Richard Henry Lee had proposed intercolonial committees of correspondence. Now Lee, Patrick Henry, and Thomas Jefferson led the Virginia House of Burgesses, on March 12, 1773, to create the first standing committee of correspondence of a provincial Assembly. The Virginia committee was to concentrate naturally on the *Gaspée* inquiry rather than on Massachusetts judicial salaries.

The first Assembly to follow Virginia's example was Rhode Island, which, in mid-May, chose a committee of leading merchants and politicians of the colony, including Stephen Hopkins, Moses Brown, and Henry Ward. Rhode Island was quickly followed by the lower houses of Connecticut, New Hampshire, and Massachusetts, led of course by Sam Adams. Thus, by June 1773, New England and Virginia had established Assembly committees of correspondence.

The other colonies were slower to join in the campaign. First came South Carolina in July, and by the end of the year all colonial assemblies except New York, New Jersey, and Pennsylvania had selected committees of correspondence. New York and New Jersey joined in the first two months of 1774, but Pennsylvania's House, run by the Tory Speaker Joseph Galloway, failed completely to respond.

The provincial committees of correspondence, however, proved to be of little importance. Necessarily bureaucratic and slow-moving organizations tied to approval of their assemblies, and unable to meet when their governing body was not in session, the provincial committees proved too staid and cumbersome to be effective. Instead it was the local committees, begun in Boston by Sam Adams, that proved to be the important and efficient engines of agitation and revolution. These freewheeling local committees were the major instruments of revolution. For a successful revolution not only needs ideology, leadership, and mass support and enthusiasm; it needs also institutions and organization. That organization was now being supplied by the local committees of correspondence, in which the old Sons of Liberty were glad to submerge.

Meanwhile, the Royal Commission of Inquiry, whose menace had touched off such intense reaction, was mired in ignominious failure. The commission, denounced as an inquisition at every hand, could not haul convicts to England unless they were caught; and how could evidence of crime be gathered when virtually the entire colony approved the deed? Furthermore, the commission

was dependent on the local authorities for warrants for information and for enforcing arrests; but local authority was elected by the populace and in wholehearted sympathy with the alleged criminals in the *Gaspée* affair. Even if the authorities had cooperated, the Crown could have done little about the stubborn refusal of the people of Providence to point out the guilty parties in the burning of the *Gaspée*. Remarkably, not a single informer could be found. After holding meetings in January and May, the *Gaspée* commission acknowledged defeat and disbanded in June 1773.* As a corollary, Lieutenant Dudingston was successfully sued by some merchants for confiscating their rum and sugar. Customs officials throughout the colonies relaxed their enforcement, and seizures declined by nearly three-fifths.

In sum, by mid-1773, the American revolutionary movement had progressed far beyond where it was the year before. Massachusetts and South Carolina were embroiled in chronic problems with Great Britain. But more important, the British revenue ship *Gaspée* had been burned and its Royal Commission of Inquiry cleverly thwarted by the people of Rhode Island. And rising out of this victory was the rapid development of a crucial network of committees of correspondence that embraced towns, counties, and assemblies of the colonies. Spurred into being by the *Gaspée* affair, these committees remained as continuing expressions of public opinion and revolutionary pressure.

*The disbanding of the commission was aided by Lord Dartmouth's opposition to any trials in England. A Whig, Dartmouth had succeeded Lord Hillsborough as secretary of state for the colonies in the fall of 1772. See Knollenberg, *Growth of the American Revolution*, pp. 84-86.

Tea Launches the Final Crisis

The duty on tea—a modest levy of threepence per pound—was the only Townshend duty not repealed in 1770. The American boycott on British tea continued after 1770. Although the boycott was only partially observed in most of the ports, it *was* strictly maintained in the two major tea-buying ports of New York and Philadelphia, which shifted to buying smuggled tea from Holland and the Dutch West Indies. Here was a happy marriage of principle and economic self-interest, for the price of smuggled tea was considerably lower than that imported from Great Britain. During 1771 and 1772, the Americans imported 580,000 pounds of British tea, of which Boston imported 375,000 pounds and the southern ports most of the remainder. In contrast to this average annual import of dutiable tea of 290,000 pounds, total American consumption per year was estimated at six and a half million pounds. Even reducing the sum to half, British tea was not in these years able to capture over eight percent of the vast American tea market.

The British tea price could have been far more competitive with Dutch tea, even with the three-penny burden, because the Townshend Act had removed the shilling tax on imports of tea into England for all tea reexported to America. In 1769, however, the East India Company, to which Britain had granted a monopoly on the import of tea (the tea was imported from China), followed the typical path of monopoly and raised the upset price it charged at auction from about two shillings threepence a pound to three shillings. Since tea in Holland sold for less than two shillings, the uneconomic status of British tea in the colonies became evident.

The structure of the English tea trade was as follows: the East India Company monopoly imported tea from Canton, China, using its full governmental

powers to rule India as the trading base for the lucrative China commerce. The company sold the tea at public auction, setting the minimum, or upset, price. English merchants bought it at auction and sold the tea to American importing merchants who in turn sold it to the retailers. American purchase of British tea was discouraged not only by the high price, but also by the irregular timing of the East India auctions, which did not permit proper advance planning by American merchants.

The price-raising by the East India Company was a reflection as much of its growing financial difficulties as of its privileged monopoly status. The East India Company did not enjoy prosperity during the widespread economic boom of 1769–72. Its high price, coupled with the American tea boycott, caused millions of pounds of tea to pile up unsold in East India warehouses. Moreover, a powerful clique of speculators in East India stock insisted on paying a high dividend, thus hazardously running up the stock far above what was justified by the actual operations of the company. They paid the high dividend even though this burdened the company further by legally obligating it to pay an annual sum of four hundred thousand pounds to the Crown. Furthermore, the company was legally liable for reimbursing the Crown for revenues forgone from exempting it from duties on tea reexported to America; the loss of the American market caused the unpaid liability to pile up, reaching over seven hundred thousand pounds by September 1772. The company's dwindling sales, its overpurchase of tea in relation to the actual American market, and its heavy expenses in running the government of Bengal all contributed to making its position precarious.* An act of June 1772 eliminated any further need for company reimbursement of the government for loss of tax revenue; it also replaced two-fifths of the former import duty levied on the company's reexported tea. But since little tea was being reexported to America anyway, this extra burden proved to be academic.

Finally, in mid-June, the great economic boom of 1770–72 followed the usual path of booms based upon credit expansion: financial crash and depression. A wave of failures of leading banks in London and Scotland brought about distress and a stock market crash (the stock boom had been fueled by bank credit expansion) in London, Amsterdam, and Paris. The general credit crash of mid-1772 hit particularly at the heavily overinflated East India shares, the price of which fell by sixty percent in the month of July alone. The crash of East India stock was also aggravated by attacks in Parliament upon the company in the spring of 1772, attacks because of its tyranny, plunder, and rapacity as a private monopoly vested with state power in India. Neither the Whig calls for vigorous reform of the monopoly nor the Crown's drive for tight governmental control over its own creature was calculated to aid its financial fortunes. In September, the company passed its dividend and

*The East India Company lost money in Bengal, but the company bureaucrats there were able to garner large personal fortunes by plundering the natives.

also defaulted on customs payments to the Treasury. Since these payments were important to the Treasury, the British government itself was now in deep financial trouble.

The Crown then decided to effect a twofold plan: to relieve the affairs of the East India Company and save it from imminent bankruptcy, and to move as a kind of *quid pro quo* to take over control of its unruly creature. The best way to relieve the company, in addition to a large parliamentary loan, seemed to be to sell some of the seventeen-million-pound surplus inventory of East India tea to the long-lost American market. And what better way to dump the tea than by lowering its price and expanding East India Company operations to direct sales to the colonies? Hence the Tea Act of May 1773. The Tea Act, first, restored the full exemption (or "drawback") of duties paid on tea imported into England and then reexported to America. Second, it continued the old threepence duty on American tea imports, despite the pleas of the East India Company, in order to gain some revenue and to preserve the principle of parliamentary taxation of American trade. But these provisions were relatively unimportant, as they merely continued policies that had prevailed since 1767 and had provoked little clamor. The radical innovation—the deed that alarmed and provoked the Americans—was to extend the hated and feared East Indian monopoly to American shores. For the Tea Act authorized the East India Company to obtain a license from the Treasury and to export tea to America on its own account and from its own warehouses. These sales, on all inventory of tea over ten million pounds, could be made either to merchants it designated or to branch houses of its own in America.

Here was a grievous threat indeed to the merchants of America. The East India Company could now employ its monopoly power to cut prices even below smuggling prices, and to arrogate the entire American tea trade to a new vast network of its own agents, branches, and favored merchants. New York and Philadelphia merchants, in particular, feared imminent ruin of their flourishing trade in smuggled Dutch tea. But the fears of American merchants were hardly confined to tea; they knew full well that the East India Company imported into England vast quantities of other commodities: silks, calicoes, spices, chinaware, etc. And if now the East India Company were to take over the American tea business, could these commodities be far behind? Indeed, such a scheme was already being proposed to England by the Tory merchant of Philadelphia, Thomas Wharton. Philadelphia had already had bitter experience with East India Company machinations in other commodities than tea. In 1771, when chinaware first began to be manufactured successfully in Philadelphia, the East India Company—monopoly importers of chinaware into England—managed to manipulate the price to fall by one-fourth in order to destroy its newfound American competition.

It is the curious position of some historians that to focus on mercantile opposition to the East India monopoly means to charge such hostility to the

Tea Act with lacking principle, with being confined to economic self-interests, and with lacking the support of the bulk of the people. On the contrary, there is no necessary contradiction between political principle and economic self-interest. Opposition to a governmentally privileged monopoly is itself a high principle, which can be and was upheld by the American populace as well as by the merchants. The fact that the competing merchants would also have been driven to the wall by the East India monopoly was certainly a compelling reason for mercantile opposition to the Tea Act; but it did not conflict with the libertarian principles that generally animated American opinion. Quite the opposite. Defense of one's property and commerce against a privileged monopoly is *required* by libertarian principle. Liberty *implies* property rights and free trade; it does not contradict them.*

Another vital factor in the colonists' opposition to the East India invasion was their horror at the brutal and rapacious record of East India Company government in Bengal—its depredations, monopoly, and ruinous taxation—a record that had led directly to the disastrous Bengal famine of 1769–71. One of the most terrible famines in history, it killed millions, eradicating a full one-third of the population of Bengal. The specter of that famine and of the East India Company tyranny that had brought it about was in the minds of the American people as they confronted the prospect of the East India Company extending its tentacles to America. This horror at the record of the East India Company was expressed most forcefully and eloquently in the widely circulated pamphlet of Pennsylvania's eminent liberal leader, John Dickinson:

Their [the East India Company's] conduct in Asia, for some years past, has given ample proof, how little they regard the laws of nations, the rights, liberties, or lives of men. They have levied war, excited rebellions, dethroned princes, and sacrificed millions for the sake of gain. The revenue of mighty kingdoms have centered in their coffers. And these not being sufficient to glut their avarice, they have, by the most unparalleled barbarities, extortions and monopolies, stripped the miserable inhabitants of their property, and reduced whole provinces to indigence and ruin. Fifteen hundred thousand . . . perished by famine in one year, not because the earth denied its fruits,

*Historians as disparate as Robert E. Brown and James Truslow Adams agree in upholding this spurious contradiction. Thus Adams, generally pro-British, sneers at the antimonopoly focus as involving "absolutely no principle," presumably since defense of one's economic rights can never be conjoined with high principles. Brown, determinedly anti-British and accepting this fallacious dichotomy, tries oddly and unsuccessfully to assert that the main focus of American opposition to the Tea Act was on the tea tax and not on monopoly. In this way he hopes to salvage democratic principle in what would otherwise be a supposedly narrow, selfish economic ground for American resistance. But his attempt ignores the fact that the tea tax had been quietly on the books since 1767, and that no new tax—or even more rigorous enforcement—was here being imposed. See Brown, *Middle-Class Democracy*, p. 312n. Contrast this discussion of the tea crisis with Arthur M. Schlesinger's in *The Colonial Merchants and the American Revolution, 1763–1776* (New York: Ungar, 1917), pp. 244–51, 262–304.

but this company and its servants engrossed all the necessaries of life, and set them at so high a rate, that the poor could not purchase them. Thus having drained the sources of that immense wealth . . . they now, it seems, cast their eyes to America, as a new threat, whereon to exercise their talents of rapine, oppression and cruelty. The monopoly of tea is, I dare say, but a small part of the plan they have formed to strip us of our property.

In coming to the aid of the near bankrupt East India Company, the British government did not neglect its *quid pro quo*. In two companion acts to the Tea Act, it took care to grant itself control of East India affairs and patronage. Thus, the top governors of India were now to be named by the government. This takeover, too, had grave repercussions in the colonies. For this involved a violation of the East India Company charter by Great Britain, and the Americans feared nothing more than a threat of tampering with their precious colonial charters. Yet here was clear precedent for large-scale intervention.

American opposition, particularly New York opposition, to the new tea policy was whipped up by the brilliant theoretician of the Rockingham Whigs, Edmund Burke. Burke was appointed New York's London agent in late 1770 and his correspondence had great influence in forming opinion in that colony. Opposed to the record of the East India Company and especially to the Crown's takeover, Burke bitterly attacked the King's Friends and the Tories who were behind the Tea Act. He urged Americans to resist, pledging the full support of the English Whigs in that effort.

The Boston Tea Party

The first concrete step of the East India Company to invade the American market came at the end of August 1773, and was published in the American press in September. Aiming eventually to construct a factory in Philadelphia and its own warehouse in each of three leading American ports, the company decided to begin by shipping six hundred thousand pounds of tea to a few favored merchants as agents, or consignees, in the four leading ports of America.

The merchants of the four ports quickly mobilized against this threat and were backed by the press and the bulk of the populace. It was clear to the resisters that the best way to meet the tea invasion was in the same way that the hated stamps had been repulsed—by revolutionary mob violence or the threat thereof against the few favored distributors of the commodity. In 1765 the appointed stamp distributors had been “persuaded” by force to resign their posts; now it was the few consignees designated by the company to receive the tea. After securing their resignation, the next step was to prevent the East India tea from landing on American shores. The British government had no idea that the Tea Act would cause any particular stir, much less that violence against its agents, direct or indirect, would be resumed.

Not surprisingly, matters came to a head in Boston. That great center of Anglo-American confrontations faced a British fleet and troops stationed offshore; moreover, it had as governor the flint-hearted Tory Thomas Hutchinson. Opinion had been inflamed against Hutchinson the previous spring when the wily Benjamin Franklin, to ingratiate himself with his employers, the Massachusetts Assembly, secretly sent them old letters of Hutchinson and of his henchman Andrew Oliver expressing Tory views and calling on Britain

for tough policies against the colonies. Sam Adams' publication of the letters in June polarized the silent conflict between Massachusetts and its governor, and provoked him to be more intransigent than ever. Three of the Boston tea consignees, by no coincidence, turned out to be two sons and a nephew of Hutchinson, in a firm of which the governor himself was a member and probable partner. Hutchinson's personal interest in East India tea simply strengthened his Tory resolve to give not an inch to the colonists. Thus, whereas the executive officials of the three other colonies, lacking specific instructions to the contrary, were happy to look the other way while mob pressure was put upon the consignees, Hutchinson resolved to back the consignees to the hilt.

On November 3 a Boston mob gathered at the Liberty Tree to witness an expected resignation by the consignees. Thwarted by their refusal, the mob stormed the store of Richard Clarke (Hutchinson's nephew) and was only driven off after a prolonged struggle by a group of friends of the consignees. Two days later, on November 5 and 6, a Boston Town Meeting was assembled and presided over by John Hancock. The meeting unanimously adopted resolutions demanding that no merchants import any British tea, and appointed a committee including such radical leaders as Sam Adams, William Molineux, and Dr. Joseph Warren to pressure the resignation of the consignees. But the consignees were emboldened by Hutchinson's support and repeatedly refused to resign. When the tea arrived, they, along with the harassed customs commissioners, took secure refuge with the British troops at Castle William.

With the consignees refusing to resign, stopping the landing of the tea became ever more important to the Americans. Transcending the bounds of Boston, Sam Adams called a joint meeting of the committees of correspondence of the towns of Boston, Roxbury, Brookline, and Cambridge for November 22. The meeting resolved unanimously to prevent the landing and sale of the tea, and the Boston committee was instructed to raise the town to "immediate and effectual opposition." The Boston Town Meeting, furthermore, was now superseded by the unofficial, flexible, and more powerful revolutionary institution: the "body meeting"—a recurring mass meeting of the body of all inhabitants of Boston and Roxbury, Brookline, and Cambridge.

The first tea ship, the *Dartmouth*, arrived at Boston harbor on November 27; two other East India tea ships followed a few days later. Promptly, two great mass meetings of the "body" met through November 29 and 30, presided over by the eminent merchant Jonathan Williams. The mass meeting adopted unanimously the resolution of Sam Adams that the tea be shipped back by the East India Company and that no duty whatever be paid on the tea. The latter demand represented an advance in American goals. Hutchinson sent the sheriff to disperse the "unlawful" assemblage, but he was hissed down by the meeting. While the consignees discreetly repaired to Castle William, Hutchinson responded to the popular demand by refusing the ships per-

mission to leave the harbor unless duty were paid. Thus the East India ships were caught between two swords.

On receiving word of the situation from their committees of correspondence, town after town in Massachusetts resolved to back the Boston mass meeting to the hilt, including Cambridge, Brookline, Roxbury, Charlestown, Marblehead, Plymouth, Malden, Gloucester, Lexington, Groton, Newburyport, Lynn, and Medford.

The deadlock at the port could not continue indefinitely. The tea ships' entry into port made the vessels liable to seizure by the customs officers after twenty days for nonpayment of duty. The rebels were afraid that once the customs officers had the tea, they could land it, sell it secretly to the people, and use the money to pay the salaries of the appointed officials of the colony.

Meanwhile, the Boston Committee of Correspondence provided a military guard on the tea ships to make sure that the tea was not landed in secret. Clearly the tea must be destroyed before its confiscation by customs, and the period of grace for the *Dartmouth* was up on December 17. The last chance for the colonists was therefore on December 16. That day, the 16th, a great mass meeting of the "body" of eight thousand people learned of Hutchinson's refusal to allow the *Dartmouth* to sail home. The meeting heard the news with great restiveness and anger. Several angry speeches ensued. The prominent merchant John Rowe asked meaningfully: "Who knows how tea will mingle with salt water?" Finally, Sam Adams arose to give the signal that angry words must now give way to deeds: "This meeting can do nothing more to save the country." Thereupon, a remarkably disciplined ginger group of Sons of Liberty, disguised as Mohawk Indians, rushed to Griffin's Wharf, boarded all three tea ships, and spent several hours of the night dumping every bit of East India tea into Boston harbor. No other property and no person was at all harmed. This was the famous and electrifying Boston Tea Party. The heroic band of "Mohawks" that defied British armed might numbered over a hundred and represented a cross section of the populace: from leading merchants to farmers, carpenters, and blacksmiths. The band also probably included such prominent radical leaders as the merchants William Molineux and Henry Bass, the engraver Paul Revere, the young clerk and writer James Swan, the old South End gang leader Ebenezer Mackintosh, and the ardent radical theoretician Dr. Thomas Young, who had previously made the first public suggestion for dumping the tea overboard.

The "Mohawks" had done their work well, and Hutchinson soon found that no Americans, whether the Council, grand juries, justices of the peace, sheriffs, or the militia, would help to track down the culprits. Only one witness to the Tea Party was willing to testify—but only if the trial took place in England. John Adams hailed the Tea Party as "an epoch in history" and as "the most magnificent movement" of all the actions of the "patriot" forces before the outbreak of the Revolution.

Many Massachusetts towns leaped to the support of the Tea Party. Many were sufficiently radicalized by the occasion to deny Parliament's rights to legislate for and to tax the colonies, and to pay for the salaries of colonial officials. These included the towns of Hadley, Braintree, Sheffield, Andover, and Worcester. On the other hand, a few towns were frightened by the radical deed and dissolved their committees of correspondence.

The Other Colonies Resist Tea

The rebels had an easier time of it in the other colonies. With no Hutchinson or British fleet to hinder them, and with the inspiring example of the Boston Tea Party before them, the consignees and tea ships put up little resistance to popular pressure. The first public meeting of protest in the colonies against the Tea Act took place in Philadelphia on October 16. The citizens of Philadelphia adopted a comprehensive set of resolutions that served as a model for Boston and the other colonies. The Tea Act and tea duty were denounced, and a committee was appointed to demand resignation of the consignees. The consignees, including Thomas Wharton, saw the way the wind blew and soon resigned. A second public meeting warned against the landing of the tea.

The tea ship sailed up the Delaware on December 25. The vessel was stopped four miles from Philadelphia, thus avoiding the Boston problem of the customs duty. The captain was deeply impressed with the intense feeling of the public against landing the tea. Two days later, a huge public meeting of eight thousand assembled in the town and demanded that the captain sail immediately for England. The meeting also voiced its resounding approval of the Boston Tea Party, doing so over the opposition of its more conservative resolutions committee. The captain of the tea ship agreed to bow to the public will and promptly returned to England. Philadelphia had repulsed the tea threat.

In New York, the story blended many of the same elements of the Philadelphia and Boston episodes. In preparation for the tea ship, an "Association of the Sons of Liberty" was drawn up on November 29, which association called for a boycott against any enemies to its country. Enemies were those

who might aid in introducing the British tea into the country or who might buy or sell the tea after it had landed. A boycott was also called against those who had failed to boycott the transgressors. The association was signed by the leading lawyers, merchants and merchant shipmasters, landowners, and mechanics of New York. A committee of the newly formed Sons then pressured the three New York consignees to resign, aided by a public threat of violence issued by the radical "Mohawks," a direct-action group formed by the Sons of Liberty. Under this pressure and realizing that mass opinion was solidly against them, the consignees resigned their posts on December 1. The Sons then held a mass meeting of two thousand on December 17, headed by the veteran radical leader, the merchant John Lamb. The meeting denounced the landing of any tea and decided to appoint a committee of correspondence to write to other colonies. Harbor pilots were warned against guiding any tea ships into port. The meeting derisively spurned the mayor's suggestion that the British tea be stored at the local fort.

In reaction to this meeting, the conservative Isaac Low launched a movement to renounce the use of force in opposing the landing of the tea, but this movement was swept aside by popular enthusiasm upon receipt of the news of the Boston Tea Party. When a tea ship arrived off New York the following April, the captain, heeding the counsel of the committee of correspondence, promised not to enter the port and sailed away. A few days later, however, another sea captain was planning to sneak eighteen chests of tea into New York. The angry citizens, on discovering the ruse, emulated the Bostonians by boarding the ship and dumping the tea into the sea. The treacherous captain promptly fled to another vessel and sailed back to England.

The final port to be sent the tea was Charleston. There the radicals were in more difficult straits than elsewhere, since Charleston had not been an important center of the tea trade and the merchants were not as directly threatened. The tea ship *London* arrived on December 2, precipitating a mass meeting the following day. The meeting, headed by Christopher Gadsden, succeeded in persuading the tea consignees to resign their commissions. It further agreed to circulate among the merchants of Charleston a petition pledging the nonimportation of British tea. Gadsden and the others found, however, that while the planters and artisans (soon to form a "John Wilkes Club") were eager to pledge a boycott of merchants importing dutiable tea, the merchants themselves were reluctant to join the ranks. A showdown meeting of merchants, planters, and mechanics was held on December 17, each of the three groups having privately caucused in preparation for the critical meeting. The radicals passed a resolution for nonimportation of dutied teas, but the conservative merchants managed to weaken the resolve by including *all* teas in the interdict—including smuggled Dutch teas—and allowing six months for consumption of their current stocks of dutiable British tea.

While the struggles continued over a boycott, the tea ships remained in the

harbor; the twenty-day period for payment of duty would soon expire, after which nonpaying ships were subject to seizure. Would the people of Charleston follow the Bostonians in a bold tea party? On the contrary, the merchants' opposition discouraged the radicals, and the customs officials seized and landed the tea on December 22 without any opposition. Nothing happened thereafter, however; the easygoing government officials made no attempt to sell the tea and it remained safely in the government warehouse until the outbreak of the Revolution.

Thus, in every one of the four colonies, determined action by the resisting Americans prevented any of the East Indian tea from reaching its consignees. Once again the rebellious Americans had been successful in forcibly thwarting British designs. Moreover, tea parties continued during 1774, and the Americans soon radicalized their opposition to include the tea tax and therefore all dutied tea, even that of private merchants. A group of Boston "Mohawks" destroyed a cargo of tea in March, and tea cargoes were burned during the year at Charleston, Greenwich, Annapolis, and in New Jersey. Indeed, so fiercely did the Americans concentrate upon tea that *all tea*, even smuggled tea, soon became boycotted and shunned for fear that the tea *might* be English. Tea, which had been a staple drink throughout America, soon vanished from the colonies. As early as January 30, the Boston tea dealers agreed to suspend the sale of all tea, and the movement soon spread to other towns and provinces.

The Coercive Acts

News of the Boston Tea Party and the other resistance to East India tea hit the British like a thunderclap. Since the repeal of the Townshend duties over three years earlier, news of the American colonies had dropped out of the British press, and while Massachusetts had continued to be a slight irritant, it was generally assumed that everything was tranquil in the colonies. Hence, no one in Britain had an inkling of the furor that the Tea Act would cause.

Suddenly America erupted again, and now the British saw that the colonial problems had never been really quieted. They also began to see something more: that generally only the "extreme" poles are logical or viable, and that in-between states are logically self-contradictory and unstable mixtures that impel persistently toward one pole or the other. And so the British began to realize that continued drift and repeated near conflicts with Americans were unworkable, and that Great Britain must finally choose—either to pursue appeasement and go back to the salutary neglect and colonial quasi-independence of the pre-Seven Years' War era, or to take the hard line and crush the colonists and impose absolute British rule. The choice was appeasement and peaceful co-existence on the one hand, or maximum force for total victory on the other. In keeping with its nature, of course, the Tory imperialist ruling clique opted unhesitatingly for coercion and the mailed fist.

When the news of the crisis came to London, Benjamin Franklin was amid an unhappy imbroglio. While trying as agent for Massachusetts to present a Massachusetts petition for removal of Hutchinson and Oliver, the news of Franklin's responsibility for unearthing the Hutchinson-Oliver letters and sending them to Boston came to light. Reaction to Franklin's underhanded methods was widespread and understandably bitter, especially because of

Franklin's presumed Tory leanings. When news of the Tea Party arrived shortly thereafter, it was not difficult for the British to leap to the absurd conclusion that the whole affair was a diabolical plot conceived by the sinister, subversive devil Dr. Franklin. Franklin became the general scapegoat and whipping boy, was quickly dismissed from his lucrative royal post as deputy postmaster general of America, and was roundly denounced as a "viper . . . festering the bosom" of the English government, an "old dotard" who had schemed to make himself dictator of an independent Massachusetts. As John Adams later wrote, in reaction to the continuing hold of this myth on the minds of the British, "The history of our revolution will be one continued lie from one end to the other. The essence of the whole will be that *Dr. Franklin's electrical rod smote the earth and out sprang General Washington.*"

To compound the irony, Franklin, at the same time, was sending his stern Tory disapproval of the Tea Party to the Massachusetts Committee of Correspondence. Franklin denounced the extremism of destroying what he chose to call "private property"—a designation that surely stretched the concept of "private" to the breaking point. Franklin also vainly demanded that Massachusetts repair the damages and pay compensation to the company.

Within the cabinet, the ministry prepared to crush the rebellious Americans. The Bedfordites, the Grenvillites, the King's Friends, and King George himself howled for revenge and suppression. Only Lord North himself and the Whiggish Lord Dartmouth, half brother of North and secretary of state for the colonies (who had replaced Hillsborough a year and a half earlier), pleaded for confining the mailed fist to rebellious Boston. They largely won the day. But this old policy of isolating and smashing the leading center of resistance could no longer work; the American colonists were too united from years of struggle and from the growth of such revolutionary institutions as a network of local committees of correspondence.

The Crown called Parliament into session in early March 1774 and presented a series of four Coercive Acts designed to bring Britain's might to bear upon Boston. First came the Boston Port Act, which brutally closed the port of Boston to all commerce until the town granted compensation for the lost tea to the East India Company, and paid the forgone duties to the Crown. The act also transferred the royal customhouse from Boston to Salem for the duration of the act. No ships were to load or unload at Boston except for military stores and whatever food or fuel might be cleared by the customs authorities.

Opposition in Great Britain was revitalized: the Chathamites and the bulk of the Whigs had condemned the Tea Party, but they could not sanction coercion of the colonies. One of the few British supporters of the Tea Party had been the Wilkite radical MP, Alderman Bull, who urged clearing Boston of British soldiers—"brutes that have too long been suffered to live there." The plan supposedly to isolate and then coerce Boston into submission had

stemmed from Lord Dartmouth and his undersecretary, John Pownall. Chatham, in opposition, urged a demand for reparation before coercion; but the most effective opposition came from the Whigs: Edmund Burke, William Dowdeswell, the West Indian merchant Rose Fuller, and young Charles James Fox. But the opposition was in vain. With even Colonel Barré and General Conway speaking in favor of the bill, the Boston port bill was quickly passed on March 30, was approved by the king the following day, and became effective on June 1.* Great Britain added to the injury of the people of Massachusetts by the seeming kindness of removing Hutchinson—but replaced him as governor and captain-general by General Thomas Gage, who was sent to Boston to announce the stormy tidings and to put the bill into effect. Gage was also to transfer the seat of Massachusetts government from Boston to Salem.

The Boston Port Act was soon followed in early April by the Massachusetts Government Act. North and Dartmouth had hoped to end their coercive measures with the presumably temporary rap on the knuckles of the Port Act. They now allowed themselves to be pressured into approving this second and drastically permanent act of suppression—a task made easy by the growing mental instability of Lord North. Following the counsel and guidance of former Massachusetts governor Francis Bernard, the Tories were about to see their old dream of destroying the preciously guarded Massachusetts charter come true. The Massachusetts Government Act changed the Massachusetts Council to a body appointed by the king, each councillor continuing in office at the king's pleasure. The Massachusetts governor was now given exclusive power to appoint and dismiss all executive and inferior judicial officers, including justices of the peace and sheriffs. Superior court judges were to be nominated by the governor for appointment by the king. Juries would now be chosen by the sheriff instead of democratically elected by the people of the towns. Finally, to crush the local radical centers of colonial resistance, the act barred town meetings from being held or an agenda acted upon except by express permission of the governor. The only minor victory for moderation was Dartmouth's deletion of an original proposal to bring the tea rioters to trial in Great Britain.

This savage act had been staunchly opposed by some of the leading Whigs and liberals: Sir George Savile, Colonel Barré, who had reluctantly supported the Port Act, Charles James Fox, General Conway, and Edmund Burke. Notwithstanding, it passed by a large majority, was approved on May 20, and became effective on July 1 and August 1 (different provisions taking effect on the two dates).

*Charles Van, MP from Wales, was the most extreme proponent, calling for the destruction of Boston, "that nest of locusts"; "*delenda est Carthago*." See Knollenberg, *Growth of the American Revolution*, p. 106; and Benjamin W. Labaree, *The Boston Tea Party* (New York: Oxford University Press, 1964), pp. 188, 207.

This was as far as North and Dartmouth wanted to go. But meanwhile, severe pressure for still further measures descended upon them from the rest of the cabinet, led by the Grenvillite lord privy seal, the Earl of Suffolk, and the Earl of Sandwich, a Bedfordite. Sandwich and Suffolk pushed through the Administration of Justice Act, introduced in mid-April. This act provided exemption from any high crimes committed in Massachusetts by royal officials in the course of their duties. Any royal official committing a capital crime in the course of collecting revenue or suppressing a riot would now have his trial transferred from the local courts to Great Britain, provided that the governor and Council decided that the official could not receive a fair trial in Massachusetts. This exemption act passed overwhelmingly, despite the opposition of Colonel Barré and others, and the king signed it on May 20.

No other act could have been more calculated to arouse the fears and hostilities of the colonists than the fourth Coercive Act, the Quartering Act, which revived the troubles over quartering British troops on the colonists. This act applied to *all* the colonies and forced the provinces to supply unoccupied houses and dwellings to quarter British troops at the location desired by the latter, for example, to put up the troops in Boston proper rather than at government barracks at Castle William. The Quartering Act, introduced at the same time as the third Coercive Act, whipped through Commons without debate and was opposed in the House of Lords only by Chatham. The measure received royal approval on June 7.

The beleaguered Whigs heroically tried to counterattack during the passage of the Coercive Acts. In mid-April, Rose Fuller moved repeal of the Tea Act and was backed by Fox, Barré, and an eloquent and widely circulated speech by Edmund Burke. However, the motion was voted down by an overwhelming majority.

The Quebec Act

A fifth act passed concurrently in the same session was regarded by the colonists and by the Rockingham Whigs as part of the coercive series. The Quebec Act was introduced in early May and passed and approved by the king at the end of June, over the vigorous opposition of Barré, Fox, Burke, and Chatham. The bulk of present-day historians have chided Whigs and Americans for their opposition and “fantasies” about the bill and have praised the Quebec Act as a wise and “statesmanlike” measure. The Quebec Act had two basic parts: fastening a permanent frame of government on the people of Quebec, and aggressively expanding the province’s borders. The latter provision arbitrarily but provisionally extended the domain of Quebec to the French communities in the Ohio Valley and Illinois Country. Although such extension threatened to interfere with speculative claims to the western lands, the act’s rather vague clause occasioned little protest, because the land involved was a virtually unpopulated area concerning which the Crown, beset by conflicting speculative interests, had never been able to make up its mind on a proper land policy.

The really intense opposition to the Quebec Act, in both England and America, centered on its “domestic provisions”—its permanent frame of government for the hapless French who had been conquered in the French and Indian War and governed only in tentative, makeshift fashion since. The root premise of this supposedly statesmanlike measure was the ingrained English view that the French Canadians were an inferior race, unfit for self-government and fit only to be governed by an English ruling class. (There was at that time only a handful of English in Canada, mainly merchants and royal bureaucrats.) The Quebec Act deprived Quebec completely of any elected

Assembly (even the previously existing Assembly for the handful of English there) and of any right to trial by jury in civil cases. Full legislative authority was vested in a royally appointed Council, but even the acts of this creature of the Crown were subject to royal veto. Moreover, the power to levy all but purely local taxes upon the Canadians was vested in Parliament itself. Executive power was to accrue to a royally appointed military governor. Furthermore, a supplementary act levied duties on imports into Quebec to pay the salaries of the royally appointed officials.

The chill that this schema sent up the American colonists' spine can well be imagined. For in this there seemed to be a model of the ultimate aim of Great Britain: to reduce *all* the American colonies to abject creatures totally ruled by instruments of Parliament and the Crown. English or natural liberties such as trial by jury, no taxation without consent by representation, and Assembly control over executive salaries were arrogantly swept away. And there was in the Quebec Act not even a hint of any future self-government for Canada.

The Quebec Act, to be sure, disestablished the Anglican church and removed the grievous disabilities under which the French Catholics had suffered since the British conquest. But instead of allowing simple religious liberty, the Quebec Act reimposed the Roman Catholic church as the established religious communion, thus restoring the feudal political privileges to the seigneurs and the church against which the poor *habitants* had been struggling for many years. The compulsory re-establishment of the Catholic church was no service either to the people of Quebec or to the church itself. For, as in so many cases in history, the *quid pro quo* exacted for special privilege was special *control*. Under the act, the Catholic church and its revenues were placed under Crown control and the Catholic church of Quebec was to be completely severed from the Roman See. As Lord North promised, "No bishop will be there under papal authority, because . . . Great Britain will not permit any papal authority whatever in the country."

Current historians attribute the English and American horror at these provisions to simple anti-Catholic prejudice. Although this certainly played an ample role, the Whigs—the leading English opponents of the Quebec Act—were long-time champions of religious liberty for Quebec as well as Britain. They had fought valiantly for absolute toleration of the Catholic church in religious matters, including even permission for a resident bishop. Their objection to the religious provisions of the Quebec Act was the reimposition of an established church and of corollary feudalism. They realized that the North ministry was seeking to gain the political support of the Quebec clergy by granting them special political privileges.

The Whigs also denounced the Quebec Act's limitation on rights of jury trial, and its replacing an elected Assembly with a royally appointed Council. And their main protest at the extension of Quebec to the western lands was the consequent extension of these evil and despotic principles to the vast areas

of the west. Edmund Burke did yeoman work in alerting New York to the nature and implications of the Quebec Act, as well as to its threat to New York's own western land claims—a service that helped greatly in radicalizing opinion in that often conservative province.

One of the fruits, in fact, of Burke's opposition to all the Coercive Acts was his election to Parliament in the autumn from Bristol, the second greatest port of England and the metropolis of west England, and the home of leading merchants in the American trade. Bristol bitterly opposed the coercive measures, and Wilkite radicalism grew rapidly there—in fact, the other newly elected representative from Bristol was the prominent New York merchant and ardent radical, Henry Cruger, Jr. Aside from Bristol, however, the fall election was a triumph for the government and a defeat for the Whigs; no check on British power would emanate from that quarter.

60

Boston Calls for the Solemn League and Covenant

The four Coercive Acts and the Quebec Act—soon to be called by the colonists the Intolerable Acts—struck the Americans with the force of a thunderclap. The savage repression of Boston was to the American colonies the hurling down of the gauntlet. The embattled colonists, sharpened and increasingly unified by the years of struggle for liberty against Great Britain, hastened to accept that challenge.

The shocking news of the Boston Port Act—the first Coercive Act—reached Boston on May 11, 1774. It was immediately clear that the fate of Boston, and of the entire American resistance movement, of which Boston was the leader, now hinged on the all-important question: Would the other American towns and colonies come to the aid of Boston in this great crisis? On hearing the news, the Boston Town Meeting and neighboring committees of correspondence met to decide their course. The frightened conservatives attacked the Tea Party as being mob violence and urged submission by paying for the tea. The radicals, however, firmly declared that they would see Boston burned before paying a farthing to the East India Company. The May 13 Boston Town Meeting, led by Sam Adams, resolved to appeal to other Americans for united action against Great Britain. It urged a joint American boycott not only of all imports from Great Britain, but of exports as well, until the Port Act was repealed. The Boston Committee of Correspondence was instructed to inform the other colonies. The same day, May 13, the committee joined other committees of eight neighboring towns to urge upon all other colonies the total boycott of trade with Britain. The radical Boston engraver and courier Paul Revere was then sent to the critical ports of New York and Philadelphia with Boston's appeal. Boston urgently impressed upon its corre-

spondents that it was the first line of defense of the liberty of all Americans, and that it was being singled out for punishment simply because it had long been the vanguard of that defense.

First to respond and rally to Boston's support were the other towns of Massachusetts, including even the towns of Salem and Marblehead, which presumably would have benefited by the closing of Boston and the shifting of the site of government and customs officials. Liberal donations of food and money soon poured into suffering Boston from towns and provinces as far away as South Carolina. When the black day of June 1 dawned and the Port Act went into effect, angry demonstrations took place throughout the colonies. In Philadelphia, church bells tolled and shops closed. In New York, effigies of Lord North, Hutchinson, and the devil were paraded through the streets and burned. In Connecticut, the Port Act was publicly burned and executed. Newport, which had had its differences with Boston in the past, pledged its aid to the Bostonians, "who have so nobly stood as a barrier against slavery." This unification was indeed spurred by the fact that the other leading ports knew they had treated the British tea as roughly, if not nearly as dramatically, as had Boston.

As the fateful day of June 1, 1774, drew near, the conservatives of Boston made a last-ditch attempt to reverse the tide. But the town meeting of May 30 resolved not to consume any British manufactures and to boycott any violators. As Hutchinson prepared to leave office, however, 124 Boston conservatives signed a petition praising the administration of Hutchinson (and another welcoming General Gage), and promised to pay their share of the damage for the destroyed East India tea. About a quarter of the signers were merchants, many of them wealthy.

The Boston merchants had been persuaded by the committee of correspondence to agree to a total boycott of Britain, provided that merchants of other American colonies would agree to join. In early June, the radicals were dismayed to find merchants of other towns refusing to agree, and the conservative merchants of Boston then hastened to abrogate their agreement. The eminent liberal Congregational minister, the Reverend Charles Chauncy of Boston, angrily denounced the defecting merchants: "So many of them are so mercenary as to find within themselves a readiness to become slaves themselves, as well as to be accessory to the slavery of others, if they imagine they may by this means serve their own private separate interest."

Sam Adams and the radicals had learned better during the Townshend struggles than to rely on merchants to boycott for principle; now, the whole body of consumers was to engage in the boycott. Counterattacking, the Boston Committee of Correspondence adopted on June 5 the "Solemn League and Covenant," drawn up by Dr. Joseph Warren and other radicals. The Solemn League urged *all* Americans to sign a pledge to boycott immediately all trade with Great Britain, and to bar all purchases and all consumption of British

products after October 1. It also pledged in turn to boycott forever any American who refused to sign such a covenant. Dependence on the merchants was bypassed for reliance on the voluntary actions of the masses of the people.

Conservative Boston merchants counterattacked vigorously and tried to challenge the committee. The Boston Town Meeting endorsed the Solemn League and Covenant on June 17, but a final battle between conservatives and liberals took place in the Boston Town Meeting of June 27–28. The meeting overwhelmingly defeated a motion of censure and voted approval of the actions of its committee of correspondence. In contrast, Governor Gage ordered magistrates to arrest any persons circulating the “traitorous” covenant. Defying this proclamation, nearly every Bostonian signed the pledge.

The Massachusetts towns were quick to rally to the Solemn League and Covenant. The town of Worcester, in fact, strengthened the covenant by advancing the date of nonimportation from October 1 to August 1. The covenant was adopted by fourteen other Massachusetts towns, among them Gloucester, Braintree, and Shrewsbury; towns outside the province announced their support, Portsmouth, New Hampshire, being one. Furthermore, special county conventions in Massachusetts endorsed the total boycott, including those of Berkshire, Suffolk, Plymouth, and Bristol.

Meanwhile, other towns were responding to Boston’s boycott appeal of May 13. The town meeting of Providence, Rhode Island, on May 17 introduced an important and creative new proposal: a congress of representatives from all the colonies to conduct and unite the American boycott and resistance. In addition, Providence expressed willingness to enter into a joint boycott, as did Newport and New Haven. The real problem was the reaction of Philadelphia and New York to Boston’s plea; hence the importance of Paul Revere’s speeding the transmission of Boston’s circular letter to those cities.

New York’s radicals in control of its committees of correspondence were as eager as Boston’s to join the boycott and pledge their support. But the radicals in New York faced far stronger conservative opposition in that oligarchy-ridden province, and they sadly lacked a revolutionary leader with the brilliance and dedication of Sam Adams. The radicals had called a series of meetings of merchants and mechanics on May 13. At the meeting a committee of twenty-five was set up that included conservatives but was dominated by the old committee of the Sons of Liberty. At a public meeting of merchants on May 16, however, radical leaders Isaac Sears and Alexander MacDougall saw to their dismay a successful vote to oust the existing committee of correspondence and to replace it with a new and larger committee that had enough conservatives to put it under right-wing control. Fully half the merchants on the new committee had been zealous in breaking the nonimportation agreement in 1770, and twenty of the fifty-one members were later to choose the Tory side in the Revolution.

On May 19 a public mass meeting of the inhabitants of the city and county

met to act on the nominations made at the merchants' meeting of three days before. The conservative merchants demonstrated their dominance by making their leader—and chairman of the new committee of correspondence—Isaac Low, chairman of the meeting. Aside from agreeing to add one radical to the committee, the conservatives swept the meeting. Whereupon Governor Cadwallader Colden was moved to write exultantly to the Earl of Dartmouth that the new Committee of Fifty-one was made up of some of the wisest and most prudent citizens of New York.

The decision of how to reply to Boston's appeal was now in the hands of New York's conservatives, who decided to use Providence's call for a general congress—meant to implement the boycott—as a tactic for delaying any effective action. The new Committee of Fifty-one therefore answered Boston on May 23 that all action should be postponed until an interprovincial congress could be held. Boston vainly replied by urging immediate nonintercourse with Britain rather than wait many months for a congress; but New York was adamant. It was such responses as New York's that drove the Boston radicals to endorse the Solemn League and Covenant, by which the masses could impose a total boycott over the heads of recalcitrant merchants.*

The Committee of Fifty-one tried to prod new committees of correspondence from the New York towns into being, but the few that did appear—in Suffolk County, Orange County, and Cumberland County—urged the radical Boston program of immediate boycott.

To counteract the conservative coup, the radicals held their own meeting, denounced the Port Act, urged an immediate nonimportation agreement, and named their own committee of correspondence. The Sons of Liberty also countered the Committee of Fifty-one by creating a new Committee of Mechanics to operate as a center of radical pressure.

A similar conservative victory had occurred at the same time in the other major port of Philadelphia. The strong group of conservatives wished to confine American protest to a timorous petition of grievances to Great Britain. On the other hand, the radicals, led by the Philadelphia iron manufacturer and distiller Charles Thomson, wished to heed Boston's appeal. When Paul Revere brought Boston's letter, the radical leaders—Thomson, already known as the "Sam Adams of Philadelphia," and the young Quaker Thomas Mifflin—called a public meeting for the next day, May 20, and tried desperately to enlist the great John Dickinson in their cause. But it often happens to pioneers in a revolutionary movement that the movement's dynamic advance leaves them behind in a kind of crabbed *cul-de-sac*. Such had recently been

* John C. Miller is completely in error when he asserts at length that the New York, and Philadelphia, conservatives were here reacting against the Solemn League and Covenant. For these meetings, calling for postponement until a congress should open, took place several weeks *before* the covenant was drawn up. In truth, the covenant was a reaction against the conservative decisions in New York and Philadelphia. See John C. Miller, *Origins of the American Revolution* (Stanford, Calif.: Stanford University Press, 1959), pp. 363ff.

happening to Dickinson, who caviled at the Boston Tea Party and at the bold resistance movement required by current conditions. At the meeting of May 20, Thomson and Mifflin urged an immediate declaration making common cause with Boston; instead, Dickinson and Joseph Reed gained the day with an unhappy bit of stalling, pleading with the governor for a special session of the Assembly to petition for redress of grievances. Furthermore, the committee of correspondence selected by the meeting to answer Boston was also dominated by the conservative forces. In its letter to Boston of May 21, the Philadelphia committee showed itself even more conservative than New York: it had the bad taste to denounce the Tea Party, it pressed Massachusetts to compensate the East India Company, it called for varying the boycott plan by reserving it for a last resort, and it urged that a general congress be strictly confined to petitioning the Crown. The letter was drawn up by the highly conservative and Tory Anglican minister Dr. William Smith, head of the College of Philadelphia. This response also contributed to Boston's adoption of the Solemn League and Covenant.

The only recourse left to the Pennsylvania radicals was to exploit the governor's rejection of the petition for a special session of the Assembly. When the expected rejection was announced, radicals forced a new committee of correspondence upon the old committee by calling a meeting of two hundred angry mechanics (artisans) for June 9. This artisan pressure forced the old committee to call a general mass meeting of Philadelphia City and County for an enlarged committee on June 18. But the conservatives moved skillfully behind the scenes to control the mass meeting in advance: the caucus selected a new committee comprising the old committee and twenty-seven representatives of religious sects in the city. The proposed committee was strongly under the control of the conservatives, who cleverly chose the eminent John Dickinson to be chairman, and thus to serve as a front man for their designs. The meeting proved easily amenable to manipulation by the conservative-religious caucus. The handpicked Committee of Forty-three was selected, and an intercolonial congress proposed to petition for redress of grievances. No mention was made of Boston's appeal for a boycott of Great Britain. During the next three weeks, most counties in Pennsylvania created committees of correspondence and obediently adopted the Philadelphia resolution for an interprovincial congress.

Thus, Boston's appeal for immediate and total nonintercourse with Britain had been shunted aside by the victorious conservative forces of New York and Philadelphia, who instead took up and perverted Providence's proposal for a general congress. The conservatives had two aims in mind: to delay any action for the many months' time necessary to call and hold a congress; and, second, to limit the congress to a peaceful—and innocuous—petition of Great Britain and to keep it from such radical measures as a total boycott. The desperate response of the Boston radicals was the Solemn League and Covenant,

calling for a general public boycott of Britain to override the merchants and the local governments. But while many towns of Massachusetts approved the covenant, other towns of the province, including Marblehead, Salem, Charlestown, and Springfield, decided to wait for the congress as did most of the towns in Connecticut.

It was swiftly evident to the Boston leaders that the covenant could not be pushed through immediately, and that the conservatives had at least achieved their objective of delay. The Boston radicals were unyielding in matters of principle; but they were eminently adaptable and realistic in matters of tactics. And so they quickly cut their losses and decided to join the movement for an intercolonial congress. The official call for the congress accordingly came from the Massachusetts Assembly on June 17; the "Continental Congress" was to meet at Philadelphia on September 5. The great struggles within the American revolutionary movement were now to be waged for the soul of the Continental Congress.

Meanwhile, the pressing emergency was the shutdown of the port of Boston by the nearby British fleet. Generous donations of food and supplies from all the colonies kept the Bostonians from acutely suffering from the British blockade. The passage of the later Coercive Acts helped to radicalize American opinion still further, and the Boston Committee of Correspondence urged civil disobedience against the invalid abrogation of the Massachusetts charter and the innovation of a royally appointed Council. The new councillors found themselves beset by American mobs and by social ostracism, and they were soon forced to flee to Boston and the arms of General Gage. The judges and sheriffs newly appointed by Gage also soon joined their Tory colleagues. In addition, the general threat to the liberty of the other colonies from the Coercive Acts appeared to be reinforced by the Quebec Act, which also seemed to raise the old specter of "popery."

Selecting Delegates to the First Continental Congress

From mid-June until the opening of the Congress, the major struggles were waged over the selection of delegates in the various colonies and the lining up of support for or opposition to a total boycott of trade with Great Britain. Massachusetts' delegates were chosen by the Assembly on the day of the call, June 17, and in defiance of General Gage. Makeup of the delegates, including Sam Adams and John Adams, as well as the conservative Thomas Cushing, ensured Massachusetts' leadership of the radical forces in the Congress.

In New York the radicals, now centered in the Committee of Mechanics, prepared to do battle over delegates with the conservative Committee of Fifty-one. At a meeting of the latter committee on July 4, the radicals' proposal for a concurrent choice of delegates by the two committees was beaten by a two-to-one majority, and the Committee of Fifty-one thus gained the exclusive privilege of naming delegates. Nominated as delegates were four staunch conservatives: Isaac Low, James Duane, John Alsop, and the very young lawyer John Jay, as well as the middle-of-the-road merchant Philip Livingston. The embittered radicals struck back and called a meeting of their own on July 6, at which Boston was energetically supported and the forthcoming Congress urged to agree to nonimportation. The radical pressure forced a general mass meeting of July 7 to vote to poll all the taxpayers, freeholders, and freemen of New York City on the delegates, under joint supervision of the two rival committees. The radicals were to run leaders Alexander MacDougall and Leonard Lispenard against Alsop and Duane. But the Committee of Fifty-one immediately reneged on the agreement to hold a general election, and eleven radical members of the committee heatedly resigned the next day. Ignoring the radicals, the committee resolved on July 13 to keep the original

slate of five, and instructed them not to call for a boycott. But the public meeting called by the committee for July 19 bitterly overruled the Committee of Fifty-one, created a new committee of ten radicals and five conservatives, and substituted two radicals, "unexceptionable friends of liberty," for Livingston and Duane. But the Committee of Fifty-one again scorned a public meeting, this time one called by itself, and now pressed forward plans for a general election. The conservatives managed to defeat radical resolutions at a public meeting of July 25 and went ahead with a public election of delegates on July 28. In exchange for the rather feeble statement by the five candidates that a "faithfully observed" general nonimportation agreement seemed to be the most effective measure for the Congress to take, the radicals suddenly capitulated, and the five conservative choices were unanimously selected as delegates from the city and county of New York.

Of the thirteen other counties of New York province, six took no action at all in securing representation in the Congress, while four counties (Albany, Westchester, Dutchess, Ulster) gladly authorized the conservative city delegates to act for them. Only three counties proceeded to elect delegates of their own: Suffolk and Orange counties, where the towns had supported a boycott, and Kings County, where two liberal citizens selected one of their number to be the delegate from the entire county.

Thus, New York's internecine struggle resulted in a largely conservative delegation. Pennsylvania's problems, however, were rather different. The Committee of Forty-three, to be sure, was largely in conservative hands, under the middle-of-the-road chairmanship of John Dickinson. But in Pennsylvania, much farther right than these conservatives was the arch-Tory faction headed by the wily and powerful Speaker of the House Joseph Galloway. To Galloway, all popular resistance going beyond humble petitioning of Parliament was rank anarchy. Galloway similarly insisted that the delegates to the Congress be chosen by the legally constituted provincial Assembly; any other method would be popular and hence revolutionary—and not subject to the control of Joseph Galloway. To combat the Galloway threat and also to push its own extralegal case, the Committee of Forty-three decided on June 27 to call a convention of county committees to advise the Assembly on a choice of delegates. Such a convention, not subject to the undemocratic weighting of representation in behalf of the eastern counties, was bound to be more radical than the Assembly.

An extralegal and hence revolutionary provincial convention of county committees was called by the Committee of Forty-three for July 15. Press controversy raged, meanwhile, over the Boston boycott proposal, and a radical artisan-and-trader meeting in Philadelphia urging a boycott was ignored by the Committee of Forty-three. The Pennsylvania Convention, meeting on July 15–20 under the guidance of John Dickinson and the committee, labored mightily to bring forth a mouse. Boycott was urged as only a last resort after

petitioning, but any boycott agreed upon by the Congress would receive full support. Pennsylvania delegates were instructed to ask for redress of the various American grievances, in return for which Americans would pay an annual revenue to the king and pay all damages to the East India Company. In response to this highly tame resolution the Galloway faction denounced the illegal convention as "setting up anarchy above order . . . THE BEGINNING OF REPUBLICANISM." Galloway ignored the tortured pleas of the convention and selected delegates exclusively from the Assembly itself; but the liberals managed to add Dickinson to the list late in the proceedings of the Assembly.

In New England the radicals had little trouble in dominating the selection of delegates. In Connecticut, delegates were chosen by the Assembly's committee of correspondence. In Rhode Island, they were chosen by the General Assembly. Looking forward to a "firm and inviolable union of all the colonies," Rhode Island chose Stephen Hopkins and Samuel Ward, leaders of the two hostile political factions in the province, as its two delegates. But this gesture of unity was to be overshadowed by the apparent desire of Ward and Hopkins to disagree with each other on all vital matters. As to New Hampshire, when Governor Wentworth prevented the House from choosing delegates, the representatives called an extralegal convention of the towns to choose the delegates from that colony.

Back in the middle colonies, New Jersey's Assembly, as well as meetings of eleven of the province's thirteen counties, sturdily endorsed nonimportation and nonconsumption and "perhaps nonexportation." Delegates to the Congress were chosen by provincial convention of county committees of correspondence, which recommended nonimportation and nonconsumption. In Delaware, mass meetings in the three counties selected representatives to a convention at New Castle, which chose delegates to the Congress.

In the South, the first province to react to the crisis in Boston was Maryland. The inhabitants of Annapolis met on May 25 and adopted an impeccably radical set of resolutions, pledging to join an association for immediate nonimportation and nonexportation with Great Britain. Any province not agreeing was in turn to be boycotted. The meeting further urged lawyers not to bring suits for recovery of debt due to Britain until the Port Act was repealed. Within a few weeks, eight of Maryland's sixteen counties followed the lead of Annapolis, the bulk of them favoring a total boycott and half of them suspension of debt collections. On June 22, a provincewide convention of county committees of correspondence (chosen by the county meetings) met at Annapolis. Every county in the province was represented, with each county being allocated one vote. The convention urged the Congress to adopt boycott agreements and pledged to follow its lead.

Virginia was particularly exercised at the brutal treatment meted out to Boston. On hearing news of the Port Act, Richard Henry Lee was dissuaded only with difficulty from pressing for an immediate declaration in behalf of

Boston. On May 24 the House of Burgesses, adopting an idea of the brilliant young lawyer and planter Thomas Jefferson, unanimously set aside the fateful first of June as a "day of fasting, humiliation, and prayer." Governor Dunmore retaliated by dissolving the House, but the burgesses met as supposedly private citizens on the 27th and formed an association to boycott the use of tea, and suggested an annual general congress. This was a feeble resolution indeed. But when Boston's circular letter arrived at the end of May, Peyton Randolph gathered the remaining burgesses together, and this rump, divided on tactics, called a meeting of burgesses for August 1 to decide Virginia's course.

To guide this extralegal provincial convention, thirty-one counties of Virginia held public meetings to frame instructions and resolutions. Of the thirty-one, twenty counties declared for absolute boycott of Great Britain jointly with other provinces, while eight others advocated nonimportation only. Three Virginia counties (Accomack, Dinwiddie, Isle of Wight) were conservative enough to leave all matters up to the provincial convention. Eight counties wished to couple suspension of debt collection with nonexportation. Six of the counties took the occasion to denounce the importation of slaves from Africa and two (Fairfax and Hanover) actually condemned slavery itself as immoral.

The period of June and July was particularly appropriate for forming public opinion. In it two important contributions to the public debate advanced the American cause far beyond where even the radicals were officially prepared to go. Particularly important was a Virginia contribution by Thomas Jefferson, *A Summary View of the Rights of British America*. This widely circulated pamphlet proposed instructions for the Virginia delegates, and rejected all parliamentary authority whatever over the colonies, acknowledging that allegiance was owed only to the king. Since the British king could not impose legislation or taxation without Parliament, such allegiance would necessarily be more ceremonial and *pro forma* than anything else, and signified an advance to virtual independence from Great Britain. Jefferson grounded his case not only on legal and historical claims but especially on the Lockean natural rights of man. The libertarian rights of the colonists included freedom of trade with all parts of the world, and this right invalidated even parliamentary attempts to regulate American trade. Even the king himself was warned to desist from tyranny: ". . . kings are the servants, not the proprietors of the people. Open your breast, sire, to liberal and expanded thought. Let not the name of George III be a blot on the page of history."

It might be noted that shortly after publication of Jefferson's pamphlet, a rising young Pennsylvania lawyer, James Wilson, issued an updated version of an unpublished paper of six years before. Wilson's *Considerations on the Nature and Extent of the Legislative Authority of the British Parliament* also espoused independence of parliamentary authority. Legislatures must them-

selves be regulated by natural law, wrote Wilson, who added: "All men are, by nature, equal and free: No one has a right to any authority over another without his consent. . . ." Citing the Swiss political theorist Jean Jacques Burlamaqui, Wilson proclaimed that "all power is derived from the people—that their happiness is the end of government," and that any invasions of this principle were illegitimate acts of government. From what source, then, does the alleged sovereignty of Parliament flow? "Have they a natural right to make laws, by which we may be deprived of our properties, of our liberties, of our lives? . . . What act of ours has rendered us subject to those, to whom we were formerly equal? Do those, who embark, free men, in Great Britain, disembark, slaves, in America . . .?"

Another important and trenchantly radical essay in Virginia was a series of pseudonymous articles in the *Virginia Gazette* by the eminent lawyer and planter Thomson Mason. Mason denied Parliament's power to legislate for the colonies, but his major stress was on the methods for Americans to pursue—on tactics rather than basic philosophic principles. Brilliantly rejecting total boycott as a temporizing and rather vulnerable measure, Thomson Mason boldly cut straight to the heart of the matter: Congress should flatly refuse every law, regulation, and tax imposed by Parliament. And should this total civil disobedience to Great Britain be challenged by British arms, it should press onward to armed resistance and outright secession if necessary. For Mason realized that more was at stake than nonintercourse with Britain; far more important would be civil disobedience at least to the anti-Massachusetts laws and perhaps to all the others as well.

The Virginia Convention met on August 1–6. Spurred by Jefferson, Patrick Henry, and the radical planters George Mason, George Washington, and Richard Henry Lee, the convention proceeded to top all previous colonial gatherings, save that of Massachusetts and its Solemn League and Covenant, by refusing to wait for the Congress to impose a boycott. The convention boldly adopted the Virginia Association, which pledged: (1) immediate non-importation and nonuse of any kind of tea; (2) an absolute boycott of all direct or indirect imports from Great Britain (including slaves from Africa or the West Indies) except medicines, beginning on November 1; and (3) absolute nonexportation direct or indirect to Great Britain, beginning on August 10, 1775. The total boycott would remain in effect until all the grievances named by the Congress were redressed. To supervise enforcement of the association, a committee was chosen in each county, and nonsigning or violating merchants and traders were publicly boycotted and severed from all dealings with the public.

North Carolina followed after Virginia and thus came under radical control. A six-county meeting was held at Wilmington on July 21, under the chairmanship of a young ex-Bostonian lawyer, William Hooper. A provincial convention representing the counties was then called for August 25. Governor

Josiah Martin proclaimed his prohibition of this scheduled "illegal meeting," but the North Carolinians simply ignored the decree. The provincial convention met on schedule at New Bern, with thirty-two of the thirty-eight counties and two of the six towns represented. The convention adopted a slightly modified variant of the Virginia Association: East India tea was not to be used after September 10, all British imports except medicine were to stop after January 1 (no slaves imported after November 1, 1774), and no exports to Great Britain after October 1, 1775. In one respect, North Carolina went slightly beyond its sister colony, for it pledged a boycott of any province, town, or individual that failed to abide by any plan adopted by the Continental Congress.

In South Carolina the radical leaders, notable as they were, had a far more difficult time. On hearing of the Boston Port Act, Peter Timothy and his *South Carolina Gazette* called for a general nonimportation and perhaps nonexportation with Britain. Christopher Gadsden, "the Sam Adams of South Carolina," was of course ready to plunge wholeheartedly into the fray, even at the risk of his entire considerable mercantile fortune. However, the merchants and factors were generally recalcitrant, and the rice planters, heavily dependent on export of their staple, were strongly opposed to any nonexport agreement. A plea to wait for Congress to act therefore exerted great effect in South Carolina.

On June 13 the General Committee of Charleston called a general meeting, representing the people of South Carolina, for July 6. Articles in Timothy's *Gazette* called insistently for boycott instructions to the delegates at the Congress, but the newly formed chamber of commerce bitterly opposed any boycott measure and drew up a slate of delegate nominations that pledged to support the chamber's views.

The extralegal general provincial meeting took place at Charleston, July 6-8. Appointment of representatives was haphazard and chaotic, but the meeting soon clearly divided into two factions. The radicals favored adopting the Boston boycott idea immediately, and allowing South Carolina's delegates to the Congress full power to vote. The conservatives wanted restricted powers for the delegates and a postponement of all action until Congress made its decision. The first step of the convention was to reject any immediate boycott. Following this, the convention vested the delegation with full power to vote for any measures at the Congress.

The struggle now shifted to the personnel of the South Carolina delegation. Here every freeman of the entire province was declared to be entitled to vote. However, the radicals proved themselves even more tactically inept than in New York; for although the radical slate won the election by over four hundred votes, the radicals had oddly chosen, on their slate of five, no less than three conservatives. Thus a conservative majority was assured for South Carolina's delegation to the Congress. Only conservative Edward Rutledge's

status as son-in-law to Gadsden seems to account for his place (and that of his brother John) on the radical slate. On August 2 the Commons House of Assembly officially ratified the slate of delegates and voted money for their expenses.

By the end of August, twelve American colonies had selected delegates to the Continental Congress—with Massachusetts, Virginia, and North Carolina leading the radical cause, having already pledged a comprehensive boycott of trade with Great Britain. Only one colony sent no delegates: the newest, smallest, and southernmost province of Georgia.

The task of the radicals in Georgia proved insurmountable. In the first place, Georgia received a generous annual subsidy from Parliament and as a result was hagridden by as many placemen and government bureaucrats as the most populous of colonies. It received one million dollars a year in general subsidy as well as lavish bounties for growing silk and indigo. The vested economic interests created in the tiny colony by this lavish spending by the British government proved too much to overcome. Furthermore, back-country Georgians hankered after British troops to aid them in fighting the numerous Creeks and other Indians in the back country, as well as, perhaps, heavily armed Spanish Louisiana. Finally, Georgia was the only colony with no charter and therefore with no legal rights recognized by Great Britain. Georgians were thus at the mercy of their royally appointed governor.

The small group of radicals in Georgia were concentrated in Christ Church Parish, including the seaport of Savannah, and St. John's Parish directly to the south, which contained former citizens of Dorchester, Massachusetts, who had founded the settlements of Midway and Sunbury. The latter was later to be renamed, appropriately, "Liberty County." Toward the end of July, the Georgia radicals, under the plotting of their South Carolina confreres, peppered the *Georgia Gazette* with propaganda defending the Boston cause. Hastily, on July 20, the *Gazette* called for a provincial meeting at Savannah on July 27. This meeting first rejected, then fraudulently drove through the appointment of a committee to draw up resolutions. The meeting, seeing itself beleaguered and outnumbered, called a systematically selected, though extralegal, provincial convention at Savannah for August 10. Sir James Wright followed the usual precedent of provincial governors by interdicting the forthcoming meeting, while forty-six inhabitants of St. Paul Parish (Augusta) attacked any solidarity with Boston and called for British troops to aid in fighting Indians.

The convention of August 10 condemned the Coercive Acts and pledged Georgia's support to measures of redress adopted by the other colonies. For the first time in an American province, a motion to select delegates to the Continental Congress was rejected—this despite numerous irregular practices committed by the desperate radicals. From Savannah to the back country, numerous protests poured in against the secrecy, fraud, and misrepresentation

practiced by the radicals, but all these practices were to no avail. The intrepid radicals of St. John's Parish, in a last desperate try, held a convention of St. John's, St. George's (Waynesboro), and St. David's parishes, and chose Dr. Lyman Hall as delegate, provided that the other parishes would agree. But nothing ever came of this plea. Georgia alone remained unrepresented at the Continental Congress of 1774.

Resistance in Massachusetts

While the Congress prepared to meet, revolutionary struggles were greatly intensifying in Massachusetts. General Gage had reoccupied Boston with four regiments of British troops sent from Ireland; additional regiments were also transferred to Boston. The people of Boston did not attempt to meet the troops head-on. Instead they engaged in a thoroughgoing campaign of mass noncooperation, of nonviolent resistance to the British troops. First, the town refused to provide barracks for the soldiery, obliging them to camp out on Boston Common for the remainder of 1774. A voluntary boycott was instituted against the British: the Boston Committee of Correspondence ordered carpenters not to help erect barracks; lumber was cut off; and merchants refused to sell the British tools or supplies of any kind. Sabotage of materials also disrupted Gage's plans. Gage was forced to bring construction workers from Nova Scotia to build the barracks. All in all, the British soldiers were surrounded with a wall of hostility. And the liberal press kept up a drumfire of propaganda about the rapes and robberies committed by the "bloody soldiery."

Mass resistance in Massachusetts also extended to the body of the Coercive Acts. In August, Gage published a list of thirty-six new royally appointed "Mandamus Councillors," who succeeded the old councillors in accordance with the Massachusetts Government Act. A meeting of delegates from the towns declared them unconstitutional and suggested a new revolutionary provincial congress to become the new government of Massachusetts. The knot of notorious Tories chosen for the new Council was subjected to intense mob pressure, which forced the councillors either to resign or to take refuge in the arms of British troops in Boston. Abijah Williams, Lieutenant Gover-

nor Thomas Oliver, Justice Peter Oliver, Foster Hutchinson, and eleven others were forced to resign. So extensive was the use of Boston as a place of refuge for Tory officials that the Whig leader Edmund Burke caustically taunted the British in Parliament, saying, "He had often heard of such places for thieves, rogues, and female orphans; but it was the first time he ever heard of an asylum for magistrates." General Gage contemplated sending troops into the countryside to protect councillors and judges from popular wrath, but threw up his hands at the universality of opposition to these appointees.

The royal courts were also subject to harassment now that judges were removable at pleasure rather than for ill behavior. The Pittsfield Town Meeting urged the people to resist the Coercive Acts "to the last extremity," and resolved that no courts should sit until the Massachusetts Government Act was repealed. Indeed, all courts were stopped throughout Massachusetts by methods ranging from persuasion to outright coercion. In Boston, the chief justice and sheriffs were unable to find a juror who would be sworn so that the superior court could meet.

To settle its special problems as the center of conflict with Great Britain, Massachusetts, during the summer, was preparing for an extralegal provincial congress in the autumn. County conventions overwhelmingly protested the Coercive Acts and attacked the appointment of officials at royal pleasure, the destruction of trial by jury, and the payment of government salaries apart from any control by the representatives of the people. All implied that even armed resistance would be justified to prevent enforcement of the Coercive Acts and called for a provincial congress to organize the opposition. Town meetings did the same and ratified the county conventions, and Brookline voted to indemnify any town official for any penalty incurred from violating the Coercive Acts.

As Massachusetts' resistance grew and deepened, and a wall of resistance—nonviolent at least in relation to the British army and navy—built up against the Coercive Acts, General Gage became increasingly frightened and trigger-happy. He was under increasing pressure by his superiors to reflect the chauvinist contempt of the British for the Americans. The British leaders held that a mere show of force, a mere cleaving to a hard line and eschewing the temptation to appeasement, would quickly drum the numerous but craven colonials into line. The military men were eager to crush the Americans, and believed, with the narrowness and vainglory of the military mind, that this could be accomplished easily. Gage began to follow the classic and fateful path of a minority in power that is faced with the determined and largely nonviolent resistance of the majority: recourse to aggressive use of state violence against the people. Thus Gage tried to use troops to prevent a Salem Town Meeting called to select delegates to a county convention of protest; his attempt failed. Later, on September 1, Gage sent troops into Charlestown and Cambridge to seize cannon and ammunition belonging to the province of

Massachusetts. Twenty thousand men of the western towns of Massachusetts quickly gathered in Cambridge to march on Boston, but were persuaded to turn back by cooler heads who realized that American unity had not yet been sufficiently forged to back up such a direct attack on the armed forces of Great Britain. But meanwhile, town meetings and county conventions in Massachusetts were calling for more military training for its militia, in preparation for possible armed resistance.

Despite General Gage's increasing reliance on aggressiveness and bluster, he recognized that his concrete military situation was precarious. He urged Britain to send reinforcements and decided in early September to fortify Boston Neck. Reacting to the latter plan, Boston workers boycotted the project and refused to help build the fortifications. Learning that Gage would apply at New York, Boston's Committee of Mechanics successfully warned the New Yorkers not to export carpenters to Boston.

The First Continental Congress

On September 5, 1774, there met at Philadelphia the most fateful and momentous assemblage ever gathered in the colonies: the Continental Congress. Brilliant and distinguished, the colonial leaders had come to decide the course of the colonies. They were, besides being eminent, young and vigorous, the average age of the delegates being only forty-five.

It soon became evident that there were two polar groups at the Congress: the radicals, determined on resistance to the British; and the conservatives, bent on more securely fastening the British yoke upon the colonies. It was sensibly determined that with the number of delegates varying greatly from each colony, the colonies would vote as separate units. Leading the radical forces were Massachusetts, headed by the brilliant father of the revolution Sam Adams and graced by his rising young distant cousin John Adams, and Virginia, whose delegation included the eminent young leaders Patrick Henry, George Washington, and Richard Henry Lee. North Carolina and the rest of New England dependably followed the radical lead, but Rhode Island's inherent split between Hopkins and Ward served to cancel each other's votes, and the blunder of the South Carolina radicals in selecting their delegates made matters difficult for the revolutionaries. Heading the Tory forces was the wily, shrewd Joseph Galloway of Philadelphia, seconded by the New York delegation, especially the young lawyer James Duane.

The Congress conducted its deliberations in secret. It began in committee by debating two vital questions: the philosophical groundwork of the American stand, and how far it would deny the authority of Parliament. The radicals on the committee, led by John Adams and Richard Henry Lee, insisted on grounding the American case on the ultimacy of natural law and natural

rights. The conservatives, on the other hand, were most anxious to ignore natural law and its profoundly radical implications and to confine the American statement of grievances to legalistic discussions of the British constitution. Joseph Galloway, James Duane, and Edward Rutledge led this attempt, but the radicals prevailed in cleaving to natural law.

During this early formative period of the Congress, Sam Adams engineered a masterstroke that electrified the meeting. Adams had the radicals of Suffolk County (including Boston) meet to draw up county resolves such as Middlesex and other counties had done. Prevented by the British authorities from meeting in Boston, the radicals met at a village outside the metropolis on September 9 and adopted a set of resolves drawn up by Dr. Joseph Warren. Known as the Suffolk Resolves, they were sped down to Philadelphia by Paul Revere, reaching there on September 16. The Resolves bitterly opposed the recent acts of Parliament and called ringingly for mass civil disobedience. "No obedience is due from this province to either or any part" of the Coercive Acts, they asserted. Furthermore, no taxes would be paid to the constituted government until it became truly valid. In short, the Resolves implicitly called upon the people of Massachusetts to set up a dual government that would cease to obey, and indeed ignore, the British-appointed authorities. In addition, the resistance would use violence only defensively, and only if the British attempted to enforce the Coercive Acts upon the people. Besides the specific civil disobedience in Massachusetts, the Suffolk Resolves urged the Continental Congress to organize a general voluntary boycott of all trade relations with Britain.

The Suffolk Resolves struck the Congress with overwhelming force. The day after they were received, the Congress voted to endorse them enthusiastically. Adams' brilliant strategy had thus gotten the Congress committed to civil disobedience in Massachusetts and to the principle of an absolute boycott of Great Britain. John Adams, deeply moved, wrote in his diary that "this was one of the happiest days of my life." Now he *knew* that "America will support Massachusetts or perish with her." Sam Adams supported that judgment. Five days later, on September 22, the Congress specifically endorsed the Suffolk clause for a boycott of Great Britain.

But, it soon became clear, the radicals had not yet won the day. The Congress was not ready to endorse dual courts or legislatures to be set up by the people in Massachusetts, much less to think of absolute independence. Indeed, Joseph Galloway was now ready to play his last Tory trump. The wily Galloway introduced to the Congress his "Plan of the Proposed Union Between Great Britain and the Colonies." Galloway's plan pursued the old Tory dream, proposed since the late seventeenth century, of a centralized government for all the colonies. Under the tempting facade of colonial unity, Great Britain was finally to unite the colonies under one imperial yoke. Each colony was to retain its present form of rule over its local affairs. The central

government for the several colonies was to consist of a president-general appointed by the king, subject to the king's veto, and holding office at the king's pleasure, and of a grand council chosen by the assembly of each province. The grand council's actions were to be subject to the president-general's veto. This central organ of president and Council was, furthermore, to constitute an inferior branch of the British legislature, and measures dealing with America could originate either with this body or with the rest of Parliament, each of which would have to agree with the measure.

The similarities of Galloway's plan to Franklin's Albany Plan, at the Albany Congress of 1754, are obvious. Galloway, however, would have even more solidly cemented the ties between America and Britain. The central authority was to act as a transmission belt of rule between Britain and the separate colonies. And with the new central body inducted, as it were, into the British Parliament, the plea of no taxation without representation would no longer hold.

Joseph Galloway's lethal but sugarcoated pill constituted the big conservative drive of the Congress. Galloway opined that every society "must" have one supreme legislature and executive as its authority, that every individual of a society "must be subordinate to [the] supreme will" of this authority, and that, in the present case, this authority was the British Parliament. Supporting the Galloway plan were Duane and the two youngest delegates to the Congress, Edward Rutledge (25) and New York's John Jay (29). Leading the opposition were Patrick Henry and Richard Henry Lee. Galloway's plan was just barely defeated by a vote of six to five (Rhode Island producing a tie between its two delegates). Although the vote was secret, it is safe to guess that Massachusetts, New Hampshire, Connecticut, Virginia, and North Carolina voted nay, while Pennsylvania, New York (dominated by the conservative New York City delegates), and South Carolina voted in favor. This means that one of the middle colonies—New Jersey, Delaware, and Maryland—voted against the plan.

This vote was the high-water mark for conservatism at the Congress. The victorious radicals tried to eliminate all traces of the close balloting. On October 8 the Congress became still more explicit in support of Massachusetts' resistance, specifically applauding that province's moves and urging all America to come to the aid of Massachusetts should Britain try to impose upon it an enforcement of the Coercive Acts. Galloway and Duane tried unsuccessfully to have their opposition to this resolution recorded in the minutes of the Congress.

That the Congress should issue a declaration of grievances and petition Britain for redress was agreed upon by all, liberal and conservative alike. The philosophical groundwork of rights and the admitted scope of parliamentary authority had now to be determined. With Duane largely responsible for its writing, the Declaration of Rights, adopted on October 14, played down the

inalienable, natural rights of life, liberty, and property, and stressed instead the far more restricted rights of petition, assembly, and jury trial, as well as freedom from a standing army without consent of an Assembly. The position taken on Parliament was also rather backward for the dynamic situation of the time. The old orthodox and weak American position was simply reiterated: Parliament had the right to regulate American trade but not to tax the colonies internally or externally, or to govern their domestic affairs. The Coercive Acts and the Quebec Act were condemned, and repeal was urged of thirteen invasive parliamentary acts that had been in effect since 1763. The Congress also requested the termination of British standing armies occupying American towns, of the dissolutions of colonial assemblies, and of the aggrandizement of the vice admiralty courts. The Congress's address to the king, drawn up by the moderate John Dickinson, carefully followed the customs of rendering obeisance to the king and pinning the blame on his advisers and underlings alone.

Having endorsed Massachusetts' resistance, urged redress of grievances, and rejected Galloway's plan for a central government, the Congress took up its final—and vital—matter of business: deciding the general American means of waging the struggle against Britain; specifically, the question of a continental boycott. On October 18, the Congress agreed to the Continental Association, closely patterned after the Virginia Association of early August. The colonies jointly pledged an absolute boycott of trade with Great Britain: nonimportation after December 1 (including no slave trade after that date); nonconsumption of British products after March 1, 1775; and no exports to Britain after September 1, 1775. Because of the threat of the South Carolina delegation (with the exception of the redoubtable Gadsden) not to sign, the Congress reluctantly agreed to exempt South Carolina's staple, rice, from the ban on exports to Britain. Most ardent for total boycott were Thomas Cushing of Massachusetts, young Samuel Chase of Maryland, and Eliphalet Dyer of Connecticut, who urged *immediate* nonimportation, nonconsumption, and nonexportation, but they were overruled by the necessity of gaining the support of Virginia's tobacco planters.

The Continental Association was to remain in effect until all the listed grievances had been redressed. It was to be enforced by rigorous but nonviolent methods of persuasion and expression. Any trader violating the boycott would be ostracized and boycotted by every colony; as to enforcement, every town, city, and county would select a committee to oversee the boycott, publicize the names of violators, and then denounce them as "enemies of American liberty." Furthermore, any colony violating or failing to agree to the Association would be denounced and itself be boycotted.

The Continental Congress had on the whole done its work well. Despite a lack of enthusiasm (again excepting Christopher Gadsden) for taking the offensive against British troops, for American independence, and even for

denying the authority of Parliament to regulate trade, and despite the strong conservative bloc and its machinations, the Congress stood squarely behind Massachusetts and took steps to come to its aid. Civil disobedience and defensive resistance by the people of Massachusetts were endorsed, and the Continental Association was pledged to boycott British trade until the grievances of Massachusetts and other Americans should be allayed. Charles Thomson, the Philadelphia radical leader who had been chosen secretary of the Congress, expressed a common sentiment upon adjournment: "I hope [the] administration will . . . be convinced that it is not a little faction but the whole body of American freeholders . . . that now complain and apply for redress: and who, I am sure, will resist rather than submit . . . even yet the wound may be healed and peace and law restored. But we are at the brink of a precipice."

Finally, before adjourning on October 26, the Continental Congress resolved to meet again the following May 10 if its grievances had not yet been relieved. Thus a permanent revolutionary assembly was here created. It should be noted, however, that since the measures of enforcement of the boycott were to be purely local and voluntary among the people, the First Continental Congress could in no proper sense be regarded as a dual *governmental* institution.

The Continental Association

As the Congress ended, the colonists hastened to ratify the results at provincial congresses, which were extralegal revolutionary bodies, whose composition was very much like the official assemblies. Localities throughout the colonies created committees of inspection, observation, or "public safety" to oversee and enforce the Association agreement. In Massachusetts, General Gage's refusal to permit the Assembly to meet brought about the institution of a provincial congress, which endorsed the Congress's measures in early December. Weeks earlier, Marblehead and Newburyport had taken the lead in forming local committees of inspection. The Boston Town Meeting selected a committee of sixty-three, including Cushing, Hancock, Sam Adams, Paul Revere, and Henry Bass, to enforce the Association. In Massachusetts, few towns needed to establish new commissions of inspection, as they would simply continue committees already chosen to enforce the now superseded Solemn League and Covenant. Only the town of Marshfield refused to agree to the Association. New Hampshire's provincial congress unanimously endorsed the Association in late January, and many towns appointed local committees.

In Rhode Island and Connecticut, there was no need for special congresses, since the official assemblies were uniquely free from British control; hence the assemblies themselves ratified the boycott. In Connecticut, resistance to the Association centered in the small Anglican elements of many small towns in Fairfield County—Ridgefield, Newtown, and Redding among them. New Jersey, on the other hand, had little trouble in ratifying and setting up local committees; the provincial Assembly itself approved the Congress's proceedings at the end of January.

The situation in Pennsylvania, in contrast, was highly delicate but soon proved successful. The radicals realized that to enforce the Association the conservative Committee of Forty-three and the Philadelphia politics that it dominated had to be bypassed. On November 14, the radicals held their own mass meeting and decided to hold elections by ballot, with the city and county of Philadelphia each electing its own committee. In the election, the radical committee slate won an overwhelming victory in the city; as a result, the new Committee of Sixty-six was far more radical than the old Philadelphia Committee of Forty-three. The counties also chose committees of inspection to enforce the Association. Finally, the Pennsylvania Assembly itself ratified the Continental Association and then set up a provincial congress that endorsed the Continental Congress in late January. As for Delaware, its Assembly unanimously endorsed the Congress, but Anglican Sussex County refused to select a committee of inspection.

Maryland was the first of the southern colonies to act. Many of its counties chose committees of inspection and a provincial convention unanimously endorsed the Congress in early December. Virginia too acted quickly in forming committees; its provincial convention endorsed the Congress's proceedings at the end of March. North Carolina also began early, its enforcement committees, particularly at Wilmington and the Tidewater counties, being established in early December. However, North Carolina's provincial convention did not endorse the Congress until the following April.

In South Carolina, the battle for ratification and enforcement of the Association was led by the liberal General Committee of Charleston. Radical-liberals, led by Gadsden and the *South Carolina Gazette*, urged ratification without the galling and discriminatory exemption for rice exports, while from the right the indigo planters wanted to include South Carolina's other staple in the exemption. At the South Carolina provincial congress in mid-January, the magnificent Gadsden argued against special privilege for rice, while John Rutledge pleaded hardship and dependence of the colony on the export of rice to Britain. Furthermore, to purchase the support of the indigo interests, the General Committee had suggested that privileged rice growers compensate the indigo planters by buying a certain proportion of the latter crop. The indigo subsidy was defended by the Rutledges, William Henry Drayton, and even Thomas Lynch, while Gadsden cuttingly asked why only the *indigo* growers, and not other people, in the province should benefit from the rice exemption. Finally, the compensation was extended to other agricultural commodities.

South Carolina's provincial congress set up an unusually systematic set of local enforcement committees. In every parish and district, members of the congress composed a majority of the committee, and future vacancies were to be filled in elections by the inhabitants.

Two colonies failed to ratify the Association: New York and Georgia.

Many of New York's conservative intellectuals, such as the Anglican ministers Samuel Seabury and Thomas Chandler, removed themselves in disgust from the Association movement, openly denouncing it, and being branded as Tories in return. But the bulk of conservatives determined to stay within the popular movement in New York and thereby to guide and emasculate it. The conservative Committee of Fifty-one, however, was forced to dissolve and yield to the clamor of the radical Committee of Mechanics for a public election of a new committee. At a public meeting on November 22, the newly elected Committee of Sixty was dominated by the radicals, including Isaac Sears and Alexander MacDougall. However, the landlord-run rural counties remained apathetic to the revolutionary movement, and only Suffolk, Ulster, and Albany counties endorsed the Association. In Suffolk, particularly, the several towns hastened to appoint enforcement committees. Radicals attempted to form committees of inspection in Queens and Tryon counties but with little success; thus, when committees in Jamaica and Newtown, Queens, were appointed, the committees were speedily repudiated by many of their citizens. In upcountry Dutchess County, a Tory association openly combatted the boycott, and the majority of freeholders swore to obey the constituted laws of the land and to enforce obedience to the rightful authority of king and Parliament. A majority of Jamaica freeholders signed a loyalist oath, and Oyster Bay was largely Tory. A public meeting of freeholders of Albany County pledged loyalty to established government and a Loyalty Pole was constructed in Ulster County.

The radicals made a determined effort to get the New York Assembly to ratify the Association, but failed—by one vote. Notwithstanding, the radical Committee of Sixty proved sufficient in controlling the course of the trade in New York City.

In Georgia, conditions in late 1774 were more favorable for ratification; the looming Indian war had faded and rice had received its exemption from the Continental Congress. But now many of the radical leaders in Georgia began to lose their nerve. The Savannah and the Assembly radicals proposed to endorse the Association only if more time were granted for launching nonimportation and nonexportation. Only the pure radicals of St. John's Parish, led by Dr. Lyman Hall, adopted the Association without deviation, on December 1.

A provincial congress met in Georgia on January 18. Only five of the twelve parishes sent delegates, and these represented only small minorities of their parishes. The congress, then, lacking self-confidence, decided to submit its extralegal decisions to the official Georgia Assembly. The congress proceeded to ratify the Association but with modifications: postponing nonimportation to March 15 and nonexportation to December 1, 1775. Governor Wright dissolved the Assembly before it could ratify, but the congress tried to redeem itself by publishing its decisions. It did not, however, go so far as to ratify undiluted the actual measures of the Continental Congress.

Local committees in every province began immediately to enforce nonimportation after December 1, and nonconsumption the following March. In addition to boycotting and ostracizing violators, the same methods were used against persons of known Tory leanings. While historians have remarked on the paradox of a libertarian movement using coercive measures against dissidents, the remarkable thing is the degree of libertarian means that this movement used in pursuit of its ends. Never before in history had so much reliance been placed on such nonviolent methods of mass struggle as the boycott, and on such libertarian and nonviolent means of enforcing the boycott as secondary boycotts, social ostracism, blacklists, and public obloquy. This unprecedented constancy of libertarian ends and means, especially for a revolutionary mass movement of such size and scope, was marred only around the edges by such minor excesses as the use of the tarpot, the rail, and the feathers. The whole Association movement of 1774–75 is a remarkable testament to the strength of libertarian ideals permeating the revolutionary era.

One of the earliest examples of organized voluntary boycott took place in Worcester, Massachusetts, in early November, when over forty blacksmiths of the county pledged to refuse to sell their services to all who violated the Association in any way. They also resolved to do no further work for specified persons and families with Tory leanings, particularly Timothy Ruggles and others who had been trying to form a Tory association supported by Governor Gage, and pledged each other mutual aid against a popular threat to their lives or liberties or properties. Further pressure on the Ruggles group came from the Massachusetts provincial congress on December 9, which recommended to the local committees of correspondence a widespread public notice to such associations and any people signing them that "their names be published to the world, their persons treated with that neglect, and their memories transmitted to posterity with that ignominy which such unnatural conduct must deserve." Under this pressure the Ruggles group found that it was virtually devoid of signers. Only in the incorrigible Tory town of Marshfield did a sizable number gather to sign a Loyalist association, and even they had to send a hurried call to British troops for protection.

There was little trouble about endorsing nonimportation in Massachusetts. Nonconsumption presented a more difficult enforcement problem. The Newburyport inspection committee solved the matter by requiring shopkeepers to produce a certificate from a committee of inspection, attesting that the goods were not sold in violation of the Association. Tea, a product hitherto in great demand in the colonies, was the biggest nonconsumption problem. Typical of committee vigilance was the crackdown on Thomas Lilly of Marblehead for buying tea for his own consumption. Lilly was pressured into publicly burning the English tea and publicly recanting his errors. A particular problem was the itinerant peddlers who sold East Indian tea in the country towns. A certificate here would not be practicable; hence the provincial congress in mid-February urged abstinence from all trading with peddlers.

Even before the meeting of the Continental Congress, radical editors had begun publicly blacklisting Massachusetts supporters of the Intolerable Acts and "traitors" accepting jobs in the Gage regime. The *Norwich Packet*, of Connecticut, on October 13, blasted the Reverend Samuel Peters, a Tory Anglican minister, as the "most unnatural monster" and "detestable parricide to this country." In response, the Petersham Town Meeting branded fourteen Tories "incorrigible enemies of America" for being opposed to the Continental Congress and the Association. The Marblehead Town Meeting decided to boycott a half-dozen of its citizens as "abettors of tyranny, and parricides of their country." Sometimes, of course, there were excesses, as when mob coercion forced Dr. Abraham Alden of Biddeford and John Taylor of Shrewsbury to confess their errors.

In New Hampshire, nonimportation was energetically enforced in the port of Portsmouth by the Committee of Forty-five. The main trouble was in the country towns, where peddlers violated nonimportation and nonconsumption regulations. As a solution, the towns of Exeter, Kingston, New Market, and Brentwood imposed a prohibition upon peddling. The provincial convention in late January endorsed the prohibition and extended it to the province, urging all citizens to maintain the boycott by abandoning the use of tea. Rhode Island enforced the Association very well. One excess in that province went beyond voluntary, market means: the requirement by the town of Providence that all traders show certificates of compliance with the Association.

Connecticut did little direct importing of its own; therefore, its problem was largely that of enforcing nonconsumption. The vigilant committees of inspection conducted their own private trials of people accused of violating the Association. These trials were almost always fair and impartial; they required full proof of violations according to the laws of evidence, and invited the defendant to appear voluntarily. This procedure began in Hartford County in late January and soon spread to New Haven, Fairfield, and Litchfield counties. The committee of the town of Norwich also adopted the idea of requiring dealers under pain of boycott to certify that their goods were not acquired in violation of the Association.

One problem that plagued Connecticut and many other colonies was introduced by the Continental Congress's demand that merchants and traders not take advantage of scarcity and that they hold the prices of boycotted goods to the previous year's levels. This absurd attempt at voluntary price-fixing betrayed a monumental ignorance of how the market price system operates. When goods become scarce (as under nonimportation agreements) the free market price rises to account for the greater scarcity. Putting the matter into such pseudo-moralistic terms as "taking unfair advantage" of the scarcity, completely ignores the "rationing" function of the price system. If prices do not rise to reflect increased scarcity, then the goods will soon disappear and not be available at all to those clamoring to buy. Consumers as well as producers are gravely injured by this form of price control.

In Connecticut, in late January, a joint meeting of committees of inspection of Hartford County attempted to impose fixed retail prices on imported goods, and this drive spread to the other counties as well.

New York was the great feeder port for New Jersey and Connecticut; hence its importance for enforcing nonimportation. Fortunately, the radicals on the Committee of Sixty soon took over the commercial affairs of the city, and the committee rigorously enforced the boycott. Great mobs prevented several English ships from landing. Happily, while enforcement of the boycott was rigorous, the committee showed instinctive economic sense by not insisting on prices remaining the same as the supposedly God-given prices of the previous year. In this way, the committee did not aggravate the substantial amount of Tory sentiment in New York, while allowing effective imposition of the boycott. Furthermore, the rigorous enforcement of nonimportation upon the city made unimportant the fact that nonconsumption could not begin to be enforced outside the city and Albany, Ulster, and Suffolk counties—the only areas where local inspection committees were available. Probably most of the infractions, again, occurred in the area of tea consumption. Like the Ruggles association in Massachusetts, Tory organizations did not get very far in New York. A group of Tories in ultraconservative and landlord-ridden Dutchess and Westchester counties attempted to form such associations but did not succeed.

The Association was also well enforced in New Jersey, where there were few ports. The Elizabethtown committee cooperated with their brethren in New York. Woodbridge Township and Gloucester County also enforced the boycott wholeheartedly, and a “tea party” was held by New Jersey “Indians” when East Indian tea almost landed secretly at Greenwich in Cumberland County. And in February, the committees of observation of Elizabethtown and Woodbridge decided on a complete boycott of trade with the Tory citizenry of Staten Island.

Tea drinking, a favorite pastime of Americans, again proved the most difficult part of the Association to enforce. When Silas Newcomb of Cumberland County announced rather rashly that he proposed to drink tea, all dealings were broken off with him by the Cumberland committee, and in two months he abjectly recanted.

Philadelphia, filled with conservative Quaker merchants, was the big problem area for the American rebels. Here was the weak link that threatened to collapse the entire boycott movement. In the late seventeenth century, the Quaker creed of nonviolence had been radically individualist and antistatist. But during the eighteenth century, Pennsylvania Quakers had become increasingly conservative, statist, and even warlike. Quaker nonviolence was now largely a thinly veiled camouflage for highly conservative, quasi-Tory views. The official Quaker Committee of Sufferings in Pennsylvania and New Jersey kept up a steady drumfire of agitation against the Association and other anti-

British measures, which agitation, despite its nonviolence, was supposedly in violation of Quaker religious views. A Quaker meeting for Pennsylvania and New Jersey in late January was quite explicitly Tory; it denounced "every usurpation of power and authority in opposition to the laws and government, and . . . all combinations, insurrections, conspiracies and illegal assemblages." The official Quakers were not able to silence their pro-Association brethren.

Despite these problems, the Philadelphia Committee of Sixty-six did an excellent job of enforcing nonimportation. The committee divided its membership into six districts, and one member from each district was delegated each morning to inspect all incoming vessels. This enforcement, as in New York, was greatly facilitated by a sensible laxity in fixing import prices. Despite the *de jure* pronouncements, for example, dry goods prices had increased by twenty-five to one hundred percent by March 1775.

Delaware, a small and agricultural, rather than commercial, province, was scarcely a center for nonimportation struggles and had little trouble in enforcing the boycott.

The southern colonies had particular problems in enforcing the boycott, especially where the merchants were Scots or factors of Scottish firms—Scottish zeal for the American cause was less than ardent. But with the planters heavily in debt to these merchants in the normal course of trade, the southerners had a powerful political weapon against the Tories: a threat to suspend the judicial collection of debts.

Maryland faced the problem of a score of navigable rivers where imports could enter the province, but keen vigilance by committees of radicals at the commercial centers of Baltimore and Annapolis ensured effective enforcement of the Association. In December a provincial convention resolved that all lawyers should refuse to prosecute any suits, especially collections of debt, for those who violated the boycott. In enforcing nonconsumption, tea was again the main problem. Sometimes a bit of violence was added, as in the case of the stubborn tea dealer John Parks. Parks was boycotted by the committee for Upper Frederick County, and to the boycott was added the breaking of his doors and windows by a mob. Unfortunately, the rigors of enforcement here extended to price-fixing as well, and the local and provincial committees tried, Canutelike, to hold back the tides, of which they knew nothing, by fixing precise but necessarily arbitrary markups of wholesale and retail prices over costs.

The opposition of Scottish merchants and factors was particularly strong in Virginia. That colony led in closing down collections of debts as a means of putting further pressure on British merchant-creditors for repeal of the Coercive Acts. A provincial convention in August, for that reason, closed up the county courts and successfully recommended boycott of the General Court by lawyers and witnesses in civil cases; this action was confirmed by the convention of the following March. Many historians have charged that the court

closings and indeed much of the revolutionary impetus in Virginia occurred primarily because of a desire to avoid paying debts to Great Britain. It seems clear, however, that the measure was rather a means of putting pressure on Britain to repeal the Intolerable Acts, just as similar pressure had been used against the Stamp Act a decade before. This is indicated by the fact that when some grasping planter-debtors urged a boycott of merchants not just for violating the Association but also for failing to extend credit, this attempt was immediately slapped down by the leadership. Indeed, Peyton Randolph, who had presided at the Continental Congress, sternly reminded the hotheads that the Association did not empower local committees to dictate to merchants how much credit they may give. And even for strictly political purposes against Britain, a good many of the more moderate of the Virginia leaders opposed the temporary nonpayment of debts as unjust; these included George Washington, Robert Beverley, Peyton Randolph, and Edmund Pendleton. Backing political nonpayment were the more radical George Mason, Patrick Henry, Landon Carter, and Richard Henry Lee. Both sides of the dispute, of course, were led by large tobacco planters.*

The Virginia rebels made enforcement of the boycott much more difficult than it had to be. In the first place they frenziedly tried to prevent any price increases, and the committees arrogantly insisted on inspecting the daybooks and invoices of the merchants to make sure that prices were not increasing. Indeed, price-fixing committees were actively harassing merchants in many Virginia counties. The other unnecessary task taken up by the radicals was the decision to require every individual citizen to sign the Continental Association. This went beyond all the other colonies and forced the radicals to boycott not only violators of the Association but also any of those who were not enthusiastic enough to endorse it. All this considerably multiplied the roster of supposed delinquents and those harassed by the popular forces. As in the other colonies, open Tories were of course held up to public obloquy.

As elsewhere, the difficult article of consumption to boycott was tea. This was the product requiring enforcement. Tea parties were held at the port of Yorktown to reinforce the boycott.

North Carolina, as so often happened, largely followed the example of neighboring Virginia. Here the body of suspect Scottish merchants was compactly gathered at Wilmington. The merchants agreed to obey the boycott but understandably balked at price-fixing. The implacable committees persisted in carefully supervising prices, and committees in Pitt and Rowan counties and in Wilmington presumed to fix maximum prices for salt, dry goods, rum, and gunpowder. The Wilmington committee also followed the aggressive Virginia

*For revision of the older emphasis on repudiation of Virginia debt as a motive for closing the courts and for revolution in Virginia, see Emory G. Evans, "Planter Indebtedness and the Coming of the Revolution in Virginia," *William and Mary Quarterly* (October 1962): 511-33.

lead of insisting that every individual sign the Association. When eleven Scottish merchants refused to sign, they were boycotted; eight recanted and signed. The most striking example of tormenting a nonsigner was the case of Thomas Macknight of Currituck County, in the extreme northeastern part of the colony. A member of the provincial convention in April, Macknight announced that he would abide by the Association but would not endorse it; a struggle now raged at the convention on whether to harass him further. The majority favored accepting Macknight's course, but the fanatical minority threatened to withdraw from and split the convention, and thus forced through a boycott of the candid Macknight.

To put pressure on British merchants, the North Carolina liberals, again following Virginia, refused to allow the courts to operate, thus suspending collections of debts. There was little trouble, furthermore, in enforcing the nonconsumption agreement.

As could be expected, the radicals were active and zealous in South Carolina. Charleston's radical-oriented General Committee led the enforcement, and advanced beyond the Continental Association by establishing its own association for nonconsumption of tea to begin on November 1. At committee direction, the schoolboys of Charleston collected all the tea in the city and burned it publicly on Guy Fawkes Day, November 5. Merchants of Charleston were induced by the committee to dump their English-imported tea into the river. Nonimportation was enforced with great efficiency and zeal. Sometimes, as in the Macknight case, enforcement degenerated into petty absurdities. Consider, for example, the case of Robert Smyth, who returned from London to Charleston bringing with him his furniture and two horses. Immediately the ultraradicals, led by Christopher Gadsden, denounced this act as an "import" in violation of the Association. After the General Committee had narrowly approved Smyth's action, Gadsden and 250 radicals urged reconsideration; but led by Lynch and the Rutledges, the General Committee continued to endorse Smyth, but by one vote only.

As elsewhere in the South, action was taken against collection of debt by British or Tory creditors. South Carolina's provincial congress in January decided that any judicial processes for debt had to be approved by local committees of observation. The absence of anticreditor animus *per se* is seen in the instruction to the local committees to permit prosecution for debt whenever debtors were trying to evade their obligations permanently or to defraud their creditors.

Georgia did not join in the nonimportation agreement until March, and even then there was no effective enforcement in that royal-bureaucrat-ridden colony. The colonies were then faced with the problem of boycotting this lone holdout of the thirteen American colonies. Accordingly, on February 8, the Charleston General Committee decreed a boycott of trade with all citizens of Georgia. The radical enclave of St. John's Parish hastened to send delegates to

Charleston urging exemption for themselves, and the perplexed General Assembly agreed to turn the case over to the next meeting of the Continental Congress. In the meanwhile, however, the boycott of Georgia persisted, and the poor citizens of St. John's were forced against their principles to engage in limited trade with the Tory merchants of Savannah.

Quebec had also been invited to join the Association. The English merchants of Quebec were willing to join, but the overwhelming French majority was understandably loath to join with either wing of its hated oppressors, and the English merchants understandably feared that they would simply lose their trade to their French rivals. Quebec, therefore, did not join the Association. By mid-April the Philadelphia committee began the colonial boycotts of the nonsigning colonies: Georgia, Quebec, Nova Scotia, and Newfoundland.

The task of checking and certifying the good faith of merchants within the several colonies was not unduly difficult; local committees in the seaports performed the major tasks. But how could the genuineness of goods and merchants be assured in the *coastal* trade when the merchants of two remote colonies traded with each other? Early in the Association movement, a Salem merchant trading with Virginia hit on a happy device that served also to cement and expand the scope of the network of revolutionary popular institutions in America. The merchant asked the Salem Committee of Correspondence to issue him a certificate vouching for his devotion to the cause of American liberty. The Boston Committee of Correspondence enthusiastically welcomed the idea, and the plan, spearheaded by Providence and the Virginia counties, was soon adopted in the other provinces.

65

The Impact on Britain

Buoyed by the network of provincial conventions and local enforcement committees, the Continental Congress's boycott of British imports proved extraordinarily effective. Imports of the thirteen American colonies from Great Britain fell from 2.6 million pounds in 1774 to over 200,000 pounds in 1775. The effectiveness of the boycott is even more startling if we omit non-boycotting Georgia, where imports more than doubled, from 57,500 pounds to 135,000 pounds. Omitting Georgia, imports from Great Britain fell ninety-seven percent in one year.

The drastic decline in imports had the desired effect on the British merchants and manufacturers in the American trade. From January through March 1775, they kept up a drumfire of agitation upon Parliament to repeal the Coercive Acts. Petitions to this effect passed into Parliament from London and from such manufacturing towns as Bristol, Glasgow, Birmingham, Manchester, Liverpool, Leeds, Nottingham, and Belfast, which all complained of business losses, bankruptcies, and unemployment. Indeed, in February, a subscription fund to send relief to the distressed people of Boston and New England was launched by merchants in London. But the Tory North ministry, far more firmly ensconced than the government of a decade before, adamantly hewed to the tough line of suppression and no appeasement. Solicitor General Alexander Wedderburn declared in April that the interests of commerce and manufacturers must bow to the higher interest of upholding supreme legislative power against open rebellion: "An enemy in the bowels of a kingdom is surely to be resisted, opposed, and conquered; notwithstanding the trade that may suffer, and the factories that may be ruined."

Indeed, rather than relent, Lord North decided to escalate the struggle and

bring the fractious Americans to heel by severe retaliation; if Americans would not trade with Britain, then, by God, they would not be *allowed* to trade with anyone else! On March 30, Parliament, over Whig and Chathamite opposition, enacted North's New England Restraining Act, prohibiting New England from trading with any place except Britain and the British West Indies after July 1, and from using the Newfoundland fisheries after July 20, until peaceful conditions were restored. When news arrived of the widespread ratification of the Continental Association, Parliament in mid-April extended the provisions of the Restraining Act to New Jersey, Pennsylvania, Maryland, Virginia, and South Carolina. With petty cunning, the supposedly Tory colonies of New York, Delaware, North Carolina, and Georgia were omitted in an attempt to induce them to break with the boycott. But the time for divisive tactics had long since past.

While moving to impose a big-stick policy of escalating force, Lord North also held out a highly anemic and suspect carrot. His Conciliatory Plan, introduced into Parliament on February 20, tried to seduce the Americans into abandoning their position under the cloak of saving face. Thus, a colony was to be spared parliamentary taxation for revenue provided that it would tax itself to pay for the salaries of the royal officials. Britain—indeed, the whim of the Crown—was, in short, to tell each colony how much it must raise in taxes to pay for purposes fixed by the home country; and then the colony would have to obey. Thus, imposed taxation by Britain would remain under a new guise. North's complex and unworkable plan was consciously designed, as were his force acts, to split the American colonies. But no one was fooled. The illustrious Whig leader Edmund Burke brilliantly analyzed the plan and such of its unworkable features as deciding on quotas of taxes for each colony as a "ransom by auction" of the colonies. Lord North's proposal was soon rendered obsolete by the rush of events—reaching New York, for example, the day after news of Lexington and Concord.

Burke, leading the opposition in the House of Commons to the British crackdown, called for repeal and a return to the Old Whig colonial policy. In his "Speech on Conciliation with the Colonies," Burke set forth the necessity of appeasement as the prime foreign policy of a truly strong government: "I mean to give peace. Peace implies reconciliation; and . . . reconciliation does in a manner always imply concession on one part or on the other. In this state of things . . . the proposal ought to originate from us. Great and acknowledged force is not impaired, either in effect or in opinion, by an unwillingness to exert itself. The superior power may offer peace with honor and with safety." And Burke made clear that peace was precisely the desideratum, to be arrived at simply and directly, not by the paradox of pursuing the chimera of peace through waging long and bloody war: "The proposition is peace. Not peace through the medium of war; not peace to be hunted through the labyrinth of intricate and endless negotiations; not peace to arise out of universal

discord, fomented from principle . . . not peace to depend on the juridical determination of perplexing questions . . . it is simple peace, sought in its natural course, and in its ordinary haunts. It is peace sought in the spirit of peace; laid in principles purely pacific."

Burke saluted American achievements and economic development, which had not been "squeezed into this happy form by the constraints of watchful and suspicious government, but that, through a wise and salutary neglect, a generous nature has been suffered to take her own way to perfection." He added, "When I see how profitable they have been to us, I feel all the pride of power sink, and all presumption in the wisdom of human contrivances melt, and die away within me." In this way Burke harked back to the crucial distinction he had made in his first work, *A Vindication of Natural Society* (1756), between the benefits of natural voluntary actions in society ("natural government"), and the mischievous effects of the coercive intervention of the state ("artificial government").*

Burke hailed the "fierce spirit of liberty" that had grown up among the Americans, a result of their remoteness, their religion and customs, their English tradition of liberty and revolution, and their education in legal and political theory. Now the spirit of liberty in America was in collision with the spirit of power in England. Burke saw with acute perception the radically new nature of what the Americans had recently been doing. He saw that they had been creating, in their network of local and provincial committees of correspondence, of enforcement, and conventions of delegates, both provincial and continental, an approach to a state of anarchism. For here were revolutionary institutions completely illegal and outside the legal framework, created spontaneously by the people building from the grassroots. This voluntary network of popular revolutionary organs, from town committees up to provincial conventions and even including the Congress, exercised only minimal coercive authority; its influence was in giving leadership to the voluntary actions of the mass of individuals. These institutions, for example, did not live off taxation—that coercive institution unique to the concept of government. And none printed its own money. Thus, as legal government began to break down, particularly where it was prohibited in Massachusetts, and was replaced by these popular institutions, government in America began to veer toward anarchism. As Burke phrased it:

We thought, Sir, that the utmost which the discontented colonists would do, was to disturb authority; we never dreamt they could of themselves supply

*This hard-hitting anarchist attack on government, written pseudonymously while Burke was an impecunious and disgruntled young law student, was by him quickly repudiated as a supposed satire when his authorship became known. And yet here Burke echoes a work that was supposed to be a satire. For a brief discussion disputing the satirical nature of the *Vindication*, see Murray N. Rothbard, "A Note on Burke's *Vindication of Natural Society*," *Journal of the History of Ideas* (January 1958): 114–18.

it. . . . They have formed a government sufficient for its purposes, without . . . the troublesome formality of an election. Evident necessity, and tacit consent, have done the business in an instant. So well have they done it . . . that the new institution is infinitely better obeyed than the ancient government ever was in its most fortunate period. Obedience is what makes government, and not the names by which it is called. . . . This new government has originated directly from the people; and was not transmitted through any of the ordinary artificial media of a positive constitution. It was not a manufacture ready formed, and transmitted to them in that condition from England. The evil arising from hence is this; that the colonists having once found the possibility of enjoying the advantages of order in the midst of a struggle for liberty, such struggles will not henceforward seem so terrible to the settled and sober part of mankind as they had appeared before. . . .

[And as to Massachusetts] we were confident that the first feeling, if not the very prospect of anarchy, would instantly enforce a complete submission. The experiment was tried. A new, strange, unexpected face of things appeared. Anarchy is found tolerable. A vast province has now subsisted, and subsisted in a considerable degree of health and vigor, for near a twelve-month, without governors, without judges, without executive magistrates.

The Tory Press in America

While the Whigs were leading an unsuccessful opposition in England, a small group of Tories, looked on with favor by the royal officials, were doing the same to the main current in America. Cynically crying out for "liberty"—they had never displayed much zeal for anyone's liberty but their own—they denounced the rebels and the Continental Congress as a greater tyrant than the Crown. They could only do this, of course, by blurring any distinction between the coercive invasion of persons and property, and the voluntary methods of boycott or public censure.

Despite their charge of tyranny, the Tories had undisturbed control of several of the colonies' most influential newspapers. By far the leading Tory journalist in America was James Rivington, publisher of the *New York Gazetteer*, whose articles circulated throughout the colonies. Rivington was seconded by Hugh Gaine's *New York Gazette and Weekly Mercury*. Delighted by Rivington's pen, Governor Gage distributed four hundred copies of each issue of the *Gazetteer* to soldiers and Tories in Boston. The radical editors fumed at Rivington, calling him a "Judas" and a "most wretched Jacobitish, hireling incendiary." Rivington replied in kind. Young James Madison angrily wrote to a friend from Virginia that if "we had Rivington . . . twenty-four hours in this place, he would meet with adequate punishment."

In Boston, the Tory press rode high under the guns of British troops. The two leading newspapers were the *Massachusetts Gazette and Boston Newsletter* and the *Massachusetts Gazette and Boston Post-Boy*. One cocky Tory called upon the British troops to make ready to kill "those trumpeters of sedition," the editors of the radical papers, the *Boston Gazette* and the *Massachusetts Spy*. The British troops did threaten to tar and feather these leaders.

Tory writers such as William Eddis of Maryland, "Grotius," and "Thomas Trueman" made their case in the press. The leading statement of the Tory case was written in a series of articles by Daniel Leonard, as "Massachusettsensis," in the *Massachusetts Gazette and Boston Post-Boy*. Leonard, a renegade liberal now enjoying the perquisites of the post of solicitor general of the customs board, attacked the anarchy rampant in the colonies. Confusing invasion of person and property by violence with such noninvasive measures as public boycott, Leonard decried the tyranny as well as the anarchy of the rebels.

Answering Leonard in a running and scholarly debate in the Massachusetts press was John Adams, writing as "Novanglus." Adams pointed to the mass support of the American cause and declared it to be in the great British tradition of resistance to tyranny. He asserted flatly that "America is not any part of the British realm," and warned that Britain was preparing to conquer and crush the colonies. Adams grounded his defense in natural law, human reason, and the great revolutionary tradition of the English: "My friends, human nature itself is evermore an advocate for liberty . . . that all men by nature are equal; that Kings have but a delegated authority, which the people may resume, are the revolution principles of 1688; as are the principles of Aristotle, of Livy and Cicero, of Sidney, Harrington, and Locke, of nature and eternal reason."

Particularly active in the drumfire of Tory agitation against the rebel cause was a group of Anglican clergymen, led by the Reverends Thomas Chandler, Myles Cooper, Charles Inglis, and Samuel Seabury of New York, and Jonathan Boucher of Maryland. Cooper tried to form a continentwide association of Anglican ministers to oppose the rebellion—an organization the very existence of which would have driven the Americans to fury. The Pennsylvania and southern clergy refused to go along, and New York remained the center of the Anglican Tory agitation—agitation fostered by the strength of the Anglican church in New York City affairs. Chandler, Cooper, and Seabury turned out numerous pamphlets in late 1774, all printed by James Rivington. Many incensed gatherings of Americans in New York, New Jersey, and Maryland publicly burned these tracts. As so many other opponents of natural rights have done, Seabury, in a pamphlet debate with the young student Alexander Hamilton of Kings College, confused "natural rights" with a primitive "state of nature." Not realizing that natural-rights theory is a logical and moral rather than an historical construct, Seabury persisted in identifying it with an historical state of savagery.

The Americans began an effective, even though spontaneous and unorganized, boycott of the galling newspaper of James Rivington. A newly organized "Friends of America" in New York systematized the boycott and sent letters to rebel committees throughout the colonies urging a general boycott of the "Pensioned Servile Wretch" and all of his advertisers. Radical meetings

pledged no further dealings with Rivington. By April 1775, twenty-one committees had acted to suspend purchases of the newspaper—led by committees and meetings in various counties of New York, New Jersey, and Connecticut. In mid-April, a mob in New Brunswick, New Jersey, hung Rivington in effigy. Driven to the edge of bankruptcy by the boycott and threatened by an angry mob, Rivington, not long after, pledged to give no further offense.

Massachusetts: Nearing the Final Conflict

The Continental Association and the mass boycott were all very well. These measures served to radicalize the entire continent and to build an intricate network of spontaneous grassroots revolutionary institutions, often virtually replacing constituted authority with quasi-anarchic leadership. But none of these measures dealt directly with the really acute focus of conflict: Boston. It was Boston and Massachusetts, after all, that were being punished, oppressed, and militarily occupied. Massachusetts necessarily had to be the focal center of struggle. The moral and material support of the other provinces was most welcome. But would they join if armed support were necessary?

At the Congress Christopher Gadsden had urged initiating armed struggle against the British troops in Boston, but it was clear to the sagacious radical strategists of Massachusetts that the rest of America would not support such an effort. As the Continental Congress made clear, only *defensive* efforts would be supported against outright aggression by British troops. Furthermore, most of the radicals naively thought that the Continental Association would suffice to bring Britain to reason; they did not see as clearly as the Adamses and the Massachusetts radicals that Britain would not be deflected from all-out suppression. They would soon learn. Meanwhile, the radicals could only wait for that lesson and tell each other, in the words of John Adams, "I expect no redress but . . . increased resentment and double vengeance. We must fight." Even those who expected armed conflict did not go so far as to anticipate actual American independence; conflict was to induce Britain to back down from its coercive imperialist policy. Indeed, the Massachusetts delegation to the Congress had to reassure even the Virginians that their aim was not independence—all the delegation, that is, except for Sam Adams, whose silence on the matter was eloquent in itself.

Soon after the opening of the Continental Congress, the provincial congress of Massachusetts assembled in a fateful meeting. General Gage had called for a meeting of the General Court in early October, but dared not lead the newly appointed mandamus councillors out from under the wings of the British troops. It was, furthermore, clear from town instructions to their representatives that the Assembly would hardly agree to the changes imposed by the Massachusetts Government Act. Most radical and frantically revolutionary were the instructions from the town of Worcester; these counseled the immediate return to the old Massachusetts charter of the seventeenth century, the (presumably forcible) opening of the port and removal of British troops, and a trial of the mandamus councillors for treason. In the light of this atmosphere of militancy, General Gage called off the meeting of the General Court.

But the Americans were prepared, and towns sent delegates to the extra-legal provincial congress that met at Concord on October 11, and later in the month at Watertown. The delegates faced a province without ports or judges or executives or legislature. Undaunted, the Massachusetts provincial congress made, as its operating executive, John Hancock president, and created a steering committee of fifteen: the Committee on the State of the Province, which included Hancock, Dr. Joseph Warren, and such leading radicals as Joseph Hawley of Northampton, James Warren of Plymouth, and Elbridge Gerry of Marblehead. Later, the four Massachusetts delegates to the Continental Congress were added to the province's steering committee.

As a continuing operating organization, the provincial congress selected a smaller, eleven-man Committee of Safety, with John Hancock chairman and Dr. Joseph Warren among its members. The committee was authorized to call out the provincial militia and to collect munitions and supplies in preparation for meeting any future aggression by the British armed forces. Concord and Worcester were selected as the principal depots for military supplies. The militia officers, furthermore, were directed to recruit the best-qualified twenty-five percent of the militia, mainly veterans of the French and Indian War, into a ginger group known as "minutemen," so called because they were expected to answer the committee's call at a moment's notice. The minutemen were formed into emergency companies of fifteen men each, and the men of each company had the power of freely electing their own officers, subject to the overall direction of the Committee of Safety. This project was based on the precedent of emergency units used as early as King Philip's War in the mid-1670s.

The Committee of Safety proceeded with dispatch and efficiency to organize an armed militia, to repel any aggressive acts of the British troops. The aim was to raise a potential army of twelve thousand men in Massachusetts, and twenty thousand additional troops at the ready were requested from the other colonies in New England. Officers were to be democratically elected by the soldiery.

The militia trained hard. This time, in contrast to their unpreparedness when British troops earlier occupied Boston, the people of Massachusetts would be ready to counter any further invasion. All the militia of the colony were soon directed to train according to Colonel Timothy Pickering's new book, *Easy Plan of Discipline for a Militia* (1775). From Salem, Pickering imaginatively simplified the stodgy and ritualistic rules of British army drill and emphasized the American woodsman's habit of individual marksmanship, a practice particularly suited to an armed people's guerrilla war. Political philosophy and military tactics blended as one, for Pickering stressed that the American soldier was an individualist, a freeman, and a property owner, in contrast to professional European soldiers trained as obedient "machines." Pickering wrote that "men must see the reason and the use of any action or movement. 'Tis the boast [of European commanders] that their men are mere machines. . . . God forbid that my countrymen should be thus degraded. . . ."*

A circular letter sent throughout the colony by the Committee of Safety asked the clergy to help raise a volunteer army. The committee, an anarchistic institution without coercive governmental powers to tax or to conscript militia, had to rely on volunteers and voluntary contributions. John Adams understood the revolutionary nature of what he was seeing: "At Watertown he had witnessed, John [Adams] told himself, a great Province governed not by police and penalty but by, as it were, two hundred and sixty volunteer consciences."**

The second provincial congress of Massachusetts, meeting at Cambridge on February 1, 1775, rapidly advanced these measures of defense. It also authorized the militia to collect military stores rapidly, either by purchase or by assuming jurisdiction over the stores of the Massachusetts government. Consequently, during March and early April, large stores were collected by the Americans at Concord. The congress, consistent with its devotion to liberty, refused to levy taxes on the people; it *recommended* that they voluntarily pay the provincial tax to the new revolutionary institutions instead. Addressing the citizens of Massachusetts, the congress exhorted: "Resistance to tyranny becomes the Christian and social duty of each individual. Fleets, troops, and every implement of war are sent into the province, to wrest from you that freedom which it is your duty, even at the risk of your lives, to hand inviolate to posterity. Continue steadfast, and . . . defend those rights which heaven gave, and no man ought to take from us."

The Congregational ministry of Massachusetts was eager to take up the task offered it by the provincial congress. Eminent ministers like the veteran

*Don Higgenbotham, *The War of American Independence* (New York: Macmillan, 1971), pp. 12-13.

**Catherine Drinker Bowen, *John Adams and the American Revolution* (New York: Grosset & Dunlap, 1950), p. 509.

Charles Chauncy, William Gordon, and Peter Thacher, of Boston; Peter Whitney of Northborough; and Timothy Hilliard of Barnstable, led the clergy in exhorting the right of resistance to the British. Eloquent were the calls to rise up and wield the sword of the Lord against oppression and "slavery," in militia-mustering sermons. In Boothbay (now Maine), the Reverend John Murray, a Presbyterian, urged the right and duty of resistance to defend natural, God-given, and constitutional rights. The Reverend Samuel Eaton of Harpswell (Maine) went so far as to declaim at a militia-muster: "Cursed be he that keepeth back his sword from blood!"

Particularly important expressions of Congregational support for the rebel cause came at a convention in radical Worcester County, in the interior of Massachusetts, in late March 1775. At this meeting a delegate, the Reverend Ebenezer Chaplin of Sutton, pleaded for liberty and separation of church and state. And in a widely printed and distributed speech, the Reverend Elisha Fish of Upton defended the right of property as unalienable by man; the right of each individual to enjoy his own earnings, Fish declared, was a corollary of his God-given rights of life and liberty.

Similar preachments were made by Congregational ministers throughout New England, especially New Hampshire and eastern Connecticut. Termed by Lieutenant Governor Oliver "gutters of sedition," the Congregational clergy of New England led the revolutionary cause, and provided a stark contrast to the relatively nonpolitical clergy of New York and Philadelphia, the lukewarm support of the Baptists, and the Tory views of the Anglican clergy.

As tension mounted between the British troops and the swiftly preparing people of Massachusetts during the winter of 1774–75, several incidents brought the two sides inextricably closer to overt military conflict. On December 13, the noted courier and messenger of the Boston leadership, Paul Revere, warned the New Hampshire radicals of a British plan to garrison troops at Portsmouth. The very next day a band of troops, led by the prominent young lawyer Major John Sullivan and the young merchant John Langdon, swooped down on the British fort at Portsmouth and carried away cannons, small arms, and a hundred barrels of powder. Sullivan, a delegate to the Continental Congress, was now the major political figure in New Hampshire and leader of the popular radical forces there. Soon after the raid, Sullivan and Langdon were chosen by the provincial congress to be New Hampshire's delegates to the Second Continental Congress.

The next clash also inflicted humiliation upon the proud British troops. On February 26, several hundred British soldiers were shipped clandestinely to Salem to seize military stores from the Americans. Not finding them there, the British marched to the stores at Danvers; but there they were forced by a larger number of Americans to wait while the stores were removed and then to retreat back to their ships. In Boston, another clash occurred soon afterward when Dr. Joseph Warren delivered the annual oration in commemora-

tion of the Boston Massacre. Gathered illegally at a town meeting, moderated by Sam Adams, the townspeople heard Warren eloquently champion the liberty of Americans *and* Englishmen, and attack the sending of British troops to occupy Boston. Then Warren declared: "An independence of Great Britain is not our aim, but if pacific measures are ineffectual, and it appears that the only way to safety is through fields of blood, I know you will undauntedly press forward, until tyranny is trodden under foot."

As Warren concluded, British officers who had been courteously welcomed to the meeting began to hiss. In an obvious attempt to provoke the Americans into physical attack (which might not carry the support of the other colonies), the troops arrested a man for illegally buying a firearm offered by a British soldier. The next day the British arrogantly tarred and feathered the man, pinned on his back the label "American liberty, or a specimen of democracy," and paraded him through the streets of Boston with an armed guard and military band.

Support from Virginia

The well-disciplined citizens of Massachusetts held themselves in check and refused to be provoked into attack; and their angry leader Sam Adams wrote: "See what indignities we suffer rather than precipitate a crisis." It took no uncommon astuteness to see that the colonies and Great Britain were on collision course.

In late March, before the Virginia convention—an enlarged House of Burgesses meeting illegally at Richmond without authorization of the governor—the golden-tongued Patrick Henry made his most famous speech. In it he prophetically warned: "The war is actually begun! The next gale that sweeps from the north will bring to our ears the clash of resounding arms!"

The major issue at the Virginia convention, and the occasion for Henry's speech, was his resolution to strengthen and arm the Virginia militia for the clash that Patrick Henry was sure was fast approaching. Henry openly welcomed the imminent revolutionary clash: "Let it come. I repeat, Sir, let it come!" Henry dramatically concluded: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take; but as for me, give me liberty, or give me death!" Henry's resolution was ably supported by the radical theoretician Richard Henry Lee and the military-minded George Washington. But the resolution to strengthen the militia met stiff conservative opposition, led by three delegates to the Continental Congress: Edmund Pendleton, Benjamin Harrison, and Richard Bland. As a result, the Henry resolution won only by a slim vote. Indeed, the delegates refused to call up any sizable number of armed men and to seize the reins of government openly; and they appointed a conservative committee, dominated by Pendleton and Harrison, to oversee the military preparations.

Nevertheless, the Virginia militia was formed in companies independent of officers appointed by the governor. Patrick Henry's militia resolution was modeled on preceding county committee resolutions in Virginia, especially one of Fairfax County, where George Washington had led the adoption of this proposal in January. Washington's resolves, in turn, had been strictly patterned upon the Maryland convention of November, which, in addition to approving the acts of the Continental Congress, urged the formation of a large-scale militia in Maryland, with officers to be elected, and with funds for the citizen-soldiery to be raised in a voluntary (and hence libertarian) manner.

North Carolina, counseled to follow the lead of Maryland and Virginia, declined to do so. One of North Carolina's problems was the high proportion of Tories in the province, including the colonies of Highland Scots around Wilmington and Cape Fear, and in the back counties of Rowan, Surry, Anson, and Guilford, where hundreds of citizens signed loyalty pledges to Great Britain. Indeed, Governor Josiah Martin urged General Gage to send him weapons and ammunition to arm the North Carolina Tories.

The Tory sentiment in the back country has led historians to believe that the North Carolina Regulators, in anger against the seaboard planters who had suppressed them and who were now rebels against Britain, had reacted by joining the Tory cause. A pretty theory, but at odds with the facts. The most recent and most careful historian of the Regulator movement estimates that of 323 Regulators whose later choice is known, 289 joined the revolution while only thirty-four, slightly over ten percent, became Tories.*

Armed clashes between the popular and governmental troops began to occur in mid-April in the South, shortly before news of Lexington and Concord arrived. By mid-April, news had arrived of Britain's decision to crack down on New England rather than conciliate. Accordingly, Lord Dunmore, governor of Virginia, had twenty kegs of powder in the Virginia provincial stores at Williamsburg seized by a British naval captain on the night of April 20. The Williamsburg masses threatened to rise up and recapture the powder. Virginia seethed with indignation, and the committees of Gloucester, Henrico, Dumfries, and Albemarle counties called for restoration of the gunpowder. Lord Dunmore refused to give up the powder, summoned all people loyal to Britain to rally to him, and threatened to free all the slaves of Virginia and burn Williamsburg to the ground. Six hundred well-armed Virginians met at Fredricksburg on April 29 to press their demands, but, as in the case of the Williamsburg agitation the week before, more conservative leaders, George Washington and Peyton Randolph, persuaded the men to disperse

*Elmer Douglas Johnson, "The War of the Regulation: Its Place in History" (unpublished master's thesis, University of North Carolina, 1942), p. 115 and app. 3. On this as well as similar reports on the choices of the South Carolina Regulation, see Richard M. Brown, *The South Carolina Regulators*, p. 213.

and refrain from advancing upon the British troops. The redoubtable Patrick Henry, however, refused to be cowed, as had even Richard Henry Lee, and himself led a militia company from Hanover County, which managed to seize at least the monetary equivalent of the powder from the British. Lord Dunmore declared Patrick Henry an outlaw, which more than ever made him a hero of the enraged people of Virginia.

The night after Dunmore's raid on the powder, South Carolina rebels, joined in a secret committee of the South Carolina provincial congress headed by William Henry Drayton, staged a raid on the government armory, and carried off arms and ammunition. By the time of Lexington and Concord, much of the South, and especially Virginia, was at fever pitch.

“The Shot Heard Round the World”: The Final Conflict Begins

Despite the mounting tension in the South, the main focus of potential revolutionary conflict was still Massachusetts. The British authorities, ever more attracted to a hard line, were becoming increasingly disenchanted with the timorousness and caution of General Gage, who had actually asked for heavy reinforcements when everyone knew that the scurvy Americans could be routed by a mere show of force from the superb British army. Four hundred Royal Marines and several new regiments were sent to Gage, but the king, one of the leaders of coercion sentiment, seriously considered removing Gage from command.

There were a few voices of reason in the British government, but they were not listened to. The Whiggish secretary of war, Lord Barrington, urged reliance on the cheap and efficient method of naval blockade rather than on a land war in the large expanse and forests of America. And General Edward Harvey warned of any attempt to conquer America by a land army. But the cabinet was convinced that ten thousand British regulars, assisted by American Tories, could crush any conceivable American resistance. Underlying this conviction—and consequent British eagerness to wield armed force—was a chauvinist and quasi-racist contempt for the Americans. Thus, General James Grant sneered at the “skulking peasants” who dared to resist the Crown. Major John Pitcairn, stationed at Boston, was sure that “if he drew his sword but half out of the scabbard, the whole banditti of Massachusetts Bay would flee before him.” Particularly important was the speech in Parliament of the powerful Bedfordite, the Earl of Sandwich, first lord of the Admiralty, who sneeringly asked: “Suppose the colonies do abound in men, what does that signify? They are raw, undisciplined, cowardly men. I wish instead of . . . fifty thousand of these brave fellows, they would produce in the field at least

two hundred thousand; the more the better; the easier would be the conquest . . . the very sound of a cannon would carry them off . . . as fast as their feet could carry them.”

There was another reason, it should be noted, for Sandwich’s reluctance to use the fleet rather than the army against the enemy. While the army was to dispatch the Americans, Sandwich wished to use the fleet against France, with which he hoped and expected to be soon at war.

Accordingly, the Crown sent secret orders to Gage, reaching him on April 14. The Earl of Dartmouth rebuked Gage for being too moderate. The decision had been made; since the people of New England were clearly committed to “open rebellion” and independence of Britain, maximum and decisive force must be slammed down hard upon the Americans—immediately. While reinforcements were under way, it was important for the British troops to launch a preventive strike, by moving hard before an American revolution could be organized. Therefore, Gage decided to arrest the leaders of the Massachusetts provincial congress, especially Hancock and Sam Adams. As in so many other “preventive” first strikes in history, Great Britain itself precipitated the one thing it wished most to avoid: a successful revolution. Interestingly enough, the Massachusetts radicals were at the same time rejecting hot-headed plans for a first strike by rebel forces, who would thus be throwing away the hard-forged unity of the American colonists.

Adams and Hancock were out of town and out of reach, near Concord; so Gage decided to kill two birds with one stone by sending a military expedition to Concord to seize the large stores of rebel military supplies and to arrest the radical leaders. Gage determined to send out the force secretly, to catch the Americans by surprise; that way if armed conflict broke out, the onus for initiating the fray could be laid on the Americans. Gage also used a traitor high up in radical ranks. Dr. Benjamin Church, of Boston, whom the British supplied with funds to maintain an expensive mistress, informed on the location of the supplies and the rebel leaders. (Church’s perfidy remained undetected for many more months.) Gage learned from Church, furthermore, that the provincial congress, under the prodding of the frightened Joseph Hawley, had resolved on March 30 not to fight any armed British expedition unless it should also bring artillery. By not sending out artillery, Gage figured that the Americans would not resist the expedition.*

Gage, however, immediately encountered what would prove a major difficulty in fighting a counterinsurgency war by a minority ruling army against insurgent forces backed by the vast majority of the people. He found that, surrounded by a sullen and hostile people, he could not keep any of his troop or fleet movements hidden. The rebels would quickly discover these movements and spread the news.

* Knollenberg, *Growth of the American Revolution*, pp. 182, 190.

On April 15, the day after receiving his orders, Gage relieved his best troops of duty, gathered his boats, and on the night of April 18 shipped 700 under Lieutenant Colonel Francis Smith to the mainland, from which they began to march northwest to Lexington and Concord. But the Americans quickly discovered what was happening. Someone, perhaps Dr. Joseph Warren, sent Paul Revere to Lexington to warn Adams and Hancock. Hancock, emotional, wanted to join the minutemen, springing to arms; but the sober intelligence of Sam Adams reminded Hancock of his revolutionary duty as a top leader of the American forces, and they both fled to safety. Revere was soon captured, but Dr. Samuel Prescott was able to speed to Concord and bring the news that the British were coming.

As news of the British march reached the Americans, the Lexington minutemen gathered under the command of Captain John Parker. Rather absurdly, Parker drew up his handful of seventy men in open formation across the British path. When Major Pitcairn, in charge of six companies of the British advance guard, came up to confront the militia, Pitcairn brusquely ordered the Americans to lay down their arms and disperse. Parker, seeing his error, was more than willing to disperse but not to disarm. In the midst of this tense confrontation, shots rang out. No one knows who fired first; the important thing is that the British, despite Pitcairn's orders to stop, fired far longer and more heavily than necessary, mercilessly shooting at the fleeing Americans so long as they remained within range. Eight Americans were killed in the massacre (including the brave but foolish Parker who refused to flee), and eight wounded, whereas only one British soldier was slightly wounded. The exuberant and trigger-happy British troops cheered their victory; but the victory at Lexington would prove Pyrrhic indeed. The blood shed at Lexington made the restraining resolution of Joseph Hawley obsolete. The Revolutionary War had begun! Sam Adams, upon hearing the shooting from some distance away, at once realized that the fact of the open clash was more significant than who would win the skirmish. Aware that the showdown had at last arrived, Adams exclaimed, "Oh! What a glorious morning is this!"

The British troops marched happily on to Concord. This time the Americans did not try any foolhardy open confrontation with the British forces. Instead, an infinitely wiser strategy was employed. In the first place, part of the military stores were carried off by the Americans. Second, no resistance was offered to the British entry into Concord, thus lulling the troops into a further sense of security. While the British were destroying the remaining stores, three to four hundred militiamen gathered at the bridge into Concord and advanced upon the British rear guard. The British shot first, but were forced to retreat across the bridge, having suffered three killed and nine wounded. The despised Americans were beginning to make up for the massacre at Lexington.

Heedless of the ominous signs of the gathering storm, Colonel Smith, com-

manding the expedition, kept his men around Concord for hours before beginning to march back to Boston. That march was to become one of the most famous in the annals of America. Along the way, beginning a mile out of Concord, at Meriam's Corner, the embattled and neighboring farmers and militiamen employed the tactics of guerrilla warfare to devastating effect. Knowing their home terrain intimately, these undisciplined and individualistic Americans subjected the proud British troops to a continuous withering and overpowering fire from behind trees, walls, and houses. The march back soon became a nightmare of destruction for the buoyant British; their intended victory march, a headlong flight through a gauntlet. Colonel Smith was wounded and Pitcairn unhorsed. The British were saved from decimation only by a relief brigade of twelve hundred men under Earl Percy that reached them at Lexington. Still, Americans continued to join the fray and fire at the troops, despite heavy losses imposed by British flanking parties.

Despite the British reinforcements, the Americans might have slaughtered and conquered the British force if (a) they had not suffered from shortages of ammunition, (b) the British had not swerved into Charlestown and embarked for Boston under the protecting guns of the British fleet, and (c) excessive caution had not held the Americans back from a final blow at the troops on the road to Charlestown. Even so, the deadly march back to Boston was a glorious victory, physically and psychologically, for the Americans. Of some fifteen to eighteen hundred redcoats, ninety-nine were killed and missing, and 174 wounded. The exultant Americans, who numbered about four thousand irregular individuals that day, suffered ninety-three casualties. Insofar as these individuals were led that day, it was by Dr. Joseph Warren and William Heath, appointed a general by the Massachusetts provincial congress.

Events could not have gone better for the American cause: initial aggression and massacre by the arrogant redcoats, then turned to utter rout by the aroused and angry people of Massachusetts. It was truly a tale for song and story. As Willard Wallace writes, "Even now, the significance of Lexington and Concord awakens a response in Americans that goes far beyond the details of the day or the identity of the foe. An unmilitary people, at first overrun by trained might, had eventually risen in their wrath and won a hard but splendid triumph."*

Above all, as Sam Adams was quick to realize, the stirring events of April 19, 1775, touched off a general armed conflict: the American Revolution. In the immortal lines of Emerson, penned for the fiftieth anniversary of that day:

By the rude bridge that arched the flood
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard round the world.

*Willard M. Wallace, *Appeal to Arms: A Military History of the American Revolution* (Chicago: Quadrangle Books, 1964), p. 26.

PART VIII

Other Forces for Revolution

The Expansion of Libertarian Thought

The accumulating conflict with Great Britain had led to armed revolution at Lexington and Concord. In addition, other forces had joined since the middle of the century to add strength to the revolutionary movement. One vital force was the further development and extension of libertarian thought in America. It was the general concepts of liberty and revolution that found expression in the specific revolutionary arguments against Great Britain.

One of the most important sources of the dissemination of libertarian thought in prerevolutionary America, England, and elsewhere, was Thomas Hollis V of Lincoln's Inn, England. Hollis's career is a stirring testament to the influence that can be wielded by the activities of one lone but dedicated man. An ardent libertarian, Hollis in 1754 conceived his "plan" of disseminating books on liberty throughout the world. To this he then dedicated his life and his ample fortune. Hollis lovingly collected and disseminated old libertarian works and republished those out of print. In addition to distributing liberal classics like Locke, Neville, Sidney, Milton, Nedham, Harrington, and Trenchard and Gordon, Hollis discovered and publicized such important but forgotten sixteenth-century writers as François Hotman, George Buchanan, and John Poynt, who anticipated Sidney and Locke, and Marian exile Christopher Goodman, whose work influenced the later doctrines of disobedience to the state. Libertarian medals, coins, prints, pictures, and manuscripts were also collected and sent abroad.

In the late 1750s and early 1760s Thomas Hollis distributed his libertarian gifts far and wide: to Switzerland, Germany, Russia, Poland, Italy, and France. But with the inception of the Stamp Act and other colonial struggles, Hollis turned the bulk of his attention after 1764 to the American colonies.

Hundreds of libertarian works regarded as subversive by the British government were sent to the library at Harvard College, with libertarian mottoes and characters stamped upon them. Hollis also carried on an extensive correspondence with two great liberal Congregational divines of Massachusetts: Jonathan Mayhew and Andrew Eliot. And not only did Hollis ardently sow the seeds of English radicalism in America, he also led in distributing the American views to the people of England. Hollis, indeed, was the source of most of the pro-American writings printed in England and elsewhere in Europe during the 1760s, including the essays of Mayhew and Eliot.

There was nothing namby-pamby about Hollis's libertarianism. It was profoundly radical and stressed Hollis's passionate devotion to "king-killing," resistance to tyrants, and the revolutionary principles of seventeenth-century England. There was perhaps more truth than exaggeration in Tory Samuel Johnson's blaming the activities of the indefatigable Hollis for the outbreak of the American Revolution.*

Thomas Hollis was deep into the Wilkite movement, and a particularly active member of Hollis's circle was the great radical writer and historian, Mrs. Catherine Macaulay, sister of one of the Wilkite leaders, Alderman John Sawbridge. When Edmund Burke published his famous *Thoughts on the Cause of the Present Discontents* (1770), which defined the principles of the Whig party, Mrs. Macaulay promptly attacked it from the republican and democratic left. This debate clarified the split between the regular or "moderate Whigs" and the libertarian, radical Whigs.

In America, the Reverend Jonathan Mayhew had been the leader of libertarian thought since his great sermon of 1750, which first gave public expression in colonial America to the sacred right and duty of resistance to tyranny. As a result of his extensive correspondence with Hollis from 1759 to 1766, the latter distributed Mayhew's works throughout England. Mayhew, in turn, spread the message of the liberal and radical works sent him by Hollis—works such as Harrington, Sidney, Milton, and Hoadly. When the Stamp Act crisis arrived, Mayhew was perhaps the first to urge a network of committees of correspondence throughout the colonies and helped lead the opposition to the Stamp Act. In a sermon hailing repeal of the Stamp Act, Mayhew was among the first to envision America as a haven of liberty for the oppressed of other lands: "And if any miserable people on the continent or isles of Europe . . . should . . . be driven, in their extremity, to seek a safe retreat from slavery, . . . O let them find one in America . . . where our oppressed fathers once found it. . . ."

*Hollis's crucial role has in recent years been rescued from ill-deserved oblivion by Caroline Robbins. See her "The Strenuous Whig: Thomas Hollis of Lincoln's Inn," *William and Mary Quarterly* (July 1950): 406-53; and *The Eighteenth Century Commonwealthman* (Cambridge: Harvard University Press, 1959), pp. 262-68.

John Locke continued to be the major fountainhead of libertarian theory in America, and his works and influence spread even more widely after midcentury. By the 1760s and early 1770s, for example, the libraries of Harvard, Princeton, and Yale contained the numerous works of Locke. Locke's more revolutionary side, however, began to be stressed late in the colonial agitation, especially after the American printing of his *Civil Government* in 1773. Many writers have stressed the influence upon Americans of the American printing of William Blackstone's *Commentaries* in 1771, but this work was used largely for its tactical strength as a source for quoting the eminent English Tory jurist against Great Britain. Actually, as Clinton Rossiter admits, "The Americans read the eclectic *Commentaries* in a shrewdly selective manner, citing this oracle repeatedly and effectively in support of all manner of Whiggish doctrines. Two of the most popular borrowings . . . were Blackstone's memorable salutes to natural law and natural history."⁸

The Lockean emphasis on natural rights was further strengthened by the influence of the distinguished philosopher of the German Enlightenment, Christian Wolff, in the *Institutiones* (1750). Wolff emphasized more consistently than Locke that man's natural rights are inalienable and cannot therefore be alienated to the state by any social contract. Wolff's rigorously systematic work was highly influential and not only in Germany. In France, the important journals featured Wolff's writings, and Voltaire was an enthusiastic student of Wolff's work. The *Institutiones* was translated into French in 1772, and Thomas Jefferson is known to have had a copy in his library—a copy in which passages on the asserted right of revolutionary war are specifically marked. Wolff's views were also carried to America by the Swiss writer on the law of nature, Emerich de Vattel, whose book, published in French in 1758, influenced Jefferson, Otis, and the Adamses.

As the Revolution drew near, Algernon Sidney's influence continued to be strong. His martyrdom at the hands of Great Britain now had a personal meaning for the American radical leaders. Thomas Hollis had spread Sidney's writings, including his famous revolutionary motto, throughout the colonies, the maxim soon to be enshrined as the official motto of the revolutionary state of Massachusetts. The English translation of the Latin motto by John Quincy Adams runs as follows:

This hand to tyrants ever sworn the foe,
For freedom only deals the deadly blow,
Then sheathes in calm repose the vengeful blade,
For gentle place in freedom's hallowed shade.

⁸Clinton Rossiter, *The Political Thought of the American Revolution* (New York: Harcourt Brace, & World, 1963), pp. 73-74.

And as the anxious American rebels prepared for the outbreak of conflict, the Boston radical, Josiah Quincy, stirringly wrote: "America hath in store her Brutii and Cassii, her Hampdens and Sidneys, patriots and heroes, who will form a band of brothers; men who have memories and feelings, courage and swords."

Beginning in the 1760s, the French Enlightenment began to have notable influence in America; especially was this true of the great liberal Voltaire. Voltaire issued several important works during the 1760s, and an English translation appeared of his *Collected Works*. Americans steeped in Lockean thought recognized the French, especially Voltaire, as heirs to that tradition. Jonathan Mayhew, having read Voltaire's *Philosophical Dictionary* and *Philosophical History* shortly after they appeared, wrote to Thomas Hollis praising these works, although stating that he could not agree with the Frenchman's antireligious views. Howard Mumford Jones has shown, contrary to many historians, that Voltaire's influence on American thought was far greater than that of his conservative contemporary Baron de Montesquieu, whose *Spirit of the Laws* (1748) stressed state building, and checks and balances in that state, rather than natural rights or individual liberty. Jones shows that while Voltaire was the most popular French author in America in the second half of the eighteenth century, Montesquieu was only the sixth most influential. Moreover, Montesquieu's influence was exerted only in the later state-building period of America, during the last quarter of the century, rather than in the third quarter when the revolutionary American ideology was being forged. The annual number of newspaper advertisements during the last half of the century averaged, in New York, thirty for Voltaire and eight for Montesquieu, and in Philadelphia forty-five for Voltaire and seventeen for the latter. It is true that American revolutionary tracts cited Voltaire minimally, but this proves little, since any such references to the great French radical would have been as tactically unwise as the window-dressing references to respectables like Blackstone or Montesquieu were shrewd. Voltaire's works, furthermore, permeated a wide segment of the American public; the general public absorbed his political and social thought by reading his literary works, while the influential elite read his political and social philosophies directly.

The second most popular French writer in America was that confused and inconsistent radical, Jean-Jacques Rousseau. Again and again he was referred to in America as "the ingenious Rousseau" or the "celebrated Rousseau." Like those of Voltaire, Rousseau's ideas were absorbed on two levels, the masses reading the novels *Emile* (1762) and *La Nouvelle Eloise* (1761) and the more serious-minded studying the *Social Contract* (1762), all of which were translated into English shortly after publication. Indeed, an English translation of Rousseau's collected works appeared in 1774. John Adams had read the *Social Contract* as early as 1765, and he eventually accumulated four

copies in his library. James Otis, in his pamphlets of the early 1760s, approvingly cited the radical Rousseau as well as John Locke.*

In his writings, Voltaire praised Locke's motto, "Liberty and Property," upheld revolution in behalf of liberty, and attacked despotism and war. In the article on war in his *Philosophical Dictionary*, Voltaire acidly compared warring states to armed gangs and observed that "the marvelous part of this infernal enterprise is that each chief of the murderers causes his flags to be blessed and invokes God solemnly before going out to exterminate his neighbor." Revolution for liberty against the state, on the other hand, was a different question. In rebuttal to the age-old conservative attack upon revolution for using violence, Voltaire, in the *Philosophical Letters*, trenchantly pointed out that all political history has rested upon violence. Violence was permanently foisted upon the people by the state, declared Voltaire, and the difference between England and the other countries of Europe was that violent revolution had succeeded in England (at least in Voltaire's romanticized model) but had failed elsewhere:

To establish liberty in England had been costly, no doubt; the idol of despotic power has been drowned in seas of blood; but the English do not think they have purchased good laws too dearly. Other nations have had no less troublous times; but the blood they have shed for the cause of their liberty had only cemented their servitude.

In striking contrast to Voltaire, Montesquieu was opposed to revolution and was a defender of the concept of preventive war (which Voltaire bitterly scoffed at as "clearly unjust"). In his *Spirit of the Laws*, Montesquieu joined in the important debate between two important French historians. In 1727, the Comte de Boulainvilliers had concluded from his historical researches that the existing French government was rooted in conquest and that the current political structure was therefore the frozen embodiment of that past conquest. The current ruling class was the heir of the tribal conquerors; the ruled masses were the descendants of the subjugated. To the reactionary Boulainvilliers, this insight was only a support for complete domination by the ruling class, built on the presumed right of conquest. But to the philosopher and historian Abbé Jean-Baptiste Dubos (1734), the origin in conquest of the ruling class made all the more necessary the restoration of freedom to the people by

ending the power of the rulers. Montesquieu, evading the obligation to weigh existing institutions on the basis of natural moral law, presumed instead to be a political "scientist" who takes existing institutions as his given—and therefore, of course, implicitly took as his undefended axiom the wisdom of the essentially feudal status quo. Indeed Montesquieu, fundamentally a reactionary, wanted to return to stronger feudal checks against the Crown. As a political scientist defending the basis of the status quo, Montesquieu, accepting the facts of original and permanent conquest, undertook to defend the existing ruling-class structure against possible revolution from below. It is no coincidence that Montesquieu's popularity in the New World was suited rather to the state-building than to the revolutionary age in America.

For all his confusions, contradictions, and romantic irrationalism that opened the doors to future forms of tyranny, Rousseau staunchly supported the people against the despotic ruling classes of his day. He therefore must be regarded overall as a vital part of the broad radical-liberal movement of the era. In his *Discourse on the Moral Effects of the Arts and Sciences* (1750; English translation, 1752), Rousseau condemned the accretion of centuries of coercive government—with its hordes of officials and auxiliaries of power in the legal profession, as contrasted to the more natural or voluntary government of the past. A trenchant attack on the ruling class was contained in Rousseau's *Discourse on Inequality* (1754). Building on Locke's insight that private property began in the mixture of people's labor with land and natural resources, Rousseau described how the state arose in the imposition of violence on such properties and their owners. This violence resulted in a ruling class imposing slavery and domination over the body of the ruled. From the state flowed the institutionalization of violence in "perpetual conflicts" between the original property owners and the ruling class. As Rousseau slashingly put it,

Such was . . . the origin of society and law, which bound new fetters on the poor, and gave new powers to the rich; which irretrievably destroyed natural liberty, eternally fixed the law of property and inequality, converted clever usurpation into unalterable right, and, for the advantage of a few ambitious individuals, subjected all mankind to perpetual labor, slavery, and wretchedness. . . .

From the State also flowed perpetual wars: struggles between the ruling classes of each state, employing and exhausting the lives and labors of the ruled. . . . The most distinguished men hence learned to consider cutting each others' throats a duty; at length men massacred their fellow-creatures by thousands without so much as knowing why, and committed more murders in a single day's fighting . . . than were committed in the state of nature during whole ages over the whole earth.

In *Emile*, Rousseau properly criticized Montesquieu for evading discussion

of the philosophical and moral validity of the existing state, turning instead to elaborate treatment of currently established systems. Yet, when Rousseau later turned to such a philosophic inquiry in his own *Social Contract*, he developed two contradictory positions, for individual liberty, and for a popular collectivism.* On the existing ruling class, however, Rousseau stood firm for a libertarian view. Criticizing Hobbes' curious conclusion that the right of the rulers to govern stems from the fact that only the rulers can benefit from political power, Rousseau scornfully remarked, "On this showing, the human species is divided into so many kinds of cattle, each with its ruler, who keeps guard over them for the purpose of devouring them." On existing states, Rousseau's famous verdict was unambiguous: "Man is born free; and everywhere he is in chains." Above all, Rousseau was concerned, in his proposed commonwealth in the *Social Contract*, that democratic forms be as pure and direct as possible so that the specter of oligarchy could never more rear its ugly head. The more direct and continuous the control of the body of the people over state officialdom, the less likely would be the state to surmount the checks of popular vigilance and reestablish the despotism of oligarchy. Thus, for Rousseau, the necessary checks on state power were to be found not, as in Montesquieu, in legalistic forms within the state, but in popular forces coming from outside the state apparatus.

*The collectivist, or at least the antiindividualist, strain in Rousseau may be partly attributed to the conservatizing influence of Montesquieu. See Kingsley Martin, *French Liberal Thought in the Eighteenth Century* (New York: Harper & Row, 1963), pp. 208ff.; and C. E. Vaughan, *Studies in the History of Political Philosophy Before and After Rousseau* (New York: Russell & Russell, 1960), 1:296.

The Vermont Revolution: The Green Mountain Boys

While the American colonies were moving inexorably toward a final break with Great Britain, and the winds of revolutionary doctrine blew in from overseas, a local but intense revolutionary conflict was developing in the North. As in the case of so many internal conflicts in the American colonies, the struggles centered around the disposition of land.

Western New Hampshire (now Vermont), though still sparsely populated, was being settled throughout the 1760s, under land grants parceled out by New Hampshire's governor, Benning Wentworth, and these lands quickly devolved by purchase upon the actual settlers. To attract settlers, the prices charged for the land were not very onerous. But New York, goaded by its land speculators, aggressively continued to assert its own arbitrary claims to all the land of the region. In 1771, this western region (which also included part of current New York east of the Hudson) contained some seven thousand settlers.

In 1764, however, the Board of Trade dealt a rude blow to the settlers of western New Hampshire. It decreed that New York's land claims to the area were valid. New York's governor, Cadwallader Colden, hastened to proclaim his rights and, true to the New York tradition of venal land oligarchy, to sell those rights to the land to a handful of land speculators from New York. By the end of 1765, Colden had sold to a few speculators rights to 36,000 acres of the best land in the area, centered around Arlington and Manchester in what is now southwestern Vermont. Leading these speculators were James Duane and John T. Kempe. New Hampshire tried desperately to halt or nullify these grants, but the Crown's pressure left enough loopholes for New York to continue granting western New Hampshire land on a large scale. By

the late 1760s, Colden had sold over 535,000 acres in grants, and had sold well over 2.1 million acres of military land grants to veterans, virtually all of which were transferred to large land speculators. By 1776 the total had reached 2.1 million acres of regular, and 2.4 million acres of military, land granted by New York. The great New York oligarchs were featured on this new gravy train of land monopoly; among the grantees were James Duane, Philip Skene, William Livingston, Robert R. Livingston, Pierre DePeyster, Augustus Van Cortlandt, William Smith, and John Morin Scott.

Claims mean little unless enforced, and trouble began as soon as New York tried to oust the New Hampshire settlers in behalf of its newly asserted "owners." In 1769, New York's aged Cadwallader Colden, back as governor after a three-year gap, brought proceedings against James Breakenridge of Bennington, to try to eject him from his farm. When they arrived at the farm, the New York authorities were driven off by armed friends of Breakenridge. The next step was for New York to order the arrest of Breakenridge and his rioting friends, who were led by the Reverend Jedediah Dewey and Samuel Robinson. New York was not able to make any arrests, however, and Colden, with mounting horror, complained that these settlers of the Green Mountain area proclaimed their allegiance to New Hampshire—as if they would hasten to salute a New York power that was trying its best to seize their lands and turn them over to a few privileged favorites!

The following year, New York proceeded again in earnest, launching ejection suits against Breakenridge, Isaiah Carpenter, and other Green Mountain settlers. At this point, one of the great figures of American revolutionary history emerged, to be chosen to lead the defense of the beleaguered settlers: the redoubtable Ethan Allen. The trial of Breakenridge, Carpenter, et al. took place in the New York courts. The impartiality of the court may be gauged by the fact that its chief justice was Robert R. Livingston, himself a leading New York grantee of New Hampshire land, and the prosecutors were Attorney General Kempe and James Duane, the leaders of the speculative ring in the granted land. Not surprisingly, the New York court ruled for New York, in June 1770.

At first, Duane and Kempe tried to bribe Ethan Allen into submission, but the latter scornfully rejected their offer. Allen and the settlers resolved to hold their positions, by force if necessary. Banding together, the settlers formed a committee of safety to oppose the court's decision, as well as an armed band to resist New York's aggression against their properties. The band was called the Green Mountain Boys and Ethan Allen was chosen its leader. Soon each town west of the mountains had selected its own committee of safety. Delegates from the local committees convened regularly at Bennington.

Moving from attempted bribery to physical violence, the New York government, now headed by its ever more grasping governor Lord Dunmore, sent sheriffs several times to arrest Breakenridge, but each time they were violently

repelled by armed farmers of the neighborhood. New York responded by escalating its coercion, ordering the arrest of the rioters, including the leaders, Silas Robinson and Simon Hathaway. The farmers refused to be intimidated, and violent armed defense continued.

The Vermont region is bisected by the Green Mountains. Although the heart of the settler resistance was located west of the mountains, the eastern region erupted also. There, while the Breakenridge turmoil continued in the west, a band of armed settlers, headed by Joseph and Benjamin Wait and by Nathan and Samuel Stone, rebelled against New York authority, denied its jurisdiction, captured the sheriff who had tried to arrest them, and forced the New York courts to adjourn. But the revolutionary movement there did not command the mass support that it did west of the Green Mountains. For the eastern side was more remote and New York's yoke was felt more lightly there. The town of Guilford even went so far as ardently to advocate allegiance to New York. Rioters were therefore routed by four hundred pro-New York inhabitants, and the settler revolution was stilled in eastern Vermont by the end of 1770.

But in the west, the revolutionary struggle intensified. From defending the property of Breakenridge and the other settlers, the rebels went on the offensive to oust by force all New York authority in the area. When New York appointed a pliant ally as judge, the judge's home was burned down and he was driven off. Robert Cochran led an armed band and forced out of the territory two leading New York officials. Surveyors from New York were threatened and beaten and their surveying tools confiscated. Settler defense continued as well: when the New York sheriff put a tenant of his in place of Isaiah Carpenter on the latter's farm, Carpenter's neighbors forced the intruder to leave.

The New York government next tried the soft sell, wooing the angry settlers by promising to confirm their grants from New Hampshire and reduce official fees. But the settlers could no longer trust their enemy. And so New York, now led by Governor William Tryon, fresh from his triumph in crushing the North Carolina Regulation, soon returned to the policy of coercion. In July 1771, Sheriff Henry Ten Eyck gathered a huge posse, numbering in the hundreds, at Bennington, in the southwest corner of Vermont, to bar Breakenridge from his farm. Now, at last, these insolent rebels were to be taught the lesson of obedience.

Setting out confidently on their easy mission, the New York posse was ambushed, surrounded, and forced back by a heroic band of ardent revolutionaries, members of the Green Mountain Boys, led by Captains Robert Cochran and Seth Warner, a cousin of Ethan Allen. This stirring victory of a private band of irregulars over organized New York power raised the hearts and spirits of the settlers of western New Hampshire.

The Green Mountain Boys now launched a systematic campaign to drive off

the settlers who had been brought in by New York to enjoy the property created by the New Hampshire settlers. Charles Hutcheson, a transplanted New Yorker on Cochran's property, saw his cabin burned and was ordered off by Ethan Allen: "Go your way now and complain to that damned scoundrel, your governor. God damn your Governor, Laws, King, Council, and Assembly."

Governor Tryon of New York, in consequence, offered a reward for the capture of Allen, Cochran, and another leader, Remember Baker, to which Allen and the Green Mountain Boys retorted sardonically by offering counterrewards for the capture of their arch-enemies Duane and Kempe. In high spirits, Allen wrote mockingly to Philip Skene that "by virtue of a late law in the province they are not allowed to hang any man before they have ketched him." Boldly, Allen rode into Albany unharmed and was welcomed by a sympathetic populace.

Allen did not even let himself be fazed by the desertion of the Green Mountain cause by the New Hampshire authorities. By the end of 1771, Governor John Wentworth of New Hampshire had abandoned support of the rebels, hoping indeed to acquire some of the New York-claimed land for himself. The best the settlers could now hope for from New Hampshire was neutrality, which they gained when Wentworth refused to issue a proclamation against the Green Mountain Boys.

The Green Mountain Boys now stood alone. How could these very loosely organized and individualistic irregulars hope to stand up to the overwhelming might of the New York government backed by British regular troops? The answer lies in the authentic genius of the undaunted Ethan Allen. Allen perceived the potential of a new form of warfare on the scene of world history. Allen had watched with interest and sympathy the Prendergast tenant rebellion of 1766 and the rapid debacle of the rebel cause. From this carnage Allen and Allen alone learned the proper military and revolutionary lessons.

Allen saw that the grave mistake of Prendergast and the tenants was to rush out, an unorganized and untrained mass, to do formal battle with the well-trained and far more heavily armed British troops. The ensuing slaughter was inevitable. But why must all battle be waged in formal ranks on open fields? Just because all European military lore said so? Allen did not see why these hidebound rules should not be transcended. In particular, he saw that a revolutionary war, a people's war, was best waged in a far different and a far more revolutionary manner.

In brief, what were the advantages and disadvantages of the Green Mountain Boys in their armed struggle with the organized power of New York? Their disadvantages were all too evident: the superior arms, and the formally trained, specialized troops of the enemy. But the military advantages of such a zealous people's revolutionary movement had too often been overlooked. Two advantages were that the rebels dwelt among an admittedly friendly and sym-

pathetic population, and operated on a thoroughly friendly terrain. As settlers themselves, the rebel forces were *of* that population and could blend quickly and easily with it. This itself greatly offset the specialization of the enemy; these part-time rebels, so camouflaged, just could not easily be spotted, isolated, or captured. Therefore, able to move among the people and on familiar terrain as fish in water, the rebel band had the great advantage of mobility and speed. It also had the advantage of surprise, for the support of the surrounding populace gave it an enormous intelligence advantage over the enemy. The rebels came to know where the enemy was, but the enemy knew virtually nothing about the rebels. The rebels, therefore, could and must hit and run, hit and run, strike and fade away, harassing and weakening and demoralizing the enemy while keeping it always off balance. These advantages, and others, the farsighted Allen had come to see. In short, he perceived that the proper path to victory for a people's revolution against a well-armed state force is *guerrilla warfare*, not a foolhardy rush to open confrontation and instant defeat.

To organize guerrilla warfare, the rebels needed knowledgeable and brilliant leadership and high morale, both in the fighting force and in the supporting population. The Vermont settlers possessed these requisites: in the high-quality leadership of Allen and his lieutenants and in the zeal of the settlers fighting for their homes and land against aggressors. By 1772, a successful and continuing guerrilla war was being waged in the Green Mountains.

The astuteness and farsightedness of Ethan Allen's grasp of the principles and tactics of guerrilla war may be seen by his highly restrained use of coercion. Since it is crucial to the success of a revolution to keep the active support of the masses, coercion must be held to the necessary minimum, both for daily mass support and so as not to provoke enemy reprisals against the people. Therefore, only as necessary, and then but minimally, were threats and terror employed by the Green Mountain Boys in achieving their aims of driving out the New York officials and interlopers, and of rescuing settlers and their own members from the New York enemy. So remarkable was their minimizing of coercion that in all their battles and skirmishes the Green Mountain Boys never killed a single man.

Allen sensed that revolutionary practice cannot successfully proceed without revolutionary theory and he proceeded to supply the latter as well. Lusty, militant, candid, and roughhewn Allen may have been, but he was far from an unlettered oaf. Though lacking a college education, Allen studied at the feet of the notable Boston radical Dr. Thomas Young. From Young, Allen imbibed deism, Newton, and French rationalism.

Allen used his ardently held Lockean natural-rights theory to justify the settler revolution. In his *Brief Narrative* (1774), written at the behest of a convention of westside towns, Allen rested the settlers' rights to their land on the Lockean natural right of possession and cultivation, which "is of itself

abundantly sufficient to maintain the right in the possessor," and to gain him a "title, sealed and confirmed with the sweat and toil of the farmer. . . ." In short, as Darline Shapiro puts it, "Allen's argument, then, is that he who occupies and works the land has a natural right to it, a right sufficient to confer legality."*

In true Lockean fashion, Allen proceeded to demonstrate the limits of government: "Laws and society, compacts, were made to protect and secure the subjects in their peaceable possessions and properties, and not to subvert them. No person or community of persons can be supposed to be under any particular compact of law, except it presupposeth that the law will protect such person or community of persons in his or their properties." Therefore, no government or king may force a man to give up his rightful property: "The *supreme power cannot take* from any man any part of his *property* without his own consent." When a government transcends its proper limits and invades private property, then power reverts to the people, who resume their original liberty. In this way, reasoned Allen, the settlers of western New Hampshire had returned to a state of nature. By the default of the governments of New York, New Hampshire, and Great Britain, the Green Mountain Boys had become the means by which the settlers assumed the task of defending their property.

Governor Tryon, the stern extirpator of the Regulators, had never encountered such opponents as the Green Mountain Boys. In the spring of 1772, he asked for negotiations, although he refused to talk with the top leaders. The rebels sent as negotiators Captain Stephen Fay, the veteran tavernkeeper of Bennington, where the rebels often gathered, and his son Dr. Jonas Fay. In the rebel messages to Tryon, it was trenchantly pointed out who the *real* rioters and wielders of violence were: "Though they [the sheriff and posse] style us rioters, for opposing them, and seek to catch and punish us as such, yet, in reality, *themselves* are the rioters, the tumultuous, disorderly . . . faction, or, in fine, the land-jobbers. . . ."

A lull now appeared in the New York conflict. In the west, the governor obeyed royal orders to leave the New Hampshire settlers alone. In the east, the revolutionary spirit died down; Guilford formally proclaimed itself part of New York, and two pro-Yorkers were elected to the New York Assembly. Tryon and the Fays readily concluded a truce on the basis of letting the settlers alone.

But the Vermont lull was destined to be short-lived. Continued pressure by Yorkers on western New Hampshire lands led to determined armed resistance by the rebels. Full-scale conflict resumed more intensely than ever, and a futile arrest order was sent out for Remember Baker and Ira Allen. Governor Tryon vainly asked for British troops to crush the Green Mountain Boys, but

*Darline Shapiro, "Ethan Allen, Philosopher-Theologian to a Generation of American Revolutionaries," *William and Mary Quarterly* (April 1964): 243.

the British wanted no repetition of their role in suppressing the New York tenant rebellion of 1766. During 1773, guerrilla terrorism by the Boys intensified. The major irritant was the Scottish colonel John Reid, a New York land claimant who had been ejected from his claimed land by the settlers a year before. In early 1773, Reid led a party of Scottish immigrants back to settle on the invaded land; he built a wall, and even began to construct a village on the land. But in mid-August, Ethan Allen, Baker, and Seth Warner, leading a hundred Green Mountain Boys, swept down to demolish this nascent settlement and to drive the intruders off the land. When asked by a settler for his legal warrant for this raid, Baker lifted his hand to declaim, "Here is my warrant," and Allen then raised his rifle high and dramatically shouted, "This is my law!"

As the guerrilla war continued to rage, Ethan Allen and his band, in the autumn of 1773, kidnapped one of New York's top officials in the area, Judge Benjamin Spencer. Allen, Cochran, Warner, and Baker then conducted a public trial of Spencer, finding him guilty of allegiance to New York at the expense of the settlers. Allen and Baker informed Spencer that "they valued not the government [of New York] nor even the kingdom . . . they had force and power sufficient to protect themselves against either." As punishment, Spencer's roof was pulled off; after this salutary warning, Spencer pledged himself to be a loyal citizen of New Hampshire thenceforth. Thus was a leading royal official in the western area mildly but firmly removed from the fray. The request of the unhappy Tryon for British troops was again scornfully turned down; General Frederick Haldimand in Boston, a Prussian-trained officer totally unfamiliar with Allen's new-style guerrilla warfare, indignantly wondered how Tryon could possibly claim to need His Majesty's troops to vanquish a few miserable bandits.

Finally, Governor Tryon moved to a stance of maximum toughness, violating the canons of Anglo-Saxon law in the process. In early March 1774, he put through the New York legislature the "Bloody Law," which proclaimed that Allen, Warner, Baker, Cochran, Breakenridge, and three other Green Mountain Boys were to be regarded as convicted felons and were to suffer death without trial unless they surrendered themselves within seventy days. Rewards for the capture of these leaders were also greatly increased.

In the face of this awesome sentence of outlawry, Ethan Allen never faltered. Instead, he leaped to counterattack in a magnificently revolutionary manner. In a slashing remonstrance, Allen blasted the New York officials of "insatiable, avaricious, overbearing, inhuman, barbarous blood-guiltiness of disposition and intention." Allen dared the New Yorkers to come and get the Green Mountain Boys: "Come on, we are ready for a game of scalping with them, for our martial spirits glow with bitter indignation and consummate fury to blast their infernal projections." Allen concluded with sweeping counter-death threats, promising death to anyone who dared to arrest a single

Green Mountain Boy. And a west-side convention of settlers in mid-April branded any person in the area holding a commission from New York an "enemy to their country."

New York was stunned to find maximum threats answered in kind. No one surrendered, and the Green Mountain Boys redoubled beatings and insults to New York officials and transplants, and they proceeded to seize, try, and sentence the New Yorkers. Acting Governor Colden (replacing Tryon, who had been called to England to explain this curious phenomenon in the New Hampshire grant area) soon was forced to call again for British troops, which were again sternly denied.

Meanwhile, the east-siders, those east of the Green Mountains, were being galvanized by the passage of the Coercive Acts and the British crackdown on Massachusetts. The east side met at a (Cumberland) county convention in Westminster late in October to consider its course. The east-siders replied rather ambivalently, if unsurprisingly, hailing American liberty *and* devotion to the king. Going beyond this stance, Leonard Spaulding of Dummerston cursed King George for establishing the Roman Catholic church in Canada, so vehemently that he was arrested for high treason. Soon armed men gathered and marched to Westminster, freeing Spaulding without meeting any resistance. The town clerk of Dummerston hailed this liberating act by the "brave sons of freedom," and concluded his account of the affair by denouncing the "cut-throately, Jacobitish, High Church, Toretical minions of George the Third, the Pope of Canada and tyrant of Britain." No conservative hanging back or ambiguity here!

The west-siders, always leading in the Revolution, were not to be caught napping. After the removal of Benjamin Spencer, the Baptist minister, Judge Benjamin Hough, was the only major New York official remaining in the area. Finally, at the end of January 1775, Hough was seized by the Green Mountain Boys and taken to Sunderland to be tried by the leaders of the rebels. Hough was charged with allegiance to New York and acting as a New York magistrate. Admitting the charges, Hough was sentenced by the judges to 200 lashes with a rope scourge and exiled from the New Hampshire grant area. Before sending Hough out on foot, Allen and Warner capped their triumph by issuing the judge a "passport" for safe conduct to New York.

Thus, Ethan Allen had led the Green Mountain Boys in five years of outstandingly successful guerrilla war against mighty New York to a smashing conclusion. In sum, New York officials and planted settlers had been ejected from the area, and New Hampshire settlers had been defended—with no one killed on either side during the entire period. Indeed, only one Green Mountain Boy was wounded, and a few New Yorkers were whipped, pushed around, and had their homes burned—the full catalogue of casualties of this remarkable conflict under a remarkable and brilliant leader.

Matters were also coming to a head on the east side of the Green Moun-

tains. A convention of Cumberland County had endorsed the actions of the First Continental Congress. Nonimportation, however, was rejected by the New York Assembly, thus widening further the rift with the east side. A third county convention in early February petitioned Governor Colden against the tyranny of the county court, which was appointed from above rather than chosen by the people of the county. Moreover, the court was too expensive and burdensome: it inconveniently dragged local farmers in to sit on juries, and was too prompt in enforcing collection of debts. Despite warnings of approaching tension, the Cumberland County court opened on March 13. A group of about a hundred men met at Rockingham, north of the county seat at Westminster, and, armed only with clubs, marched down to the county courthouse and engaged in a sit-in. That evening, marching up from the south came Sheriff Billy Paterson at the head of fifty men, many of them equipped with firearms. That night the sheriff's posse shot its way into the courthouse and killed two of the sit-ins, in what soon was dubbed the "Westminster Massacre." The first one to die was young William French, who was fittingly saluted as the martyr of the fray.

The Westminster Massacre aroused and galvanized the people of the east-side New Hampshire grants. The following day, militia companies of the people formed and kept tramping into Westminster. The Paterson posse hastened to flee. The county court, reading the handwriting on the wall, hastily adjourned. The radical elements in the assembled mob proposed to burn the courthouse and shoot the sheriff, the judges, and all their retinue, but they were held back by the more restrained militia commanders. Instead, the militiamen released the sit-in prisoners and arrested the sheriff, judges, county clerk, and members of the posse that could be rounded up. As militiamen continued to pour into Westminster to fend off any New Yorker or British counterattack, a climactic moment came when there arrived from across the mountains a detachment of Green Mountain Boys, led by Captain Robert Cochran. Their arrival was a living symbol of the emerging unity between the two halves of the New Hampshire grant territory.

As usually happens in such cases, the postponement of revolutionary vengeance led to a cooling off of temper and resolution. The Yorkite prisoners were either released on bond or sent for trial to Massachusetts, where they were all soon released; not one of the Yorkers implicated in the massacre even came to trial. However, the generally hated Justice Noah Sabin, on returning to his farm, was treated by his fellow citizens with an intense wrath that stopped just short of invading another man's sacred right of private property. Sabin was assured that should he take one step beyond the borders of his own farm, he would be shot that instant.

Unity between the east side and the west side was further forged on April 11, when a convention of the town committees of safety of the two regions assembled at Westminster and proclaimed that all citizens should "wholly

renounce and resist" the oppressive jurisdiction of the government of New York. Two east-siders and Ethan Allen were selected to draw up a remonstrance on their joint behalf.

As the news arrived of the shattering events at Lexington and Concord, the sturdy and successful Vermont revolution naturally blended into the Revolution against Great Britain. For one thing, the enemy New York government, particularly its executive, was a royal government, as was that of New Hampshire. For another, the call of liberty against the oppression of the state was very familiar to the men of the Green Mountains; they had fought for the libertarian cause for years. What more natural than to extend the fighting against the larger despotism of imperial Britain?

The Revolutionary Movement: Ideology and Motivation

With the beginning of the American Revolutionary War at the outbreak of Lexington and Concord, two truths about the Revolution already stand out clearly. One is that the Revolution was genuinely and enthusiastically supported by the great majority of the American population. It was a true people's war against British rule. In addition to all the evidence given above, the American rebels could certainly not have concluded the first successful war of national liberation in history, a war against the world's greatest naval and military power, unless they had commanded the support of the American people. As David Ramsay, the first great historian of the American Revolution, put it in 1789, "The war was the people's war . . . the exertions of the army would have been insufficient to effect the revolution, unless the great body of the people had been prepared for it, and also kept in a constant disposition to oppose Great Britain."*

A second truth that emerges is the egregious fallacy of the view endemic among historians of all ideological persuasions that there is a large and necessary dichotomy between political or moral principle and economic self-interest. Historians friendly to the Revolution have insisted that the Americans fought for political freedom, for independence, for constitutional rights, or for democracy; critical historians maintain that the fight was *merely* for eco-

*Professor Alden has shown that the myth of present-day historians that only one-third of the American public backed the Revolution, with an equal number opposed, stems from a misreading of a letter by John Adams (John R. Alden, *The American Revolution, 1775-1783* [New York: Harper & Row, 1954], p. 87). Historians of such disparate views as Robert E. Brown and Herbert Aptheker now support the view that the Revolution was a majority movement. Thus, see Brown, *Middle-Class Democracy, passim*, and Aptheker, *The American Revolution, 1763-1783* (New York: International Publishers, 1960), pp. 52ff.

conomic reasons, for defense of property and trade against British interference. But why must the two be sundered? Why may not a defense of American liberty *and* property be conjoined to a defense of political *and* economic rights? The merchants rebelling against the stamp tax, or sugar, or tea taxes, or the restrictions of the navigation laws, were battling for their *rights* of property and trade free from interference. In doing so, they were battling for their own property and for the rights of liberty at the same time. The American masses, similarly, were battling for all property rights, for their own as well as those of the merchants, and acting also in their capacity as consumers fighting against British taxes and restrictions. In short, there need be no dichotomy between liberty and property, between defense of the rights of property in one's person and in one's material possessions. Defense of rights is logically unitary in all spheres of action. And what is more, the American revolutionaries certainly *acted* on these very assumptions, as revealed by their essential adherence to libertarian thought, to political and economic rights, and always to "Liberty and Property." The men of the eighteenth century saw no dichotomy between personal and economic freedom, between rights to liberty and to property. These artificial distinctions were left for later ages to construct.

From our conclusions that the American revolutionaries commanded the loyalty of a large majority of the colonists, and that they saw no dichotomy between liberty and economic rights—and therefore between ideology and economic interest—we may proceed to some broader speculations on the role of ideology as compared with that of economic interest in the various actions of political history. In particular, we contend that the *primary* motivations will tend to differ among two classes of political actions: actions of the state in expanding its power over the populace, and actions of the populace in moving or rebelling against state power. We contend that the actions of the former will tend to be *primarily* motivated by economic interest, while the latter will tend to be motivated primarily by more abstract ideological or moral concerns.

Let us see why this should be so. The essence of the state throughout history is a minority of the population, constituting a power elite or a "ruling class," governing and living off the majority, or the "ruled." Since a majority cannot live parasitically off a minority without the economy and the social system breaking down very quickly, and since the majority can never act permanently by itself but must always be led by an oligarchy, every state will subsist by plundering the majority in behalf of a ruling minority. A further reason for the inevitability of minority rule is the pervasive fact of the division of labor: the majority of the public must spend most of its time going about the business of making a living. Hence the actual rule of the state must be left to full-time professionals who are necessarily a minority of the society.

Throughout history, then, the state has consisted of a minority plundering and tyrannizing over a majority. This brings us to the great question, the

great mystery, of political philosophy: the mystery of civil obedience. From Etienne de La Boetie to David Hume to Ludwig von Mises, political philosophers have shown that no state—no minority—can continue long in power unless supported, even if passively, by the majority. Why then does the majority continue to accept or support the state when it is clearly acquiescing in its own subjection? Why does the majority continue to obey the minority?

Here we arrive at the age-old role of the intellectuals, the opinion-molding groups in society. The ruling class—be it warlords, nobles, bureaucrats, feudal landlords, monopoly merchants, or a coalition of several of these groups—must employ intellectuals to convince the majority of the public that its rule is beneficent, inevitable, necessary, and even divine. The leading role of the intellectual throughout history is that of the court intellectual, who, in return for a share of, a junior partnership in, the power and pelf offered by the rest of the ruling class, spins the apologias for state rule with which to convince a misguided public. This is the age-old alliance of church and state, of throne and altar, with the church in modern times being largely replaced by secular intellectuals and “scientific” technocrats.

When state rulers act, then, to use and aggrandize state power, their *primary* motivation is economic: to increase their plunder at the expense of the subject and the taxpayer. The ideology that they profess and that is formulated and spread through society by the court intellectuals is an elaborate rationalization for their economic interests. The ideology is the camouflage for their looting, the fictitious clothes spun by the intellectuals to hide the naked plundering of the emperor. The economic motive behind the ideological garb of the state is the heart of the issue.

But what of the actions of the rebels *against* state power—those infrequent but vital situations in history when the subjects rise up to diminish, whittle away, or abolish state power? What, in short, of such great events as the American Revolution or the classical liberal movements of the seventeenth and eighteenth centuries? Of course, an economic motive exists here, too, in this case one of defending the private property of the subjects from the depredations of the state. But our contention here is that, even when conjoined as in the American Revolution, the *major* motive of the opposition, or of the revolutionaries, will be ideological rather than economic.

The basic reason for this assertion is that the ruling class, being small and largely specialized, is motivated to think about its economic interests twenty-four hours a day. Manufacturers seeking a tariff, merchants seeking to cripple their competition, bankers looking for taxes to repay their government bonds, rulers seeking a strong state from which to acquire revenue, bureaucrats wishing to expand their empire—all of these are professionals in statism. They are constantly at work trying to preserve and expand their privileges. Hence the primacy of the economic motive in their actions. But the majority has allowed itself to be misled largely because its immediate interests are generally diffuse

and hard to observe, and because the majority comprises *not* professional “antistatists” but people going about their business of daily living. What can the average person know of the arcane processes of subsidy or taxation or bond issue? Generally, he is too wrapped up in his daily life, too habituated to his lot after centuries of state-guided propaganda, to give any thought to his unfortunate fate. Hence, an opposition or revolutionary movement, or indeed any mass movement from below, cannot be primarily guided by ordinary economic motives. For such a mass movement to form, the masses must be fired up, must be aroused to a rare and uncommon pitch of fervor against the existing system. But for that to happen, the masses must be fired up by ideology. Only ideology, guided either by a new religious conversion or by a passion for justice, can arouse the interest of the masses (in the current jargon, “raise their consciousness”) and lead them out of the morass of daily habit into an uncommon and militant activity in opposition to the state. This is not to say that an economic motive—for example, a defense of their property—does not play an important role. But to form a mass movement in opposition means that the people must shake off their habits, their daily mundane concerns of several lifetimes, and become politically aroused and determined as never before in their lives. Only a commonly held and passionately believed-in ideology can perform that role. Hence our conclusion that a mass movement like the American Revolution must be centrally motivated by a commonly shared ideology.

How then do the masses of subjects *acquire* this guiding and determining ideology? By the very nature of the masses, it is impossible for them to arrive at such an opposition or revolutionary ideology on their own. Habituated as they are to their narrow and daily rounds, uninterested in ideology as they normally are, it is impossible for the masses to lift themselves up by their own bootstraps to hammer out an ideological movement in opposition to the existing state. Here we arrive at the vital role of the intellectuals. Only intellectuals, full-time (or largely full-time) professionals in ideas, have the time, the ability, and the inclination to formulate an opposition ideology and then to spread the word to the people. In contrast to the statist court intellectual, whose role is a junior partner in rationalizing the economic interests of the ruling class, the radical or opposition intellectual’s role is the centrally guiding one of formulating the opposition or revolutionary ideology and then of spreading the ideology to the masses, thereby welding them into a revolutionary movement.

An important corollary: in weighing the motivations of the intellectuals themselves or even of the masses, it is generally true that setting oneself up in opposition to an existing state is a lonely, thorny, and often dangerous road. It is usually directly in the economic interests of the radical intellectuals to allow themselves to “sell out,” to be coopted by the ruling state apparatus. The intellectuals who do choose the radical opposition path, who pledge—in

the famous words of the American revolutionaries—"their lives, their fortunes, and their sacred honor," can scarcely be dominated by economic motives; on the contrary, only a fiercely held ideology, centering on a passion for justice, can keep the intellectuals to the rigorous path of truth. Hence, again, the likelihood of a dominant role for ideology in an opposition movement.

Thus, statist tend to be governed by economic motivation, with ideology serving as a smokescreen for such motives, while libertarians or antistatists are ruled principally and centrally by ideology, with economic defense playing a subordinate role. By this dichotomy we may at last resolve the age-old historiographical dispute over whether ideology or economic interests play the dominant role in historical motivation.

We can now see why the Charles Beard–Carl Becker "economic-determinist" model of human motivation, a dominant school of American history in the 1920s and 1930s, so fruitful and penetrating when applied to statist actions of the American government, fails signally when applied to the great *antistatist* events of the American Revolution. The Beard-Becker approach sought to apply an economic-determinist framework to the American Revolution, and specifically a framework of inherent conflict between various major economic classes. The vital flaws in the Beard-Becker model were twofold. First, they did not understand the necessarily primary role of *ideas* in guiding any revolutionary or opposition movement. Second, they did not understand that there are no inherent economic conflicts in the free market; without government intrusion, there is no reason for merchants, farmers, landlords, et al. to be at loggerheads. Conflict is created only between those classes that rule the state and those that are exploited by the state. Not understanding this crucial point, the Beard-Becker historians framed their analysis in terms of the allegedly conflicting class interests of, in particular, merchants and farmers. Since the merchants clearly led the way in revolutionary agitation, the Beard-Becker approach was bound to conclude that the merchants, in agitating for revolution, were aggressively pushing their class interests at the expense of the deluded farmers.

But now the economic determinists were confronted by a basic problem: If indeed the Revolution was against the class interests of the mass of the farmers, why did the latter support the revolutionary movement? To this key question, the determinists had two answers. One was the common, mistaken view—criticized above—that the Revolution was supported only by a minority of the population. Their second answer was that the farmers were deluded into such support by the "propaganda" beamed at them by the upper classes. In effect, these historians transferred the analysis of the role of ideology as a rationalization of class interests from its proper use in explaining *state* action, to a fallacious use in trying to understand antistate mass movements. In this approach, they relied on the jejune theory of "propaganda," pervasive in the

1920s and 1930s under the influence of Harold Lasswell: namely, that no one sincerely holds any ideas or ideology, and therefore, that no ideological statements whatever can be taken at face value, but must be regarded only as insincere rhetoric for the purposes of "propaganda." Again, the Beard-Becker school was trapped by its failure to give any primary role to ideas in history.

After World War II, as part of the general "American celebration" among the American intellectuals of that era, the newly dominant "consensus school" of American history demonstrated that the Revolution was indeed supported by the majority of the population. Unfortunately, however, under the aegis of such major consensus theoreticians as the "neo-conservatives" Daniel Boorstin and Clinton Rossiter, the consensus school moved to the truly absurd conclusion that the American Revolution, in contrast to all other revolutions in history, was not *really* a revolution at all, but a purely measured and conservative reflex against the restrictive measures of the Crown. Under the spell of the American celebration and of the hostility to all modern revolutions generated by the post-World War II era, the consensus historians were constrained to deny any and all conflicts in American history, whether economic or ideological, and to absolve the American republic from the original sin of having been born *via* revolution. Thus, the consensus historians were fully as hostile to ideology as a prime moving force in history as their enemies, the economic determinists. The difference is that where the determinists saw class conflict, the consensus school maintained that the genius of Americans has always been to remain unfettered by abstract ideology of any kind, and that instead they have met every issue as ad-hoc problem-solving pragmatists.

Thus, the consensus school, in its eagerness to deny the revolutionary nature of the American Revolution, failed to see that all revolutions against state power are necessarily radical and hence "revolutionary" acts, and, further, that they must be genuine mass movements guided by an informed and radical ideology.

Fortunately, however, the most recent and now dominant school of historiography on the American Revolution—that of Professor Bernard Bailyn—brings radical ideology (and radical *libertarian* ideology at that) into the forefront of the causes of the Revolution. Against the hostility of both of the older schools of historians, Bailyn has managed, in scarcely a decade, to emerge as the leading interpreter of the Revolution. Bailyn's great contribution was to discover for the first time the truly dominant role of ideology among the revolutionaries. He stressed not only that the Revolution was a genuine revolutionary and multiclass mass movement among the colonists, but also that it was guided and impelled, above all, by the ideology of radical libertarianism—or, as Bailyn happily calls it, the "transforming libertarian radicalism of the Revolution."

In one sense, Bailyn harked back to a generation of historians at the turn of the twentieth century, the so-called Constitutionalists, who had also stressed

the dominant role of ideas in the revolutionary movement. But Bailyn correctly saw that the mistake of the Constitutionals was in ascribing the central and guiding role, first, to sober and measured legalistic arguments about the British Constitution and, second, to John Locke's philosophy of natural rights and the right of revolution. Bailyn saw that the problem of this interpretation was to miss the major motive power of the revolutionaries. Constitutional legalisms, as later critics pointed out, were dry-as-dust arguments that hardly stimulated the requisite revolutionary passions, and furthermore they neglected the important problem of the economic depredations by Great Britain; and Locke's philosophy, though ultimately highly important, was too abstract to generate the passions or to stimulate widespread reading by the bulk of the colonists. Something, Bailyn rightly felt, was missing: the intermediate-level ideology that could stimulate revolutionary passions.

Bailyn found the missing ingredient in the radical libertarian Lockean English writers of the eighteenth century—especially John Trenchard and Thomas Gordon of *Cato's Letters*. These writers applied and transformed Lockean natural-rights theory into a radical and passionate, and explicitly political, libertarian and anti-British framework. Trenchard and Gordon, and the other influential libertarian writers, clearly and passionately set forth the libertarian theory of natural rights, went on to point out that government in general, and the British government specifically, was the great violator of such rights, and warned also that power—government—stood ever ready to conspire to violate the liberties of the individual. To stop this crippling and destructive invasion of liberty by power, the people must be ever wary, ever vigilant, ever alert to the conspiracies of the rulers to expand their power and aggress against their subjects. It was this spirit that the American colonists eagerly imbibed, and that accounted for their "conspiracy view" of the English government, a view which historians like Bernhard Knollenberg have shown was basically correct, since, after 1760, such conspiracies were all too real. Thus, what some historians have derided as the "paranoia" of the colonists turned out to be not paranoia at all but an insightful apprehension of reality, an insight that was of course fueled by the colonists' libertarian understanding of the very nature and essence of state power itself.

Thus, in the deepest sense, the American Revolution was a conscious majority revolution in behalf of libertarianism and against power, a libertarian ideology that stressed the conjoined rights of "Liberty and Property." The American Revolution was not only the first great modern revolution. It was a libertarian revolution as well.*

*For a further elaboration of this thesis, see Murray N. Rothbard, "Economic Determinism, Ideology, and the American Revolution," *The Libertarian Forum* (November 1974): 4-7; see also Rothbard, "The American Revolution Reconsidered," *Books for Libertarians* (July 1974): pp. 6-8. For a summary of Bailyn's views, see Bernard Bailyn, "The Central Themes of the American Revolution: An Interpretation," in S. Kurtz and J. Hutson, eds., *Essays on the American Revolution* (Chapel Hill: University of North Carolina Press, 1973), pp. 3-31.

Bibliographical Essay

Despite the importance of this period in American history, there has until recently been no satisfactory overall treatment. Fortunately, this lack has now been remedied with the completion of Bernhard Knollenberg's two-volume masterpiece on the development of the American Revolution: *Origin of the American Revolution, 1759–1766* (1960), and *Growth of the American Revolution, 1766–1775* (1975). The Knollenberg volumes are thorough in detail and masterly and up to date in interpretation. Also useful but far less sound in interpretation is Merrill Jensen, *The Founding of a Nation: A History of the American Revolution, 1763–1776* (1968). Highly inaccurate is the old standby of John C. Miller, *Origins of the American Revolution* (1943). A realistic account of the use of mobs in the resistance movement is presented in Pauline Maier, *From Resistance to Revolution: Colonial Radicals and the Development of American Opposition to Britain, 1765–1776* (1972). Lawrence H. Gipson, *The Coming of the Revolution, 1763–1775* (1954), and *The British Empire Before the American Revolution*, vols. 9–12 (1956–1965), presents the British imperialist point of view. There are useful essays in Herbert Aptheker, *The American Revolution, 1763–1783* (1960).

The libertarian ideology animating the American revolutionaries is made clear in the deservedly influential work by Bernard Bailyn, *The Ideological Origins of the American Revolution* (1967), an expansion of his "General Introduction" to Bernard Bailyn, ed., *Pamphlets of the American Revolution, 1750–1776*, vol. 1, 1750–1765 (1965). The influence of French libertarian thought may be found in Howard Mumford Jones, *America and French Culture, 1750–1848* (1927); see also H. Trevor Colbourn, *The Lamp of Experience: Whig History and the Intellectual Origins of the American Revolution* (1965). The influence of, and the colonists' relations with, the Wilkite movement may be found in George Rudé, *Wilkes and Liberty: A Social Study of 1763 to 1774* (1962); Pauline Maier, "John Wilkes and American Disillusionment with Britain," *William and Mary Quarterly* (1963), pp. 373–95; and Jack P. Greene, "Bridge to Revolution: The Wilkes Fund Controversy in South Carolina, 1769–1775," *Journal of Southern History* (1963), pp. 19–52. English libertarians are depicted in Caroline Robbins' great work, *The Eighteenth Century Commonwealthman* (1959), and the activities of a particularly influential though neglected libertarian organizer in Robbins, "The Strenuous Whig: Thomas Hollis of Lincoln's Inn," *William and Mary Quarterly* (1950), pp. 406–53.

Religion played an important role in the development of revolutionary ideas. The best work on the "black regiment" of Congregationalist ministers is still Alice M. Baldwin, *The New England Clergy and the American Revolution* (1928). While scarcely definitive, Herbert M. Morais, *Deism in Eighteenth*

Century America (1934), is still the only work on this important subject. Arthur L. Cross's classic work on the struggle over Anglican bishops in America, *The Anglican Episcopate and the American Colonies* (1902), has now been supplemented and partially replaced by Carl Bridenbaugh, *Mitre and Sceptre: Transatlantic Faiths, Ideas, Personalities, and Politics, 1689-1775* (1962). The great radical Massachusetts minister Jonathan Mayhew is studied in Charles W. Akers, *Called unto Liberty: A Life of Jonathan Mayhew, 1720-1766* (1964).

Mercantilist acts and enforcement by Britain as causes of the American resistance are treated in Oliver M. Dickerson, *The Navigation Acts and the American Revolution* (1951); Carl Ubbelohde, *The Vice-Admiralty Courts and the American Revolution* (1960); and Joseph J. Malone, *Pine Trees and Politics: The Naval Stores and Forest Policy in Colonial New England, 1691-1775* (1964). While marred by errors of interpretation, Arthur M. Schlesinger's *The Colonial Merchants and the American Revolution, 1763-1776* (1918) is an important, thorough, and still definitive account of the merchants and the various movements and struggles for nonimportation from England. There are still useful essays in Richard B. Morris, ed., *The Era of the American Revolution* (1939).

The important influence of land-grabbing and speculation in the Western lands is covered in Clarence W. Alvord, *Mississippi Valley in British Politics: A Study of the Trade, Land Speculation, and Experiments in Imperialism Culminating in the American Revolution* (2 vols., 1917); and Thomas P. Abernethy, *Western Lands and the American Revolution* (1937). Dale Van Every, *Forth to the Wilderness: The First American Frontier, 1754-1774* (1961), is a vivid story of relations with Indians in the West; and Nicholas B. Wainwright, *George Croghan: Wilderness Diplomat* (1959), is an excellent account of the adventurer and swindler important to frontier and Indian relations in the early part of our period. Howard H. Peckham, *Pontiac and the Indian Uprising* (1947), supersedes the old classic by Francis Parkman, *The Conspiracy of Pontiac* (1851, 1962), as an account of the Pontiac Rebellion. Francis S. Philbrick, *The Rise of the West, 1754-1830* (1965), is a good overall account of the Western frontier.

The best discussion of the struggles over the British army and the growth of American resistance before the Revolution is in John Shy, *Toward Lexington: The Role of the British Army in the Coming of the American Revolution* (1965). The reader should also consult the excellent and up-to-date first two chapters on the military background of the American Revolution in Don Higginbotham, *The War of American Independence: Military Attitudes, Policies, and Practice, 1763-1789* (1971).

The role of the press in revolutionary agitation is admirably treated in Arthur M. Schlesinger, *Prelude to Independence: The Newspaper War on Britain, 1764-1776* (1958). This volume supersedes Philip G. Davidson, *Propaganda and the American Revolution, 1763-1783* (1941), which is fatally marred by the view that all ideology is mere "propaganda."

The vital role of colonial agents in London is treated in Michael G. Kammen, *A Rope of Sand: The Colonial Agents, British Politics, and the American Revolution* (1968); and Jack M. Sosin, *Agents and Merchants: British Colonial Policy and the Origins of the American Revolution, 1763-1775* (1965). The letters of the most important of these agents are included in Ross J. S. Hoffman, ed., *Ed-*

mund Burke, *New York Agent* (1956). The best treatment of British politics in relation to the developing American resistance is Charles R. Ritcheson, *British Politics and the American Revolution* (1954). Jack M. Sosin, *Whitehall and the Wilderness: The Middle West in British Colonial Policy, 1760-1775* (1961), is a pro-British account of imperial policy in Western lands. The Whig and radical opposition to British imperial designs and to Tory government at home is discussed in Rudé, *Wilkes and Liberty* (1962); Eugene C. Black, *The Association: British Extraparliamentary Political Organization, 1769-1793* (1963); Archibald S. Foord, *His Majesty's Opposition, 1714-1830* (1964); George H. Guttridge, *English Whiggism and the American Revolution* (1942); and Lucy S. Sutherland, *The City of London and the Opposition to Government, 1768-1774: A Study in the Rise of Metropolitan Radicalism* (1959). The definitive, but difficult, political biography of the great Whig leader is Ross J. S. Hoffman, *The Marquis: A Study of Lord Rockingham, 1730-1782* (1973). The most relevant discussion of Burke in this period is Carl B. Cone, *Burke and the Nature of Politics*, vol. 1, *The Age of the American Revolution* (1957). The Tory, or "Namierite," point of view is presented in Sir Lewis Bernstein Namier, *England in the Age of the American Revolution* (2nd ed., 1961); Ian R. Christie, *Wilkes, Wyvill, and Reform: The Parliamentary Movement in British Politics, 1760-1785* (1962); and John Brooke, *The Chatham Administration, 1766-1768* (1956).

An excellent study of American resistance to the Stamp Act is Edmund S. and Helen M. Morgan, *The Stamp Act Crisis: Prologue to Revolution* (2nd ed., 1962). Supporting documents are contained in Edmund S. Morgan, ed., *Prologue to Revolution: Sources and Documents on the Stamp Act Crisis, 1764-1766* (1959). The Boston Massacre has now been treated fully in Hiller B. Zobel, *The Boston Massacre* (1970), and the Boston Tea Party in Benjamin W. Labaree, *The Boston Tea Party* (1964). The only study on the committees of correspondence is an old and brief work by Edward D. Collins, *Committees of Correspondence of the American Revolution* (1902). Disgracefully, there is no overall history of the Sons of Liberty; as a result, we have to make do with a few sectional accounts: Roger Champagne, "The Military Association of the Sons of Liberty," *New York Historical Society Quarterly* (1957), pp. 338-50; Champagne, "Liberty Boys and Mechanics of New York City, 1764-1774," *Labor History* (1967), pp. 115-35; the older Herbert M. Morais, "The Sons of Liberty in New York," in R. Morris, ed., *The Era of the American Revolution* (1939), pp. 269-89; and the most substantial study, Richard Walsh's *Charleston's Sons of Liberty: A Study of the Artisans, 1763-1789* (1959). The battles of Lexington and Concord are treated fully in Arthur B. Tourtellot, *William Diamond's Drum* (1959).

Turning to the individual colonies, Richard F. Upton's *Revolutionary New Hampshire* (1936) has been supplemented by Jere R. Daniell, *Experiment in Republicanism: New Hampshire Politics and the American Revolution, 1741-1794* (1970); see also Lawrence S. Mayo, *John Wentworth, Governor of New Hampshire, 1767-1775* (1921). Frederic F. Van de Water, *The Reluctant Republic: Vermont, 1724-1791* (1941), is a lively account of the Vermont rebellion; see also Chilton Williamson, *Vermont in Quandary, 1763-1825* (1949). For a biog-

raphy of the great Ethan Allen, John Pell's *Ethan Allen* (1929) has been supplemented by Charles A. Jellison, *Ethan Allen* (1969).

Robert E. Brown, *Middle-Class Democracy and the Revolution in Massachusetts, 1691-1780* (1955), is a basic work, even though his stress on "democracy" is overdrawn. Rural Massachusetts is treated in Lee N. Newcomer, *The Embattled Farmers: A Massachusetts Countryside in the American Revolution* (1953), and in the important work by Robert J. Taylor, *Western Massachusetts in the Revolution* (1954). E. Francis Brown, *Joseph Hawley: Colonial Radical* (1931), is a biography of the revolutionary leader in western Massachusetts. Merchant families, on the other hand, are treated in Benjamin W. Labaree, *Patriots and Partisans: The Merchants of Newburyport, 1764-1815* (1962), and William T. Baxter, *The House of Hancock, Business in Boston, 1724-1774* (1945).

The great Sam Adams has been ill-served by his biographers: John C. Miller, *Sam Adams* (1936), under the influence of the "propaganda" school of historiography, is hostile and vituperative. John Adams, on the other hand, has had numerous biographers. Best for our purposes is Catherine Drinker Bowen, *John Adams and the American Revolution* (1950). Page Smith's *John Adams* (2 vols., 1962), though mired in detail, is weak on Adams' political and economic thought. Bernard Bailyn, *The Ordeal of Thomas Hutchinson* (1974), is sensitive, but overly sympathetic to the Tory Leader. The heroic Dr. Joseph Warren is treated in John Cary, *Joseph Warren: Physician, Politician, Patriot* (1961).

The outstanding work on Connecticut in this period is Oscar Zeichner, *Connecticut's Years of Controversy, 1750-1776* (1949). The best account of Rhode Island politics in this era is David S. Lovejoy, *Rhode Island Politics and the American Revolution, 1760-1776* (1958); see also Mack E. Thompson, "The Ward-Hopkins Controversy and the American Revolution in Rhode Island: An Interpretation," *William and Mary Quarterly* (1959), pp. 363-75.

Carl L. Becker's *The History of Political Parties in the Province of New York, 1760-1776* (1909) is a much criticized "Beardian" classic, but still the best work on New York political struggles in this era. Bernard Mason, *The Road to Independence: The Revolutionary Movement in New York, 1773-1777* (1966), presents a different interpretation, as do the later chapters of Patricia U. Bonomi, *A Factious People: Politics and Society in Colonial New York* (1971). However, the neo-Beardian approach to New York politics is rehabilitated in the early chapters of the brilliant work by Alfred F. Young, *The Democratic Republicans of New York: The Origins, 1763-1797* (1967). The indispensable work on land conflicts in New York is Irving Mark, *Agrarian Conflicts in Colonial New York, 1711-1775* (1940), which should be supplemented by the account of the New York tenant rising of 1766 in chapter three of Staughton Lynd, *Anti-Federalism in Dutchess County, New York: A Study of Democracy and Class Conflict in the Revolutionary Era* (1962); see also the early chapters of Bonomi, *A Factious People*. Dorothy Dillon, *The New York Triumvirate: A Study of the Legal and Political Careers of William Livingston, John Morin Scott, William Smith, Jr.* (1949), deals with the radical leadership in New York. The conservative figures are covered in biographies: George Dangerfield, *Chancellor Robert R. Livingston, 1746-1813* (1960); Frank Monaghan, *John Jay* (1935); Edward P. Alexander, *Revolutionary Conservative: James Duane of New York*

(1938); and Max M. Mintz, *Gouverneur Morris and the American Revolution* (1970).

For New Jersey we must go to general works on the colonial period: Donald L. Kemmerer, *Path to Freedom: The Struggle for Self-Government in Colonial New Jersey, 1703-1776* (1940), supplemented by Richard P. McCormick, *New Jersey from Colony to State, 1609-1789* (1964).

Theodore Thayer, *Pennsylvania Politics and the Growth of Democracy, 1740-1776* (1953), is the book on Pennsylvania politics for this period. Although old, Charles H. Lincoln's *The Revolutionary Movement in Pennsylvania, 1760-1776* (1901) has not been replaced. Various aspects of Philadelphia life are treated in Frederick B. Tolles, *Meeting House and Counting House: The Quaker Merchants of Colonial Philadelphia* (1948); and Carl and Jessica Bridenbaugh, *Rebels and Gentlemen: Philadelphia in the Age of Franklin* (1942). Some rebel leaders have been treated: Burton A. Konkle's *George Bryan and the Constitution of Pennsylvania, 1731-1791* (1922); David L. Jacobson, *John Dickinson and Revolution in Pennsylvania* (1965); and the great Charles Thomson in an article, John J. Zimmerman, "Charles Thomson: The Sam Adams of Philadelphia," *Mississippi Valley Historical Review* (1958), p. 464. Of the innumerable works on Benjamin Franklin, the standard, though uncritical, account is Carl Van Doren, *Benjamin Franklin* (1938). For Delaware, we must still fall back on the unsatisfactory and aged John T. Scharf et al., *History of Delaware, 1609-1888* (2 vols., 1888).

For politics in the southern colonies, John R. Alden, *The South in the Revolution, 1763-1789* (1957), is excellent. On Maryland, see Charles A. Barker, *The Background of the Revolution in Maryland* (1943); and James Haw, "Maryland Politics on the Eve of Revolution: The Provincial Controversy, 1770-1773," *Maryland Historical Magazine* (1970), pp. 103-29.

The Parsons' Cause and other Virginia grievances down to 1763 are treated in the latter chapters of volume two of Richard L. Morton's excellent *Colonial Virginia* (1960). On the revisionist view of Virginia's debts to British merchants, see J. H. Soltow, "Scottish Traders in Virginia, 1750-1775," *Economic History Review* (1959), pp. 83-98; and Emory G. Evans, "Planter Indebtedness and the Coming of the Revolution in Virginia," *William and Mary Quarterly* (1962), pp. 511-33. Charley S. Sydnor's *Gentlemen Freeholders: Political Practices in Washington's Virginia* (1952) is an excellent study of the political scene in the leading southern colony. On Patrick Henry, see the biography by Robert D. Meade, *Patrick Henry*, vol. 1 (1957); see also the older work by Moses Coit Tyler, *Patrick Henry* (1898), which includes long excerpts from Henry's notable speeches. The great Richard Henry Lee now has found his biographer in Oliver P. Chitwood, *Richard Henry Lee: Statesman of the Revolution* (1968).

The literature on North Carolina is sparse. Robert D. W. Connor, *History of North Carolina*, vol. 1 (1919), covers the colonial and revolutionary periods. "The War of the Regulation: Its Place in History" (1942), an unpublished master's thesis, is the only modern study of the North Carolina Regulator movement. An earlier study is by John S. Bassett: "The Regulators of North Carolina, 1765-1771," American Historical Association, *Annual Report* (1894), pp. 141-212.

South Carolina is better served. The classic history of the colony is Edward

McCrary, *The History of South Carolina Under the Royal Government, 1719–1776* (1899). The standard modern work is David D. Wallace, *History of South Carolina*, vol. 1 (1934). The only good history of the Sons of Liberty for any area is Richard Walsh, *Charleston's Sons of Liberty: A Study of the Artisans, 1763–1789* (1959). The most recent study is Robert M. Weir, "*A Most Important Epoch*": *The Coming of the Revolution in South Carolina* (1970). An excellent history of the South Carolina Regulators is Richard M. Brown, *The South Carolina Regulators* (1963). There is, unfortunately, no biography of the memorable Christopher Gadsden, although Richard Walsh has collected his *Writings, 1746–1805* (1966).

On the coming of the Revolution in Georgia, see Kenneth Coleman, *The American Revolution in Georgia, 1763–1789* (1958); see also Marjorie L. Daniel, *The Revolutionary Movement in Georgia, 1763–1777* (1937).

VOLUME 4

THE REVOLUTIONARY WAR,
1775–1784

These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country; but he that stands it *now*, deserves the love and thanks of man and woman. Tyranny, like Hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph.

Patrick Henry

PART I

The War Begins

1

Spreading the News of Lexington and Concord

The news of the victorious battles of Lexington and Concord on April 19, 1775, hit the world like a thunderclap; they were truly a “shot heard round the world,” and it was the first order of the day for the Massachusetts radicals to make sure that the news spread—especially to the other colonies—in the right way. They needed to present a picture of events that would evoke sympathy and solidarity for the revolutionary cause. The basic outlines of the case were there in reality: proud British troops had invaded the countryside outside Boston; they had launched an armed conflict by shooting down a brave, heavily outnumbered troop at Lexington; and finally, they were smashed by a triumphant array of enthusiastic, individualistic, American farmers on the retreat from Concord. As historian Arthur Tourtellot has put it:

The British had marched out of Boston in force. . . . The British had fired to kill first. The British had destroyed property. There had been bloodshed and death. . . . All this established beyond any doubt that the Americans had been the victims. At the same time—and this was equally important—the Americans were also the victors. The half-believed argument . . . that the American colonists would never stand up to British regulars was thoroughly shattered.*

But the facts had to be dressed up for popular consumption, especially before the British could turn on *their* engines of propaganda. There was

*Arthur B. Tourtellot, *Lexington and Concord* (New York: W. W. Norton & Co., 1963), p. 211.

little need at first to whip up Massachusetts, whose armed farmers were on fire and beginning to pour in to aid the militia; but it was essential and much more difficult to try to command the support of the other colonies for the Revolution, colonies whose leadership had always been suspicious of the radicalism and individualism of the bay colony.

When John Hancock, John Adams, and Sam Adams departed for the crucial meeting of the Second Continental Congress scheduled for May 10, the leadership of radicalism in Massachusetts was left in the capable hands of Dr. Joseph Warren. A brilliant young man educated in liberty under Edward ("Guts") Holyoke at Harvard, Warren had been the only political leader to participate in the first line of fighting over the whole course of the flight from Concord. Now the toast of Massachusetts, Warren set up civil headquarters at Cambridge on the day after the Concord battle, and was made acting chairman of the Massachusetts Committee of Safety. Less than twenty-four hours after the end of the battle of Concord, he issued the first circular on the events of April 19. In the name of the Committee of Safety, Warren directed the circular to the prime immediate task: to raise an army of the Massachusetts militia. His circular therefore went to the Massachusetts towns and beat a drumfire of flaming warning against the British:

The barbarous murders committed upon our innocent brethren . . . have made it absolutely necessary, that we immediately raise an army to defend our wives and children from the butchering hands of an inhuman soldiery, who, . . . enraged at being repulsed from the field of slaughter, will, without the least doubt, take the first opportunity in their power, to ravage this devoted country with fire and sword. . . . Our all is at stake. Death and devastation are the certain consequences of delay. . . . An hour lost may deluge your country in blood, and entail perpetual slavery upon the few . . . who may survive the carnage.

He concluded by urging the speediest possible enlistment in a Massachusetts army.

The British troops had scurried from the Charlestown peninsula back to the safety of Boston across the river; and so the first task of the rebels was to raise an army to lay siege to Boston and contain the British forces within that city. That army sprang up literally overnight as, during April 20, militia from all over the province poured into Cambridge, where Artemas Ward and others, appointed as generals by the Massachusetts Provincial Congress, now made their headquarters. Militia also poured in rapidly from Connecticut and New Hampshire, and in a few days many thousands arrived from these two colonies. As a result, in an in-

credibly brief time 20,000 eager militiamen formed an army laying siege to Boston. The provincial army which the radicals had sought and which the provincial congress had failed to raise only a week before Concord was now in being. Although it had a leader, Artemas Ward, it was as yet a force of individualists, each coming and leaving on his own responsibility.

The Massachusetts Provincial Congress met quickly on April 22. Now that an army—albeit an individualistic army—could at least temporarily hem in the British force at Boston, Joseph Warren, the new president of the Congress, turned to the vital barrage of education and propaganda directed to the other American colonies. Warren and the radicals realized the vital importance of public support and enthusiasm—and hence of agitation and propaganda—in this new type of war. Here was not a usual war begun by one government against another; here was a people's war of revolution waged against the existing state apparatus, begun without benefit of governmental or even organized direction. To continue demanded public support throughout the colonies for the Massachusetts cause.

Virtually the first act of the Massachusetts congress, therefore, was to appoint two committees, one to investigate the facts of Lexington and Concord, the other to draw up a narrative of what had happened there. Interestingly enough, while the Committee of Inquiry was making a careful investigation of the facts, the Narrative Committee was already writing its rather distorted report, and with little reference to the inquiry. Its chairman was none other than Dr. Benjamin Church, later discovered to be a secret traitor and informer, who felt he had to go out of the way to proclaim his devotion to the revolutionary cause. Church's report, issued on April 26, revelled in fake atrocity stories—always an effective device for whipping up hatred of the enemy. Dr. Warren, when editing the report, added further touches to the manufactured atrocities in an appeal to the people of Boston.

Special teams of couriers swiftly carried the Church report throughout the colonies and the newspaper press hastened to publish the story, liberally adding further atrocity tales of their own. Many papers, refusing to wait for their weekly publication date, issued handbills as extra editions as soon as the news arrived. Often, the printed account was edged in heavy black borders, and headlines such as "Bloody News" and "Bloody Butchery by the British Troops" abounded. Isaiah Thomas, editor of the fiery, radical *Massachusetts Spy*, had moved his press from Boston to Worcester. From there he fired off a blast that was reprinted in newspapers throughout the colonies. Thomas called on Americans to "forever bear in mind the BATTLE OF LEXINGTON! where British Troops, unmolested and

unprovoked, wantonly . . . fired upon and killed a number of our countrymen." No piteous cries, thundered Thomas, could divert the British troops "from their DESIGN of MURDER and ROBBERY." And the radical *New York Journal* mocked bitterly that "the kind intentions of our good mother—our tender, indulgent mother—are at last revealed to all the world"; for this mother was "a vile imposter—an old, abandoned prostitute—crimsoned o'er with every abominable crime, shocking to humanity!"

The Tory press, in the face of the intensity of popular feeling, was extremely circumspect about the events at Lexington and Concord. In Boston it ceased publication altogether, and the papers in New York refused to carry the British side of the case.

2

The Response in Britain

So zealous and skillful were the American radicals at spreading their account of Lexington and Concord that, by a feat of seamanship and enterprise, the American version reached Britain two full weeks before the official dispatches of Gen. Thomas Gage! Dr. Warren dispatched the skillful young mariner Capt. John Derby to England from Salem. Derby reached London before the end of May, quickly placing the papers in the custody of the radical John Wilkes, by then lord mayor of London. The next day, the American version of the affair hit the English press with great impact. The Reverend John Horne, a leading radical of London, promptly issued an appeal for funds to aid the widows and orphans of Americans murdered at Lexington, funds to help "our beloved American fellow-subjects, who, faithful to the character of Englishmen, preferring death to slavery, were, for that reason only, inhumanly murdered by the King's Troops. . . ." For sending the money thus raised to Benjamin Franklin, who had already sailed for America earlier that year, Horne was imprisoned by the crown. For its part, the British government, bereft of information for two critical weeks, could only deny that such battles had taken place—a denial that made it a laughingstock when Gage's dispatches finally arrived.

The outbreak of war had a great and critical impact upon the liberal Whigs, many of whom were high-ranking officers in the British armed forces. Some refused outright to serve in war against the Americans, including Adm. Augustus Keppel and Lord Effingham. Rather than lead the war against the Americans, Effingham published his resignation from

the army in September, for which he received public thanks from London, Dublin, Newcastle, and other cities. The British army was hit by numerous other resignations of conscience-stricken Whigs. Lord Chatham publicly refused to allow his son, William Pitt the Younger, to fight against the Americans. A typical Whig defection among leading Englishmen was that of Granville Sharp, the man chiefly responsible three years earlier for the legal action that had outlawed slavery within England. When the American Revolution broke out, Sharp was assistant to the secretary of ordnance and was in charge of ordering the munitions for the British army in the colonies. By midsummer, he obtained extended leave from his duties, because "I cannot return to my ordnance duty whilst a bloody war is carried on, unjustly as I conceive, against my fellow-subjects." As the war dragged on, Sharp finally resigned his post, winning public applause for his courageous act.

Many merchants joined the Whig leaders in opposition to war against the Americans. The Common Council of London petitioned the king to end the harsh measures against the Americans, and the Livery Company of London declared that the Americans were dutybound to resist invasion of their rights. This American victory for the minds of the British people was never entirely erased by the government, especially since Warren had been careful to appeal to the English as "fellow-subjects" in natural alliance against the crown and its armed forces.

The crown, of course, in the manner of hardliners throughout history, refused to acknowledge that its policy of coercion had failed. Instead, so much the more did the Americans need to be suppressed, and the "rebels" and "villains" to be taught a lesson. For the moment six regiments from the Mediterranean were to be sent to Boston and more enlistments were hoped for—enlistments that failed to materialize. Neither was the North ministry at all apologetic about the failure to cow the Americans. Instead, blame was put on subversive Whigs who had put ideas of liberty and revolution into the heads of the Americans, and, more specifically, on the supposed incompetence of General Gage, who had, however, been essentially acting on crown orders.

3

Guerrilla or Conventional War

After their humiliating defeat at Concord, many leading British officers acknowledged their error in being contemptuous of American military prowess. But others accused the Americans of not fighting fairly, according to the rules of conventional warfare. Instead of marching out on the open field in an extended line to fire volleys at a similarly aligned enemy, the “cowardly” rascals persisted in hiding inside and behind houses, trees, and stone walls, picking off English soldiers with accurate individual rifle fire. To the European military mind of the day, such actions were sheer murder and therefore dishonorable.

Behind the almost blatant idiocy of such an attitude, there lay the hard core of an extremely important problem. For certainly here had been warfare that upset all the “rules” of organized European warfare, in which the armies of the various states were sent out to kill each other in formal massed array. The tactics employed by the Americans at Concord reflected a new type of war: revolutionary war by a people in arms, a war that would naturally take the course—unless deflected by conscious purpose—of guerrilla warfare, in which individuals among the masses, familiar with the terrain, employed their advantage of knowledge and mass support to achieve mobility and surprise against an army possessed of superior firepower.

The Americans, at the very outset, were therefore faced with a choice of extreme importance in conducting their revolution. Unfortunately, they saw their alternatives but dimly, although here and there leaders

could see the vital issues with piercing clarity. Their choice not only determined the outcome and duration of the war; it also determined the permanent complexion and structure of any independent America that might emerge.

The colonists might choose either alternative or various admixtures of both. On the one hand, they could fight the war in European fashion, gathering together a standard European army, organizing it according to European-style totalitarian discipline, conscripting men and vast supplies to feed and equip the army, and then meeting the British in formal open combat. On the other hand, they could run a new style of war, a radical people's war of national liberation, a guerrilla war resting on individual responsibility, mobility, and surprise. A guerrilla war would be enormously less expensive than an orthodox one. For one thing, the guerrillas would not be full-time soldiers, torn away from productive labor to require parasitic feeding from an already harassed and burdened population. They would not be hauled from place to place, region to region. Instead they would be part-time soldiers, remaining in production, not requiring taxes or inflation to impose burdens on the people as a whole; they would remain close to home, fighting with high morale for their own area and homes, and feeding off their own continuing production rather than off the rest of society. Moreover, whereas orthodox warfare would require taxation, conscription, hierarchy, discipline, and the creation of a vast unproductive and expensive state bureaucracy to direct and supply the armies while draining the production of society, a guerrilla war could be run individualistically, relying on the zeal of the individual guerrilla, and would entail virtually no central bureaucracy or centralized confiscation of property to finance the war.

In brief, a guerrilla war would be the libertarian way to fight a war fully consistent with the American revolutionary ideals of liberty and equality of rights, and, therefore, the only way to achieve the libertarian goals of the Revolution. A European-style, orthodox war would be heavily statist, and would inevitably lead to the resumption of the very statism—the taxes, the restrictions, the bureaucracy—which the colonists were waging the revolution to escape.

What is more, guerrilla war would be enormously more effective; for that is the way any subjugated people—not only libertarians—can best fight against a better-armed, but hated foe. The efficiency of guerrilla fighting as against European warfare had not only been demonstrated in the unbroken victories of Ethan Allen and the Green Mountain Boys in the Vermont revolution, but also in the victory at Concord, a guerrilla engagement so individualistic as to be almost completely leaderless. In

contrast stood the slaughter at Lexington, where the Americans had fought in fixed ranks in the open.

Both moral principle and utility therefore required the choice of a guerrilla war; but various factors, certainly including the novelty of the dilemma, dictated a different choice.

4

The Seizure of Fort Ticonderoga

Massachusetts, a few days after Concord, had little time to ponder its choices. Twenty thousand individualists were keeping the British penned in Boston; but the 20,000, seeing little or nothing for them to do, began to drift home. In truth, the taking of major cities is the final stage of a guerrilla war; if the Americans were not yet strong enough to crush the British force of 4,000 within Boston, there was little point in maintaining the huge besieging force. Besides, Boston's geography as a peninsula with a very narrow neck and General Gage's panicky evacuation of the Charlestown Peninsula immediately after Concord insured the immobility of the British army. Here Joseph Warren took a large step away from liberty by pressing for a formal army organization to replace the individual militiaman and by insisting on terms of enlistment to last until the end of the year, and so destroying the freedom of action of the individual soldier. Massachusetts radicalism was beginning to be tempered by conservatism, and Liberty diluted by Power.

On April 23, the Massachusetts Provincial Congress voted to raise over 13,000 men for the siege, and the other New England colonies offered to supply a quota of several thousand each. Although these quotas were never filled, in little over a month 15,000 men of an organized army surrounded Boston. Occupying the center at Cambridge with 9,000 men was Gen. Artemas Ward, in command of the Massachusetts army and acknowledged as commander by the forces of the other New England colonies. On the right, at Roxbury, in front of Boston, was Gen. John Thomas of Massachusetts, commanding 5,000 men; on the extreme left, at Chelsea and Charlestown Neck, were over a thousand New Hampshire

men, headed by Cols. John Stark and James Reed. The Americans had settled down to an expensive and unrewarding—and standard—“Sitzkrieg,” and collecting goods to continue to feed and supply this inert and continuing army soon began to prove difficult. Meanwhile, British reinforcements swelled Gage’s force to over 6,000 men, giving him a greater potential for mischief.

While the New England and British troops were thus stalemated, bolder souls began to dream of American irregulars taking the offensive and striking a vital blow against England. In particular, Ethan Allen had, at least as early as February, been stressing the importance of the American seizure of Fort Ticonderoga should hostilities break out with England. Ticonderoga, on the northern frontier of New York, and at the border of the New Hampshire Grant country, was the vital gateway to Canada—whether for offense or defense against any possible British attempt to march from Canada down the Hudson Valley, splitting the colonies in two. Furthermore, Ticonderoga was known to have by far the largest store of cannon and other heavy artillery in the colonies; if the Americans could possibly manage to transport the big guns to the heights around Boston, they could compel the British to evacuate.

Shortly after Lexington and Concord, Ethan Allen proposed to seize Fort Ticonderoga. The bulk of his force was to consist of his Green Mountain Boys, to which were to be added one troop from Connecticut and one from Pittsfield, Massachusetts. All in all, approximately sixty-five men from Connecticut and western Massachusetts joined a hundred Green Mountain Boys at Bennington (now in Vermont) on May 9, and the leaders unanimously chose Allen as their commander, with Seth Warner and James Easton as his lieutenants.

The same idea had also occurred to the outspoken and wealthy merchant of New Haven, Capt. Benedict Arnold; on hearing of the outbreak of fighting, Arnold, within a day, marched his militia company to Cambridge. On the way, Arnold met and convinced Connecticut’s Col. Samuel Parsons of the importance of capturing Ticonderoga. Parsons promptly set about organizing the expedition. At Cambridge, Arnold successfully threatened to seize the needed ammunition by force when the town authorities tried to block him from taking any. He also persuaded the Massachusetts Committee of Safety to grant him a colonelcy and authorize him to raise men and take Fort Ticonderoga. Hearing of the Allen-Easton expedition, he rushed to the Green Mountain country, and, with characteristic gall, brandished his Massachusetts commission and insisted on taking absolute command of the rebel force. Allen, of course, was not one to bow before any official commission, and neither were his soldiers. Finally, Arnold was allowed to march alongside Allen at the head of the expedition, but there was no doubt in anyone’s mind—except perhaps

Arnold's—that Ethan Allen was the undisputed leader.

On the morning of May 10, Allen and his intrepid band sailed across Lake Champlain to Ticonderoga. Before launching the surprise assault on the fort, Allen, true both to his libertarian beliefs and to the individualistic framework of guerrilla war, reminded his troops that no one, even at this late date, would be forced against his will to embark on the attack.

The blow was swift and sure; the surprise was complete. Mighty Fort Ticonderoga fell without a shot being fired. Here was eloquent testimony to the effectiveness of the guerrilla tactic, with its advantages of great mobility, superior knowledge, and high morale. The next day, the small British force at neighboring Crown Point fell to a detachment under Lt. Col. Seth Warner, also without a shot.

On the day of Ticonderoga's capture, the Second Continental Congress opened a monumentally important meeting at Philadelphia. The great task of the Massachusetts and New England radicals was to line up firm military support for and unity with the Massachusetts cause, a difficult task in the face of stubborn conservatism and middle-of-the-road confusion among their colleagues. The New England rebels found they were forced to temper their radicalism and individualism in order to appeal to the far more oligarchic leaders in the other colonies.

One of the early orders of business of the Congress was how to handle the news of Ticonderoga, and the dubious temper of the Congress was revealed in its reaction to the happy news. After Ticonderoga, on May 16, Arnold, reinforced by men from western Massachusetts, had raided and occupied Fort St. John's in Canada, north of Lake Champlain, and he was preparing to occupy Ticonderoga permanently. Moreover, both Arnold and Allen were proposing to help keep up the momentum by pressing onward to capture Montreal and even all of Canada from the British. Allen asserted that all they would need was more men, but instead of rejoicing at the news, let alone encouraging further victories, Congress was horrified at the entire exploit. In contrast to Lexington and Concord or even to the siege of Boston, here was a frankly *offensive* action against the British armed forces. To welcome Ticonderoga would be to acknowledge that America was fully in the throes of revolution, and Congress, beset by timidity and conservatism, was unwilling to do this. Accordingly, on hearing the news on May 18, Congress promptly ordered Arnold and Allen to abandon Fort Ticonderoga and retreat to the south end of Lake George. Congress' only slight acknowledgement of the victory was to concede that the Americans might take the guns and ammunition back with them; but an accurate account must be kept of them, "in order that they may be safely returned when the restoration of the former harmony between Great Britain and these colonies . . . shall render it prudent."

Arnold protested bitterly to the provincial congresses of New York and Massachusetts as well as to the Continental Congress. Allen, too, was willing to swallow his old hatred of New York and appeal to that colony for aid in keeping the forts and pressing onward to Canada. The New England colonies kept up a drumfire of protest and finally persuaded Congress to change its mind and keep the captured forts. Neither Allen nor Arnold were to gain congressional support for a conquest of Canada, however, despite the enthusiastic approval of Sam Adams. Instead, Ticonderoga and Crown Point were granted to Connecticut, and both Allen and Arnold were humiliated by being deprived of command in favor of Col. Benjamin Hinman of Connecticut, who was to occupy the forts with nearly 1,500 more troops from Connecticut. Understandably, Arnold was so disgusted that he resigned and went home. A scintillating guerilla conquest had lost its momentum and deteriorated into an orthodox, idle, and squabbling army of occupation at Ticonderoga.

5

The Response of the Continental Congress

The most important business before the Congress, however, was not Ticonderoga, but the problem of Boston and the army that Massachusetts and New England had hastily put up around it. What Congress decided to do about that army would determine what it would do about the entire Revolution. As soon as Congress opened, Dr. Warren of the Massachusetts Provincial Congress urged the Continental Congress to take responsibility for the army around Boston by appointing a commander-in-chief—thus committing the other colonies irrevocably to the Revolution. The Congress showed its temper by not even deigning to answer. Instead, as the Massachusetts radicals watched with dismay, it frittered away its time in evading responsibility for adopting the Revolution, merely sending elaborate proofs to London that the British troops had fired first at Lexington. It was clear that a considerable majority of the delegates, led by the now archconservative John Dickinson of Philadelphia, looked forward to reconciliation with Britain rather than to waging the Revolution with zest and vigor toward eventual independence. (Joseph Galloway and Isaac Low, heads of the ultraright in the first Congress, had by then, as outright Tories, moved outside the American dialogue as well as the Continental Congress, and were soon to slip behind British lines.) Seething inwardly, John Adams wrote to Joseph Warren from Philadelphia: “We find a great many bundles of weak nerves. . . . We are obliged to be as delicate and soft and modest and humble as possible.”

Not receiving any reply to its letter, the Massachusetts Provincial Congress developed a careful petition shrewdly designed to prod the Continental Congress into action by urging Congress to allow Massachusetts to

set up a permanent civil government. Such official authorization of the provincial congress and the network of town committees would push the Continental Congress closer to endorsing an open political break with England. Above all, Massachusetts petitioned Congress to appoint a commander-in-chief of the army at Cambridge. The Massachusetts petition was sent down via the informer Church as personal courier, and was presented to the Congress on June 2. Cautiously, Congress appointed a committee to mull over and report on this vital and controversial petition.

The first part of the Massachusetts petition was relatively easy. On June 7, Congress sanctioned Massachusetts' new civil government and approved the right of the people to set up their own government in the current circumstances, declaring, however, that this civil government would be only temporary, until reconciliation with Britain could restore the operation of the old, disrupted Massachusetts charter.

Meanwhile, the right-wing had been winning point after point in the Congress. An attempt to shift the site of the Congress northward to Connecticut, near the New England battlefront, had been quashed by the Dickinson group. So underdeveloped was the revolutionary timbre of this Congress that when New York asked what it should do if British troops were to land in New York City, Congress had generously urged the citizens not to resist and to give the soldiers proper quarters! Finally, while the hypocritical plan of British Prime Minister Lord North for conciliation was summarily rejected by the Congress, Dickinson and James Duane of New York infuriated the radicals by moving, at the end of May, to send "An Humble and Dutiful Petition" to the king, pleading for immediate negotiation and mutual accomodation. Infuriated, John Adams blasted such futile and humble petitioning. He argued that Congress should be making haste to defend the continent from the British, to take charge of the army at Cambridge, and even to warn that it was ready to make European alliances to aid its resistance. Adams was quickly backed by John Sullivan of New Hampshire, but Dickinson bitterly warned them that if New England didn't agree to "our pacific system, I, and a number of us, will break off from you in New England!"

The radicals, however, were prepared to accept the Dickinson "Olive Branch Petition," which they knew would be futile, provided that they won the crucial point—the second point in the Massachusetts petition—congressional assumption of responsibility for the revolutionary army in New England. The Congress took measured steps toward this goal during early June by voting to supply funds to furnish powder, first "for the Continental Army" and then frankly for "the American army before Boston."

The final step, however, was whether the Congress would actually take over direction of the army at Cambridge, directing the troops and furnish-

ing them with both supplies and a commander-in-chief. Here the Massachusetts radicals were in a cruel dilemma; any army under the Continental Congress would mean, in contrast to a guerrilla army, the inevitable buildup of a central state apparatus, and of a highly expensive and burdensome state army, which would inevitably saddle all Americans with heavy taxes, inflation, and debt. The Massachusetts radicals can hardly be blamed for their decision to press for a statist continental army; the theory of revolutionary guerrilla warfare had yet to be fully developed, and Massachusetts was understandably desperate to weld the other reluctant colonies firmly to the revolutionary cause.

On June 14, Congress took the fateful step of voting to organize an army of 15,000 men, and specifically to raise six (a little later, ten) companies of expert backwoods riflemen from Pennsylvania, Maryland, and Virginia to be sent to Boston. It was not lost upon the delegates that the crack-shooting frontier riflemen had been particularly effective in the victory at Concord. The crucial question now remaining was the identity of the commander-in-chief to be appointed by Congress.

On this vital issue, the Massachusetts radical leadership, traditionally united as one man, was grievously divided. Sam Adams, almost always instinctively libertarian, began with the most individualistic and democratic plan of all: appoint no commander-in-chief at all and permit the local militia soldiers themselves to elect all of their own officers, up to the rank of commander-in-chief. Whenever any plans for a continental army and commander were mentioned, Adams "was apt to murmur the word *Cromwell* and begin animadverting on the sacred, inalienable rights of the civilian."* Thomas Cushing, Robert Treat Paine, and other New Englanders wanted a New England general, the obvious choice being Artemas Ward, already in command before Boston. Ward, however, was a bit old for the job. The issue, of course, was not simply local pride, but the crucial one of keeping control of the army in the hands of individualistic and democratic New Englanders rather than subject to the aristocratic colonies. At this crossroads, John Adams, Elbridge Gerry, and Joseph Warren bent so far backward to achieve continental unity that they gravely compromised and sacrificed libertarian principle, storing up untold trouble for individualism in the future. In short, they decided to support for commander-in-chief that conservative scion of the Virginia landed oligarchy, George Washington. In doing so, incidentally, John Adams (though not Warren or Gerry) began a slow but steady political drift rightward out of the libertarian-radical camp.

Sam Adams, too, began to display an unsureness, a lack of confidence

*Catherine Drinker Bowen, *John Adams and the American Revolution* (New York: Grosset & Dunlap, 1950), p. 531.

that would periodically display itself on national issues and would also lead him, at least temporarily, rightward. Something seemed to be going forever from that once uncannily sure and self-confident planner and organizer of the Revolution, and he allowed himself to be persuaded by his cousin John to second the nomination of George Washington.

From a short-range, opportunistic point of view, the nomination of Washington appeared to the radicals to have merit. Not militarily, to be sure, for he had had little military experience, and that was a series of decisive losses in the French and Indian War. The attraction of Washington was that he was virtually the only man who could gain the votes of most radicals and conservatives alike. On the one hand, socially and politically, Washington was a deep-dyed conservative and could be depended upon to support the oligarchy and classical military tactics. On the other hand, in the fight with Britain, he—along with most of the Virginians—was close to the radical camp and could be depended upon to be militant in warring against Great Britain.*

Consequently, John Adams rose in Congress on June 14 to nominate Washington, and he was seconded by Sam Adams. In so doing, they permanently alienated the vain and flighty John Hancock, who fancied himself in the panoplied robes of commander-in-chief and expected his fellow Massachusetts delegates to nominate him. Already ensconced in the high-sounding but largely honorific post of president of the Continental Congress, his unfounded ambition was gravely wounded by their decision not to notify him in advance of what was being planned. The consequences of the Hancock-Adams split for future Massachusetts politics were enormous; for a start, from this point on Hancock hobnobbed with and was feted by the ultraconservatives of the Congress, men who were better able to satisfy his taste for finery than were the plain men of Massachusetts.

John Adams' plan met considerable resistance on June 14, especially from those backing Ward and the other candidates; but by the next day, resistance had melted away and Washington was approved unanimously. With their main points carried, the radicals supported the Dickinson Olive Branch Petition to England, which was passed by the Congress on July 5.

*Even such an admirer of Washington as Marcus Cunliffe admits that Washington's best role during the war was political and consultative rather than military: "Like General Eisenhower, he was a coalition general for a large part of the war . . . major strategic plans usually lay outside his scope. . . . If his charismatic symbols were those of the flag, the sword, the beautifully caparisoned horse —, his day-to-day responsibilities were more appropriately symbolized by the chairman's gavel . . . and the secretary's quill. It was his task, and his talent, to preside, to inform, to adjudicate, to advise, to soothe, to persuade, to anticipate, to collaborate." Marcus Cunliffe, "George Washington: George Washington's Generalship," in George Athan Billias, ed., *George Washington's Generals* (New York: William Morrow & Co., 1964), p. 16.

6

Charles Lee: Champion of Liberty and Guerrilla War

If the choice of commander-in-chief of the Continental Army had been made on the basis of ability, genius, military experience, erudition, ardor for the cause of liberty, or for a combination of these qualities, this crucial appointment would have gone not to Washington but to one Charles Lee. But political considerations ruled, and Lee, a native of Britain, had no political base. Mere merit was submerged, though some delegates did favor Lee for the job.

George Washington and Charles Lee: No greater contrast could be found in their confrontation, and no more fateful choice of appointment could have been made, a decision which would bear heavily on the future course of the history of the United States. Washington, a half-educated, blunt, practical man, a highly conservative landed oligarch of Virginia, orthodox in his military and political views, a loser in his few previous battles, longed to become the head of a regular state army on the conventional European model. Lee, a brilliant, articulate, learned, *déclassé*, English intellectual, an ardent, witty, pungent individualist, personally and politically dedicated to liberty and deeply influenced by libertarian thought, an authentic military genius, had seen a great deal of fighting on the European model and saw its deficiencies for the American scene. It was almost inevitable that two such deeply contrasting figures (Lee was chosen by Congress as third in command of the army, after Washington and Ward) would come to an irreparable clash. That clash came to pass, and since the seemingly inescapable verdict of history

was to give the victory to Washington, Lee sank into disgrace and oblivion from which historians are only now beginning to rescue him.*

Lee was that exceedingly rare combination: a brilliant soldier and a gifted intellectual. He was also the only general on the American side (with the exception of his old English-born friend Horatio Gates) to have had substantial military experience. A fluent linguist and learned in political and military theory as well as in classical and English literature, Lee had been influenced by the strongly pro-Whig history of England written by a French Huguenot, Paul de Rapin, and later by the writings of Rousseau. After serving as an officer in the French and Indian War (where he picked up the apt sobriquet "Boiling Water") Lee performed with brilliance in the British expedition against the Spaniards in Portugal. Despite his distinction, Lee was retired from the British army after the Seven-Years' War because his outspoken criticism of British political and military leaders and his increasingly radical Whig views had lost him favor with the crown.

In England, Lee was received with warmth in important Whig circles and became a friend of the liberal lords Thanet and Pembroke, of Charles Yorke, and especially of the ardent liberal Col. Isaac Barré. Thwarted in his military career at home, Lee became personal aide-de-camp to the rather liberal King Stanislaus of Poland. His letters from Poland reflected increasingly radical and libertarian views, denouncing the aggrandizement of George III, Granville, and the Tories, toying with the idea of a republic, and praising natural rights and the American resistance against the Stamp Act. He wrote: "May God prosper the Americans in their resolution, that there may be one asylum at least on the earth for men, who prefer their natural rights to the fantastical prerogatives of a foolish perverted head because it wears a crown."

Lee returned to England the following year, but his increasing radicalism again kept him from military preferment. Befriended by Gen. Sir Henry Conway, he became an ardent supporter of the Rockingham Whigs and of radical leader John Wilkes. By 1768 he was contemplating running for Commons, to effect a "glorious revolution" in Britain. He was also increasingly attracted to the American cause and habitually referred to

*On the bias of historians against Lee, see John W. Shy, "Charles Lee; the Soldier as Radical," in Billias, ed., *George Washington's Generals*, p. 23. The major event in the emerging historical rehabilitation of Lee is the work of John R. Alden, *Charles Lee: Traitor or Patriot?* (Baton Rouge, La.: Louisiana State University Press, 1951), the first sympathetic biography of Lee since the mid-nineteenth century. The Alden volume is indispensable. A growing appreciation of the value of guerrilla warfare has greatly aided in this reevaluation of Lee. See Shy, *op. cit.* and Don Higginbotham, "American Historians and the Military History of the American Revolution," *American Historical Review* (October, 1964), p. 32.

America as the last “asylum” of freedom. At this time, Lee, Horatio Gates, and other pro-American British officers began to gather periodically for an exchange of views.

In 1769 Lee was made an honorary major general in the army of the pro-Russian king of Poland. The same year, he joined the Russian army against Turkey and had the opportunity to observe guerrilla warfare by Turks and Polish rebel forces. Ill, and failing to be granted a command, Lee traveled widely through central and southern Europe, visiting such luminaries as Emperor Joseph II of Austria and growing ever more bitter in his correspondence against the Tory policies at home. He blasted the prime minister, the Duke of Grafton, as a man without conscience or honor and wrote that “if the axe is not applied to his neck, it is laid to the root of our liberties, national honor, and inheritance; there is no medium. . . .” More and more he spoke of being free in exile rather than submitting to the domination of George III. Excusing his lack of urbanity on the subject, for the Whig cause he ardently wished for “triumph over tyranny, corruption, Grafton, North, and the Devil. . . . My puny dagger shall contribute its mite of annoyance to the breast of despotism and wickedness.” And he passionately conjured up “the spirits of Cato, Brutus, Hampden, and Sidney” for the cause of liberty. George III was “a reptile” and a “despicable . . . stupid . . . dolt,” while Lords and Commons were “dens of thieves.”

Returning to England in the spring of 1771, Lee published in the press, though more circumspectly, a criticism of King George III, and also composed a lengthy, though unfortunately unpublished and vanished, critique of David Hume’s *History of England*. He was irked at Hume’s Tory apologetics for the Stuart kings, and he projected a satirical whitewashing history of the emperors Claudius and Nero, which he bitingly dedicated to David Hume. In the introduction to this critique, which has survived, Lee again attacked the Tory policies of George III, the use of pecuniary influence by the crown, and the large standing army as instruments of oppression. Disapproving of capital punishment in general, he wished to preserve it for kings and their families, since the eradication of a royal house was surely preferable to the loss of a people’s freedom. It is little wonder that the manuscript could not find an English publisher. In these final years in England, Lee became friendly with the great painter and ardent Whig, Sir Joshua Reynolds, with Whig leader Edmund Burke, and also with the great radical republican historian, Mrs. Catherine Macauley.

Finally, Charles Lee, a major general in the Polish army and a lieutenant colonel in the British, consummated the exile for which he had long been heading. Eager to help the burgeoning American cause, he arrived at New York in the fall of 1773, where both he and the Americans were ripe for a revolutionary situation. For over a year, he travelled extensively

throughout the colonies, making friends with all the revolutionary leaders, who were fascinated by his personality and by his military knowledge and ardor for liberty. In America he was no longer a maverick, but a leader in the American struggles with the British government. It was no coincidence that those particularly attracted to Lee were the radicals George Mason and Thomas Jefferson in Virginia, Alexander McDougall in New York, and Sam Adams and his followers in Massachusetts. He became an especially close friend of Virginia's Richard Henry Lee (no relation), who truly wrote of him: "A most true and worthy friend to the rights of human nature in general, and a warm spirited foe to American oppression."

Charles Lee lost no time in lauding Boston's resistance to the Tea Act and in urging energetic boycotts in reaction to the Coercive Acts of 1774. The crisis brought on by the Coercive Acts was obviously tailor-made for Lee's revolutionary temper. Taking up the pen as "Anglus Americanus" on behalf of active resistance, he urged a boycott and attacked moderation as "Submission to Britain." America was the "last asylum of liberty," and therefore its defense of liberty was also a defense for the people of Britain and for the rest of the world. This was published in the Philadelphia press, and a similar handbill was published in New York and widely reprinted in the New England papers.

By this time, Lee's old friend and fellow radical Horatio Gates, also forcibly retired from British army service after the Seven Years' War, had also emigrated to America and retired to a plantation in Virginia's Shenandoah Valley. Both men were clearly ready to take up arms for the American cause. Lee wrote to Gates that it was "incumbent on every man . . . to contribute his mite to the cause of mankind and of liberty, which is now attacked in her last and only asylum. . . ." And Gates, known as early as 1770 as a "red-hot republican," replied that he was "ready to risk my life to preserve the liberty of the western world."

When the First Continental Congress met at Philadelphia in September 1774, Lee was there, charming nearly everyone and, remarkably, writing the appeal which Congress sent to the Canadians for support in America's struggle. He also began in secret to draw up a plan for the organization of American battalions, a plan completed by the following February and which impressed many American leaders. Visiting Maryland in the fall of 1774, he induced the Maryland Provincial Congress to adopt his plan for organizing its battalions and even stayed to drill some of the troops. This plan of Lee's impressed Washington, who persuaded Fairfax County to urge a similar plan for Virginia militia and prevailed upon Patrick Henry to get the plan adopted by Virginia the following spring.

Lee published several essays on behalf of American freedom that winter, one of which pointed to King George's tyranny being exercised in Ireland and Minorca and warned of its advent in America. In an uncom-

leted essay, he praised the republican governments of Europe, citing contemporary policies of Geneva, Venice, and Switzerland, and in his letters, he began to advocate armed revolution.

Lee's most significant work, however, was one that called forth his military as well as his ideological abilities. The Tory Rev. Dr. Myles Cooper, Anglican president of King's College in New York City, had greatly disheartened the Americans with his pamphlet, *Friendly Address to All Reasonable Americans*. Cooper had counselled that resistance was useless against the mighty and thoroughly disciplined British regulars, who would be aided by large numbers of American Tories and German mercenaries. How could the undisciplined and untrained Americans even dream of opposing the British victors of the French and Indian War?

No one was more qualified to rebut Cooper's charge than Lee. He had seen the highly disciplined Prussian battalions—the envied model of all the regular armies of the day—at first hand, and was creative and individualistic enough to be unimpressed. Lee leapt into the fray, publishing his *Strictures Upon a "Friendly Address to All Reasonable Americans"* in Philadelphia in November 1774. He pointedly deprecated the British regulars. Their showy and much admired massed formation parade-ground tactics were of no military importance, and the British only won the French and Indian War after discarding this pattern. Moreover, he argued, the highly touted victories of Frederick the Great were largely won by the Prussian *militia* rather than by the formally trained regulars. The Americans had numbers, zeal, and knowledge of the terrain on their side—and did not the amateur militias of the parliamentary armies defeat the professionals of Charles I during the English Civil War?

Lee's pamphlet proved to be by far his most popular work; as the radical *Salem Essex Gazette* declared, it removed the terror the people had had of the British troops, and gave them the heart to resist. *Strictures* was reprinted five times during the winter of 1774–75—in Boston, New York, New London, and Newport—and was also republished in American newspapers. Alden has concluded that "the *Strictures* was probably one of the most influential pieces of propaganda in the revolutionary period."^{*}

After selecting Washington over Lee and Ward as commander-in-chief, the Second Continental Congress had to select the other generals of the Continental Army. The next step was to choose the major general who would be second in command, and the battle was rather naturally between Lee and Ward. Thomas Mifflin of Pennsylvania enthusiastically backed Lee, but he was bitterly opposed by Thomas Johnson of Maryland and by almost all the highly conservative New York delegation. As New En-

^{*}Alden, *Charles Lee*, p. 62.

gland's candidate, however, Ward was the inevitable choice for "first major general"; after Ward was chosen, the New England radicals, especially Sam Adams, fought ardently for Lee as second major general. Though Hancock and the more conservative delegates from Massachusetts opposed Lee, the backing of Washington, who had been impressed by Lee's military genius, carried the day. All in all Congress selected four major generals (the others were Philip Schuyler of New York's landed gentry and the veteran Israel Putnam of Connecticut) and eight brigadier generals, seven of whom were New Englanders. The preponderance of New England officers was natural, since the bulk of the troops then in the field came from that region. Chosen adjutant general, with the rank of brigadier, was Horatio Gates.

7

The Battle of Bunker Hill

While the Congress was in process of choosing the heads of the Continental Army, a pitched battle was being fought at Boston. The famous Battle of Bunker Hill, later touted as a great American victory, was neither a victory, nor did it take place at Bunker Hill.

At the end of May, the crown had sent a triumvirate of eminent generals to assist, and implicitly to pave the way for superseding, General Gage. These prestigious arrivals were Gen. Sir William Howe, an ardent Whig, who as a candidate for Parliament had pledged never to accept a command against the Americans; young Gen. Sir Henry Clinton; and the dashing Gen. John Burgoyne. Ordered by the crown to proclaim martial law in Massachusetts, General Gage allowed General Burgoyne to write the inflamantory proclamation, which, on June 12, denounced the Americans as rebels and traitors and offered pardon to all laying down their arms, except for the irredeemable Sam Adams and John Hancock. Stunned by the proclamation, the Americans yearned to retaliate; but this yearning grew far stronger when they learned the following day that the British had decided to seize and fortify unoccupied Dorchester Heights, a peninsula south of Boston.

The city of Boston was confronted on two sides by peninsulas with heights commanding the town: on the north, Charlestown Peninsula, on the south, Dorchester Heights. Sensing the folly of battling the British directly for the heights, the Massachusetts Committee of Safety, on June 15, urged the occupation and fortification of Bunker Hill on Charlestown Peninsula. The American council of war was split on the issue: the two best generals, Artemas Ward and Joseph Warren (who had been made a gen-

eral by the provincial congress), had long counselled against fortifying Bunker Hill, for the narrow neck of the peninsula endangered the entire force, especially should their scanty ammunition give out. Besides, without artillery the Americans could not use the position against Boston. However, the widely beloved though incompetent Gen. Israel Putnam, seconded by Gen. Seth Pomeroy and Col. William Prescott, carried the day for rashness over caution. Colonel Prescott was sent out on the night of June 16 to occupy the peninsula with 1,200 of the 10,000 available Americans.

Despite the agreed-upon plan, Prescott and Putnam decided to place their main entrenchments on Breed's Hill rather than on Bunker. This was a fateful decision. Bunker Hill was close to Charlestown Neck and guarded the only escape route off the peninsula. Breed's was much further out on the peninsula and in a dangerously exposed position.

It was inevitable that when the British saw what had happened they would attack the fortifications overlooking Boston. Quickly grasping the situation, General Clinton urged a swift and immediate landing behind the American lines at Charlestown Neck, cutting off the Americans from the rear and seizing the entire force with ease. But Gage would not accept such a sneaky and "unmilitary" tactic. General Howe, he insisted, would mount a frontal assault against the strongest American position; the rebels would panic and run at the sight of the advancing British regulars! Such a display of force would restore the British honor tarnished at Concord.

This typical contempt of the British military for the Americans led them into a disastrous blunder. Even the advantage of speed was scorned as the British made their leisurely way to the tip of the peninsula, allowing the Americans to complete their emplacements. A series of frontal assaults up Breed's Hill allowed the Americans to fight in their best manner: in quasi-guerrilla fashion, employing rifle fire from behind emplacements. The Americans were only partially at an advantage, however, for their precious mobility had been surrendered in favor of fixed positions. In addition, they were in short supply of ammunition and far from an escape route. As a result, repeated frontal assaults by the British finally succeeded. Breed's Hill was overrun and the Americans were routed out of the peninsula. Losses were enormous on both sides, the Americans suffering over four hundred casualties and the British over a thousand, amounting to over 40 percent of Howe's forces. Indeed, the "Battle of Bunker Hill" (actually of Breed's Hill, and sensibly known to contemporaries as the Battle of Charlestown) was the bloodiest single conflict on the American continent until 1815. The gravest single loss to the Americans was General Warren, who died in the rout. As for the British, perhaps the most fitting casualty at Bunker Hill was the killing of Maj. John Pitcairn by a Negro rebel, the same Pitcairn who had been sure that "if [he] drew [his]

sword but half out of the scabbard, the whole banditti of Massachusetts Bay would flee" before him. Now the banditti had cut him down.*

The American defeat would have been yet far more severe if the advice of General Clinton had not once again been ignored. He urged swiftly seizing advantage of the rout by pressing forward to destroy the demoralized American forces and capture Cambridge. Had General Howe agreed, Clinton might have dealt the Revolution a devastating blow, which was precisely what the astute General Ward now feared. But Howe, beginning the rapid development of an unerring talent for making the wrong decision, chose instead to stop, dig in, and fortify Bunker Hill.

Thus the victory went to the British in that they had conquered the Charlestown Peninsula, but their preposterous tactics, born of overconfidence, had decimated their army. As in so many military engagements in history, the battle was a tragicomedy of errors on both sides, with Britain's technical victory bought at an enormous price. For their part, contemporary Americans did not have the temerity to claim the battle as a mighty victory, and the entire operation was rightly denounced as rash and unfortunate.

*On the role of British contempt in their performance in the war of the Revolution, see Eric Robson, *The American Revolution in Its Political and Military Aspects, 1763-1783* (New York: Oxford University Press, 1955), pp. 127ff.

8

Washington Transforms the Army

Washington's first task was to assume direct command of the Continental Army before Boston, which he did upon reaching his Cambridge headquarters on July 2. Although he took up his tasks energetically, Washington accomplished nothing militarily for the remainder of the year and more, nor did he try. His only campaign in 1775 was internal rather than external; it was directed against the *American army* as he found it, and was designed to extirpate the spirit of liberty pervading this unusually individualistic and democratic army of militiamen. In short, Washington set out to transform a people's army, uniquely suited for a libertarian revolution, into another orthodox and despotically ruled statist force after the familiar European model.

His primary aim was to crush the individualistic and democratic spirit of the American forces. For one thing, the officers of the militia were elected by their own men, and the discipline of repeated elections kept the officers from forming an aristocratic ruling caste typical of European armies of the period. The officers often drew little more pay than their men, and there were no hierarchical distinctions of rank imposed between officers and men. As a consequence, officers could not enforce their wills coercively on the soldiery. This New England equality horrified Washington's conservative and highly aristocratic soul.

To introduce a hierarchy of ruling caste, Washington insisted on distinctive decorations of dress in accordance with minute gradations of rank. As one observer phrased it: "New lords, new laws. . . . The strictest government is taking place, and great distinction is made between officers and

soldier. Everyone is made to know his place and keep it." Despite the great expense involved, he also tried to stamp out individuality in the army by forcing uniforms upon them; but the scarcity of cloth made this plan unfeasible.

At least as important as distinctions in decoration was the introduction of extensive inequality in pay. Led by Washington and the other aristocratic southern delegates, and over the objections of Massachusetts, the Congress insisted on fixing a pay scale for generals and other officers considerably higher than that of the rank and file.

In addition to imposing a web of hierarchy on the Continental Army, Washington crushed liberty within by replacing individual responsibility by iron despotism and coercion. Severe and brutal punishments were imposed upon those soldiers whose sense of altruism failed to override their instinct for self-preservation. Furloughs were curtailed and girl friends of soldiers were expelled from camp; above all, lengthy floggings were introduced for all practices which Washington considered esthetically or morally offensive. He even had the temerity to urge Congress to raise the maximum number of strikes of the lash from 39 to the enormous number of 500; fortunately, Congress refused.

In a few short months, Washington had succeeded in extirpating a zealous, happy, individualistic people's army, and transforming it into yet another statist army, filled with bored, resentful, and even mutinous soldiery. The only thing he could not do was force the troops to continue in camp after their terms of enlistment were up at the end of the year, and by now the soldiers were longing for home. In addition to all other factors, Americans were not geared—nor should they have been—for a lengthy conflict of position and attrition; they were not professional soldiers, and they were needed at their homes and jobs and on their farms. Had they been a frankly guerrilla army, there would have been no conflict between these roles.

As the end of 1775 drew near, then, Washington's main preoccupation was in forging a new army to replace the 17,000 men whose terms of enlistment were about to expire. His problems were aggravated by Congress' refusal to pay the bounties for enlistment New Englanders were used to receiving; instead caste distinctions were widened even further by raising officers' pay, while privates' pay remained the same. Only 3,500 of the old army agreed to reenlist; for the rest, very short-term enlistments of Massachusetts and New Hampshire men filled the gap until new enlistees finally swelled the total to about 10,000.

As might have been expected, the wealthy and aristocratic Washington, free from money worries, had little understanding of the economic plight of his soldiery. In contrast to the legends about his compassion, Washing-

ton railed about the defecting troops as being possessed of a “dirty mercenary spirit” and of “basely deserting the cause of their country.”*

A particularly colorful addition to the New England troops in the Continental Army, during the summer of 1775, was a detachment of nine enlisted companies of expert riflemen from the back-country frontier of Pennsylvania, Maryland, and Virginia, five of them from Pennsylvania. There were over 1,400 of these riflemen in all. The bulk of them were hardy Ulster Scot frontiersmen, wearing hunting outfits bearing the motto Liberty or Death and employing the unique “Kentucky rifle,” invented by Pennsylvania German gunsmiths. This long-barreled rifle was uniquely suited for guerrilla warfare. It shot more accurately and over a far longer range than the shorter musket in general use, but it did not reload rapidly, and hence was not useful for orthodox, open-field, positional or linear volley warfare.

It is not surprising that these backwoodsmen proved even more individualistic and less tolerant of coercion than the New Englanders. When they terrorized British sentries with their sniping, Washington forbade such seemingly disorganized practice which spent ammunition. Whenever a rifleman was imprisoned for infringing one of Washington’s arbitrary but cherished rules, his comrades would break into the prison and set him free. On one occasion, virtually an entire Pennsylvania company mutinied to try to free one of their own, and several regiments were needed to disarm and convict the Pennsylvanians, whose penalty consisted of less than a week’s pay. The riflemen, however, were not so much unfit for any military service as they were “by nature and by experience, totally unfitted for inactive life in camp.” When the opportunity came for action for which they were suited, they were to serve admirably.**

Meanwhile, the British troops, reinforced in midsummer by up to 5,000 effectives, also dug in for a lengthy siege. As was inevitable, General Gage was made the scapegoat for Bunker Hill, and in mid-October he was recalled and replaced as commander-in-chief by the hardly less culpable General Howe.

9

The Invasion of Canada

While Washington busied himself with crippling the morale of the American army before Boston, other American forces were not idle. We have seen that promptly upon seizing Fort Ticonderoga and Crown Point, Ethan Allen and Benedict Arnold both pressed upon Congress the urgency of seizing the northern British base in Canada. They realized the necessity of speed; the British commander in Canada, Gen. Guy Carleton, his troops depleted to aid General Gage in Boston, had only two foot regiments and two artillery companies to defend the entire region. Speed was also needed to take advantage of spring and summer weather. There were Americans who supported a prompt strike at the British base in Canada—for instance, one of the sparkplugs of the blow at Ticonderoga had been John Brown, a lawyer of Pittsfield, Massachusetts, who had been sent as early as February as a secret agent to the Canadians by the Boston Committee of Correspondence to whip up support for the colonial cause. But we have seen that the conservatives in the Congress timorously scuttled the plan and even tried to get the Americans to withdraw from Ticonderoga. They even went so far as to drive the bold and brilliant Arnold and Allen from command.

The discontented activist officers at Ticonderoga quickly reacted by sending Ethan Allen and Seth Warner of the Green Mountain Boys as emissaries to the Continental Congress. Apparently, Congress found Allen persuasive, for it promptly recommended to the New York Provincial Congress that it form the Green Mountain Boys into a ranger regiment with officers of their own choosing. Moreover, four days later, on June 27, Congress finally decided to authorize an invasion of Canada.

While the Americans essentially adopted Arnold's tactical plan of taking Montreal and then moving on to Quebec, Congress, of course, did not have the imagination or daring to place such brilliant military radicals as Arnold or Allen in charge of the expedition against Canada. Instead, command was given to the man already in charge of the "northern department" at New York, the timorous and conservative scion of the New York landed oligarchy, Philip Schuyler. At a time when speed was of the essence, Schuyler dithered for two precious months, preparing his army of 1,700 men to move north from Crown Point and Ticonderoga. Fortunately, Schuyler had as his second in command the highly competent Brig. Gen. Richard Montgomery, who recognized the need for speed in mounting the invasion. The British-born Montgomery had had almost as much military experience in Europe as his friend Charles Lee or Horatio Gates, and had resigned from the British army in 1772 to settle in New York and marry into the Livingston branch of the New York landed aristocracy. In vain did he press Schuyler to march north; finally, taking advantage of Schuyler's absence at a parley to secure the neutrality of the Iroquois, Montgomery took it upon himself to make the move against Canada at the end of August, a decision in which Schuyler, taken off the hook, readily concurred.

General Carleton decided to make his main stand at Fort St. John's on the Richelieu River, north of Lake Champlain. But Schuyler lingered defensively in front of St. John's for two weeks, and only his illness, forcing him to return south in mid-September, permitted Montgomery to surround and lay proper siege to the fort.

The great bulk of the American expeditionary force came from Connecticut; the conservative province of New York, as Connecticut's Colonel Hinman said sourly, "abounds with officers, but I have not had my curiosity gratified by the sight of one private." While this proved to be a slight exaggeration, the New Englanders were understandably aggrieved at seeing the New Yorkers fill the major posts and gain lucrative commissary contracts, while *they* furnished the fighting men. The New Hampshire Grant contribution, in the meanwhile, had been gravely crippled by an upheaval among the Green Mountain Boys. Acceding to Congress' request, the New York Provincial Congress, in early July, had agreed to raise a battalion of five hundred men from the grant lands, to be known as the Green Mountain Rangers. But when the Committee of Safety of the towns west of the Green Mountains assembled at Dorset at the end of July to elect officers of the new battalion, Allen was humiliatingly repudiated. Seth Warner was chosen to be commander and Allen was not even selected as one of the subordinate officers.

The brutal cashiering of the magnificent Allen had been accomplished not by his devoted Green Mountain Boys, but by the timorous town elders

of the grant lands, who hated the radical, brawling, zestful deist, and took this opportunity to scuttle him. The enraged young men of the grant lands thereupon refused to enlist, and Warner was not able to bring the battalion to more than half strength. Deprived of their leader and their enthusiasm, the Green Mountain men were no longer the superbly effective force they once had been.

Allen, however, swallowed his pride in his eagerness to aid the revolutionary cause, and went back to Ticonderoga in hope of a commission, but Schuyler scornfully allowed the hero of Ticonderoga to sign on only as a private. At the siege of St. John's, General Montgomery put Allen in charge of thirty Connecticut militiamen, and sent him off through the countryside between the Richelieu and Montreal to try to raise Canadian volunteers for the cause. John Brown, now a major, and Warner were also sent around the countryside on similar errands. Repeatedly urging Montgomery to seize St. John's without delay, Allen managed to raise about eighty Canadians.

On September 24, Allen encountered Brown near Longueuil across the St. Lawrence from Montreal. Brown's bold proposal to strike at Montreal with his force of 200 had been vetoed by Montgomery, so he joined with Allen in a daring plan for a joint surprise strike at that great Canadian port. They agreed upon an immediate coordinated attack: Brown to cross the river and approach the city from the north, and Allen, his force now grown to 150, to attack simultaneously from the south.

The plan was brilliantly conceived and rested on the mobility and surprise inherent in a guerrilla-style operation. But Brown unaccountably failed to cross the river as agreed. The abandoned Allen was left to face an open battle with a superior force of over thirty British regulars and two hundred Canadian volunteers. Furthermore, Allen's men were not trained and loyal Green Mountain Boys, and the Canadians on Allen's flanks fled as soon as the British force surged out of Montreal to do battle. Allen and the tiny remainder of his force were taken prisoner, with Allen placed in chains and transported to England. The Americans' greatest and most daring guerrilla fighter was removed from the scene. Washington, who was wont to defend and wet nurse his fellow oligarch, Schuyler, could only react with near satisfaction to the loss of Allen: "Colonel Allen's misfortune will, I hope, teach a lesson of prudence and subordination to others. . . ."

The population of Canada in 1775 numbered approximately 60,000, almost all of them French peasants, or *habitants*, oppressed alike by the British state-privileged *seigneurs* and by the state-privileged church. There were only several hundred English Canadians ("Old Subjects"), most of them bureaucrats, soldiers, and merchants engaged in the Montreal fur

trade. Naturally, as the Revolutionary War began, both the British and the Americans tried to woo the Canadians; equally naturally, the French Canadians, certain of English and American contempt for their religion and their ethnic origins, had little interest in either party and remained neutral and aloof. Had the Anglo-American record of racial and religious bigotry not prevented the French Canadians from joining the revolutionary cause, Canada (Quebec) would undoubtedly have become a fourteenth original state of the United States.

The capture of Ethan Allen had considerable influence in swaying the cautious Canadians and Canadian Indians toward what looked like the winning side; but Carleton quickly dissipated any goodwill among the *habitants* by trying to conscript them *en masse* into the army—a draft that the sturdy French refused to obey. Nine hundred new men thus conscripted swiftly deserted at a rate of nearly forty a day.

The weather was now turning cold; the many months of American delay were already beginning to take their toll. The heavy New England force was also irrepressibly asserting its individuality and was in a state near to total mutiny. Montgomery's orders were being blithely disregarded, and he perceptively testified to the libertarian spirit of his troops, complaining to Schuyler that it was impossible to command men "who carried the spirit of freedom into the field, and think for themselves." In short, "the privates are all generals."

Things had begun to look up for the American forces, however. Montgomery's kinsman, Col. James Livingston, managed to maneuver past St. John's and capture Fort Chambly, some miles to the north, on October 8. St. John's was now in grave peril and Carleton raised a rescue force of sixty regulars and over seven hundred allied Indians and set forth across the St. Lawrence. But Seth Warner and the Green Mountain Rangers had fortified the opposite bank at Longueuil; their fire beat back the British. The doomed Fort St. John's surrendered on November 2, and 500 regulars, the bulk of the British force in Canada, were taken prisoner.

The great victory at St. John's threw Montreal wide open to the American forces, and General Montgomery swiftly pressed his advantage. Carleton escaped with his 150 regulars down-river toward Quebec, the last British stronghold in Canada. On November 13, a citizens' committee surrendered Montreal to the American force.

At this point there occurred another of the near misses at victory that were to stud this campaign. Carleton's fleet, sailing down the St. Lawrence, reached American positions at Sorel, at the junction of the Richelieu and St. Lawrence rivers. Major John Brown managed to dupe the British into believing that great cannon were stationed at Sorel, thus convincing the British fleet to surrender on November 19. Canada could

have been conquered then and there, but the redoubtable Carleton slipped past the American lines, disguised in peasant costume, and managed to reach Quebec.

He reached Quebec just in time for the British cause. The Americans had decided to strike on two fronts; while Schuyler and Montgomery were to make for Montreal, another force was to march overland across an extremely rugged route through Maine following the Kennebec, Dead, and Chaudiere rivers to assault Quebec. The daring plan for the expedition had been drawn up by the restless Benedict Arnold, who, having won the support of General Gates, was selected by Washington to lead the expedition with the rank of colonel. The plan was a brilliant one, and Arnold was happily given a free hand. But time was growing short. The decision to go forward with the invasion was made in mid-August—and “General Winter” was near at hand.

There was no dearth of volunteers for the Arnold expedition from the bored and fretting troops in the army around Boston. The assembled force of over a thousand men consisted of ten companies of musketeers from New England and three companies of backwoods riflemen from Virginia and Pennsylvania. Working at breakneck speed, Arnold was able to assemble the troops at Cambridge on September 11. They set sail for the Kennebec from Newburyport, Massachusetts, on the nineteenth, reaching Gardiner on the twenty-second.

Arnold now organized his army into four divisions, the lead division of riflemen under the command of Capt. Daniel Morgan, head of the Virginia rifle company. It was Morgan's task to clear a path for the army through the wilderness over the numerous carrying places. This giant, burly frontiersman, teamster, and veteran Indian fighter was to prove to be *the* great guerrilla fighter of the Revolutionary War. Overcoming incredible difficulties and hardships, Arnold and Morgan led their men to Quebec in one of the most famous marches in history, ranked by many with Xenophon's. But tragically, Lt. Col. Roger Enos, in charge of the rear-guard division, decided to betray his post at the end of October and took his force back home, absconding also with the bulk of the scarce remaining food. Enos' defection subtracted three hundred crucial men from the expedition, a loss that might well have spelled the difference between victory and defeat.

Still, Arnold and his gallant seven hundred might have taken Quebec. They arrived at Point Levis, across the St. Lawrence from Quebec, on November 9. The city was weakly defended, and a quick thrust across the river could have meant its capture. But high winds forced fatal delays in the crossing, allowing the highland Scot, Allan MacLean, who by sheer accident had learned of the Arnold expedition, to reach Quebec with one hundred men before Arnold could mount his attack. Finally crossing on

November 13, Arnold tried to provoke MacLean to leave the walls and fight, as Montcalm had done against the British over a dozen years before. MacLean sat tight, so Arnold, lacking men for a siege, went up-river to Pointe Aux Trembles to wait for Montgomery.

But the months of delay were now taking their toll, and the terms of enlistment of Montgomery's troops were about up. He was left with only 800 men, and after leaving garrisons at St. John's and Montreal, he could join Arnold with only 300, making a total American force of 1,000 before Quebec.

Montgomery and Arnold now found themselves besieging a city where 1,800 men had been mobilized, and with soldiers whose terms of service expired at the end of the year. The Americans were therefore forced to strike quickly. But the number of men was now too few, and the decision for coordinated surprise attack by the two leaders was betrayed to the enemy by deserters.

Two columns struck at Quebec on the night of December 30. Trying desperately to rally his column, the gallant Montgomery was cut down. The rest of the force promptly retreated in a rout, despite efforts of the brilliant young volunteer, Capt. Aaron Burr, son of the president of the College of New Jersey at Princeton, to rally the troops.

The collapse of the Montgomery column left the British free to concentrate on Colonel Arnold's force. Arnold was wounded in the attack, but Morgan, taking command, braved countless bullets and crashed the barrier. Morgan's every instinct was to strike while the iron was hot and the British were in panic, but unfortunately, he complied with the advice of his officers against any further advance. If not for this timorousness, which Arnold would certainly have overridden, Morgan might well have seized all of lower Quebec. The delay proved fatal.

Now surrounded by the British, the undaunted Morgan offered to personally cut a swath through the British troops to gain an escape route, but the other officers refused. Instead, they decided to surrender. Morgan, completely alone and personally surrounded, steadfastly refused to surrender until the very end.

The battle of Quebec had been absolutely disastrous for the Americans, and most of the finest leaders in the American army were put out of commission. Allen had been captured, the great Montgomery was dead, Morgan was captured, and Arnold was gravely wounded. The brave Kennebec marchers were wiped out, with one hundred casualties and four hundred taken prisoner. Even so, Arnold, now a brigadier general, issuing orders from a hospital bed, refused to give up, and his few hundred half-starved men lay futile siege to Quebec for the rest of the winter.

For his noble efforts, Arnold once again received mainly humiliation;

He had asked for Charles Lee or someone like him to take command and lead the assault, but when reinforcements came in early April 1776, he was replaced by craven commanders who abandoned the siege. Now he moved disconsolately behind the lines to take charge of the occupation of Montreal.

At this strategic moment, in early May 1776, Carleton surged forth from Quebec with nine hundred men to rout the American forces. In early June, New Hampshire's Gen. John Sullivan was appointed commander of the forces in Canada. Sullivan was as bold as Arnold and Montgomery but lacked their brains. Now that strategic retreat was called for, Sullivan, on June 7, rashly launched an attack against the town of Three Rivers on the St. Lawrence. The result was collapse. Two hundred Americans (including the leader of the actual attack, Gen. William Thompson, commander of one of the Pennsylvania rifle regiments) were taken prisoner. Faced with the crushing defeat at Three Rivers, Sullivan had had enough, and he proceeded to beat a hasty and ignominious retreat. Rushing back from Canada and abandoning all positions there, the American forces returned to Ticonderoga in early July 1776.

Thus ended the American push against Canada, a tragic and disastrous failure. Yet, few campaigns in military history have been so marked by so many hairline turning points: the delays of Congress and of Schuyler bringing on winter weather and the end of American enlistment terms; the failure of Brown to meet Allen; the melodramatic escape of the formidable General Carleton from capture by the Americans; the decimation of Montgomery's army by the end of enlistment terms; the desertion by Colonel Enos; the high winds delaying Arnold's crossing of the St. Lawrence; the accidental discovery by MacLean of Arnold's advance; the hasty attack on Quebec impelled by the end of enlistment terms; the killing of General Montgomery and the subsequent rout of his column; the wounding of Arnold and subsequent hobbling of Morgan's advance; and the replacement of Arnold the following spring. Some of the most daring and progressive leaders, those most sensitive to guerrilla-type warfare, had been lost: Allen, Morgan, Montgomery, Thompson. The inordinately expensive campaign had succeeded in losing 5,000 American troops to death and capture. And Canada was lost forever.

10

Paper Money Financing

Armies, especially European-style armies, have to be systematically financed, and it was up to the Continental Congress, which had assumed responsibility for the Continental Army, to decide on its financing. The financing of an activity by any organization may be either voluntary or compulsory; and the anarchically formed revolutionary bodies in the separate colonies, as well as the Congress, were now spontaneously constituted bodies, teetering on the edge of becoming governments. Whether they would become governments or not depended largely on how they would finance themselves, for the mark of government, the feature distinguishing it from all other organs in society, is that it finances itself by compulsory levy rather than by voluntary gift or purchase of service.

The Continental Congress, however, was in a bad spot. A purely guerilla force might well have been naturally financed by voluntary contributions—in money and in kind—on the spot. But to finance regular armies on a centralized basis from voluntary contributions was completely outside the ken of the world at the time. On the other hand, it was out of the question for either the Congress or the local revolutionary bodies to impose *taxation*, the usual method of financing governments. Much of the thrust of the Revolution after all was against taxation, and the spirit of liberty among the American people was too strong to succumb immediately to similar taxation at home. Americans were in the throes of an anarchic uprising against their “legally authorized” government and its taxation. They were not yet prepared to slip on a new tax yoke in the cause of breaking the grip of the old. Later this would occur, but not yet in 1775. Furthermore, Congress had no power to tax, no power to im-

pose its will on the separate colonies or the people therein.

One time-honored method of evading and postponing the point of coercion is to borrow the needed money—a method seemingly voluntary, but resting on the pledge of future coercion (taxes) to provide repayment. The Congress began tentatively in mid-June 1775 to move toward borrowing by appointing a committee to consider borrowing 6,000 pounds sterling for supply of powder, a loan which Congress would undertake to repay.

At this fateful crossroads Congress hit upon a device, coercive but seemingly painless, a device that the British colonies had pioneered in the western world, the issue of paper money. Paper issues fraudulently pretend to be equivalent to units of specie and are used by the issuer to bid away resources in society from the producers and consumers, in the process depreciating the money unit itself. Its nature and consequences are equivalent to the process of counterfeiting.

Historians who believe that paper money agitation is invariably the product of the lower classes or of impoverished farmers might well ponder the identity of the man who led the Continental Congress down the primrose path of paper money, a young scion of the New York landed aristocracy, Gouverneur Morris. The highly conservative Morris, grandson of Lewis Morris, royal governor of New Jersey, was delegate to the Congress from Westchester County.

Once paper money was decided upon, the next decision was whether each colony would be responsible for eventual redemption of its proportion of issues—for everyone recognized that paper money would only circulate if some sort of redemption were pledged for the future. This would mean that each colony would stand on its own bottom, and one of the advantages of Continental paper for the northern colonies was inducing the other colonies to take on some of the former's financial burden. Hence Massachusetts and New Hampshire, on the firing line, were understandably eager to foist their expenses onto the shoulders of the other colonies. Finally, on June 22, Congress decided to issue \$2 million in paper, or "bills of credit," a sum that was soon to be rapidly expanded. Each colony, it was decided, would be pledged in seven years to redeem a pro rata share of the common Continental issue, based upon its relative population; but significantly, all the colonies were pledged to redeem any default by a particular colony. Redemption was to begin at the end of 1779. The process, however, was not envisioned as genuine redemption in specie, but merely the levying of taxes in Continental paper itself, which would then be used to retire the paper. In short, the redemption charted by Congress would not give hard-money backing to the new paper dollars; the bills would not be redeemed but retired. The prospect was only of a massive tax burden in a few years, which would

be superimposed upon the previous "tax" burden imposed by paper inflation.

In short, the seemingly inexhaustible fount of new Continental money had begun, and an insistent clamor soon arose for ever greater shares in the new bonanza. As Edmund Burnett phrased it, "Such was the beginning of the 'federal trough', one of America's most imperishable institutions."*

From the very start, the Continentals followed the sociological law that, once turned on, the engines of paper inflation accelerate as the clamor mounts for shares in the new cornucopia. By the time the \$2 million were ready to emerge from the press in a few weeks, Congress had already concluded that the issue was insufficient. By the end of July, another \$1 million of new money was authorized. What, after all, was to be the criterion for halting the money engine? Before the end of 1775, a full \$6 million in three issues of new paper were issued or authorized. This issue for the year contrasted with a total money supply of approximately \$12 million at the beginning of the war—a 50 percent increase in the money supply in less than one year!

Congress had no power to make its notes "legal tender" (compulsory for creditors to receive in payment of debts), but Rhode Island in 1775 pioneered in making the Continental paper legal tender for all debts in the province. Furthermore, any person refusing to accept these notes as equivalent to real specie dollars was to be denounced as an enemy of his country who "should be debarred from all communication with good citizens."

The separate provinces themselves were not to be denied use of the new bonanza. Even before Congress acted, during May 1775, embattled Massachusetts, Connecticut, and Rhode Island voted their own paper issues. At the end of June, the Massachusetts Provincial Congress rashly made not only its own bills legal tender, but also those of all colonies. Anyone refusing to accept any of the notes at par with specie would be deemed an enemy of his country.

*Edmund Cody Burnett, *The Continental Congress* (New York: W. W. Norton, 1964), p. 83.

The New Postal System

If the colonies were to fight a war of any length or seriousness against Great Britain, they could obviously no longer rely upon the crown's monopoly postal service for transmission of their mail. When the final crisis began at the beginning of 1774, and Britain got word of the Boston Tea Party, Benjamin Franklin, already in hot water, was swiftly removed as the royally appointed deputy postmaster general for America. Franklin's unceremonious removal reminded the Americans that the postal authorities were empowered to open letters and block delivery of what they thought of as "objectionable matter." In addition to the threat of the royal post to the freedom of the press, they began to see that postal fees were equivalent to another tax levied on them without their consent.

Extension of the American boycott from British trade to the royal post was thought of first, but it was soon seen that a boycott of a tight monopoly could only be self-defeating, for then no mail would be carried. The solution was set forth by the eminent radical printer William Goddard, publisher of the *Maryland Journal* and the *Pennsylvania Chronicle*. In early February 1774, he proposed an illegal revolutionary "Constitutional Post," organized and financed by local private sources operating at cost. The post would be built from the ground up, with local officers and provincial postal committees electing a postmaster general. Under Goddard's leadership, the plan soon flourished, the radical Sam Adams and the Boston Committee of Correspondence being unsurprisingly enthusiastic about the venture. By the spring of 1775, the illegal, privately organized and financed Constitutional Post had a chain of successful post offices from Portsmouth, New Hampshire, to Williamsburg, Virginia, and the lan-

guishing royal post in New York and Boston was being forced to discharge postriders for lack of work.

When the Revolutionary War began, the New England and New York provincial congresses removed the onus of illegality from the new postal system. But the Continental Congress, took a little noted step from liberty back to centralized statism in this vital area. In doing this, Congress had been prodded by a committee headed by Franklin who, since his disgrace in England, had been forced to throw in his lot with the American cause. A voluntary, efficient, grassroots postal service had aided the Revolution and replaced the royal post; but at the end of July Congress decided to nationalize the Constitutional Post. It was also decided to expand the postal system southward to Savannah, Georgia, and northward to Falmouth, Maine. Not fortuitously, Goddard, an ardent rebel and founder of the Constitutional Post, was deposed and shunted aside in favor of the old opportunist Franklin, who was chosen to be postmaster general of the new American post, operated by a newly created Postal Department. A colonies-wide governmental post, all too reminiscent of the old centralized royal post, had now replaced the grassroots private postal system.

In any event, under pressure of the growing American competition and its own increasing unpopularity, and further handicapped by being prohibited by the Maryland Provincial Convention, the royal post closed its American doors in December 1775, never to return.

12

New York Fumbles in the Crisis

The major weapon of American pressure on Great Britain at the time of Lexington and Concord had been the Continental Association, and after the shooting started, this boycott weapon continued its work with redoubled force. In mid-May 1775, Congress resolved on an absolute boycott of trade with those English colonies that had not joined the association: Quebec, Nova Scotia, Newfoundland, St. John's Island, the Floridas, and Georgia—with the exception of radical St. John's Parish, which sent Dr. Lyman Hall as an accredited delegate to the Second Continental Congress. The boycott succeeding in injuring Nova Scotia, Newfoundland, and the Floridas, but British exports soon made up the gap.

The news of Lexington and Concord sparked the local governments into circulating "defense associations," a more radical extension of the Continental Association. In New York and New Jersey signers of these mass statements agreed to support any measures of the Continental Congress and the provincial conventions; in more radical Maryland and South Carolina they pledged their lives and fortunes to the rebel cause. Generally, the grassroots associations were soon adopted by the provincial conventions, which circulated the mass oaths to all adult males, taking the precaution of publicizing the names of any who refused to sign—especially in Connecticut, New York, New Jersey, Maryland, and South Carolina. The new, more radical defense associations understandably superseded the Continental Association in the support of the public.

The New York associations responded to the electric news of Lexington and Concord on April 23 by immediately putting leadership into the

hands of the leaders of the radical forces, Isaac Sears and John Lamb. Organizing parades in the towns, Sears and Lamb called on the people of New York to arm themselves in defense of their "injured rights and liberties." Shipments of provisions for General Gage's forces in Boston were quickly stripped by a mob led by Sears, Lamb, and Peter Livingston. Sears and Lamb also broke into the City Hall Arsenal and seized and distributed the muskets and gunpowder inside. Armed citizens patrolled the streets, and Sears and Lamb hastily drilled their followers.

Revolutionary popular rule prevailed. Hated Tory printer James Rivington was forced to flee to the safety of a British warship; the Reverend Myles Cooper and other Tory Anglican clergymen of New York went into hiding; and an armed mob, led by Sears, forced the collector of customs to surrender the keys to the customs house, which was promptly shut down. Sears ordered no ships to be cleared for Halifax or British-occupied Boston, and even went so far as to close the Port of New York.

The old, predominantly radical Committee of Sixty, after failing in its bid to run the city, organized a citywide election for a "Committee of One Hundred" as the city's government. Elections were also called for a provincial congress to unify the whole province. In the election of April 29, two slates contested for the twenty city delegate positions and for the Committee of One Hundred: Sears, Lamb, the artisans, and the Sons of Liberty on the one hand, and a conservative group on the other.

The election was a victory for the conservative Whigs of Robert R. Livingston's wing of the landed oligarchy and a blow to the Sears-Lamb radicals, who had been weakened by the growing conservatization of the third member of the once great radical triumvirate, Alexander McDougall. The conservatives swiftly moved to tame and bowdlerize the revolutionary movement in New York City. At a conservative-run mass meeting immediately following the election, headed by Isaac Low and Robert Livingston, a defense association drafted by the highly conservative James Duane, John Jay, and Peter Van Schaack pledged to carry out the measures of the Continental and provincial congresses. This was a seemingly bold and sturdy step, but actually, it channeled the revolutionary movement in New York into passive, legal measures and shunted aside the extralegal activities of Sears and Lamb.*

The newly elected Committee of One Hundred quickly resolved to offer this defense association to every citizen of the city and to record the names of those refusing to sign. Within a month, 1,800 citizens of New York City had signed. The Committee of One Hundred also mobilized and drilled the militia of the city, and sale of arms to Tories was prohib-

*Cf. Roger J. Champagne, "New York's Radicals and the Coming of Independence," *Journal of American History* (June 1964), p. 24.

ited. The swift military mobilization performed two functions, one revolutionary, the other repressive. On the one hand, the militia prepared against an expected British invasion of New York City; on the other, its actual concrete function was the centrist one of keeping the Sears-Lamb radicals under wraps.

The meeting of the first New York Provincial Congress on May 22 marked the first highly significant expansion of the revolutionary movement from the city to the whole province, which had until then been conspicuously lacking in revolutionary fervor. The congress expanded the defense association of April 29 to the entire province, and county committees were selected to offer the association to every inhabitant. Although no penalties except public obloquy were attached to nonsigners, by September the patience of the Provincial Congress had worn thin. It resolved on September 1 that "although this Congress have a tender regard for freedom of speech, the rights of conscience, and personal liberty," the public safety required a stern crackdown upon those withholding allegiance not only from the provincial and Continental congresses, but even from county and district committees, all of which were extralegal and spontaneously created bodies. In two weeks the Provincial Committee of Safety, the Provincial Congress' executive arm, pressed further to force the disarming of all nonsigners of the association, who were presumed to be ipso facto rejectors of the authority of the revolutionary bodies. While this step was too radical for the Congress that autumn, the following spring it agreed to the forced disarming of all nonsigners, who were then jailed at their own expense.

Whig rule in New York was beset by many problems not encountered so virulently elsewhere. Most important was the highly conservative tinge of New York opinion; a growing and active minority of Tories faced a Whig majority shot through with conservative, neo-Tory sentiment, thereby playing into Tory hands. Outright Tory were the DeLancey wing of the landed oligarchy, the Anglicans (concentrated in New York City), and oppressed tenants whose landlords were Whigs (e.g., Livingston) and who hoped to gain by opposing their masters. Thus the inner contradictions of New York's drive for liberty that acquiesced in oppression of tenants arose to plague the revolutionary cause.

When the association was circulated throughout New York, it was found that Tories were in a majority on Long Island, overwhelmingly so in Queens and Richmond counties, where they prevented the election of deputies, and very strong in parts of Westchester, Albany, and Dutchess counties, and in New York City. The military effort of New York was thereby gravely crippled, and few men or supplies, and no money, could be furnished by New York for the crucially important invasion of Canada.

While outright Tories were unusually strong in New York, even the dominant conservative Livingston Whigs were eager for reconciliation with England. Only in New York was it credible that as late as the end of May 1775, the Provincial Congress should adopt the reconciliation report of the highly conservative Gouverneur Morris. Morris' principles, obsolete elsewhere in the colonies, approved Britain's right to regulate American foreign commerce but not domestic affairs and moved along the lines of Galloway's old defeated plan of union with Great Britain.

So timorous were the Livingston Whigs, that at the end of August when Lamb, under Provincial Congress authority, attempted to strip the Battery port of royal authority and a British ship opened fire, the Whigs totally succumbed to Gov. William Tryon's demand and left the cannon alone, even continuing to supply the British ships. When the Continental Congress recommended jailing all persons inimical to the American cause, and especially royal officials, the Whig rulers of New York City hastened to assure Royal Governor Tryon of his permanent safety. Further, in early November, when the Continental Congress urged New York to seize all British military stores in the city, the Whigs flatly refused. What sort of a revolutionary war was this? New York was clearly a pesthole for revolutionary activities.

Rendered desperate by the dead hand of the ruling Whigs, the New York radicals decided they had to carry on the Revolution by themselves. In early June, before Montgomery and Schuyler marched for Montreal, Marinus Willett defied the Provincial Congress and raided the baggage train of the royal governor embarking for England. An ordnance warehouse was looted and a royal barge burned. Sears, backed by Montgomery, decided to seize Tryon and take him to Connecticut in the summer of 1775, but he was overruled by the oligarchs, Schuyler and Washington. Finally, the defiance by New York of the Continental Congress on seizing crown military stores and royal officials was too much for Sears; it was obvious to him that he could not fight a revolution in New York, and he left for Connecticut in early November.

As for the other radical leader, John Lamb, he joined the army and participated in the invasion of Canada, falling wounded and captured, like so many other American leaders, at the battle of Quebec. Meanwhile, the third radical triumvir, Alexander McDougall, the last remaining in New York, continued to shift ever more steadily rightward into the Livingston camp. Thus, with their great leaders gone or recreant, New York radicalism and the Sons of Liberty were dealt a staggering and decisive blow, a blow which such new leaders as Daniel Dunscomb and William Goforth could not hope to repair. New York was now deprived of a Left; and remained only with a strong Tory Right and a conservative, fainthearted, Livingston Center-Right.

PART II

Suppressing the Tories

13

The Suppression of Tories Begins

Throughout the rebellious colonies developed the pattern of governmental authority, largely devoted to fighting the war of the Revolution and exercised by illegal representative bodies, provincial congresses, or conventions. Realizing that the executive function should be inherently subordinate to the lawmaking function, the rebels created a highly democratic system: making committees of safety—operating committees of the legislature—the major executive arms of the provinces, which could function when the legislatures were not in session. On the local level, the old committees of inspection, observation, and correspondence, which had enforced the Continental Association, naturally evolved into new city and rural committees to run the war, specifically to raise and operate the militia and especially to crush dissenting Tories.

The Americans had had no chance to hear present-day opinion that they were merely fighting a conservative and moderate revolution; hence they went at the Tories with a zeal that went beyond the bounds of libertarian principle. The concept of “enemy of American liberty” was quickly extended from violators of the continental boycott to anyone critical of the Revolution. Known and suspected Tories were hauled before the local committees, and as Professor Miller puts it, “If the committees failed to persuade, the mob took over. Thus was created a police system, secret, efficient, and all-powerful.”*

Letters, especially to England, were seized at the post offices and carefully examined; spies eagerly took on the task of keeping watch on sus-

*John C. Miller, *Triumph of Freedom, 1775–1783* (Boston: Little, Brown, 1948), p. 40.

pected Tories. And in contrast to enforcement of the Continental Association, committees did not try to confine punishment of Tories to voluntary boycott and ostracism; instead, fines, imprisonment, confiscation, and banishment came increasingly into play. Persons were hauled before local committees for criticizing the Continental Congress, belittling the Massachusetts Army, criticizing Presbyterian prominence in the Revolution, and a host of other "errors of opinion." The new extralegal Massachusetts General Court urged Harvard College to dismiss all faculty members having Tory views. Individual Tories were not only boycotted and forced to recant their heresies; stronger methods of punishment were adopted as soon as the rebel committees became the effective authorities in their areas. As early as May 1775, the Massachusetts Provincial Congress recommended to local selectmen and committees that they confiscate the arms of all unfriendly to the rebel cause and forbid anyone to leave the province without special permission of the local committee or the Congress. The following month, the provincial congress *directed* the town committees and selectmen to confiscate and take charge of the property of all Tories who had fled behind the British lines at Boston or elsewhere. In New Hampshire, the provincial congress, as the supreme judicial body of the province, sentenced Tory Col. John Fenton to indefinite imprisonment as "an enemy to the liberties of America." In September, the New York Provincial Congress created a hierarchy of penalties for Tories, including fines, disarming, prison, and banishment. And in November, the Rhode Island General Assembly passed a law decreeing death and forfeit of property to anyone assisting the British army with information or supplies.

One of the critical litmus tests used by the local committees to smoke out Tories was a public oath of loyalty to a defense association succeeding the old Continental Association. As historian Alexander C. Flick concluded, the association

became the first decisive test of the politics of individuals. . . . It stamped the individual as a Whig or Tory in the eyes of his neighbors, and treatment was meted out to him accordingly. . . . Hesitation [to sign] involved suspicion; refusal, guilt. The Loyalist who was true to his convictions, creed, and king was detested, reviled and if prominent, ruined in business, tarred and feathered, mobbed, ostracized, or imprisoned; and all this at the will of a committee, self-constituted and responsible to no one.*

*Alexander C. Flick, *Loyalism in New York During the American Revolution* (New York: Columbia University, 1901), pp. 47–48. Also see Harold M. Hyman, *To Try Men's Souls* (Berkeley: University of California Press, 1960), pp. 70ff.

Thus, a Revolution and revolutionaries dedicated to the cause of liberty moved to suppress crucial liberties of their opposition—an ironic but not unsurprising illustration of the inherent contradiction between Liberty and Power, a conflict that can all too readily come into play even when Power is employed on behalf of Liberty.

Hesitant to take any steps that might lead irrevocably to independence, the Continental Congress refused to do anything about hunting and combatting Tories, leaving the task to the separate towns and provinces—this despite the requests from Massachusetts and Maryland for a general congressional test oath for all the colonies. In October 1775, however, Congress learned that Dr. Benjamin Church, one of the top revolutionary leaders of Massachusetts and chief surgeon of the Continental Army, was a traitor in the pay of the British. This grave shock led Congress to urge the various local committees to crack down on everyone who might “endanger the safety of the colony or liberties of America.” The committees redoubled their efforts in rounding up suspects, imposing test oaths and punishing recalcitrants with disfranchisement or prison. The Continental Army was also authorized to aid in suppressing Tories. Even as conservative a man as George Washington wondered why the Tories, “abominable pests of society . . . who are preying upon the vitals of their country [should] be suffered to stalk at large, whilst we know that they will do us every mischief in their power.”

In their grave concern with the American Tories, the American revolutionaries were not striking at phantoms. While the idea that Tory and rebel sentiment among the people was equally matched is a historical misreading of John Adams, it remains true that the Tories constituted a real and substantial threat to the Revolution.* About one-third of politically interested Americans were Tories, or “Loyalists,” while the Revolution held the allegiance of the other two-thirds.**

The population of the rebelling colonies at the time of outbreak totalled approximately 2.5 million. Of these, about half a million were Negro slaves, who certainly were potential rebels against the revolutionaries and

*A letter by John Adams has been traditionally interpreted by historians as judging that one-third of the Americans supported the Revolution, one-third were opposed, and one-third were neutral. In fact, Adams was referring to American attitudes toward the later *French*, not the American, revolution. In another letter, Adams estimated that the American Revolution was supported by two-thirds of those taking sides one way or the other. For the facts of the Adams letter, see John R. Alden, *The American Revolution, 1775–1783* (New York: Harper & Row, 1954), p. 87.

**Also neglected is what the Tories *did* during the Revolutionary War. For even the historians concentrating on the Tories have been so sympathetic to them as to highlight their status as refugees and to play down their considerable role as armed and militant warriors of counter-revolution. See Albert T. Klyberg, “The Armed Loyalists as Seen by American Historians,” *Proceedings of the New Jersey Historical Society* (1964), pp. 101–108.

hence potential aids to the British. If we consider one-third of the whites to have been politically apathetic, then we have a mighty reservoir of another half million pro-British inhabitants. Such a huge reservoir of active or potential defectors inexorably turned the American Revolution into a civil war as well.

Who were the Tories? This question has suffered from insufficient research; too many historians, in their eternal search for an American "consensus" of sweetness and light, have preferred to forget about the hard knot of American Tories and what was done to them during the Revolutionary War.*

The first thing to be said is that the Tories were not at all uniformly distributed geographically. For example, the two major centers of population, New England and Virginia, were relatively Tory-free. The few thousand Virginia Tories were concentrated among Ulster Scots on the frontier in western Virginia, settlers on the Eastern Shore (the Chesapeake Peninsula), and native Scottish merchants and factors concentrated on the coast near Norfolk. New England Tories were to be found in scattered pockets: many in Newport, in the coastal towns of the Maine region, New Hampshire, Cape Cod, parts of western Massachusetts. Western Connecticut, near the New York border, was the only one of these regions where Tories approached a majority, even though the bulk of Connecticut was overwhelmingly rebel. All in all, New England Tories barely reached one-tenth of the population.

There were more Tories in the other colonies of the South than in Virginia, and these were mainly concentrated in the back country of the Carolinas—the pockets of Highland Scots near Wilmington and Cape Fear in North Carolina and the city of Charleston—and in royal-bureaucrat-ridden and subsidized Georgia. However, in none of the major population areas of the South did the Tories constitute a majority, and all in all, they totalled about 30 percent of southerners.

The most ominous and threatening center of Tory strength lay in the middle colonies, which were almost evenly divided between Whig and Tory. This equal strength was particularly true of New York, the greatest Tory stronghold outside of Georgia. In such areas as western Long Island, upstate, and the lower Hudson valley, Tory adherence was almost overwhelming. New Jersey, in Bergen County and in the south, was almost as fertile Tory ground. Toryism was particularly strong in Philadelphia and the surrounding counties, especially among the Quakers. Tories were also strong in Delaware and on Maryland's Eastern Shore.

Ethnic and religious minorities within a region tended to oppose the dominant majority and hence to side with Great Britain. Thus, while

*Cf., William H. Nelson, *The American Tory* (Oxford: Clarendon Press, 1961), p. 92.

Anglicans in the low-church Anglican South were solidly revolutionary, the minority of Anglicans in the North, far more high church and attached to Britain, were predominantly Tory. Also in the North, many Baptists and the budding Methodist movement were restive and Tory. Most Dutch in New York and New Jersey, and Quakers in southern New Jersey and eastern Pennsylvania, and many native-born Scots tended to be Tories. The Ulster Scots, however, at least in the South, were rather evenly divided.

Had the British acted early and energetically to mobilize the Tories, to organize their scattered centers of strength, and to exploit the potential conflicts within American society, they might have been able to deal the Revolution a crippling blow. The Negro slaves, as we have pointed out, were a huge potential reservoir of discontent to mobilize against the Revolution. And New York, a fertile field, lay available for exploitation. The Revolution split the landed oligarchy of the province, with the Anglican DeLanceys of New York City and the lower Hudson valley turning Tory, while the Presbyterian Livingstons of the northern Hudson valley supported the break with England, though only meekly. As a result, the disgruntled tenants of the Livingstons and their fellow Whig landlords naturally gave their support to the Tory cause. And many Ulstermen of the back-country Carolinas, long unhappy about underrepresentation and governmental discrimination against them, were Tories or lukewarm to a revolution made by the planters of the lowlands.*

The Tories, as we have seen, ranged, through all social classes and occupations, from the aristocratic DeLanceys of New York to the lowly tenants of the Whig landlords and the back-country settlers of the Carolinas. Neither were they dominantly concentrated within any broad social class. It is therefore impermissible to identify them with any particular economic or social group. However, neither can we discard social-class analysis altogether. While most of the wealthy were rebels and the Tories ranged through all social classes, it is also true that the proportion of the upper class was greater among the Tories than among the rebels, and a far greater proportion of Tories was concentrated among such well-to-do groups as royal bureaucrats and officials, British factors in the South, and Georgia planters. Thus, almost two-thirds of the councillors—members of the royally appointed upper houses of the colonial assemblies—became Tories.

*However, the long-held view of historians that the old rebel Regulators of the Carolinas later became Tories has been refuted by the recent researches of Johnson, Barnwell, and Brown. The former Regulators of both North and South Carolina were predominantly Whig revolutionaries; indeed, it was only the old South Carolina *Moderators* who became largely Tory. See Richard Maxwell Brown, *The South Carolina Regulators* (Cambridge: Belknap Press, 1963), pp. 123–26, 213–14.

For the British to have organized and welded together all the disparate threads of Tory and anti-Whig potential would have required energy and ability that the British did not have. For one thing, the British, like all counter-revolutionaries always and everywhere, scoffed at the Revolution as being a movement of a small fanatical minority rather than a majority, and as a movement of a weak and inferior breed of men. All counter-revolutionaries tend to gravely underestimate their enemies by treating rebellion as the work of a small subversive band of dogmatic and fanatical ideologues. The vast majority, these archconservatives typically feel, are deeply loyal to the constituted government. Therefore, the British confidently believed that no intensive coordination of the Tories was necessary. Surely, they need only call, or land, and the great majority of loyal folk would rise up and help their rulers smite the traitors!

A second cause of chronic British optimism, as we have seen, was the chauvinist contempt for the Americans as a people and for their martial abilities—a contempt redoubled by the British devotion to orthodox military prescriptions and ignorance of guerrilla forms of warfare. The defeat of the Revolution also required an indomitable will, but General Howe, the commander-in-chief of the British armies after the removal of the disgraced Gage, in October 1775, was an ardent Whig opposed to the war. These inner convictions kept him valiantly trying for a compromise political peace rather than a repressive military solution to the conflict, thereby substantially weakening the resolve of the counter-revolution.*

*Howe's leniency toward the rebels was considerably strengthened by the arrival in the summer of 1776 of his Whig brother, Richard Lord Howe, as commander of the British fleet in North America. See Ira D. Gruber, "Richard Lord Howe: Admiral As Peacemaker," in George A. Billias, ed., *George Washington's Opponents: British Generals and Admirals in the American Revolution* (New York: William Morrow, 1969), pp. 235-41.

14

Suppressing Tories in Rhode Island and Connecticut

While the Tories stood disunited and lacking firm British leadership, the revolutionaries in colony after colony struck with keen efficiency and dispatch to disarm the actual and potential traitors in their midst. In Massachusetts, support for the Revolution was so ardent and widespread that there was little organized Tory opposition, and the local revolutionary committees could work their will on individual Tories, unchecked. Most Massachusetts Tories were concentrated in the west, in the towns of the upper Connecticut River valley, including Amherst, Hatfield, and especially Deerfield. Other concentrations were to be found in the town of Worcester (which was, however, predominantly revolutionary) and among the Baptists of the town of Ashfield. Tories were particularly numerous among the royal judges and bureaucrats, and it has been estimated that fully half the lawyers in western Massachusetts were Tories. However, no special measures had to be taken against the Massachusetts Tories since they were few in number relative to the total population.

Toryism was much more threatening in Rhode Island, where Newport abounded in Loyalists. Particularly embarrassing was Rhode Island's Gov. Joseph Wanton, who became an active Tory and urged the Rhode Island Assembly to seek a separate peace with England. In June 1775, the powerful assembly, moving toward deposing Wanton, quickly forbade the oath of office from being administered to him, and commissioned militia officers without his signature. In November, it deposed Wanton as governor and replaced him with the radical Nicholas Cooke of Samuel Ward's old faction.

Throughout 1775, Rhode Island, particularly Newport, suffered from

the plunder of a fleet of British warships in lower Narragansett Bay commanded by Capt. James Wallace. Wallace disrupted and plundered Rhode Island's foreign trade and shipping and continually threatened Newport with fire and destruction if the citizens did not furnish food and supplies to the British army and fleet. Wallace finally did shell the defenseless town of Bristol and thoroughly plundered and partially burned Jamestown in 1775.

Eventually, the months of British terror and imposed starvation took their toll; the people of Newport began to flee the city. By early November, nearly half of its citizens—largely women and children—had fled northward from the city. Most of these were rebels, so the revolutionary morale of Newport—never high at best—was weakened still further. With the consent of the Rhode Island government and the Continental Congress, Newport agreed in the autumn of 1775 to supply the British fleet with provisions and to withdraw the colony's militia from the town.

In the meanwhile, however, the Rhode Island Assembly intensified its ardor to take stern measures against the Tories; thus it decreed the punishment of death and confiscation of property for anyone betraying the cause to the enemy or providing him with supplies—the Newport agreement, of course, excepted. In December, Rhode Island authorities, alarmed at growing Tory power in Newport and fearful of a British attack from Boston, begged Washington for help. Washington sent down his best man, General Lee, with a handful of troops. Lee heartened the rebels and thoroughly frightened the Tories, enforcing upon them a public oath in support of the Continental Congress and arresting three Tories who refused to take it. His energetic activities at the end of the year, including arrests of Tory leaders and issuance of mass loyalty oaths, succeeded in cowing the Loyalists in Newport.

Tory opposition to the Revolution in New England centered in southwestern Connecticut, in sharp contrast to the fierce revolutionary fervor of the bulk of that colony. Indeed, at the end of 1775, Connecticut became the first colony to enact a systematic body of law against Tories, including such severe punishment as forfeiture of all property and three years' imprisonment. For the first time in America, serving the king was officially branded a crime to be severely punished. Connecticut's fervor was such that it was the best place to imprison Tories from neighboring provinces. One of the principal prison sites in the colonies was the dank, abandoned copper mine at Simsbury. The New Haven Town Meeting opposed taking up arms against Britain, and the meetings of Litchfield and Danbury condemned the Continental Congress. In Reading and New Milford, the majority of the inhabitants went so far as to swear to Loyalist oaths. The most acute Tory threat to Connecticut appeared in May 1775, when the bulk of the Waterbury militia, officers and enlisted men alike, declared

their refusal to follow the policy advised by the Continental Congress. This threat was swiftly and efficiently countered by a secretly conducted night raid upon southwestern Connecticut by several hundred Whig militiamen from revolutionary eastern Connecticut. The Tories of the entire area were disarmed by the raiders, and a dozen Tory leaders were taken prisoner.

15

Suppressing Tories in New York

New York, as we have indicated, was a hotbed of Toryism, and even the Whigs were dominated by highly conservative oligarchs. The colony was therefore held in understandable suspicion by the other colonies, and Isaac Sears, the leading New York radical who had left in disgust for Connecticut, was one of the first to realize that any radical action in New York would have to be accomplished from outside its borders. In late November, Sears, appointed a military commander by the Connecticut Assembly, collected 100 men from Connecticut and conducted a daring raid into New York City, smashing the Tory print shops. They seized three leading Westchester Tories, including the Reverend Samuel Seabury, and hauled them back to New Haven.

Only Suffolk County in eastern Long Island, part of Ulster County, and New York City were largely revolutionary, but even in those places the action meted out to the local Tories was negligible. Indeed, of 104 merchant members of the Chamber of Commerce of New York City, no fewer than 78 were Tories. Westchester County was largely Tory, and Dutchess County predominantly so. Indeed, in Dutchess, the Loyalists armed themselves openly, condemned the Continental Congress, interfered with the regular militia, and openly enlisted men for the British armed forces. Leading the Tories were the rivermen, who used their boats to convey enlistees to the British forces and threatened to carry the leading rebels off as well. During October 1775, many Tories of the lower Hudson valley were planning to join the British forces. Some, in the Peekskill area, tried to rise up in arms, but were quickly disarmed by the local militia.

The heavily Tory Staten Island sent no delegates to the provincial

congress and was embargoed by the adjoining area of New Jersey for its "unfriendly disposition toward the liberties of America." But the staunchest Tory region in New York was Queens County, covering most of western Long Island. The Queens towns not only refused to send delegates to the provincial congress, but passed Loyalist resolutions in defiance of the Revolution. In the November 1775 elections to the provincial congress, the freeholders of Queens County voted by three and a half to one against sending a delegate. The following month, the bulk of the county's voters declared their neutrality in the war and decided to arm in their own defense. The British fleet proved more than willing to supply them with arms. Rising Tory activity in Queens so alarmed even such conservatives as Jay and McDougall that the latter held it imperative to disarm the Tories of the county. Even the conservative provincial congress recommended embargoing those counties that continued to refuse to send any delegates. However, the congress refused to agree to the urgings of its Committee of Safety to disarm all the province's Tories.

The Continental Congress, however, angrily resolved to smash this resistance movement, and declared the virtual outlawry of Queens County, denouncing its citizens as "incapable of resolving to live and die free men." It declared that the Queens Tories should be disarmed, the dangerous ones imprisoned, and the names of all be published throughout the country. No inhabitant of Queens was to be allowed to leave the county without a passport issued by the New York Committee of Safety. It was clear, however, that any chastening of Queens Tories would have to be accomplished from outside the province. Under the Continental Congress' direction, Nathaniel Hurd of New Jersey was sent into New York with 1,200 men in late January 1776. Hurd succeeded in disarming 600 armed but disorganized Queens Tories without a fight. Seventeen Tory ringleaders were marched off to prison in Philadelphia.

Succeeding Hurd was that great scourge of Tories and Toryism, Gen. Charles Lee, increasingly in use as a radical military trouble-shooter. With the Canadian campaign heading toward defeat and the siege of Boston moving towards victory, it was becoming ever more clear that the next problem was the expected transfer of the British army from Boston to some more congenial spot on the Atlantic seaboard. Probably they would pick New York City. From there they might, in a combined pincers movement with forces in Canada, try to split the colonies in two, and riddled with Tories and neo-Tories as it was, New York might prove a hospitable haven for the British troops. Lee was among the first to press for more radical and vigorous measures against the British and the Tories. By the summer of 1775 he was advocating the independence of America and wondered "why in the name of Satan" New York's Governor Tryon had not been seized. During the autumn, Lee urged McDougall to seize

Tryon and to inform the British naval captain in New York harbor that, if he bombarded the city, "the first house he sets on fire shall be the funeral pile of his Excellency [Tryon]." In short, Tryon should be held as hostage for British good behavior. In October 1775, Lee pioneered in proposing two radical steps: that the war be partly financed by the confiscation of Tory property, and that American ports be thrown open to all European commerce, defiantly shedding the last American allegiance to the British laws of trade.

In early January 1776, deeply worried about New York, Lee urged Washington to allow him to raise a body of Connecticut volunteers and Jersey militia in order to cleanse New York City of Tories and to fortify it. Washington hesitated for political reasons, but finally agreed when John Adams approved the plan. Lee promptly went to Connecticut and there collected 1,200 men recruited by Isaac Sears, whom Lee hailed and picked as his assistant for the expedition with the rank of lieutenant colonel.

Approaching the border, Lee was met by hysterical pleas not to cross into the city, lest the British navy bombard it. He characteristically replied that, if they did, "the first house set in flames by their guns shall be the funeral pile of some of their best friends." His arrival in New York in early February coincided with the arrival of British Gen. Sir Henry Clinton in the harbor with several hundred troops. Lee took command and successfully threatened the British that opening fire on the town would mean the death of 100 Tories. He also cut off the supplies that the New Yorkers had been generously furnishing the British.

The New York Provincial Congress protested with particular bitterness at the hard treatment Lee was meting out to the Tories. It is curious that the congress took time out in the midst of a dire revolutionary crisis and a fight for survival to complain about the fact that the Tory Samuel Gale had been imprisoned by Lee in Connecticut and his property invaded. Or perhaps it is not so curious, when we reflect that Gale was an English surveyor, allied to the landed New York oligarch and highly conservative Whig, James Duane. Lee paid no attention to the carping. Instead, he sent out the eager Isaac Sears to tame the Tories of Queens County. Sears swept through Queens denouncing the New York Congress and forcing a strong public oath of allegiance upon everyone. All noncompliers were arrested and sent to Connecticut. Lee was soon called elsewhere, but his activities did have the effect of shoring up the Patriots and chastening the Tories. An indigenous New York Left could not be restored, however, and the raid provoked such a storm of conservative New York protest that the Continental Congress and army weakly withdrew from suppressing Tories.

New York was where the British first tried to exploit another contradiction within American society: the disaffected Indians on the frontier. In any conflict between English and Americans, the tendency of the Indians would be to side with Britain, for it was the land-grabbing American settlers who constituted their supreme enemy, whereas the British had played a relatively mollifying role with the Indians, for example, in decreeing the Proclamation Line of 1763. The most that the Americans could hope for, therefore, was Indian neutrality in the war; it was that promise that General Schuyler had gained from the Iroquois in the summer of 1775.

Fortunately for the American cause, Sir William Johnson, Indian trader, superintendent of Indian affairs at Albany, and uncrowned king of the Iroquois, had died in 1774. But Johnson's nephew and son-in-law, Col. Guy Johnson, succeeded him, and William's son, Sir John Johnson, ruled an enormous estate in up-country Tryon County with the aid of a fierce private army of his tenant Highland Scots. Furthermore, Tryon County, covering most of up-country New York, was predominantly Tory, and rumors persisted of a plan for the Johnson Highlanders to join pro-British Iroquois and march down the Hudson valley, raising Tories as they came. But the ardor of the several thousand pro-British Iroquois was dampened by the British themselves in the spring of 1775, when General Carleton, fearful of provoking an American invasion of Canada, advised them to lie low for the time being. And in January 1776, General Schuyler took several thousand militiamen into Tryon County in a surprise attack, thoroughly disarming Johnson's Scots and shipping six of their leaders to prison in Philadelphia. Thus, by early 1776, the rebels, with the use of surprise and skilled organization, had managed to disarm the Tories in the areas of their greatest support.

Many of the Highland Scots, along with most of the other Tories of upper New York, fled to Canada, there to work for vengeance and return. Back home, their property was confiscated, and the Tories who remained behind were imprisoned, flogged, and sometimes executed. Sir John Johnson managed to hold Fort Stanwix, at the extreme western point of the Mohawk River, until late spring of 1776, when he was forced to abandon his properties and flee to Canada.

16

Suppressing Tories in the Middle Colonies

New Jersey had nearly as great a proportion of Loyalists as New York, and southern New Jersey was notoriously loyal to Great Britain. Its royal governor, William Franklin, illegitimate son of Benjamin, was particularly active in the British cause. In the spring of 1775, he tried to persuade the New Jersey Assembly to negotiate a separate peace with Britain. Failing this, he continued to organize Tory sentiment. Prodded by a series of petitions organized by him, the assembly vehemently instructed its delegates to the Continental Congress against any attempt at independence. Indeed, Franklin was almost able to induce the assembly to beg the king for peace, and only lengthy harangues by moderate delegates from the Continental Congress were able to dissuade New Jersey from such separate action. It was only in June 1776 that Franklin was finally arrested by the New Jersey Assembly and sent to prison in the recesses of Connecticut.

Apart from Franklin's political activity, by the spring of 1776 the province was plagued with imminent insurrections in Monmouth, Hunterdon, and Bergen counties. Negroes were reported arming themselves to join the British cause and later to be intriguing with British prisoners of war.

In conservative Pennsylvania, the Tory cause had been crippled by Joseph Galloway's decision not to run for the Second Continental Congress and his withdrawal from political life. The bulk of the Tories continued to be the Quakers in the Philadelphia area. The Philadelphia Meeting sent dispatches to Quakers throughout the middle colonies urging them to abstain from all forms of rebellion and to remember that it was their religious duty to "honor the King." From their old anarchic individualism, the Quakers had now evolved into a nonviolent bulwark

of state and crown; it was not their business, the meeting warned, "to plot and contrive the ruin or overturn of any" government. The Toryism of the Quakers remained passive, however, and there was no worry about their taking up arms against the Revolution.

In Maryland, a sharp geographical split prevailed, with the tobacco-growing regions on the western shore of Chesapeake Bay being staunchly revolutionary, while the maritime Eastern Shore was predominantly Tory. In heavily Tory Worcester County on the Atlantic Coast, the Loyalists, led by a Hugh Kelly, obtained arms during the fall of 1775 from a vessel of Lord Dunmore, royal governor of Virginia. Meeting in secret and signing a joint oath, 1,900 Tories formed an association, met for military drill, declared themselves for the king and "against Boston," and pledged themselves to resist any conscription into the Continental Army. They also managed to seize some local Whigs and hustle them aboard Dunmore's ship in a futile quest for recruits.

In adjoining Somerset County, one Isaac Atkinson led over half the local militia into a counter-revolutionary force for the king, and he threatened one day to "fight it out." He also denounced the Revolution as a Presbyterian plot. Several companies of militia in Caroline and Dorchester counties on the Eastern Shore laid down their arms in defiance of the revolutionary cause.

The colony of Delaware, almost wholly on the Chesapeake Peninsula, was riddled with Tory sentiment; by the spring of 1776, 1,000 Tories were under arms in Sussex County in the south; and in northern New Castle County, British ships on the Delaware River were regularly furnished supplies by the inhabitants.

Virginia Battles Lord Dunmore

Virginia had only a few thousand Tories at most, but they were concentrated in a few strategic areas. Aided by Lord Dunmore, the highly energetic royal governor, they gave the American rebels a good deal of trouble. Apart from the Tory predominance on the Eastern Shore, the Loyalists were concentrated among the Scottish merchants in Virginia's commercial city of Norfolk and on the extreme northwestern frontier around Pittsburgh. After the rejection by the Virginia Assembly of Lord North's conciliation scheme in June 1775, Dunmore fled with over a hundred British regulars to a British ship in the harbor of congenial Norfolk.

Toryism was strong though not predominant on the American frontiers, undoubtedly in part because of a suspicion that the American governments might not be able or eager to supply armed forces to push back the Indians. Toryism on the Virginia frontier was concentrated around Pittsburgh (now in Pennsylvania), near where Fort Pitt had been dismantled three years before. Under Dunmore, Virginia, during 1773 and 1774, had aggressively expanded its territory. Dunmore had seized control of the Pittsburgh region, arresting and expelling Pennsylvania officials and creating a new West Augusta County there for Virginia. Furthermore, in "Dunmore's War," the governor had defied the Proclamation Line of 1763 and had driven the Shawnee Indians out of Kentucky.

When the Revolutionary War began, John Connolly, a physician, Tory militia official, and faithful ally of Dunmore and Britain, conceived an audacious plan. Visiting Dunmore on his ship during August 1775, Connolly brought with him a pledge of loyalty to Dunmore and the crown

from several hundred inhabitants of West Augusta County, including the Indian traders Alexander McKee and Simon Girty. More important, Dunmore and Connolly agreed to the latter's scheme (the "Connolly Plot"), in which Dunmore would raise a troop of Tories in the east, while Connolly, made a lieutenant colonel, would winter at the British fort of Detroit. There Connolly would form a regiment of British regulars and Tory militia into the Royal Foresters, after which he and McKee, with a troop of Indians, would march up the Ohio and seize Pittsburgh. Dunmore would march west, and Connolly east, perhaps enlisting oppressed indentured servants as he went, to meet at Alexandria in northern Virginia, cutting the American colonies in two. In early October a peace conference at Pittsburgh between Indians and representatives of Virginia and Pennsylvania had resulted in an agreement that provided for Indian neutrality in exchange for an American pledge to maintain the Proclamation Line of 1763 as the limit of western settlement. This agreement defied the fact that the line had already been rendered *de facto* obsolete by the white victory of Dunmore's War over the Shawnees and by the subsequent beginning of the settlement of Kentucky. McKee and Connolly were agreeable to this arrangement as a short-term tactic until their proposed campaign could begin.

It was an ambitious and undeniably unworkable scheme; but at any rate, it never had a chance, as Connolly and two aides were arrested shortly afterward by alert militia at Frederick, Maryland. Connolly was brought before the Continental Congress for trial and promptly imprisoned. As for McKee, he was soon confined to Pittsburgh by the local Committee of Correspondence, headed by George Croghan, for corresponding with an official of the British army.

The collapse of the Connolly Plot left Lord Dunmore with his forces based upon the sea. For the first time in the war, the British now found themselves a small armed force facing a large, unorganized, hostile population. Except for the initial shock at Concord, the British forces had encountered regular American armies (as at Boston) or fought in friendly or neutral territory (in Canada), but now Lord Dunmore was facing the essence of counter-revolutionary warfare. Since it is waged by relatively small though heavily armed forces of the government or its supporters against the mass of the civilian population, counter-revolutionary warfare must needs be mobile, swift, and devoted to hit-and-run raiding. Even so, it is a grave mistake, made by many analysts and historians, to confuse this kind of raiding with true guerrilla warfare.

Guerrilla warfare must rest on the active support of the bulk of the populace; the guerrilla troop is the armed spearhead of the revolutionary masses. Its fire is directed in pinpoint fashion against government troops and installations, and sometimes against their relatively few allies and

sympathizers. Its aim is to dislodge the rulers from the backs of the people. Its long-run chances of victory are excellent. But counter-revolutionary raiding is necessarily conducted in wild and haphazard fashion, by an armed minority *against* the bulk of the people. Its aim is not simply to dislodge a ruling group, but to spread terror among the people, to injure, harass, and disrupt the economy. Its long-run chances of victory are slight. The strategies proper to the two types of warfare reinforce these differences. The more scrupulously the guerrillas refrain from harming the civilian population, the more solemnly and securely the populace will support them, while the more vigorous the counter-revolutionary terror raids, the more bitterly hostile will the populace become. Short-term successes for guerrillas therefore promote victory in the long run; short-term gains for counter-revolutionary bands anger the people still further and insure long-run defeat.

It was this sort of harassing force that Lord Dunmore established on the Virginia coast. Dunmore began in June 1775 with 100 regulars and a few ships anchored off Norfolk, where he was kept supplied by the preponderantly Tory town, dominated by Scots merchants and their factors and clerks. When in early October Dunmore was angered by rebel newspapers in Norfolk, he sent a detachment of soldiers ashore to seize the press and paper as well as the persons of two of the printers. The local militia was called out to stop the outrage, but the apathetic militiamen failed to lift a finger to protect the printers. The mayor and aldermen of Norfolk sent the governor a feeble *pro forma* protest; so mild, indeed, was Norfolk's indignation, that shortly afterward a Town Meeting invited Dunmore to occupy the town.

The Virginia rebels decided to take action against renegade Norfolk, and soon 300 local militia of adjoining Norfolk and Princess Anne counties met at Kempsville, in Princess Anne. Dunmore, adding some Negroes and Scottish clerks to his forces, marched against the rebels. The Americans skillfully trapped him in an ambush, but they fled in panic at the sight of the British. Greatly emboldened by his victory, Dunmore proclaimed martial law on November 7 and set up the king's standard for the colony. In a few days, 300 citizens took an oath of allegiance to the crown at Kempsville, as did 500 more at Norfolk. Soon, 3,000 took the oath in Princess Anne, Norfolk, and Nansemand counties, the inhabitants of Princess Anne pledging themselves to support Dunmore and the crown to the last drop of their blood.

On November 17, with imagination and daring lacking in his fellow British commanders, Lord Dunmore decided to exacerbate the contradictions in American society by offering freedom to any Negro slaves who would join his armed forces, thereby permanently enraging the conservative slave-holding Virginia planters who would probably not have sup-

ported the British in any case. Soon he was able to organize two regiments of Tory militia, the Queen's Own Loyal Virginia Regiment and the Ethiopian Regiment, composed of runaway slaves. The conservative Committee of Safety leading the rebel cause at Williamsburg was now finally forced to act, sending two regiments of militia against Norfolk with the aid of a regiment of North Carolina militia. The rebels, over 900 men led by Col. William Woodford, faced Dunmore's 500 at Great Bridge, near Norfolk, on December 11, 1775. Dunmore, in the foolish European manner exemplified by Howe at Bunker Hill, chose to make a direct, massed, frontal assault on the entrenched rebel positions. Rebel musket and rifle fire thoroughly smashed the British as they came forward, and the British suffered sixty casualties, while only one rebel was wounded. Dunmore, decisively defeated, fell back to his ships, and Norfolk was recaptured by the rebel forces.

The Virginia army, on occupying the Norfolk area, recommended that the entire population of the region be forcibly removed to the interior, to prevent any trade or intercourse with Dunmore's ships. While this recommendation was never really put into effect, a reign of terror was launched against the Tories in the area. Their homes destroyed and plantations seized, the bulk of them fled the colony. Some went to Scotland, others to England and the West Indies. Many joined the British army in Boston.

The Tories were angered at being so callously abandoned by Lord Dunmore, who paid little attention to them and treated even those who fled to his ship with scant consideration. The case of the Sprowle family is a particularly poignant one. One of the wealthiest men in Virginia and for several decades president of the Court of Virginia Merchants, the ardently Tory Andrew Sprowle fled to Dunmore's ship as the rebels entered Norfolk. The revolutionaries destroyed his urban properties and confiscated his plantation. This was too much for old Sprowle, who died soon after. His wife Katherine, also on Dunmore's ship, obtained permission from Dunmore to visit her son, imprisoned as a Tory in a North Carolina jail. When she landed, the Williamsburg Committee of Safety refused to allow her the visit and sent her back, but now Dunmore cruelly refused to let her board the vessel. Booted back and forth between the two sides, and not allowed a resting place, she was finally able to obtain passage to Scotland. She was placed on a modest British pension list, but was arbitrarily cut off by Lord Dunmore, while her Virginia plantations were sequestered and sold by the Virginia government.

On New Year's Day, Dunmore received well over a hundred regulars and much arms from Boston and St. Augustine. Emboldened by the reinforcements, he promptly shelled Norfolk, deliberately firing warehouses on the docks used for cover by the rebel forces. The revolution-

aries used this incident as a convenient cover for brutally putting a large portion of Tory Norfolk to the torch. It is estimated that Dunmore's naval fire that day destroyed fifty houses valued at over 3,600 pounds sterling, but that the rebels deliberately destroyed nearly nine hundred houses valued at over 110,000 pounds sterling. In February, the ruling Virginia Convention made it official; at its order, the rest of Norfolk—over four hundred houses—was deliberately and savagely burned to prevent Dunmore from ever again using it as a base. Thus did these "moderate" revolutionaries in a "consensus" America pass a harsh collective sentence upon the people of Norfolk. Yet, in the propaganda war, the rebels were able to lay the blame for the burning of the city upon Dunmore, who, the previous October, had desperately but unsuccessfully tried to burn the coastal town of Hampton as punishment for the people's burning of a grounded British warship.

Outside of Norfolk, the Virginia rebels tended to be more lenient, and in December 1775 the Virginia assembly offered pardon from arrest and confiscation if the Tories would take an oath of allegiance to the new Virginia government. However, enforcement often differed in accordance with race. Thus, in May 1776, thirteen whites and twelve Negroes were arrested for Tory activity and sent to Williamsburg for trial. The Virginia Convention tried the cases in June; the Negroes were sent to forced labor in Virginia's lead mines, while the whites were either freed or given parole.

Ousted from his Norfolk base and failing to rouse the west, Dunmore intensified his plunder and terror raids up and down Chesapeake Bay and along the Virginia coast. He ardently intercepted shipping, seized tobacco, and burned plantations, and many Negroes seized the opportunity to supply the British and to join Dunmore's forces, naturally enraging still further even the most conservative planters. All in all, nearly two thousand Negroes ran away to join his fleet, even though only the Negro soldiers, and not their families, had been offered freedom. The slave exodus from coastal Warwick and Northampton counties was particularly heavy, but a severe smallpox epidemic decimated their ranks and ruined their potential effectiveness.

His troops thus ravaged and his supplies running low, Dunmore decided in the summer of 1776 to give up and join the British fleet in the north. Several hundred of the healthiest remaining Negroes were taken north with the fleet, but Dunmore perfidiously shipped many others into slavery in Florida and the West Indies.

18

Battling Tories in the South

North Carolina confronted concentrations of Tories among Highland Scots in the Wilmington-Fayetteville area, who owed their land to the crown's largesse and who included a number of retired British army officers. There were also strong but not dominant clusters of Tories in the back country. Perhaps fully half of the North Carolina population was Tory or at least lukewarm to the rebel cause. Furthermore, fear of Negro uprisings aiding the British led the North Carolina Provincial Congress in the spring of 1776 to urge all slave owners on the south side of the Cape Fear River to remove far into the interior all slaves capable of bearing arms for the British. In Wilmington, Negroes began to escape in droves into the woods, and whites enforced a nine o'clock curfew on them.

In January 1776, Josiah Martin, the royal governor of North Carolina, who had fled to a British warship, decided to mobilize the Tories of the province. Overoptimistically expecting 9,000 Tories to rise in arms, Martin urged the Highlanders and all other Tories to rally in arms for the king and march to the sea to join him and expected reinforcements from Great Britain.

Soon, 1,600 Tories gathered under the veteran British general Donald MacDonald at Cross Creek (now Fayetteville). The Tory response was weakened, however, by the failure of Governor Martin to sail his ship past enemy fire to arrive at the Cross Creek rendezvous. Reaching Moore's Creek Bridge near Wilmington on February 27, the Tories encountered a smaller force of 1,000 militiamen under Cols. Richard Caswell and John Lillington. The Americans held strongly entrenched positions, but in the absence of the ailing MacDonald, the new commander, the young and

reckless Col. Donald McLeod, was able to override the advice of older officers. Once again, as in Virginia, the Tories hurled themselves heedlessly but in orthodox fashion against entrenched rebel positions and were crushed even more effectively than at Great Bridge. The Tories suffered thirty casualties, whereas the revolutionaries enjoyed the incredible casualty rate of none killed and only two slightly wounded.

The surviving Tories fled inland, pursued by relentless bands of American rebels, who captured no fewer than 850 of the enemy. Among the killed were Colonel McLeod, and among the captured, General MacDonald and the political leader of the Highland Scots, Maj. Allan MacDonald. Armed Toryism in North Carolina had suffered a crippling blow.

After commiserating with their families and pledging them its protection, the North Carolina Provincial Congress decided to disperse the hundreds of captured Tories to all the provinces, so as to guard against their "pernicious influence." The rank-and-file prisoners were shipped to Maryland and Virginia, the leaders to remote Philadelphia. The people of North Carolina were solemnly warned that the treatment meted out to the prisoners would largely depend on the good behavior of the remaining Tories of the province.

The year before, during the summer and fall of 1775, the English government had worked out a plausible plan: British troops would invade the South from the sea, and the charismatic presence of the redcoats would inspire Tory risings by the Highland Scots and other Loyalists, to follow their royal governors, Dunmore and Martin. British troops were to embark from Ireland to be led by General Clinton, who would join the expedition at Boston. However, bureaucratic bumbling and adverse weather delayed the expedition until April 1776, by which time Dunmore had been routed off the continent and Martin's premature Tory uprising crushed. When Clinton arrived near the Cape Fear River in mid-April, he was forced to abandon his projected invasion of the South.

Tory disaffection was even stronger in South Carolina than in its northern neighbor, for there both British support and neutralism abounded among low-country merchants and planters as well as the back-country frontiersmen. The revolutionist low-country planters were in constant fear of pro-British insurrections by the numerous Negro slaves, and a Negro named Jerry was executed in the summer of 1775 for saying he would help pilot British warships into Charleston. Furthermore, John Stuart, the British Indian agent in the South, was plotting to raise the powerful Cherokee tribe in attack against the frontier settlements. This buildup was originally part of General Gage's plan for a concerted Indian attack on the entire American frontier, but the arrest of Connolly in Virginia and McKee in

Pittsburgh in October 1775 and the disarming of Johnson in New York in January 1776 wrecked that plan. Even so, Stuart and the Cherokees were still all too dangerous.

Despite the great potential of Tory strength in South Carolina, lack of intelligent organization crippled its impact. In particular, the royal governor, Lord Campbell, instead of going to the back country to rouse his supporters, chose to conduct operations from British warships in Charleston Harbor. Seizing the opportunity presented by Campbell's caution, the rebels of Charleston sent their leader, William Henry Drayton, and the Reverend William Tennent, Charleston's leading Presbyterian minister, to the back country in August 1775 to organize the rebel forces there. By September, two large contending back-country forces had gathered at Ninety-Six, 1,000 rebel militiamen under Drayton confronting a larger Tory force under Col. Thomas Fletchall. Remarkably, Drayton and Tennent managed to sweet-talk Fletchall into signing a "Treaty of Neutrality" and to disband. The treaty pledged the neutrality of Fletchall and his men and even partially acknowledged the authority of the South Carolina Provincial Congress.

Soon, however, the Tories rose again, led this time by Robert Cunningham. Over 1,800 of them gathered at Ninety-Six, where in mid-November they unsuccessfully attacked a fort manned by one-third their number.

In the meanwhile, the South Carolina Council of Safety, the arm of the provincial congress entrusted with executive powers, decided to crush the Tories posthaste, and sent Col. Richard Richardson to do the job. Richardson sped westward, collecting revolutionary militia from both North and South Carolina as he went. By late November, he had amassed over 4,000 men. Richardson's force crushed all Tory resistance before it, and hundreds of Tories were disarmed and compelled to pledge peaceful behavior in the future. An amnesty the following March completed the rout of the South Carolina Loyalists. South Carolina, any more than its sister province to the north, could not now lend Tory assistance to an invasion by General Clinton.

In Georgia, which had been the colony least enthusiastic for the opposition to Great Britain, armed Tory resistance was at first avoided by the very mildness of the Whig response to the Revolution. Indeed, only the rebel enclave of St. John's sent a delegate to the Second Continental Congress. The opening of hostilities at Lexington and Concord, however, coupled with the angry boycott of Georgia by the other colonies, could only push Georgian opinion into a more active course. The development also advanced the fortunes of the Liberty Boys, who, on hearing the news, broke into the public powder magazine. Realizing that Gov. James

Wright's power could only be nullified and eliminated by force, the Liberty Boys organized an effective "Savannah Mob," headed by young Joseph Habersham, son of the president of the Georgia Council. This spearhead of the liberty militants in the province consisted of a cross section of the town's activists: aristocrats, laborers, and town rowdies alike. The blows of the mob soon wrecked the authority and morale of the royal government, and Governor Wright soon saw that his cause was lost; this was no longer his snug Tory Georgia. This campaign was capped in early July 1775 by Habersham and others openly and boldly carrying off the government's store of munitions.

On June 13, several hundred Liberty Boys assembled at Savannah, put up a Liberty Tree, established a Savannah committee to enforce the Continental Association, which Georgia had never joined, and called a provincial congress for the following month. This congress, meeting on July 4, ratified the program and circulated a defense association around Savannah. The congress became the de facto legislature of the colony and a council of safety its chosen executive; the joining of the other American colonies in revolt was particularly symbolized by Georgia's finally choosing a full slate of delegates to the Continental Congress. Soon the provincial congress took over rule of the militia and the courts in Georgia. Thus the Georgia rebels were fully occupied during 1775 with catching up to the other American colonies.

In mid-January, British warships appeared at the mouth of the Savannah River to aid Governor Wright, who had been shorn of all authority by the rebel provincial congress. The Council of Safety promptly decided to seize Wright and other officials to prevent them from rallying the Georgia Tories. He was arrested by Habersham, but a few weeks later he escaped to flee to a British warship. Georgia Toryism, like its counterparts in the other southern provinces, had been outmaneuvered and effectively suppressed.

PART III

The War in the First
Half of 1776

19

The British Assault on Charleston

Bereft of hope for Loyalist aid in the South, and ordered to return north in a short while, General Clinton still had his powerful expeditionary force, and there was no point in not using it. He decided, not unexpectedly, to attack and seize the key southern port of Charleston, or at least Fort Sullivan in its harbor, which the British could then use as a firm base for invasion of the entire southland. Aided by Gen. Charles Lord Cornwallis, over three thousand regulars, and a strong fleet of over fifty warships under Commodore Sir Peter Parker, Clinton sailed against Charleston to assault it by land and by sea.

The American leadership knew that Gen. Charles Lee was perhaps the only man who could save Charleston. Indeed, Lee was in urgent demand everywhere, as John Adams wrote to him: "We want you at New York—we want you at Cambridge—we want you in Virginia. . . ." George Washington wanted him in New York to counter the expected transfer there of the main British force from Boston. As Washington, later to be Lee's mortal enemy, wrote to his brother at the time: "He [Lee] is the first officer in military knowledge and experience we have in the whole army." If he could have been spared, Lee probably would have been chosen to lead the ill-starred campaign against Canada. As it was, both the dashing Gen. Richard Montgomery (an old friend of Lee's) and, after Montgomery's death, Benedict Arnold repeatedly urged that Lee be placed in supreme command over them. Now, in mid-February 1776, Congress unanimously decided to send him to Canada to save the campaign—and such leaders as John Adams, and Franklin, and the unpredictable Hancock sent him glowing and optimistic letters of congratulation. But no sooner

had he accepted the post, and asked as his assistants for either Gen. John Sullivan or the able young Gen. Nathanael Greene, an admirer of Lee who had served under him at Boston, than Congress changed its mind. The southern leaders were now beginning to dread a British attack on the South, so at the end of February, the southern members persuaded Congress to name Lee head of a newly established Southern Military Department, covering Virginia, the Carolinas, and Georgia.

Lee hastily left New York, where he had been cowing the Tories and strengthening defenses, to assume his southern military post, virtually independent of Washington. (Indeed, with the imminent retirement of aging Artemas Ward, Lee was soon to be the second-ranking general in the Continental Army.) Taking up his post at Williamsburg at the end of March, Lee—inveterate scourge of the Tories—was horrified to find Maryland's royal governor Robert Eden basking unmolested in wide personal popularity. Learning from captured dispatches that Eden intended to help a British invasion of the South, Lee urged Maryland to arrest him. When Maryland's newly constituted rebel authorities refused, Lee, with the support of the Virginia Council of Safety, boldly went over their heads to appeal for Eden's arrest to Samuel Purviance, chairman of the Baltimore Committee of Safety. Purviance and the Baltimore committee readily agreed and sent a small troop to the capital at Annapolis to arrest Eden. The angry conservatives of the Maryland Council of Safety at Annapolis prevented Purviance and his men from fulfilling their task, and issued condemnations of the actions of the Baltimore committee. The Council of Safety would do no more than place Eden on parole, and even an order of the Continental Congress could not persuade the council to place him under arrest. Instead, in June, the Maryland convention peacefully suggested that Eden leave for England, allowing him to depart unsearched and unseized.

Soon after his arrival, Lee learned of Clinton's projected invasion of North Carolina from captured documents and swiftly organized defenses and armed forces in the South. The Tories having been crushed in North Carolina, it was clear to him that Clinton would soon strike in force, either at South Carolina or Virginia. When Clinton appeared off North Carolina in early May, Lee moved his 1,300 Virginia troops south to New Bern—slowly, so as not to be committed erroneously to a South Carolina theater of war while neglecting Virginia. By the beginning of June, Lee had learned that the British were probably sailing to Charleston, and he rushed down to the defense of that city in a battle that would decide the fate of the South for several years at the least. Both the Americans and the British fleet arrived at Charleston in early June 1776.

Lee found the defenses at Charleston hopelessly inadequate. President John Rutledge of South Carolina's rebel government, in charge of the

South Carolina militia, refused to abandon Fort Sullivan on Sullivan's Island in Charleston Harbor, which Lee found to be in an exposed and unsound position. Fortunately, however, bad weather and harbor conditions delayed the British attack for several weeks, allowing Lee to shore up the defenses of the fort and Charleston Harbor with great energy. On June 28, the British fleet attacked, but clumsy piloting ran several of their frigates aground. The gallant band at the fort under Col. William Moultrie were almost miraculously able to outgun and batter the vaunted British fleet, even though they were badly short of ammunition, and there were very few American casualties. After a few weeks of hesitation, the British abandoned their plans and sailed north. Lee, Moultrie, and their heroic men at Fort Sullivan had saved Charleston, and with it much of the South.*

*Paul Smith, in opposition to other historians, makes a quite unconvincing case for deprecating the importance of the Battle of Sullivan's Island. Paul H. Smith, *Loyalists and Redcoats: A Study in British Revolutionary Policy* (Chapel Hill, N.C.: University of North Carolina Press, 1964), pp. 18–31.

20

Forcing the British Out of Boston

The securing of the South was not the only decisive military victory gained by the American revolutionaries in first half of 1776; another was the forced evacuation of Boston by the British. It is true that the British were contemplating an eventual shift of their base from Boston to New York, where Tories and provisions would be plentiful and the inner parts of the colonies accessible to attack. But the British were driven out much sooner than they had planned.

The idle siege army in front of Boston had its troubles, and the end of 1775 saw a huge turnover, as enlistment terms were up and new enlistments were secured. It was clear to the Americans that Boston could only be taken if the great guns that had been captured at Ticonderoga could be brought to bear. But how to transport them overland across the ice and the steep New England hills?

The answer was supplied by a young Boston bookseller and amateur student of military engineering, Col. Henry Knox, head of the American army artillery. Asking Washington to be sent to transport the guns, Knox arrived at Ticonderoga in early December. He conceived a fantastically ambitious plan of dragging sixteen big cannon, howitzers, and mortars, weighing over one hundred and twenty tons in all, on forty-three sledges over three hundred miles of snow and ice. The sledges had to be constructed and then dragged by eight yoke of oxen, slowly driven by whips. Whenever a big cannon broke through and sank beneath the ice, it was laboriously hauled up again. Knox finally completed the journey of his wondrous caravan in early February. It was a remarkable

achievement, "a feat at which soldiers and engineers still marvel."*

Now that the Continental Army had the guns, Washington, ever eager for military glory in the classical European manner, and drastically underestimating the number of British troops, proposed a direct frontal assault upon Boston. On three previous occasions—without the guns—he had impatiently urged such an attack, and each time had been opposed by a unanimous war council of his generals. The council of war again demurred, and General Ward sagely proposed to place the guns upon the unaccountably still-unoccupied Dorchester Heights commanding Boston to the south, just as Breed's Hill and Bunker Hill commanded it to the north. Washington grudgingly accepted the plan, which was agreed to by all the generals. The American army, given something sensible to do for the first time since Bunker Hill, worked with renewed enthusiasm.

The operation began on the night of March 2, 1776, with three nights of cannonading from the northwest, diverting British attention from Dorchester Heights. On the night of March 4, under cover of the bombardment, Gen. John Thomas took 2,000 men and 360 carts, and with splendid efficiency constructed two forts on Dorchester Heights. The Americans could perform this remarkable feat of constructing the entire works in one night by using a novel plan suggested by Col. Rufus Putnam, employing frames on top of the ground that required little digging in the frozen earth.

The British awoke on the morning of March 5 to look up in amazement at the American heavy guns on the heights. General Howe sadly remarked that "the rebels have done more in one night than my whole army could do in months." As at Bunker, he decided on March 7 to give up and evacuate, for it was not safe for the British fleet to remain in the harbor under the guns of Dorchester. He had planned to move at his own will to New York, but was now forced to move to Halifax, a military base unquestionably safe for the British, to await the arrival of supplies.

The understandably fearful citizens of Boston soon obtained a promise from Howe that he would not burn the city if the Americans would allow his troops to embark in peace and without bombardment. Washington took no official notice of the promise when it was conveyed to him, but he abided by its terms, and Boston was spared much devastation and bloodshed. Finally, Howe and the British troops, carrying with them no fewer than one thousand Tories in flight, embarked on March 17 in a mighty armada of over one hundred and seventy ships, soon setting sail for Halifax.

*North Callahan, "Henry Knox: American Artillerist," in Billias, ed., *George Washington's Generals*, p. 241.

It was truly a great victory; Boston, the spearhead of the Revolution, the focal point of British military oppression, had at last been liberated. And in their hasty flight, the British had been forced to leave behind them an enormous amount of supplies and military equipment. As the Duke of Manchester was soon to declare in the House of Lords: "Let this transaction be dressed in what garb you please, the fact remains that the army which was sent to reduce the province of Massachusetts Bay has been driven from the capital, and . . . the standard of the provincial army now waves in triumph over the walls of Boston."

21

Privateering and the War at Sea

It was clear to all that, militarily, the Americans were most vulnerable at sea, where Britain ruled the waves and no American population lived to support armed operations. We have seen how Lord Dunmore was able to use the ocean with impunity as his base from which to raid and plunder the American coast, and the entire coastline lay open to raids of this sort. Soon after the outbreak of war, the separate colonies began to try to defend themselves at sea. The first to react was Rhode Island, which chartered two vessels in June 1775 to try to save Newport and the coast from the depredations of the British fleet. Massachusetts and Connecticut soon followed with two ships each; and in mid-July, Congress correctly but not very hopefully urged each colony to defend its coastal areas.

It soon became evident that American ships might accomplish more by taking the offensive, particularly in harassing the British supply lines to the army at Boston. At the end of June Rhode Island again took the lead; its radical governor, Nicholas Cooke, urged just one swift armed ship to seize arms and supplies. Washington took the hint, and despite lack of congressional authorization, appointed shipmaster Nicholas Broughton a captain in the "army," and presented him with a schooner for that purpose. Broughton's successes led to more of the same, and soon Congress began to give its tentative support. By the end of October, the Continental fleet consisted of six schooners, which acquitted themselves ably against the British. Particularly successful was Capt. John Manley, of the *Lee*, who cheered the Americans greatly by capturing several military ships filled with supplies and ammunition. In addition to the schooners, the Americans around Boston organized a fleet of 300 private whaleboats, which

conducted guerrilla-type night raids on the British lighthouses and other installations in Boston harbor.

Nettled by his utter inability to cope with the American schooners and night raiders, Adm. Samuel Graves, commander of the British fleet at Boston, decided to punish the Americans collectively in their ports and harbors. In early October 1775, Graves sent out Capt. Henry Mowat with two schooners and nearly two hundred men on a savage terror raid of the coast north of Boston. He was ordered to "burn, destroy, and lay waste" every seaport town north to Maine, and to destroy all the shipping at their harbors. Specifically, he was to concentrate on burning to the ground the two port towns of Gloucester and Falmouth (now Portland, Maine), whose people, according to Admiral Lord Howe, were distinguished for their "opposition to government." Finding it impractical to destroy Gloucester, Mowat entered Falmouth on the October 16. Giving the townspeople one day to evacuate, he shelled and fired the town until its over two hundred houses, eleven ships, and wharves and warehouses were completely burned.

The wanton destruction of Falmouth spurred Congress into action. By December, prodded by John Adams, it was ready to create officially a small marine corps and a continental fleet of four vessels, to name its officers, and to establish for its supervision what would become the Marine Committee. As commodore and commander of the little fleet, Congress selected the veteran general Ezek Hopkins, until then head of the armed forces of Rhode Island. By the following spring the Continental Navy was ready for offensive exploits in the British West Indies. Commodore Hopkins' first operation was to raid Nassau on March 3, 1776, and to seize large stores of British gunpowder. Bermuda also proved a good source of enemy powder.

Such large-scale raids were exceptions, however, and usually the tiny Continental Navy was confined to forays by individual ships. As we have seen in the case of the whaleboats around Boston, the great many privateers were far more important than the governmental fleet. As their name implies, these ships were wholly private in ownership and operation. An old tradition of private armed merchantmen preying on enemy shipping during wars, privateering had reached a peak during the eighteenth century, and in America particularly during the Seven Years' War. As the Revolutionary War began, many hundreds of ships took to seizing supplies and arms by capturing British vessels. New England (particularly Massachusetts), its fishing and carrying trades ruined by the war and by British control of the northern fishing banks, was an especially successful center of privateering, as were Philadelphia and Baltimore. The inlet of Little Egg Harbor on the New Jersey coast was a particularly attractive haven for privateer vessels. Privateering flourished especially during 1775

and 1776, and it has been estimated that as many as two thousand ships sailed against the British. During 1776 half the Jamaica fleet was captured by American privateers, along with large quantities of ammunition and military supplies. In that year, the British lost several hundred vessels to privateers, with ships and cargo worth over one million pounds sterling—a figure exclusive of government transports and store ships.

Privateering was not only a very effective means of naval warfare; it was a far less costly—and a far more libertarian—a method than building a government navy. Reliance on privateers saved enormous sums and the time necessary to build new ships, since existing merchant ships were used; Moreover, it saved the taxpayers (including “inflation-payers”) the expense of construction and operation. As in all private operations, the costs were borne only by those who assumed the risks, and their rewards were strictly proportionate to their successes. And the war effort also benefitted *pari passu* with the successes of the privateers. Even Washington saw this, and when he created his small fleet in the autumn of 1775, he tried to approximate privateering conditions by granting to the seamen on each ship one-third to one-half of the proceeds from the vessels they captured—about the same incentive pay received by the crews of privateers. Not the least important advantage of privateers was the fact that they automatically disappear with the arrival of peace, and convert to peaceful uses; the public would not then be saddled with the burdens, bureaucracy, potential tyranny, and the nuclei for the fomenting of future wars that are inherent in a governmental navy.

Where in all this was the vaunted British navy? Fortunately for the American cause the overconfident British did not bother to launch a serious naval effort against the rebels, and no attempt was made to blockade the American coast. In these critical first years of the war, only a few British warships were stationed in American waters, and the British did not bother to provide armed convoys to their merchant shipping on the Atlantic.*

During 1775, the privateers proceeded happily, even though unauthorized by the governmental authority. In November, Massachusetts authorized the issue of official letters of marque and reprisal to privateers, and other colonies followed suit. The harsh British Prohibitory Act of late December 1775, denouncing the Americans as traitors and rebels, prohibiting all ships from trading with any part of the thirteen colonies, and subjecting all American and foreign ships trading with them to seizure and

*On Admiral Howe's failure to establish an effective blockade of the Americans after 1776, despite orders to do so, see Gruber, “Richard Lord Howe,” in Billias, ed., *George Washington's Opponents*. pp. 235–43.

confiscation, became known to the Americans by the end of February 1776. The Prohibitory Act spurred the Continental Congress to take further bold measures against Great Britain. In March, Congress officially authorized privateers, providing them with continental letters of marque and reprisal.

22

Commodities, Manufacturing, and Foreign Trade

Before the war, Great Britain had been the principal exporter to, and importer from, the American colonies. America had been particularly dependent upon Britain for supplies of high-grade manufactured goods, including textiles and ammunition. Now the outbreak of war suddenly cut off these supplies, necessary for the American economy and more acutely for the American army. The total imports from England to the American colonies were 2.6 million pounds sterling in 1774, plummeting to less than 200,000 pounds sterling in 1775, and 50,000 pounds sterling the following year. Apart from privateering, the Americans would have to make up the gap by shifting to other sources of trade.

The major obstacle to this vital shift in trade patterns faced by the Americans was paradoxically enough self-imposed. The Continental Association, an intelligent method of putting pressure on England before Lexington and Concord, was now simply a destructive, self-imposed barrier on importing supplies. The pressure policy had failed, war had begun, and now the desideratum was to obtain supplies. Already in July 1775, John Adams, Richard Henry Lee, and other radical delegates to the Congress had recommended that American ports be thrown open to all countries except Great Britain. Throwing American ports open to imports from all other nations, however, would mean open and outright defiance of the time-honored Navigation Acts, and hence a long step toward outright proclamation of independence from Britain, a step which the conservative and timorous in the colonies were not yet prepared to take.

Despite the drastic change of conditions, the American rebels, suffering from a "cultural lag," continued to enforce even the nonimportation

provisions of the Continental Association, and Congress, in effect, reaffirmed the association in May and July of 1775. By mid-July, rationality began to break through, and Congress authorized, for a period of nine months, the importation of munitions from anywhere in exchange for American produce, the Continental Association notwithstanding; merchants were specially licensed by the Congress to receive these imports. So shamefaced were the delegates about this arrangement, that it was not revealed to the public until late October.

American foreign trade had been further gravely crippled by the approach of the date set by the Continental Association for nonexportation (September 10) and by its zealous enforcement by the local committees of safety. At the end of October, further breaches were made by Congress' recommendation to the provincial governments—and to its own newly created Secret Committee—to license ships to export produce to the West Indies in exchange for munitions. Moreover, export of food to Bermuda in exchange for salt and munitions was now officially allowed.

It also began to dawn on some colonists that Britain's exemption of four of the less revolutionary colonies (New York, Delaware, North Carolina, Georgia) after April 1775 was now a boon rather than a bane. The conservative Whig, Thomas Willing of Pennsylvania, a merchant and shipowner, argued in October that it was absurd to "act like the dog in the manger—not suffer [the four colonies] to export because we can't. We may get salt and ammunition by those ports." But on November 1, Congress decided not to allow this major breach, and by the end of 1775 this particular matter had become academic as a result of Britain's anathematizing all American trade with the Prohibitory Act.

November 1, indeed, was a black day for rationality as well as for the Revolutionary War effort, for Congress staunchly reaffirmed the nonimportation pact, with the exception of the specifically licensed shipments for munitions. Those aptly called "fools" by Adams in July had prevailed then, and they tightened their grip in November.

Nonexportation would expire on March 1, 1776, and this fact, as well as the increasing strangulation of foreign trade, reopened the debate on open or closed ports at the beginning of that year. This time Willing, eager enough to import goods into American ports, was hardly eager to throw open American importation to the ships of all nations. Typically, the conservative faction in Congress chose to place protection of the state-granted privileges above success for the Revolutionary War effort. Thomas Johnson of Maryland wailed that the merchants and shipbuilders would suffer if foreign nations enjoyed the carrying trade to America. Samuel Chase of Maryland and John Joachim Zubly of Georgia opined that opening of the ports smacked too much of American independence.

Spearheading the fight for free trade with the rest of the world were the

radicals: Richard Henry Lee and George Wythe of Virginia, Christopher Gadsden of South Carolina, and John and Sam Adams of Massachusetts. They pointed to the growing scarcity of goods and the consequent distresses of the poor. They also shrewdly noted that admitting the ships of foreign nations would be likely to bring in its wake foreign warships to protect the merchant vessels, thus aiding in the American struggle against the British navy. The Virginia Provincial Convention urged Congress to open the ports, as did the Philadelphia Committee of Inspection.

The British Prohibitory Act proved to be the decisive means of radicalizing Congress on this issue, and on April 6, they provided that imports and exports of all goods to and from all parts of the world, except Great Britain and her possessions, would henceforth be free. The onerous Acts of Trade and Navigation were at last no more, and Sam Adams exulted that we have "torn into shivers their Acts of Trade, by allowing commerce subject to regulation to be made by *ourselves* with the people of all countries. . . ." Here was a momentous step indeed toward American independence from Great Britain.

Although the restrictions of the Continental Association on trade with Britain remained, the freeing of all other trade greatly reduced their crippling impact, and they were soon relaxed still further. One of the most onerous provisions of the association, in effect since March 1, 1775, imposed total nonconsumption of tea. Zealous enforcement by local radical committees understandably alienated many citizens from the radical cause. Also understandably, merchants put pressure on Congress to relax what had now become absurd as well as tyrannical regulation. Despite the opposition of Benjamin Franklin, Thomas Lynch of South Carolina, and Richard Henry Lee, Congress agreed on April 13, 1776, to permit at least the sale and consumption of all tea imported before December 1, 1774, when the nonimportation clauses of the Continental Association had gone into effect. Since it was difficult to distinguish between tea imported before and after that date, this measure proved another advance toward freedom of trade.

Still another important advance toward free trade was the liquidation of the economically absurd provisions of the Continental Association for fixing the prices of imported goods at their previous levels. Since the association and then the war were bound to make these goods far more scarce and therefore raise their prices, enforcement of such provisions could only lead to drastic shortages of the goods and dislocation of the economy, shortages and dislocation later aggravated by the still higher prices necessarily brought about by the paper-money inflation financing the war effort.

In the North, the price regulations caused a great deal of trouble from the beginning of the nonimportation, particularly in New York and Phila-

delphia and their tributary markets. Most foodstuffs were grown in America rather than imported, and hence remained abundant during the war; the important exceptions were salt, tea, and the West Indies products sugar and molasses. The dearth and consequent high prices of previously abundant West Indies commodities (in contrast to the more stable prices of home products) were the particular irritants in the North and hence were the special objects of zeal in enforcement by the radical local committees. During the winter of 1775–76, the Philadelphia committee continually harassed the merchants. In December 1775 the committee fixed detailed wholesale and retail prices for oil, following this up on March 6 with a comprehensive schedule of fixed prices for such West Indian trade products as salt, molasses, rum, coffee, cocoa, and sugar. Violators would be advertised as “sordid vultures who are preying on the vitals of their country in a time of general distress.” This petulant deed was quickly imitated by the New York committee, which had previously harassed merchants for alleged overcharging in the price of pins. The Newark committee followed with similar schedules for West Indian commodities on March 15, and other imitators were the joint Committees of Inspection of the towns of New London County, and the joint committees of Hartford County, Connecticut. The New Hampshire Provincial Congress and the Providence, Rhode Island, committee also issued frequent warnings and outcries against the rise of prices.

In the south, the major scarce imported commodity was salt. Salt was essential for the preservation of meat and fish, and the bulk of colonial supplies of salt had come from Turks Island in the British West Indies, now closed to American shipping. Local committees in the south, particularly in Virginia and Maryland, tried desperately and unavailingly to stop the rise in the price of salt, efforts which could only aggravate the shortage. People in the Virginia uplands went so far as to join in looting raids against the salt stocks of tidewater merchants, raids which only intensified the shortage still more.

Congress was finally moved at the end of December 1775 to relieve the salt shortage by opening Maryland, Virginia, and North Carolina to the import of salt from any foreign country and to the export of any produce in exchange. Thus salt, at least in the upper south, won free trade before other commodities.

Having watched the colonies struggle unavailingly against price increases for scarce commodities, Congress decided to complete its great free trade program of April 1776 by completely scrapping the price-control provisions of the Continental Association. Wisely asserting that merchants should be encouraged to import from abroad by a prospect of profits proportionate to the risks incurred, Congress resolved on April 30 to end the powers of committees of observation and inspection to “regu-

late the prices of goods." Domestic trade immediately flourished again with the sweeping away of the restrictions, and the merchants happily ignored the exemption the Congress had tried to make for green tea.

The breaking of this logjam of course allowed prices to rise to their free-market levels, thereby clearing supply and demand. Unfortunately, Congress soon partially backtracked on its free-market policy and on May 30 it advised the local committees once again to fix the price of salt. Most of the provinces and local committees were quick to adopt this advice, thereby perpetuating a salt shortage. The New Jersey Committee of Safety, on the other hand, displayed better sense. When, in various sections of the province, angry mobs formed to coerce merchants into lowering their prices, the New Jersey Committee warned the people that any forced reduction of prices would merely discourage importation and end by injuring the mass of the poor.

The gravest commodity shortage for the American war effort was ammunition, especially gunpowder, the great bulk of which had formerly been imported from England. Without ammunition, of course, the war would be over promptly. The Americans made determined efforts to encourage and subsidize domestic manufacturing of powder, but with little success. America, after all, was not a manufacturing country, and there was no reason why it should have been. Agriculture was its *metier*, and over 90 percent of the population lived on farms (including plantations). Cities were far more important as centers for commerce—trading in and for American agricultural products—than for manufacturing. What manufacturing took place was on a small scale indeed; there were artisans in urban centers and the more prevalent household manufacturers (e.g., of the family's chief clothing) in the rural areas. The exception to the paucity of manufacturing for the market was Philadelphia, the largest city in British America. Wood from nearby forests and hides from neighboring farms provided raw material for numerous types of manufacturing, and local iron, zinc, and copper mines supplied the material for manufacture of arms.

Seeing that the powder shortage was critical, the Continental Congress as early as June 10, 1775, urged the provincial governments to subsidize or engage themselves in the manufacture of gunpowder. In Philadelphia and environs, with its tradition of manufacturing, six powder mills were soon producing several thousand pounds of powder a week. The Virginia convention also passed a bill subsidizing powder mills, but with little success. Many Virginians attempted powder manufacture, but they soon found that the heavy capital requirements and costly operations forced them to abandon the field. As the powder shortage accelerated throughout the colonies, and subsidized private manufacture proved hopelessly

uneconomic, Virginia turned in January 1776 to consider the establishment of public powder mills at government expense. But despite the active support of the powerful John Page, the attempt was blocked by a majority of the Virginia Committee of Safety and especially by the president of the convention, Edmund Pendleton.

At any rate, it was rapidly becoming clear that domestic powder production could supply only a negligible amount of the needs of the American forces; even Philadelphia's contribution could only be a drop in the bucket and was inferior in quality to European powder besides. In short, the great bulk of American powder still had to be imported. The obvious source was the West Indies, and this meant that tobacco, the great staple demanded in Europe, would be the main source of funds to pay for the imported powder. And tobacco meant Virginia, the great center of tobacco production and export.

The first attempt to expand the import of powder came in Virginia during 1775 when the merchant and planter John Goodrich was sent by the Committee of Safety to negotiate the purchase of powder in the West Indies. Goodrich, however, through no fault of his own, was soon in trouble on all sides. The British discovered his mission and arrested him, and after his release, Virginians, led by the Isle of Wight Committee of Safety, denounced him for daring to consider buying ammunition from the *British* West Indies. Few Americans, indeed, seemed to realize that purchase of war supplies from the British would be a boon, not a living shame, for the American war effort. After all, there was no mystical taint attached to *British* ammunition. Goodrich, in understandable disgust at his persecution, abandoned the struggle and joined the British cause.

A more successful effort to import powder came in April 1776 after the American seizure of Dorchester Heights and the British evacuation of Boston. French and Dutch merchants became far more optimistic about rebel chances, and promptly began to sell a steady and abundant flow of powder to the Americans, using the entrepôts of St. Eustatius (Dutch West Indies) and Martinique (French West Indies) to exchange European gunpowder for Virginia and Maryland tobacco. Large, though necessarily sporadic, shipments of arms and ammunition also came from Spain to the back country of Virginia by way of Havana and the port of New Orleans in Spanish Louisiana. So abundant was the flow of imports after April 1776 that the colonies had no further worries about a shortage of gunpowder.

For other types of arms and ammunition, American domestic sources were far superior. Particularly important was the rapidly growing iron industry of Pennsylvania. From producing only one-seventieth of the world's crude iron (bar and pig iron) in 1700, the American colonies produced 30,000 tons in 1775—one-seventh of the world's output and exceeding the iron production of England. Pennsylvania, with its abun-

dance of iron ore, timber for fuel, and access to nearby markets, was preeminent in iron output. Southeastern Pennsylvania had no fewer than seventy-three iron furnaces and forges, the largest and most numerous being in Berks County, north of the Schuylkill River. Hence, during the winter of 1775–76, Pennsylvania manufactured over four thousand stand of arms. Other major centers of iron manufacture were in northwestern New Jersey, around Lake Hopatcong, northwestern Connecticut, around Salisbury, northeastern Maryland, and—after 1775—in various parts of Virginia, and together they produced another four thousand stand of arms.

In contrast to the production of crude iron, the manufacture of finished iron had been restricted—though only slightly in practice—by the British Iron Act of 1750. The stimulus of war contracts, however, quickly spurred the construction of iron foundries in Massachusetts, New Jersey, Maryland, and especially in Pennsylvania, and village blacksmiths and other artisans were fully competent to turn their attention to finished iron for the war effort. The Americans also benefited from zinc deposits in northwestern New Jersey and copper mines in New Jersey, Pennsylvania, and Maryland. As a consequence, the army suffered no shortages of iron, rifles, muskets, or ammunition. American cannon, however, proved far inferior to European, and the rebels quickly placed their reliance on cannon, whether iron or brass, imported from France or captured from the British.

There was one vital ingredient of ammunition, however, that *was* short during the war: lead. So scarce was lead that as early as June 1775 the Continental Congress pleaded with the provinces to open up governmental lead mines. Several colonies tried this desperate experiment, but, as might be expected, the results were failures: yieldless mines, as in New York, or marginal mines, as in middle Connecticut. This should have been expected, for any useful lead mines would have been discovered and exploited by private enterprise. The only workable lead mines were operating in southwestern Virginia (near what is now Austinville). By the summer of 1776, the Americans were stripping lead from clocks and windows to provide the Continental Army.

Of the food products, we have seen that the major item in short supply was salt. While some salt could be imported from the West Indies, the Americans also constructed makeshift factories along the coast to make salt from evaporated sea water. This was a basically uneconomic process to be sure, but was made temporarily profitable by the high price of salt caused by the scarcity of supply. Thus when market prices were permitted to rise, the wartime shortage of salt created its own partial corrective.

Also cut off by the war was a very large amount of textiles for clothing imported from Great Britain, but this drastic cut was nearly compensated by large increases in household manufactures of homespun cloth, as well

as by seizures by privateers. In New England and the middle provinces, farmers with ready flexibility increased their household production of woolen and linen cloth. In the South, farmers and planters increased their output of homespun linens, cottons, and linsey-woolsey. And many back-country settlers simply wore their deerskin clothing as before.

23

Getting Aid from France

To open the ports of America to trade for munitions and with the West Indies the Americans were required to take a step toward independence almost as momentous as throwing open the ports in defiance of the navigation acts: they had to negotiate as a separate country with the European countries supplying the munitions, especially with the major supplier, France.

As early as July 1775 the Continental Congress began its first diplomatic efforts by sidestepping the British government and speaking directly to their fellow subjects. An address stating its wish for equal liberty was sent to the City of London. Appeals to the people of Canada and Jamaica to join in the colonial cause, and a particularly noteworthy address sent to the people of Ireland, were the first attempts to export the revolution overseas. Congress noted the grievances of the Irish under British rule, and suggested that both peoples should engage in a common struggle for liberty, albeit within the framework of the British Empire. The subservient Irish Parliament, however, merely moved to endorse the British war of suppression against the colonies.

At the same time Congress was moving toward liberty and independence, however, it was taking some steps at home toward oligarchic rule. Of necessity, it had already begun to function through various standing committees to discharge its vital responsibilities for the war effort. Generally these functioned under the strict control of Congress itself and were always open to its guidance and supervision. But in late 1775 Congress created two "secret committees," and as their name implies, they acted in

secret and on their own initiative, without checking with Congress. Instead, Congress only had the power (largely unexercised) to ask for their records at its discretion. A great deal of working power was thereby put into the hands of a few men who dealt, furthermore, in the particularly sensitive area of foreign affairs. On September 18 Congress created the nine-man Secret Committee to handle the deals with foreign countries for munitions; on November 29 it created the five- (later six-) man Committee of Secret Correspondence, to correspond "with our friends" abroad. An omen for the future was the highly conservative complexion of the Committee of Secret Correspondence, consisting of John Jay, John Dickinson, Benjamin Harrison, and Thomas Johnson, who were archconservatives, and Benjamin Franklin, a thoroughgoing opportunist with highly conservative instincts. The establishment of this committee came as a response to the prodding by John Adams, Patrick Henry, and Samuel Chase of Maryland to open full diplomatic relations with France.

Soon the two secret committees were able to work very closely and cozily together. This close working relationship was embodied in the person of the young Philadelphia merchant Robert Morris, destined to become the great Mephistophelean figure of the revolutionary era. At the turn of the year, he became a member of both committees; he virtually ran the Committee of Secret Correspondence himself throughout 1776 and quickly became the leading figure in the Secret Committee. He was, in fact, to serve as the second chairman of the latter committee, succeeding his friend and partner, Thomas Willing of the firm of Willing and Morris. Thus catapulted to the very seat of power in the American colonies, the highly conservative Morris was able to make himself the center of a veritable plunderbund, which unabashedly and systematically looted the public purse for their private profit.

One of the first deeds of the Secret Committee was to substitute for regular market purchases a system of contracting—the ancestor of modern "cost-plus" government contracts. Under this system some favored firms were selected by the government to purchase (or to produce) certain goods, which the government pledges to buy at a rate that will give the merchants a guaranteed margin of profit, a lucrative special privilege eagerly fought for by business then and since. The Secret Committee established a handsome rate of profit on such mercantile purchases and often advanced the merchants the initial capital to buy the supplies. Moreover, Congress had thoughtfully allowed only merchants specifically to purchase supplies abroad, and as we have seen, this condition obtained until April 1776. This authorization came from the Secret Committee, and it was soon clear enough that control of this committee was the open sesame to special privilege and high guaranteed fortunes to be made out of the revolutionary effort.

Control of the committee Morris and Willing had, and they lost no time in exploiting their position. One of the first acts of the committee was to grant heavy contracts to the firm of Willing and Morris. These commission contracts were not the only form of subsidy the company enjoyed. The committee now quickly granted it a startling contract for supplying gunpowder, guaranteeing a high flat price of fourteen dollars a barrel, *whether or not* the powder reached American stores safely! This assured Willing and Morris a clear profit of \$60,000 without even a fleeting risk of loss.

Other members of the Secret Committee also came in for their share of the loot. John Langdon of New Hampshire provided contracts to his own firm; Philip J. Livingston routed contracts to Livingston and Turnbull of New York; Silas Deane of Connecticut furnished commissions to his brother Barnabas. But heading the associates in plunder were Willing and Morris. All in all, the Secret Committee paid out over \$2 million in war contracts from 1775 to 1777, and of these nearly \$500,000, or one-fourth of all disbursements, went directly to the firm of Willing and Morris. Morris also directly shared with fellow members of the committee the largesse of nearly \$300,000 in other contracts. Morris and Willing soon established a far-flung network of agents and followers, including leading merchants Benjamin Harrison (a member of the Committee of Secret Correspondence) and Carter Braxton, both of whom consequently received handsome contracts from the Secret Committee. Two particularly important committee agents were soon to double as congressional envoys to the French, William Bingham of Philadelphia, and Silas Deane of Westfield, Connecticut.

Deane was a prototype of the young lawyer with a keen eye to the main chance. He had launched his career by marrying the widow of a wealthy merchant, then capped that by divorcing her and marrying a member of the powerful Saltonstall family, thus getting himself profitably launched in Connecticut politics. Hardly had he latched onto a good thing in the operations of the Secret Committee, however, when the ungrateful voters of Connecticut unceremoniously turned him out of Congress in the elections of October 1775. But the lame-duck congressman continued to stay in Philadelphia, knowing that he would soon be taken care of. His expectations were not to be disappointed.

Great Britain, by its aggressive expansion of over two centuries, culminating in the conquest and arrogant seizure of shipping during the Seven Years' War, had gravely alienated the other powers of Europe. Particularly bitter at England was France, crushed by the Pittite war and the peace of 1763. France, of course, especially welcomed the American Revolution and its prospects of trouble and even loss of the colonies for Great Britain. A reduction in British power would benefit France and the

other countries of Europe, and would guard France against any possible resumption of a Carthaginian War against her by a united Anglo-American Empire under another Chatham ministry.

During the summer of 1775, the dashing young dramatist Caron de Beaumarchais, an agent of the French government in London, was able to make contact with many British and American radicals. On the basis of his information, he predicted turbulence in Britain and urged some understanding between France and the American revolutionaries. The shrewd French foreign minister Comte de Vergennes thereupon sent to the American colonies a secret agent, Achard de Bonvouloir. Without making any definite commitments of French aid, Bonvouloir was to assure the Americans that France had no designs for reconquest of Canada, had nothing but admiration for the American revolutionary efforts, and would welcome American commerce in French ports.

The Committee of Secret Correspondence had been recently established by Congress, and Bonvouloir met privately with it to convey the French assurances to the rebels. In its turn, the committee was eager to convince the French that Congress was moving toward independence, and thus spur French aid to the revolutionary cause. In early March, despite the absence of a declaration of independence, the committee decided to send a secret agent to France as its envoy to bid for French aid. This envoy was Silas Deane, who arrived at Paris in early July 1776 in the guise of a private merchant. He was able to use his crucial position in the procurement of munitions to serve also as an agent of the firm of Willing and Morris. There Deane was able to draw many influential French financiers and officials into the Morris-Willing network. Deane and Morris employed the network to plunder public activities systematically for their private profit. In addition to granting themselves contracts, public ships and wagons were freely and abundantly used to convey their private cargoes without charge. Accounts were scarcely kept and remained virtually unsupervised, and thus Deane and Morris were able to engage in large-scale outright peculation of American funds. In 1776, on one contract alone, the government advanced Morris the large sum of \$80,000 to buy goods abroad. Even though the goods were never delivered, Morris never returned the money. Furthermore, purchases on public account were given a back seat by Morris and his group in preference to their strictly private transactions.

Before the dispatch of Deane, the Committee of Secret Correspondence was able to engage secret agents living abroad. The separate colonies had employed six agents in London; of these two were members of Parliament and hence effectively ineligible for further work, one became a Tory actively serving the British cause, one resigned, and one (Franklin) had been forced to return home. This left the learned Massachusetts radical

Arthur Lee, Richard Henry Lee's brother, who became a secret agent of the Committee of Secret Correspondence in mid-December. The committee also engaged an old friend of Franklin's living at The Hague, Charles W. F. Dumas, to work for it in Holland.

Meanwhile, Beaumarchais was strengthened in his purpose by frequent conferences with Arthur Lee, who had the verve and vision to ask for French aid on his own initiative. Beaumarchais pressed upon King Louis XVI a policy not only of permitting and encouraging private shipment of munitions to America by selling these munitions to French merchants, but of going beyond this to positive aid by the French government itself. This aid was to be secret, through a dummy private firm, so as not to provide Great Britain with a *casus belli*. Bonvouloir's optimistic report on American plans for independence persuaded Vergennes to recommend, and the king to adopt, the Beaumarchais plan. On May 2, 1776, the king ordered the government to supply as a virtual gift to the Americans, one million livres worth of munitions through Beaumarchais, who emerged as a supposed merchant representing the fictitious firm of Roderigue Hortalez et Cie. As part of the active new policy, the king also moved to strengthen France's army and navy. This gift was promptly matched by another one million livres supplied to Beaumarchais by Charles III of Spain, eager to join his ally in weakening their ancient foe.

King Louis envisioned French governmental aid as an outright gift to the Americans in the guise of a loan. But when Beaumarchais saw that Deane had come prepared to *purchase* the munitions, he saw an opportunity for a huge future windfall for himself. He drew up an agreement with Congress to supply munitions on credit, to be repaid in money or in tobacco at an indefinite later date. He also advanced government credit to French ships to carry the war supplies to America. Indeed, Beaumarchais was to send to America on credit many times the initial Franco-Spanish subsidy; by mid-October 1776, he had shipped over five and a half million livres of supplies furnished by the government (of which Spain refused to pay more than the initial one million), including powder, guns, cannon, cannon balls, and clothing for soldiers. After the war, Beaumarchais had the nerve to demand 3.6 million livres from the United States in payment for the supplies, but the perceptive Arthur Lee had early realized that Beaumarchais was simply a cover agent intended by the French government to give munitions in secret to the Americans. Congress properly paid Beaumarchais nothing.*

As the Americans had foreseen, France quickly followed its encourage-

*In 1835, however, the United States government paid 800,000 francs (livres) to the heirs of Beaumarchais as a deduction monies paid to the U.S. by the French government under the Treaty of 1831.

ment of private as well as its own secret trade with America by using its navy to protect that trade. France informed Britain in June that it would insist on full rights as a neutral under international law: to open its ports to American merchant shipping; to have its ships free from British search in French territorial waters (e.g., the French West Indies, especially Martinique and Cap François in Haiti, the entrepôts for the new trade); and to keep its trade with its own colonies inviolate from British interference. The French could then keep their shipments within their empire, and therefore inviolate until they reached the West Indies, thus protecting them most of the way to America. Furthermore, France greatly aided American privateers by secretly permitting them to fit out in French ports; British complaints were either ignored or the privateers would be seized officially and then allowed to escape without loss.

24

Polarization in England and the German Response to Renting “Hessians”

During 1775 and early 1776, as we have seen, the American conflict escalated and intensified step by step: as the military clashes widened on land and at sea; as the British cracked down bitterly on the revolutionaries; as militant measures were taken against Americans loyal to Britain; and as the Continental Congress opened diplomatic relations, organized the war effort, and opened the ports to foreign trade and supplies in defiance of the time-honored British laws of trade.

As the conflict got underway and for many months thereafter, most of the American leaders had conservative aims and goals. They aimed not at all at independence, but at intensifying the old pressure of the boycott to bring Britain to her senses and to abandon her recent policy of aggressive imperial domination. Others at least realized that Britain would adopt a hard-line policy of crushing the rebellion, inexorably pushing the Americans into greater conflict, but only a handful of the most radical and prescient leaders fought eagerly for the maximum goal: independence. They realized that France would only be interested in aiding an American movement that would aim for independence and not for eventual reconciliation and strengthening of the British Empire. Moreover, they saw that in the difficult war ahead only American independence would provide the necessary inspiration for waging the struggle. The radicals realized, as Curtis Nettels has written, that

the Americans had arrived at a crossroads of history. Backward the road led to monarchy, serfdom, oppression. Ahead was visible the trace of a new path leading to emancipation, freedom and self-government. . . . Should [Con-

gress] take the road backward to the oppressions of the old world or build a new road to the summit discernible in the distance . . . ?

It was independence that “offered an inspiring prospect—nothing less than the creation of a new nation, a great republic, dedicated to rights of man.”*

New England, the center of liberalism and democracy, with its traditions of virtual independence, had little difficulty in visualizing American independence. But as long as Massachusetts was the focal point of conflict with Britain, it and the rest of New England had to tread warily in Congress. “Levelling” New England was under enough suspicion as it was from the other colonies, and it would have been suicidal for it to take the lead in advocating independence—a most unpopular concept in 1775. Massachusetts and its chief radicals, the Adamses, had to lie low, waiting for the lead for militancy and eventual independence to be taken by Virginia, the foremost—and the most radical—colony in the South. This was a further consideration in the decision to give George Washington command of the Continental Army: he was an uncommon blend of impeccable conservative on social and political matters and yet a militant in the fight against Britain.

Yet the radicals had a difficult row to hoe indeed, for Congress began firmly in the hands of conservatives who would not consider independence: such leaders as John Jay, James Duane, John Alsop, Philip Schuyler, and Philip and Robert Livingston of New York; John Dickinson, James Wilson, and Robert Morris of Pennsylvania; Thomas Johnson of Maryland; Benjamin Harrison of Virginia; Thomas Lynch and the Rutledges of South Carolina; and Dr. John Zubly of Georgia. Even New England had conservative delegates: Silas Deane of Connecticut, and Thomas Cushing and the waffling and petulant John Hancock of Massachusetts. Against such a formidable array the Adamses, Patrick Henry, and Richard Henry Lee could only fume in private and await the passage of time that they firmly believed would be on their side.

The superior insight of the radicals was partly due to their superior information on political conditions in Great Britain and on the formidable strength of the Tory forces. The prime source of this information was Arthur Lee, who was functioning as a one-man committee of correspondence from London from the late 1760s, sending his news and evaluations to the Adamses and other radical leaders. Lee and his other brother William, a merchant settled in London who had become important in London politics, reported clearly the feebleness and decline of the Whigs

*Curtis P. Nettels, *George Washington and American Independence* (Boston: Little, Brown, 1951), p. 107.

and radicals, as well as the triumphal successes of the imperialists and Tories and the subservience of a corrupt Parliament.

The American radicals soon saw this estimate of the temper of the British government confirmed as the king brusquely refused even to receive Dickinson's Olive Branch Petition and issued the staunchly hard-line Proclamation of Rebellion on August 23, 1775. The proclamation absurdly denounced the Americans as rebels and traitors who had now brought long-laid designs and "traitorous conspiracies" to open rebellion and war. The king announced that "he would bring traitors to justice . . . [and] condign punishment." This was quickly followed by a royal order to seize the ships of Americans or all those trading with America, and the royal authorities expressed their determination to proceed against the Americans as "open and announced enemies of the State."

In England the Whig and liberal cause had fallen to low estate. No mass protests of merchants or populace arose to block the determination of the North ministry to crush the Americans. Many English merchants were beguiled by the temporary expansion of markets in Europe, aided by the recent peace between Russia and Turkey, and by the lure of government war contracts. The mass of the people were seduced by a wave of patriotism as well as the desire to force the Americans to pay part of their tax burden. The aristocratic Whig leadership, always inclined to luxurious indolence, decided against the efforts of Edmund Burke to arouse them, and instead to give up and absent themselves from Parliament. Burke did his best to work for peace on his own and roused peace petitions from London and his constituency in Bristol, but all in vain; indeed, more people in Bristol addressed their support of the government on the American war.

Burke's persistent appeals to the Marquis of Rockingham and the Whigs to oppose the war vigorously was not simple impetuosity; it was based on profound insight into the proper strategy for a party truly in opposition to the existing regime. Vigorous opposition, though in a weak minority at the time, would not be at all futile. On the contrary, local opposition would inform people of the available alternative to which they might turn in anger when present policy became bankrupt. But for such an angry turn toward a radical change of the system, there must be skilled leadership and direction. There must be a vanguard. As Burke wrote: "To bring the people to a feeling . . . as tends to amendment or alteration of system, there must be plan and management. All direction of public humor and opinion must originate in a few." He vainly urged on the Whigs a large and powerful nationwide petition movement, which would remain permanently in operation as a network of local committees of correspondence to serve as the lever of dynamic political change.

The eloquent young Charles James Fox, a son of Henry Fox and close

to the Whig party, also argued against the Britain's war against the Americans. The Pittites opposed the war, too, but were enfeebled by the chronic illness of Lord Chatham. Leading individual Whigs did make their mark by refusing to serve in the armed forces against the Americans; and these came to include Lord Effingham, an army officer, and the great Adm. Augustus Keppel.

Meanwhile, the radical movement in Britain had fallen into rapid decline. John Wilkes' triumphal entry into Parliament in 1774, as well as into London politics, marked the beginning not of new triumphs for the Wilkite movement, but of its collapse. In any age of Tory ascendancy, Wilkes proved to have been a far better radical leader in disgrace than in positions of power or influence; in fact, "having realized his civic and Parliamentary ambitions, it seemed that he no longer sought or depended on the acclaim of the 'lower orders' of citizens."* He was still a liberal opposed to the war, however, and he warned that victory would be hollow, since the Americans could not be kept permanently in subjection, even by large forces of occupation. Soon to abandon the radical position, Wilkes was to remain for a while an undistinguished liberal member of Parliament; but he began to follow the classic ever-rightward path of the renegade radical, until, after two decades, he died "in the odour and sanctity of the new Toryism."** The radical cause in 1776 had become moribund in Britain, a state aggravated by Parliament's recent reimposition of a high tax on newspapers, crippling the cheap and popular press that had served as a vehicle for gaining support of the cause from the masses.

Of the radicals only the doughty Reverend John Horne managed to remain active: he took up a collection in London in June 1775 for widows and orphans of the Americans "murdered" at Lexington by the British troops. He was promptly sent to prison for his audacity. It is significant of the decline of British radicalism that his arrest evoked none of the popular agitation generated by the imprisonment of John Wilkes in 1763.

In their desperate state, the various liberal and opposition groups began to draw hesitantly together and to become increasingly radicalized by the American crisis. They soon realized that their only hope lay in a drastic British defeat at the hands of the Americans. Openly favoring the American cause, they grew more radical in their proffered solutions. Burke, who habitually dealt in terms of utility and expediency, or else tradition, now acknowledged in part the validity of the Americans' stress on their *rights*. Yet he was gradually being outflanked on his left. The Earl of Shelburne and the other Chathamites, along with the London radicals, called for

*George Rudé, *Wilkes and Liberty* (Oxford: Clarendon Press, 1962), p. 192.

***Ibid.*, p. 192.

repeal of the Declaratory Acts asserting full parliamentary sovereignty over America, including the right of taxation; and Charles James Fox was calling for repeal of every British measure toward America passed since 1763.

With the liberal and radical movements weak and in disarray, the field was wide open for the hard-line apostles of force and suppression. Bunker Hill was characteristically taken, not as a signal to stop and think, but as a stain to Britain's honor to be avenged as quickly and forcefully as possible. Only Lord Dartmouth, the colonial secretary, stood out against the war policy of the cabinet, but with no success. So widespread was British support for suppression that the manufacturing centers of Manchester, Lancaster, Liverpool, and Bristol presented progovernment addresses. Driven on by the king and by the war party in control of the rest of the cabinet and of popular opinion, the equivocal prime minister, Lord North, was forced to press the war with vigor. He raised troops, relieved General Gage and Vice Admiral Samuel Graves, who were considered dilatory by the war party, and sent five Irish regiments to America. In the autumn of 1775, moreover, the two cabinet moderates lost their posts: the Whig Duke of Grafton went into opposition in bitter protest against the war, and Lord Dartmouth lost the key post of colonial secretary to hard-line Lord George Germain, a man bitterly opposed to appeasement of the colonies.

Strengthening hard-line dominance over public opinion was a pamphlet published in 1775 by the eminent Tory literary critic Samuel Johnson. With his accustomed perceptiveness, Johnson, in *Taxation No Tyranny*, warned that the logical conclusion of the "libertine" and American hostility to taxation, was no taxation at all, or anarchy.

Prowar petitions, inspired by the government, denounced the "sophistical arguments and seditious correspondence" of "a few disappointed men" who were responsible for "deluding" the Americans into rebellion. The ministry propounded a similar line. Indeed, more serious than the imprisonment of John Horne was the arrest on a charge of treason of the radical alderman and leading London banker Stephen Sayre, whom Burke and other Whigs were refused permission to visit in prison. Similar treatment for the Whig leaders was hinted to be in the offing, though Sayre was eventually able to sue successfully for false arrest.

Having agreed to prosecute the war vigorously, North attempted to offer peace terms to the Americans. After a great deal of wrangling with Germain and the war party, he won an agreement in May 1776 to send as peace commissioners to America, Gen. Sir William Howe and his brother the Whig Adm. Richard Lord Howe, the newly appointed commander of the fleet in American waters. This wrangling was a waste of time, for the peace terms merely amounted to a demand for American

submission in exchange for instituting North's rejected Plan of Conciliation and a plan to consider American grievances. There was not the ghost of a chance that the Americans would submit. As Professor Ritcheson comments: "The terms thus held out were those a victorious and reasonably benevolent mother country might have granted to discouraged and chastised rebels."* But the Americans, of course, were neither beaten nor discouraged.

Lord North's first task in prosecuting the war was to raise 20,000 men to send to the American colonies. Rather than annoy the British people by raising the troops at home, he determined to use Britain's vast wealth to hire mercenary troops from other governments. He turned first to Russia, which had been substantially helped by Britain to defeat Turkey in the Russo-Turkish War of 1768-74. Russia had installed King Stanislaus as its puppet ruler in Poland, and in 1768 the liberal Polish country party, or Confederation of Bar, led by Counts Joseph and Casimir Pulaski, rose in rebellion against the king. By 1772, the Polish rebellion was crushed, and Poland suffered the loss of one-third of its territory and half of its population in the First Partition by Russia and Prussia. Turkey had decided to aid the Polish rebels, earning the belligerent attention of Russia. But Russia's gratitude to Britain for its aid in the war had cooled. The German-born empress Catherine the Great had come strongly under the influence of Prussia, and Frederick the Great of Prussia was peeved at Britain for what he considered unsatisfactory peace terms after the Seven Years' War. After much backing and filling and seeming agreement, Catherine finally refused Britain's request.

North turned next to the Dutch. Ever since the accession to the English throne of William of Orange in 1688, the Dutch House of Orange had been subservient to Great Britain. They had been governed during the first half of the eighteenth century by the libertarian Republican party, which pursued a policy of thoroughgoing decentralization, minimal government, and profitable neutrality in Europe's wars. During the War of Austrian Succession, Britain had engineered a coup by the House of Orange; the Republic was overthrown, and William IV of Orange was installed as *Stadholder* of the Dutch provinces. Now Great Britain asked the Dutch to supply the needed troops, specifically the "Scotch Brigade." (This brigade originally consisted of Scotsmen, but was now largely comprised of Walloons from the southern Netherlands). The House of Orange was, of course, willing to agree; but the Prince of Orange was by no means the autocratic ruler of Holland, and the republican-led assem-

*Charles R. Ritcheson, *British Politics and the American Revolution* (Norman, Okla.: University of Oklahoma Press, 1954), p. 207.

blies of most of the provinces vetoed the scheme. Eloquent opposition to providing the troops was expressed by John Derk, who, citing English depredations upon the sea and upon Dutch commerce, declared that the Americans were contending for their liberty just as the Dutch themselves had fought for their independence as rebels against Spain in the late sixteenth century.

Leading the successful opposition to troop-aid to Britain in the interior Dutch province of Overijssel was a man destined to become one of the most important figures in the international revolutionary movement in the near future: the nobleman J. D. van der Capellen tot de Pol, who broke precedent by making public his views in the secret discussion within the provincial estates. Van der Capellen, who also led the movement to abolish *corvée* servitude by the peasants of the province, was in contact with British radicals and was soon to correspond with the revolutionary governors of Connecticut and New Jersey.

The substantial number of republican merchants in the Dutch provinces also expressed their opposition to British dictation by happily engaging in "illicit" trade with the rebellious Americans and with the French, St. Eustatius in the Dutch West Indies serving as a crucial entrepôt in the American trade.

Twice rebuffed in their search for mercenary troops, the British now turned to some of the petty princes of western and southern Germany who were always eager to augment their incomes by renting out their troops. In January 1776, Britain received into its service 30,000 German mercenaries from six principalities, including Hesse and Brunswick, of which three-fifths came from Hesse-Kassel.* While some of these German troops were mere hired killers or soldiers of fortune, many were imbued with deep sympathy for the American cause, proving to be reluctant fighters at best and often deserting outright to the American ranks.

In their discontent the German troops at least partially reflected a wave of enthusiasm for the revolutionary cause that was sweeping the intellectuals of Germany. The Enlightenment had deeply penetrated into German thought, and Rousseau and Voltaire were read as widely in Germany as in America. The rights of man were keenly admired, and the German intellectuals saw with enthusiasm that here was a new type of war, a war for liberty, a revolutionary war for an ideal very different from the familiar European war of mercantilistic and dynastic plunder.

The rental of the troops to counter-revolutionary England ignited a torrent of protest in Germany. The German poets were in the forefront of the protest, including the young poets Goethe and Schiller. The poets

*Of the 30,000 troops, 7,500 were to perish during the war, either in battle or of disease; of the remaining 22,500, 5,000 were to desert to settle in the United States.

were moved to use the American struggle for liberty to protest directly or obliquely against their own petty despotisms. The poet Johann Voss called courageously for Germans to “drain the cup of tyrant’s blood to triumph.” Leading the campaign was the romantic poet and newspaper editor of Wurttemberg, Christian F. D. Schubart, who had recently founded a lively paper to help launch Germany’s political press. Also avidly enthusiastic for the American Revolution was the poet Johann Georg Jacobi, who hailed the Americans as really battling against despotism in *all* countries; an editor of a sentimental women’s magazine, Jacobi rhapsodized over revolutionary activities by the women of Pennsylvania. Another prominent romantic libertarian poet of the revolution was Christopher M. Wieland, former jurist and professor of philosophy, who founded *Der Teutsche Merkur*, the most lively and popular—and most politically oriented—paper in Germany.

Schubart and Jacobi were soon suppressed by their respective princes, but Wieland carried on, and he was joined in advocating the American cause by more sober thinkers. These writings included a constitutional defense of the American case and of American smuggling, and an attack on the Navigation Acts by Jakob Mauvillon, professor of military science at Kassel. Mauvillon was greatly influenced by the first modern economists, the French physiocrats, who had evolved a rigorous libertarian theory that included a commitment to a strictly laissez-faire economy and to the natural rights of man. Mauvillon declared the lesson of the American revolution to be that, to avoid revolution, the German states must abolish the statist repressions at home, including “religious intolerance, monopolies, guilds, taxes on agriculture, and . . . economic burdens on trade and commerce.” Mauvillon’s physiocracy, in turn, influenced his colleague, the statesman and economist Christian von Dohm, who became the political commentator for Wieland’s *Merkur*. Von Dohm criticized the vicious trade monopoly of the British mercantilist system, and pointed out that American independence would be a great boon to the world if only because it would smash this monopoly. He thereby summed up the German—indeed the European—radical hopes for the American Revolution: its success would “create new routes for trade, new types of industry, new connections between nations in various parts of the world. . . . It can give wider circles of influence to the Enlightenment, new keenness to popular thought, new life to the spirit of freedom.”*

*Quoted in the important article by Elisha P. Douglass, “German Intellectuals and the American Revolution,” *William and Mary Quarterly* (April 1960), p. 216.

PART IV

America Declares Independence

America Polarizes

English Whigs and radicals put up a gallant fight in Parliament in early 1776 against the hiring of mercenaries, but to no avail; as a result, sentiment in America for independence increased greatly. To the Americans the hiring of the German mercenaries—generally called “Hessians”—was proof that Britain would treat them as aliens and foreigners.

From observing British reactions, General Lee and the other radical leaders in the Continental Army had already been convinced of the necessity of independence. Lee began to pepper congressmen with urgings of greater militancy. In early October 1775 he wrote to the receptive John Adams: “Now is the time to show your firmness. If the least timidity is displayed we are all ruined. . . . You ought to begin by confiscating . . . the estates of all the notorious enemies to American liberty. . . . Afterward you should invite all the maritime powers of the world into your ports.” Thus he gave the call for open ports and the confiscation of Tory property, which, before long, became the key planks in the radical platform. In another letter, he put his finger on the main stumbling-block to American independence: despite the general willingness to denounce Parliament or the royal advisors, Americans had been reluctant to break with the symbol of the king himself. Now he could write that people “begin to suspect that the king is as bad as the worst of his ministry. To have advanced such a proposition last year would have been thought treason and impiety. Next year [he added prophetically]—if you will have patience—king and tyrant will be a synonymous term.”

Similarly, Gen. John Sullivan of New Hampshire asked why Congress did not have the courage to declare independence. Did they believe that

such a declaration would lead the British to "throw their shot and shells with more force than at present?" Sullivan insistently urged John Adams "to destroy that spirit of moderation which . . . if not speedily rooted out, will prove the final overthrow of America." General Nathanael Greene wrote to a receptive fellow Rhode Islander, delegate Samuel Ward, on behalf of independence. And Gen. Horatio Gates was preaching independence so openly and enthusiastically as to astonish even Charles Lee.

Despite the fact that the inner logic of the accelerating conflict called for American independence, Congress was by no means ready to take such a radical step. Congressional foot-dragging on the subject was in a large sense a function of opinions on independence in the respective colonies, for Congress itself was a creature of the individual provinces; even if it wanted to, it could not declare American independence unless the respective provinces desired to do so. Each of the provinces, it is true, had rapidly and spontaneously developed a network of revolutionary bodies which took over the functions of local and provincial government. In each case the royal executive and the royal governor had been quickly swept away so that only three royal governors remained in their provinces by the spring of 1776, and these had no political power whatsoever. By far the most dangerous of the three, William Franklin of New Jersey, was placed under house arrest in March 1776 and shipped to a Connecticut prison. The popular and quiescent Robert Eden of Maryland was shipped home during the same month, and John Penn, of Pennsylvania and Delaware, the last proprietary governor in the colonies, was sympathetic to the rebel cause and remained in Pennsylvania as a private citizen.

In each province, the colonial assembly, which was part of the old royal structure, was abandoned, replaced by elected provincial congresses, or conventions. These provincial legislatures retained the supreme legislative power of the colonial assembly as well as the supreme judicial power that had belonged to the assembly and to the executive. Of particular importance was the automatic liquidation during this process of the old bureaucratic executive that had been removed from all popular or democratic check. Replacing this ruling oligarchy were the legislatures themselves, which now appointed their own committees of safety, or "councils of safety," which were totally subordinated to the elected legislatures. Philosophically, after all, the executive function is merely that of a hired hand to enforce the laws, so total subordination of the executive to the legislative power seemed the rational course. This conclusion was redoubled by the threat of oligarchic rule, cut off from direct popular check, a threat inherent in any independent executive power.

The separation of the executive and the legislature in England and other countries of the day was not the result of a competing philosophical view

of government, but of the history of these institutions. The executive power had been vested as a result of previous conquests in the oligarchic rule of a monarch and his aides, a rule which the monarch always strove to be as absolute and unchecked as the "traffic" could bear. In Great Britain, Parliament became the legislature as a result of an effort by part of the public to exercise a checkrein upon the king. Contrary to mythmakers on the English constitution, the democratic wing of royal government was not the embodiment of reasoned philosophic principle, of "checks and balances" or "separation of powers"; the democratic wing established itself in a pragmatic struggle to limit the power of the royal government. Originally, democracy was not so much a *means* of governmental rule as it was a means for the popular *checking* of government. Parliament did not begin as a way to rule; it began as a means of telling the king that if he did not redress grievances and lower his exactions and demands, the representatives of the public would not consent to paying taxes to the crown. Democracy, in short, originated as a libertarian weapon against the State rather than as itself a form of state. Later it became a form of government, but the former function still prevailed in eighteenth century England, for even though Parliament shared part of the governmental rule, it also tried at times to check its old nemesis, the crown.

In the eighteenth century, however, it was America that had taken over the original libertarian role of democratic representation once played by the early institution of Parliament. The main function of the colonial assemblies was to check as much as possible the power of the royal bureaucracy. The assemblies were the arm of the public that combatted and kept vigilance over the growth of royal executive power. One effective means to this end was keeping control of executive salaries firmly and day to day in an assembly's hands. Then when royal government was swept away, the spontaneous local and provincial revolutionary bodies, freely and frequently elected and thereby subject to popular check, took over governmental functions, deposing the old oligarchy. As was true of so many aspects of the American Revolution, this was truly a revolutionary act for liberty and democracy, and at one unspectacular stroke it profoundly changed American political institutions. Not only was royal rule liquidated, but so too for the time being was the bureaucratic oligarchy.

Not only was the executive oligarchy swept away by the act of revolution, but so too were the councils, the royally appointed upper houses of the legislatures which had also served as executive aids to the royal governors. The representative part of the legislature automatically came to the fore as provincial congresses or assemblies, and equally naturally as unicameral legislative bodies. The glorification of separation of powers and bicameral legislatures by such Tory-minded theorists as Montesquieu was

a method of keeping democracy in severely narrow bounds and preserving the dominance of arbitrary oligarchic rule.

In recent years, neoconservative writers have sharply contrasted liberty and democracy, and have loudly protested any identification between them. Their case rests on two broad grounds: *philosophically*, because liberty refers to *what* government *should do*, while democracy refers to *who* should rule in the government; and empirically, because the main threat to liberty has allegedly been “totalitarian democracy.” But historically, for the late eighteenth and for earlier centuries (waiving later centuries at this point) democracy and liberty were conjoined; democracy was precisely the major instrument by which the libertarian revolution exerted pressure upon the tyranny of the ruling castes. The threat—or rather the reality—of continuing invasion of liberty came from the state apparatus and its privileged ruling castes. The popular democratic upsurge against this prevailing “old order” was the concrete form necessarily taken by the libertarian idea; the preeminent libertarian task was to end the dictation to and exploitation of the people by the rulers of the State apparatus. In England, as everywhere, the State began in conquest, and a democratic upsurge was the clearly indicated path by which the people could pursue libertarian goals.

In addition to these historical reasons for democracy and liberty to go hand in hand, there is the further philosophic point that any direct *popular* thrust for tyranny is bound to be fleeting and episodic. Even as ugly a happening as the democratic lynch-mob is necessarily erratic and short-lived. For one thing, the mass of the people generally have neither the time nor the interest to engage in continuing organized expressions of power or plunder. The average man is too busy at the tasks of everyday life to be even concerned about, much less active in, such matters. Hence the much deplored phenomenon of political “apathy.” Only in revolutions does such mass interest in political affairs arise, and this is one of the main reasons why revolutions—disturbing as they are to regular routine—are so difficult to launch. Threats to liberty, therefore, will tend to come not from the formless and remote masses, but from “professionals,” people directly and fully concerned day in and day out in political affairs—from an oligarchy, either government bureaucrats or those who can persuade or manipulate those bureaucrats to grant them special privilege and pelf, the “ruling classes.”

The natural though not perfectly invariant conjunction of liberty and democracy was well understood by the radical wing—the “Left”—of the American revolutionaries, and hence their continuing concern to maintain governmental forms as close to popular democracy as possible. Hence too their constant vigilance against any recrudescence of executive oligarchy

after the royal forms were swept away at the beginning of the Revolution.

Each American province, then, quickly found itself after Lexington and Concord with a new revolutionary governmental structure, consisting of a provincial unicameral legislature and town and county governments and committees of safety. To adopt a formal constitutional frame would be an important step toward proclaimed independence.

As spontaneous creatures of local committees of rebels, the new revolutionary assemblies were remarkably democratic in the sense of participation by the great bulk of the non-Tory population. Every one of the thirteen colonies had had freehold (landed) or personal property qualifications for voting in provincial and town elections, although five colonies allowed a minimum of personal property as an alternative, and in New York and Virginia long-term tenants were included as freeholders. Historians formerly believed that this colonial suffrage was severely undemocratic, disenfranchising most of the adult male population. Recent researches reveal the fallacy of this gloomy view, indicating that the average proportion of eligible adult males in the colonies ranged from 50 to 75 percent.* It should be recognized, however, that this situation was far from idyllic, and that one-quarter to one-half of white adult males of the American colonies were disfranchised; including the slaves drags down the percentage of eligible voters still further, and even the few free Negroes were barred from voting in the four southern colonies. At the end of the colonial period, eligible voters constituted 90 percent of adult white males in New Hampshire (higher in local town elections); approximately 75–80 percent in Massachusetts, Rhode Island, and Connecticut; over 80 percent in North and South Carolina; and generally over 70 percent in Georgia. In contrast to these high percentages, eligibility in New York and New Jersey ranged from 50 to 75 percent. In the lowest strata were Virginia, whose eligibility was approximately 50 percent, and Pennsylvania and Maryland, where it ranged from 35 to over 50 percent.

*For the most balanced and judicious presentation of this suffrage revisionism see Chilton Williamson, *American Suffrage from Property to Democracy, 1760–1860* (Princeton: Princeton University Press, 1960), chapters 1–6.

26

Forming New Governments: New Hampshire

After Lexington and Concord the separate provincial bodies faced two broad sets of decisions. One was external—whether or not to push for American independence from Great Britain. The other was internal—whether to keep the highly democratic nature of the new revolutionary bodies or to revert to an oligarchic regime resembling the colonial era. The problem of adopting a formal constitution was both internal and highly relevant to the question of American independence.

New England, in the forefront of American radical sentiment, pioneered the first self-made provincial constitution. Massachusetts asked the Continental Congress' advice on what sort of governmental form to adopt, and on June 9, 1775, Congress simply told Massachusetts to aim at preserving the old pre-Coercive Act Massachusetts Charter.

A few months later, in mid-October, New Hampshire asked for advice on a new government. The powerful Governor Wentworth and other royally favored oligarchs had fled, and New Hampshire was being ruled by a makeshift committee of safety and by local town committees. While New Hampshire was asking for advice, the British burning of Falmouth, Maine, on October 16, enraged the colonists, and Congress advised New Hampshire on November 3 to establish a new government to operate for the duration of the conflict. This change of advice was the reflection of a change in composition of the congressional committee answering the request; archconservatives Thomas Johnson, John Jay, and James Wilson had been replaced by radicals John Adams, Samuel Ward, and Roger Sherman. (Despite the radical advice to New Hampshire to form a new government, however, reconciliation with Britain and resumption of the

precrisis status quo were still held up as the ultimate ideal.)

In eager response, New Hampshire called a constitutional convention, which met at Exeter in December to form a new government. Violently objecting to this revolutionary step were freeholders from the ports of Dover and Portsmouth, who denounced the new constitution as a virtual declaration of independence from Britain. The Exeter convention followed on the heels of November elections that had swept away all freehold qualifications for voting and decreed that all resident taxpayers might vote. This important step toward democracy was not gained without a struggle, however, as at first the New Hampshire Provincial Congress had decided only to lower freehold qualifications for voting from ownership of property valued at fifty pounds to ownership of property worth twenty. It was forced to reconsider and abandon freehold restrictions by strong public pressure. Thus New Hampshire became the first province to put into practice one of the leading suffrage goals of the radical forces: voting rights for all taxpayers with no property restrictions, and admission of all militiamen and soldiers into the ranks of eligible voters.

A somewhat more important step taken by the Provincial Congress was to reform representation in its lower house, the assembly. New Hampshire apportionment was plagued not only by the inherent obsolescence of democratic representation; it had been further hobbled by the deliberate policy of the crown and the royal governor to repress the voice of the western frontier towns. Only 36 of the 155 towns in New Hampshire had been allowed to send delegates to the assembly; and even among these larger towns, delegate allocation was way out of balance. Thus, such of the larger westerly towns as Concord, Ipping, and Londonderry had no representation. In calling the late 1775 elections, the provincial congress rearranged the representation, but amidst the corrections were numerous new inequities and *over* representations of the new towns in the century-old manner of Massachusetts.

The new New Hampshire constitution was adopted by the congress on January 5, making it the first constitution enacted in and by an American colony. The major political power in the colony was thenceforth to be wielded by the elected House of Representatives; there was also to be an upper house, or Council, which was to be elected in such proportions as to weight it in favor of the eastern seaboard towns. The constitution was vague, but implied no property qualifications for voting, although there were property requirements for election to the legislature.

The new constitution fully satisfied few New Hampshiremen. It was attacked from the right by those who objected to any form of government that made reconciliation with Britain unlikely. It was attacked from the left by those who complained of the patently insufficient degree of democracy. Thus, sixteen far-western towns protested to the House, demanding better

representation and the abolition of property qualifications for holding political office and the Council's veto on actions of the House of Representatives. They also urged a bill of rights to guarantee the rights of the individual. The powers of the upper house did have a sinister aspect, since they resembled all too closely the powers of the old royal executive. Thus the town of Chesterfield, in extreme western New Hampshire, charged that the new government threatened "to settle down upon the dregs of monarchical and aristocratical tyranny, in imitation of their late British oppressor." Or, as the sixteen far-western towns trenchantly put it: "It is a thousand pities, that when we are engaged in a bloody contest, merely to oppose arbitrary power without us, we should have occasion to contend against the same within ourselves. . . . We are determined not to spend our blood and treasure, in defending against the chains and fetters . . . abroad, in order to purchase . . . the like kind of our own manufacturing. . . ." The western towns repeatedly stressed the revolutionary fact that they were at that point in a state of nature, and that by their natural right, they should form a constitutional convention.

Leading the popular agitation in the west was Hanover, in extreme northwest Grafton County, the seat of newly established Dartmouth College, the only institution of higher learning in the province. Dartmouth had been founded and Grafton County settled by New Light Congregationalists from revolutionary eastern Connecticut. Fresh from "separatist" struggles against established churches, the men from Connecticut were acutely alive to infringements upon their liberties or rights. Dartmouth College and its president, the Reverend Eleazer Wheelock, led the protest movement, which was popularly dubbed the "College Party." In fact, the protest of the far-western towns had been adopted at Dartmouth College Hall, and authorship of the protest was attributed to the son-in-law of Wheelock, Dartmouth's Professor Bezaleel Woodward.

The town of Hanover and other far western towns soon determined to make their protests effective by refusing to send delegates to the legislature and by refusing to vote for candidates for seats in such an abhorrent institution as the Council. Several of the towns pressed on and refused to pay taxes to New Hampshire altogether, preferring to conduct their affairs on their own.

New England Ready for Independence

In a sense, the situation of Connecticut and Rhode Island was the most clear-cut in the colonies, for these two colonies had been uniquely free of any royal governor or royal arm of government at home. Virtually independent while colonies, they needed no political or constitutional change to equip them for the struggle with Great Britain or for possible independence. Hence, with the exception of the ouster of the Tory Governor Wanton by the Rhode Island Assembly, there was no need for confrontations or political upheaval. Since Wanton was closely associated with the Hopkins faction, however, his overthrow meant the eclipse of the Hopkinsites and the taking of complete power by the more radical Ward faction. The new governor, Nicholas Cooke, was a leading Wardite, as was brilliant young Continental Army General Nathanael Greene, scion of one of the first families of Rhode Island.

Rhode Island was galvanized in early November by the burning of Falmouth to denounce the British and to declare it high treason to correspond with, supply, or aid the British forces, a virtual commitment by Rhode Island to American independence. Indeed, in that same month Samuel Ward, leader of the Ward party and one of the colony's delegates to the Continental Congress, openly opted for American independence, working tirelessly for that cause from then on.

Thus by the end of 1775 Rhode Island and Connecticut were essentially ready for independence. But the key to New England, of course, was Massachusetts, and if that great spearhead of radicalism would not take the lead for independence, the cause would be lost. While Massachusetts had lost none of its fervor for measures against Britain, its delegation to the

Continental Congress was grievously hobbled throughout 1775. Voting in Congress was by province, and hence an elementary requisite for Massachusetts' leading a move toward independence was the ability to command the vote of its own delegation. And yet, this the Massachusetts radicals could not do. The Adamses were of course two of the brightest stars of the radical firmament, but the conservatives Thomas Cushing and Robert Treat Paine opposed any drive toward independence. The fifth, or "swing," member of the delegation was the vain and flighty John Hancock, who clung to his largely honorific post of president of the Continental Congress. He never forgave the Adamses for nominating Washington for army commander-in-chief instead of himself, and bearing that grudge, he broke with the radicals and veered sharply rightward. Allowing himself to be feted by the Dickinsons and Duanes, the luxury-loving Hancock acquired the derisive sobriquet of "King Hancock" among the radicals. This meant an effective vote of three to two against independence, and thus Massachusetts radicalism was stymied. Sam Adams and the frustrated radicals began to threaten openly a separate independent New England unshackled by the dilatoriness of the other colonies.

The critical turning point in this unhappy situation came on December 20, when the Massachusetts Provincial Congress turned Thomas Cushing out as delegate and replaced him with the brilliant young radical and follower of Sam Adams, Elbridge Gerry, of Marblehead. This gave the radicals a majority in the Massachusetts delegation, effective the following February when Gerry was to take his seat. Soon afterward, in mid-January, the Massachusetts Congress authorized the delegates to do whatever they thought necessary "to establish the right and liberty of the American colonies on a base permanent and secure." Here was a virtual endorsement of American independence.

The Sudden Emergence of Tom Paine

At the beginning of 1776, New England was ready for independence. So were such leading radicals as Richard Henry Lee and Patrick Henry of Virginia, Christopher Gadsden of South Carolina, and army leaders such as George Washington and Charles Lee. But the bulk of the colonies and the Continental Congress were not. One of the main stumbling blocks to a commitment to independence was personal loyalty to the British crown. There has always been a political taboo of almost mystical force against attacking the head of state, and always the convenient though emasculating custom of attributing his sins to his evil or incompetent advisers. Such long-standing habits impeded a rational analysis of the deeds of King George III. Furthermore, the old and obsolete Whig ideal of virtual independence under a figurehead king of both Britain and America could only be shattered if the king were to be attacked personally.

To rupture this taboo, to smash the icon, and so to liberate America from its thrall required a special type of man, a man fearless, courageous, and radical, an intellectual with a gift for dramatic and exciting rhetoric and unfettered by the many ties that bind a man to the existing system. At this strategic hour America found just such a man: Thomas Paine.

Unlike most of the other eminent leaders of his day, there was nothing in the least aristocratic in the background of Tom Paine. The son of a poor English corset maker, he was forced to educate himself for lack of schooling. After serving a checkered career as corset maker, sailor, and petty bureaucrat, he finally rose to the status of a minor English tax collector. He was soon characteristically in trouble with the authorities. Chosen by

his fellow excise collectors in 1772 to petition Parliament for higher wages, he was curtly dismissed from the service by the authorities. Unemployed, bankrupt, the unhappy Paine began his life again at the age of thirty-seven by emigrating to America, armed only with a letter of introduction he had managed to obtain from Benjamin Franklin in London.

Landing in Philadelphia toward the end of 1774, he got a job with a Philadelphia printer and soon rose to the editorship of the printer's insignificant *Pennsylvania Magazine*. He quickly proved himself an outstanding writer and publicist and quickly made his reputation as a libertarian by publishing a blistering attack on the institution of slavery. In "African Slavery in America," written shortly after his arrival and published in early March 1775, Paine pointed out that the African natives were often peaceful and industrious farmers brought into slavery either by European man-theft or by outsiders inducing the African chieftains to war on each other and to sell their prisoners into slavery. He also riddled the common excuse that purchase and ownership of existing slaves was somehow moral, in contrast to the wickedness of the original enslavement: "Such men may as well join with a known band of robbers, buy their ill-got goods, and help on the trade; ignorance is no more pleadable in one case than the other . . . and as the true owner has the right to reclaim his goods that were stolen, and sold; so the slave, who is proper owner of his freedom, has a right to reclaim it, however often sold." The slaves, being human, have not lost their natural right to their freedom, and therefore, concluded Paine, "the governments . . . should in justice set them free, and punish those who hold them in slavery."

Shortly after this article was published, the first abolitionist society—The Society for the Promotion of the Abolition of Slavery—was established at Philadelphia. Largely Quaker, it included the deist Paine as one of its members.

Lexington and Concord moved Paine to turn his talents to the radical revolutionary cause. In July he urged upon the Quakers the justice of taking up arms in defense of liberty so long as disarmament is not universal. He denounced the British government as highwaymen setting forth to plunder American property; therefore, in self defense, "arms like laws discourage and keep the invader and plunderer in awe." For the British, "nothing but arms or miracles can reduce them to reason and moderation." And in October he combined his antislavery and proindependence views to castigate Great Britain for trafficking in human flesh, and he looked forward to an independence that would end the slave trade and, ultimately, all of slavery.

All this culminated in Paine's tremendous blow for American independence. His fiery and brilliant pamphlet *Common Sense*, off the press in early

January 1776, spread like wildfire throughout the colonies. A phenomenal 120,000 copies were sold in the space of three months. Passages were reprinted in newspapers all over America. All this meant that nearly every literate home was familiar with the pamphlet. Tom Paine had, at a single blow, become the voice of the American Revolution and the greatest single force in propelling it to completion and independence. Charles Lee wrote jubilantly and prophetically to Washington that "I never saw such a masterly, irresistible performance. It will . . . in concurrence with the transcendent folly and wickedness of the ministry, give the *coup de grace* to Great Britain." And Washington himself endorsed "the sound doctrine and unanswerable reasoning" of *Common Sense*.

Common Sense called squarely and openly for American independence, and pointed to the choice for Americans as essentially between independence and slavery. But what was more, Paine boldly smashed the icon, directing his most devastating fire at King George himself. For the first time, the king, "the Royal Brute of Great Britain," was pinpointed as the major enemy—the king himself, not just his wicked advisers (the king's advisers were attacked as being in thrall to him). Paine had quashed the taboo, and Americans flocked to imbibe his liberating message.

Not stopping at indicting George III, Paine pressed on to a comprehensive attack on the very principle of monarchy. The ancient Jews had prospered without kings and had suffered under them, he wrote, following the great English tradition of Milton and Sidney; and Holland flourished as a republic. But more important, the division between kings and subjects is unnatural, and bears no relation to the natural distinction between rich and poor on the market. How, indeed, had the natural equality of men before the law become transposed into subjection to a monarch? "We should find the first of them [kings] nothing better than the principal ruffian of some restless gang; whose savage manners or pre-eminence in subtilty obtained him the title of chief among plunderers; and who by increasing in power and extending his depredations, overawed the quiet and defenseless. . . ." And now the kings were but "crowned ruffians."

In this way, Paine not only laid bare the roots of monarchy, but provided a brilliant insight into the nature and origins of the State itself. He had made a crucial advance in libertarian theory upon the social-contract doctrine of the origin of the State. While he followed Locke in holding that the State *should* be confined to the protection of man's natural rights, he saw clearly that actual states had not originated in this way or for this purpose. Instead, they had been born in naked conquest and plunder.

Another vital contribution of *Common Sense* to libertarian thought was Paine's sharp quasi-anarchistic distinction between "society" and "government." Indeed, Paine opened his pamphlet with these words:

Some writers have so confounded society with government, as to leave little or no distinction between them; whereas they are not only different, but have different origins. Society is produced by our wants and governed by our wickedness. . . . The one encourages intercourse, the other creates distinctions. The first is a patron, the last a punisher.

Society in every state, is a blessing, but government, even in its best state, is but a necessary evil; in its worst state an intolerable one: for when we suffer . . . the same miseries *by a government*, which we might expect in a country *without government*, our calamity is heightened by reflecting that we furnish the means by which we suffer. Government, like dress, is the badge of lost innocence; the palaces of kings are built upon the ruins of the bowers of paradise.

In addition to limning brilliantly the nature and origins of monarchy and the State, calling boldly for independence, and attacking George III, Paine set forth the proper foreign policy for an independent America. Here he argued that the connection with Great Britain entailed upon Americans burdens rather than rewards. The Americans should not be tempted by the prospect of Anglo-American domination of the world; on the contrary, America would vastly benefit from throwing open its trade and ports freely to all nations. Further, the alliance with Britain “tends directly to involve this continent in European wars and quarrels, and set us at variance with nations . . . against whom we have neither anger nor complaint.” As Europe is our market for trade, we ought to form no partial connection with any part of it. It is the true interest of America to steer clear of European contentions, which she can never do while “she is made the make-weight in the scale of British politics.” Thus, Paine adumbrated for America what was later to be called a foreign policy of “isolationism,” but which might also be called neutrality or neutralism. Whatever it is called, it is essentially the libertarian policy of free trade and peaceful coexistence with all nations; it is an America that acts as a moral beacon for mankind rather than as judge or policeman.

In addition to all these achievements, Paine managed to outline in this brief pamphlet the internal political program of the libertarian wing of the American Revolution: the new democratic system naturally created by the Revolution. This consisted of rule by democratically elected legislatures established by proportionate representation and responsible to checks upon them by the people. The aim of such government was simply to protect every man’s natural rights of liberty and property: “Securing freedom and property to all men, and above all things, the free exercise of religion. . . .” He saw that the superficially plausible lucubrations of such Tory writers as Montesquieu and Blackstone, with their talk of mixed constitutions and checks and balances, masked the repression and hob-

bling of the democratic element by unchecked aristocracy and oligarchy. Human reason, he implied, must be brought to bear on the myths and accretions of government itself. The much-vaunted British constitution was a tangle of complexities, and hence vague and devoid of a focus of responsibility. In effect, he charged, the so-called checks and balances have led to the aggrandizement of monarchical tyranny over the other branches of government. Indeed, at any given time, for government to act at all, one of the branches must predominate and outweigh the checks and balances. This argument is reminiscent of Edmund Burke's blast against the idea of mixed and balanced government in his anarchistic first work, *The Vindication of Natural Society*.

Paine concluded the bulk of his magnificent pamphlet with these stirring lines: "O! Ye that love mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is overrun with oppression. Freedom hath been hunted round the globe. . . . O! Receive the fugitive, and prepare in time an asylum for mankind." Sounding the clarion call for the democratic-libertarian cause as the party of hope, the party of progress, in short, the party of a secular, rational messianism, he eloquently hailed the impending future: "We have it in our power to begin the world over again. . . . The birthday of a new world is at hand. . . ."

The explosive success of *Common Sense* emboldened the radicals to follow with pamphlets and articles extolling the goal of independence, excoriating King George as "a full-blooded Nero," and anticipating the great benefits of free trade with all the world that would flow from an independent status.

That the Tories, and quasi Tories, and conservatives who opposed independence should abominate *Common Sense* was, of course, to be expected, reviling it as that "artful, insidious and pernicious" work of sedition and "phrenzy." Several Tories hastened to publish pamphlets of rebuttal, warning of the "ruin, horror, and desolation" that would stem from abandoning the happy and peaceful status of a colony to pursue the romantic chimera of independence. Independence was roundly denounced as absurdly impractical and "Utopian," a project of "ambitious innovators" who "are attempting to hurry . . . into a scene of anarchy; their scheme of independence is visionary. . . ." Conservative landed oligarchs such as Landon Carter and Henry Laurens considered the Paine pamphlet

*It is true that Paine wanted the polity to approximate as closely as possible the libertarian "state of nature." In that sense, as Halevy pointed out, "the principle of the natural identity of interests, when applied to the solution of the problem of politics, seems logically to lead to the anarchistic thesis." Elie Halevy, *The Growth of Philosophic Radicalism* (Boston: Beacon Press, 1955), p. 130.

as “indecent,” “rascally,” and “dangerous.” But the Tories and conservatives soon found that their attacks on independence were in vain, that “there is a fascination belonging to the word *Liberty* that beguiles the minds of the vulgar. . . .”

Massachusetts Turns Conservative

By far the most influential rebuttal to *Common Sense*, however, came not from the fading Tories, but from a rapidly emerging right wing *within* the independence movement. Until 1775, virtually the sole focus of political conflict in the colonies was the anti-British resistance movement, on what side to take and how fast to travel. But after Lexington and Concord, another great problem confronted the Americans: the structure of the internal polity within each colony. And as independence drew nearer, the *internal* problem—the problem of “who should rule at home,” in the famous phrase of Carl Becker—came increasingly to the fore, as compared to the older problem of “home rule.” Of course, this separation can be overdrawn, and clearly British rule had created and propped up an “internal” domestic oligarchy. But, essentially, the internal problem had naturally been submerged by the struggle against Britain until the war began and the choice of forms of government had to be faced.

Before Lexington and Concord, then, the radical-conservative “Left”-“Right” conflict centered around the struggle with Great Britain. After that point, a new set of conflicts emerged. Historians have long quarreled about the existence of internal conflicts and about the possible continuity of the various ideological factions over the years. The first thing that can be flatly asserted is that the conservatives on the British question became archconservatives on the domestic scene. Believers in strong central oligarchic government from abroad also desired strong, central oligarchic government at home. Some of the conservatives became outright Tories and thereby put themselves outside the American dialogue; others, as we shall see below, opposed independence up to the last moment and finally

opted for the rebel cause in deep resignation in order to guide it in a conservative direction. In short, they were more flexible and adaptable than their outright Tory brethren. These conservatives particularly predominated in the quasi-Tory provinces of New York and Pennsylvania. Among conservatives, then, continuity prevailed before and after 1775: the Ultraright before was the Ultraright afterward. There were no cases of quasi Tories later shifting to become radical on domestic issues.

The same continuity did not apply, however, to the pre-1775 Left, to those who had led the radical fight against Great Britain. Out of this increasingly victorious group there began to emerge a cohesive faction who were radical on independence and yet highly conservative on domestic affairs. In one sense, this lack of continuity is understandable, for as the unifying British question began to give way to consideration of domestic matters, temporarily suspended differences among the radicals inevitably came to the fore. Every revolution, after all, splits as it advances from one stage to the next and former advocates fail to adhere to its inner logic and go over into opposition. But in this case the split was particularly poignant, for those who remained radical on domestic questions simply wanted to fulfill at home the grand rhetoric of liberty and democracy which both wings had effectively employed in the fight for America against Great Britain.

In the case of the powerful center of the Virginia oligarchy, this split was to be expected. It was clear from the beginning, for example, that Washington was a radical on Britain and independence and yet a staunch conservative domestically; this rare centrist quality was one of the main reasons for his selection as army commander-in-chief. But the real shocker was Massachusetts. Massachusetts had always been the home of radicalism, the spearhead and vanguard of the American Left. Now it was Massachusetts that was to turn almost *en masse* to deep-dyed conservatism on domestic issues. Certainly one great reason for this was a lack of opposition on which to hone one's edge; in contrast to Pennsylvania or New York, for example, where conservatism had always been dominant and radicalism precarious, Toryism had always been inherently feeble in Massachusetts. With little opposition on which to develop a cutting edge, the tendency for Massachusetts radicalism was to grow lax and conservative on domestic affairs.

A second problem was a crisis of leadership. John Hancock, as we have seen, turned sharply rightward largely out of pique. More serious was the collapse of the great Massachusetts leaders, the Adamses. The brilliant young John Adams not only turned sharply rightward on domestic matters; he was quickly to stamp himself as the major theoretician of a conservative American polity—a polity that would eventually end up as British rule without Great Britain. And Sam Adams, now that the domestic scene

was inevitably growing in importance, lost his former marvelous sureness of step; uncertain, adrift in unfamiliar waters, he was from then on to drift and veer erratically leftward and rightward, his basically radical instincts at war with the influence of his brilliant cousin John. And with the Adamses shifting, the faithful followers of the Massachusetts Left shifted with them.

The basic issue in internal affairs was simply: Would the American governments remain as they had emerged at the outset of the Revolution: spontaneous, libertarian, democratic, and responsive to the checks of the people? Or would they revert to something very like oligarchic British rule: strong government, with an executive and upper legislative house far removed from the people and only partially checked by them? Would oligarchic power be resumed by a new set of Tory lords in another guise? This is what the internal struggle in the years after Lexington and Concord was basically all about. And this is why the separation of home rule from rule at home can be highly artificial; for in a profound sense, those who remained radical on the domestic front were carrying to completion the meaning of the struggle against Britain. After all, their objection was not only to a certain set of Tory and monarchical rulers; their objection was also directed to governmental power itself—to executive oligarchy, to taxes and restrictions, and to big government. They did not propose to overthrow one set of masters in order to raise up another.

If Tom Paine became the ideological spokesman of the new Left, John Adams was the theoretician of the new Right. This new Right was, of course, of inestimable value to the conservative cause. The New York and Philadelphia aristocrats, for example, who had to be dragged into independence, would have never been accepted as leaders of a new independent America. But John Adams and the Massachusetts men, impeccably in the forefront of the Revolution? Their presence in the conservative camp could not but lend that camp the color of patriotic respectability which it so desperately needed after independence.

In contrast to most believers in independence, Adams was angered rather than exhilarated by *Common Sense*. A vain and petulant man, he was patently envious of the popular success of one whom he considered a johnny-come-lately in the independence movement. More than that, the democratic-libertarian sentiments went against his grain. Already, he had set forth his views on the proper government to fellow congressional delegates from other provinces who had sought his valued advice. Now, to counteract Paine's influence, Adams hastened to publish these views in his *Thoughts on Government*, a highly influential work that would prove to be a virtual political manifesto of American conservatism.

Adams' aim was frankly the counter-revolutionary one of restoring as nearly as possible the status quo ante: the prerevolutionary form of gov-

ernment, especially a powerful executive and judiciary separate from the popular assembly and independent of it. His political system, akin to that of Blackstone and Montesquieu, rested on a separation of powers, especially a separation from the checks of democratic procedure. In order to limit and overcome the democratic arm, an independent executive power wielded by a new governor and council was to be added to the popularly elected revolutionary committees, this executive to have an absolute veto over the legislature. Within the legislature, an upper house removed from the people was to be created, supposedly as an aristocratic element in the polity, and Adams looked forward happily to the two houses being in perpetual conflict. Each house was to have an absolute veto over the other, and to make sure that the executive officials were to have little dependence upon the public, he proposed that the lower house choose the upper house and that they would together select the governor. Even this hedged-in and ringed-about democratic assembly was to be chosen only by property-owning voters. Furthermore, in contrast to the royal system of judges strictly under the control of the executive and the crown, Adams urged an independent judiciary holding life terms—a patent device to remove the judges completely from checks by the populace.

The judiciary in America had never been in the least *independent*. The colonial assemblies had always had judicial functions, and in the seventeenth century the Maryland, Virginia, and New England assemblies were the highest courts of appeal in their respective colonies. By the eighteenth century, however, the judiciary was appointed by the crown and became an organ of the executive. Life, or “good behavior,” judicial appointments were originally advanced as a means of removing judges holding their offices at the king’s pleasure, of curbing the absolute control of the crown. But with the royal power gone, life tenure of judges would be a backward step away from popular control.

The emergence of John Adams as the primary theoretician of domestic conservatism was paralleled by a conservative course of the colony and of leaders who had formerly led the radical vanguard. Of all the colonies, Massachusetts in particular faced an easy political path—and quickly took it. The British Coercive Acts, after all, had been directed against the Massachusetts Charter; what more apt—and more safely conservative—course than simply to reassert the charter of the *status quo ante*? And this is precisely what the Massachusetts Provincial Congress did when the Continental Congress, in early June, mildly advised it to do so. Of course, no governor could yet be found; but the General Court (legislature) was reconstituted in elections, and the Council was selected, as before, by the elected House, now to take on temporarily the entire executive power. The General Court resumed in mid-July 1775 for a very long session.

The leaders of Massachusetts were highly contented with their scarcely

visible and conservative glide back to the pre-Coercive Act charter, achieving Adams' frankly stated aim: "to contrive some method for the colonies to glide insensibly from under the old government into peaceable and contented submission to new ones," in short, "veneration for persons in authority of every rank." The former radical James Warren quickly concurred. Nor were the Congregational clergy, especially in the seacoast towns, slow to inculcate such supposed virtues in their congregations. In his important election sermon before the General Court in 1776, the Reverend Samuel West of the town of Dartmouth, a close friend of Hancock, urged everyone "to be subject to principalities and powers, to obey magistrates. . . ." With the newfound veneration of power came also its perquisites, and the less scrupulous of the Whig leaders made full use of their new appointment powers; Thomas Cushing, for example, managed to obtain five important judicial posts from the Council for himself.

But not all the old radicals were content to celebrate the status quo, and a relatively small band of new radicals emerged who fought for further libertarian changes in Massachusetts government. Many radicals were unhappy at the continuation of the established Congregational Church in Massachusetts. Isaac Backus, the leading Baptist of New England, presented a strong plea to the General Court for disestablishment and religious liberty, but his petition was quietly buried. Also prominent in the vain fight in the General Court for disestablishment was Joseph Hawley, an eminent lawyer of Northampton and leader of the radicals in western Massachusetts. And a writer in a Boston paper, denouncing "such glaring instances of religious tyranny as the establishment" of the Congregational Church, asked if they were "contending for liberty that we might have it in our power to trample on the rights of others?" The plural officeholding engaged in by Cushing and others was widely protested in the press. A writer in the (Boston) *Massachusetts Spy* charged that "the members of the Assembly have divided among themselves and their particular friends, all the civil and military offices in the colony." Another decrier of the new oligarchy warned that they might be fighting against a "foreign slavery" only to "suffer a domestic one to spring up in our country."

The center of the rapidly emerging new radical movement, however, was the farthest western county of Berkshire. The Berkshire towns had been radically anti-British for several years, led by college graduates (generally from Yale) who had entered law, politics, or the ministry. Also strongly Whig in western Massachusetts had been physicians, merchants, and storekeepers. Most of the lawyers in the west, heavily dependent on royal patronage, had been Tory, but the substantial number of Whig lawyers were led by the veteran Joseph Hawley. The Congregational ministry in the west had been strongly radical, led by the young Reverend

Thomas Allen of Pittsfield in Berkshire County and the Reverend Joseph Lyman of Hatfield. Now that the war had begun and the focus of radicalism was shifting to internal liberty, Berkshire took the lead of the new Left. There are two factors that in part account for the activity in Berkshire: the relative youth of the Berkshire leadership, due to its status as a newly settled frontier county, and the indefatigable leadership of the Reverend Thomas Allen, who stumped the county organizing the new opposition to the status quo. Allen's friend, Joseph Hawley of Northampton much further east, would have been a natural leader of the movement, but chronic illness allowed him to be effective only sporadically.

Having travelled throughout the West calling for a new and more libertarian constitution, Allen became known as the leader of the Berkshire Constitutionalist Movement. In mid-December 1775 he called a Berkshire County convention of town committees of correspondence to meet at Stockbridge in the southern part of the county, an area much less devoted to the radical cause than was the north. The resolves of the Stockbridge Convention were simple and straightforward: the people of Berkshire should at least be able to nominate men for county offices from which the Massachusetts Council could select its choices. From this simple and almost innocuous request the delegates from eight towns in southern Berkshire issued an angry protest. The right-wing dissenters bitterly attacked the Stockbridge resolution, charging that the leaders of the convention were men whose principles would "tend to dissolve all government, and introduce dissension, anarchy . . . and disorder." Five of the prominent conservative dissenters were, not coincidentally, recent Council appointees to the very county posts in contention, and hence had a vested interest in the defeat of the Constitutionalist Movement. Of these, three were understandably under particular popular suspicion: John Ashley of Stockbridge, one of the hated "17" Tory rescinders of the Massachusetts Circular Letter of 1768, and Mark Hopkins of Sheffield and Jahleel Woodbridge of Richmond, formerly justices of the peace by royal appointment.

Stung by the conservative dissent, Allen drew up a remonstrance of the town of Pittsfield to the General Court, setting forth his and other Constitutionalist views systematically and at great length. It turned out that the conservatives from south Berkshire had not been far wrong in analyzing the ultimate position of Allen and his supporters. For many months the towns and counties of Massachusetts had nullified the royal appointments and therefore closed the local courts; they had all been living in "a state of nature," a state close to anarchy, and they enjoyed the experience. As Allen's petition strongly put it, "Since the suspension of government we have lived in peace, love, safety, liberty and happiness. . . ." The only governmental power was the local committees and these were largely devoted to crushing Tories. But now the men of Pittsfield saw with dismay

that assumption by the General Court of the old executive power to appoint county judges and officials would shortly end this libertarian idyl. "We find ourselves in danger of [returning] to our former state and of undergoing a yoke of oppression which we are no longer able to bear," a yoke of "unlimited passive obedience and non-resistance" to governmental power.

For their practical demands, Allen and the town of Pittsfield insisted on the right to annul the central appointive power by electing or at least nominating all of their local county officials.

Heedless of the radical opposition, the General Court tried to establish a county court in Berkshire. The local Committee of Inspection forcibly prevented the court from opening, and Allen repeatedly denounced the Charter government of Massachusetts as "oppressive, defective and rotten to the very core," which "ought not by any means to be submitted to." Significantly, he was supposed to have based his argument in part on Paine's *Common Sense*, which had just been published.

To the east, neighboring Hampshire County, in a convention of delegates from its towns on March 11, decided by a narrow majority to close its county courts. This court-closing movement was led by Joseph Hawley and by the leaders of Chesterfield and other towns of far western and northern Hampshire. The resolution was opposed by the older trading centers of the county on the Connecticut River: Springfield, Hatfield, and Northampton.

Allen's subversive discourses were reported in great detail to the General Court by John Ashley and his fellow Berkshire conservatives, and Allen was denounced as an incendiary and sower of anarchy. He was reputed to have declared that "it was the duty of the people to oppose" the "rotten" Charter government, "and that [he] would rather be without any form of government than to submit to this constitution." And again: "The people of this province had lived in peace and good order for more than a year, without government. . . ." He also trenchantly informed the people that they were not simply fighting Great Britain but all tyranny; if the Congress abused its power, it should be opposed in the same manner as the king and Parliament. He cautioned, "Whilst we are fighting against oppression from the King and Parliament [we must] not suffer usurpers rising up amongst ourselves."

Worried by the criticism relayed to the General Court, Allen and the town of Pittsfield sent another remonstrance to the legislature in May 1776, elaborating and also bowdlerizing their position. They took hasty pains to assure the General Court of their belief in the "absolute necessity of legal government to prevent anarchy and confusion," and to deny false charges that they were a mere mob of debtors eager to close the courts so as to avoid payment of their debts. They assured the legislature of their

belief that legal government is a “great blessing.” In this petition, they warned of the potential of domestic tyranny rising up to replace the old; a particular complaint was the practice of the county judges of handing out licenses to innkeepers at a fee of six shillings and more and then dividing the fees among themselves. Allen then set forth their political theory: that “the people are the fountain of power,” that since the dissolution of British power “these colonies have fallen into a state of nature,” and that the first step toward the restoration of civil government would be to form a “fundamental constitution as the basis and groundwork of legislation” and to check “the strong bias of human nature to tyranny and despotism” by a “wanton exercise of power.” Furthermore, a new constitution, being above the legislature, could not be made by the legislature itself; it must be effected by a true “compact” among the majority of the people.

The Massachusetts General Court responded to this pressure by reducing all court fees in the province, but this was hardly enough to satisfy the Berkshire demand,* and the courts in Berkshire and Hampshire counties remained closed.

The one writer cited by Allen as a “most respectable” authority for these views was James Burgh and his work *Political Disquisitions*. Burgh, an elderly Scottish schoolmaster, published the *Disquisitions* in England in 1774; it was reprinted in Philadelphia the following year and soon became a highly influential bestseller throughout the colonies. It was eagerly read by the leaders and the common people alike. Burgh had turned his searchlight on the tyranny and corruption of the English Parliament of his day. Slashing away at the tightly controlled oligarchy constituting Parliament, the radical-liberal Burgh called for thoroughgoing political reform: corrected representation, annual parliaments, secret ballots by the public, open debates in Parliament, and universal manhood suffrage except for men on relief. Government pensioners and placemen should be abolished, he wrote, thus ending the economic dependence of members of Parliament on the crown. To effect these aims, he saw that mere pleas to the extant Parliament would hardly suffice. Instead, the people of each parish and county in the land should band together in a great association to put severe pressure upon the government and even (implicitly) serve as the potential nucleus of revolution if other means should fail. The failure of reform would lead the people to prefer the temporary evils of revolution to the “permanent evil” of tyranny, “distressing and debasing the human species from generation to generation, and deluging the world in a never-ebbing sea of blood.” Not only did he thereby anticipate the English

*For documentation of this controversy see Robert J. Taylor, ed., *Massachusetts: Colony to Commonwealth: Documents on the Foundation of Its Constitution* (Chapel Hill, N.C.: University of North Carolina Press, 1961.)

association movement, but he also gave implicit backing to the burgeoning association movement in America, which fulfilled these very concepts. Burgh also hailed Algernon Sidney's justification of rebellion, as well as the writings of Trenchard and Gordon, and attacked the practice of hiring mercenary troops. On specifically colonial problems, Burgh bitterly attacked taxation without representation and the oppressive measures against America.*

If the Reverend Thomas Allen was the political leader of the Massachusetts Left, the anonymous author of the brief pamphlet, *The People the Best Governors or, A Plan of Government Founded on the Just Principles of Natural Freedom*, was, in a sense, its intellectual leader. This trenchant libertarian writer declared that the people "best know their wants and necessities and therefore are best able to govern themselves." He attacked upper houses armed with veto power and not directly responsible to the people as engines of oppression. A small council chosen by the assembly might be admirable for the sake of efficiency, but it should merely prepare material for the assembly and have no veto power over it. This writer not only wanted representation proportionate to the population, he called boldly for universal manhood suffrage shorn of any property qualifications, which would lead to tyranny over the poor by the rich. He would have a judiciary and perhaps an executive elected annually by the people, but interestingly, the executive would be denied any veto over the legislature. Thus he sensibly opposed not so much a judiciary independent of the legislature as a judiciary independent of the people. He also suggested that in each colony a house of representatives armed with some judicial power be the supreme court of appeals in the province—especially since, as he perceived, judges' decisions are often a camouflaged form of legislation.

The author of *The People the Best Governors* grounded his program squarely on natural rights and natural law: "God gave mankind freedom by nature, made every man equal to his neighbor, and has virtually enjoined them to govern themselves by their own laws. . . . [Everyone's] right to freedom is the same." This identical right to freedom for all men is evidently what the author meant by "equality." Any property qualification for voting, or oligarchic organs of government would deny this natural equal freedom and "make an inequality among the people and set up a number of lords over the rest."

*The Handlins' attempt to downgrade the radical content and influence of Burgh's *Disquisitions* is unconvincing. Oscar and Mary Handlin, "James Burgh and American Revolutionary Theory," *Proceedings of the Massachusetts Historical Society* (1961), pp. 38–57. But see Caroline Robbins, *The Eighteenth Century Commonwealthman* (Cambridge, Mass.: Harvard University Press, 1959), pp. 364–68.

30

The Drive Toward Independence

As we have already learned, although New England was ready for independence from Great Britain, torpor reigned in the Continental Congress through February. Cushing retained his seat until February so that the Massachusetts delegation was not yet under control of the pro-independence faction. And Virginia, the great mainstay of radicalism outside New England, was torn with dissension on this issue; furthermore, the radical leaders, Richard Henry Lee and Thomas Jefferson, were temporarily back home, and the other independence stalwarts, George Washington and Patrick Henry, were serving in the armed forces, so that the majority of the Virginia delegation remaining in Philadelphia were arch-conservatives.

In late February 1776, opinion in the Continental Congress shifted sharply leftward toward independence. The shift was spurred by news of the British Prohibitory Act as well as the Proclamation of Rebellion and the impact of *Common Sense*, and was quickened by the arrival in Philadelphia of Elbridge Gerry—an arrival which swung the opportunistic Hancock back to the radical line. Furthermore, Lee returned to his seat at Philadelphia to lead the Virginia radicals, and the conservative Virginia oligarch, Benjamin Harrison, shifted into the radicals' camp, thus giving them the vital majority of their delegation. The Continental Congress then had a probable majority for independence, a majority intensified by the good news of the British evacuation of Boston. On March 20, Congress urged Canada to set up a new government and join the "united colonies," and significantly, there was no mention of eventual reconciliation. This was a move hinting strongly of independence. The hint became stronger

still in the great April decisions, including winning French aid and throwing open American ports to all countries, all of which did everything up to the brink of a declaration of independence itself. Beyond this Congress could not go, for it could not bind the separate colonies to independence. Indeed, some of the provincial delegations were instructed against independence by their constituencies. The final push for independence had first to be taken by the separate colonies themselves.

After New England, the next region where independence came to the fore was the south. Paradoxically, the first virtual authorization came from Georgia, once the most laggard of all the colonies. Reacting to Lexington and Concord against its former indifference, Georgia had established a revolutionary provincial congress and a subordinate council of safety. Urged by the Continental Congress in November to step up military resistance to royal arms, the merchants and artisans of Savannah led the Georgia rebels to establish more formal government by the end of January 1776. The government fulfilled the crucial radical requirements: a unicameral elected legislature to which the executive Council of Safety, the courts, and the militia were strictly subordinate, and the legislature was selected by universal taxpayer suffrage. The president of the Council of Safety, in turn, was strictly subordinate to the council and could not act without its consent. The stalwart militant Archibald Bullock was chosen for this position, and five radicals were soon selected as delegates to the Continental Congress. In April, the Georgia rebels adopted a temporary constitution formalizing this regime, and on April 5 the provincial congress authorized its delegates to vote in whatever way they wished on independence. Thus, Georgia was the first colony to explicitly authorize its delegates to vote for independence, and considering the composition of its delegation, this itself was tantamount to an affirmative vote. By April there were no worries about Georgia's readiness for independence.

Georgia, however, was very small and one of the least significant colonies. Far more important was North Carolina. As was the case in most of the other provinces in 1775, North Carolina was run by a spontaneous network of county committees capped by a provincial congress. Several factors served to embolden North Carolina opinion in the spring of 1776. One was the rebel triumph of the Battle of Moore's Creek Bridge on February 27, where the Tories of the province were crushed. Another was the threat of invasion by Gen. Sir Henry Clinton's fleet off Cape Fear and the inspiration provided by Gen. Charles Lee. Lee's assumption of an independent southern command that March had a vital military as well as political impact; this scourge of the Tories was as well versed and radical in political warfare as he was in military matters. His arrest of Maryland's royal governor, the popular Robert Eden, galvanized the struggle; and

this was followed by his sending an aide, Gen. Robert Howe, to a convention of North Carolina radicals meeting in Halifax in early April. Chaired by the ordinarily cautious and conservative Samuel Johnston, the political leader of the colony, and influenced by General Howe, the convention took a noteworthy and climactic step: sending positive instructions on April 12 to its congressional delegation to vote for independence and for any necessary foreign alliances. Here was the first frank instruction for independence in America, albeit the instruction was to *concur* in independence rather than take the initiative. Lee warmly congratulated North Carolina on this promising step.

While the North Carolina instruction for independence passed without difficulty, the April convention for writing a constitution rent the province in bitter ideological conflict. The first local resolution for independence had been made as early as May 31, 1775, in Mecklenburg County in the far western frontier of North Carolina. The Mecklenburg Resolution had declared all British laws and commissions as well as the royal government of the province to be null and void and coupled this early call for independence with the establishment of a county-wide court as the local government elected by universal manhood suffrage. The following August, Mecklenburg County spelled out its comprehensive domestic radicalism in its instructions to its representatives at the provincial congress. They called for suffrage by all free men, the abolition of property qualifications for members of the assembly, and the correction of apportionment in the assembly in accordance with population. Plural officeholding was to be prohibited and local officials elected by the people, and there was to be no oligarchical veto over the decisions of the elected legislature. True to its democratic-liberal position, the county urged disestablishment of the Anglican Church, but they were able to go only so far in their libertarianism, and "pagan or papal" religions were decried as "false" and could not be tolerated in the province.

At the constitutional convention in April 1776, the proindependence forces split sharply on the issue of domestic democracy versus conservatism. A furious struggle ensued over bicameralism, popular election of local judges, and suffrage restrictions, with Samuel Johnston, his brother-in-law James Iredell, and William Hooper leading the conservative forces. A deadlock between the two factions forced postponement of the attempt to write a constitution for North Carolina.

The road to independence was not nearly so smooth in the neighboring colony of South Carolina. Throughout 1775, this province had a formidable bloc of conservatives deeply opposed to any hint of independence. (Even the provincial council of safety, dominated by conservatives, rejected the plea of the radicals to fortify Charleston Harbor against the expected British attack that finally came in June 1776.) In early Novem-

ber, the Continental Congress suggested that South Carolina establish a new government for the duration of the conflict, a suggestion that it had also made to New Hampshire. At the February meeting of the South Carolina Provincial Congress, the conservatives and radicals battled furiously; the right wing, led by the influential planter Rawlins Lowndes, even objected to *any* new government as a possible step toward independence. Battling for a formal government for that very reason were William Henry Drayton and the great veteran radical leader Christopher Gadsden, who characteristically called for independence publicly. The new government was finally adopted at the end of March, spurred by news of the hard-line British Proclamation of Rebellion and the Prohibitory Act. Even then, the South Carolinians took pains to dissociate this step from independence, and the irrepressible Gadsden was rebuked by the bulk of the provincial congress when he read passages from *Common Sense* to the assemblage.

The South Carolina constitution of March 1776, was, unsurprisingly, a highly conservative instrument. The representative assembly was to choose an upper house, and both houses would in turn select a third body, the Privy Council, to exert administrative and judicial authority in place of the old Royal Council. Both houses would also choose a president, who would have veto power over the legislature. Before the Revolution, South Carolina had had perhaps the most badly apportioned representation in the colonies: three-quarters of the white population of the province, living in the back country, were unrepresented in the assembly. The new constitution allowed the back country 40 representatives out of 184, but while a considerable improvement, this representation was still weighted outrageously on behalf of the lowland areas. This constitution was severely criticized by the democratic forces for its hasty adoption without explicit approval by the people, for the presidential veto which smacked strongly of the royal prerogative, and for the oligarchic upper house.

The outlook for independence in South Carolina was not bright, but the radical actions of the Continental Congress, the news of the victory at Boston, and the bold move of North Carolina for independence strongly influenced the province. As chief justice of the new government, William Henry Drayton selected a new judicial structure free of royal authority and, at the end of April, he took it upon himself in a charge to a Charleston grand jury to proclaim South Carolina's independence of Great Britain. He declared that the colony was pursuing its right to revolution against a tyrannical government. Treating the temporary constitution of South Carolina as an act of permanent separation, he defended it as a reflection of the laws of "nature and reason." South Carolina's president, John Rutledge, who had shifted to the side of independence along with other moderate conservatives, officially sent Drayton's printed statement to the

Continental Congress. This act was properly received as tantamount to a call for independence by the province itself.

The southern accession to the cause of independence meant little, of course, without the adherence of Virginia, the preeminent province of the South. This province, despite its leadership in the resistance movement to Great Britain, would not be an easy mark. While it had been eager to resist Great Britain and had thrown itself into battle against Lord Dunmore's raids, its revolutionary bodies were in the hands of thoroughgoing conservative oligarchs who balked strongly at independence, especially Edmund Pendleton, president of the Virginia Committee of Safety, and Robert Carter Nicholas, the committee's treasurer.

Patrick Henry, leader of the radical forces, was repeatedly humiliated by the Committee of Safety in his post as commander-in-chief of the Virginia militia, and, embittered, he temporarily retired to private life at the end of February 1776. One of the reasons for this treatment of Henry was his belief in an individualistic and democratic army; the conservative Committee of Safety realized in dismay that he "did not seem too conscious of the importance of strict discipline in the army, but regarded his soldiers as so many gentlemen who had met to defend their country, and exacted from them little more than the courtesy that was proper among equals."*

The attitude of the Virginia conservatives toward independence may be gauged by their vituperative reaction to *Common Sense*. The eminent planter Landon Carter was at no loss for words to vent his spleen: it was "dangerous," "absurd," "scandalous," "rascally," "nonsensical," and "brutish." Like so many archconservatives since, he raised a "social" argument against Paine's individualism. Realizing that Paine grounded his doctrine on an individualistic theory of natural law, he wrote: "This man writes for independency, and is under the necessity of stating an independence in man at his creation, when it is evident he must be a social being. . . ."

In early 1776, Pendleton, Nicholas, and the conservative forces of Virginia managed to send as a delegate to the Continental Congress the extremely wealthy planter and merchant, Carter Braxton, of the Carter family, who was the Virginia associate in Robert Morris' rapidly burgeoning financial empire. Braxton's mission was to block independence, and this he set out to achieve with great diligence.

During April, however, sentiment in Virginia veered ever more toward independence: the news of the victory at Boston, the bold moves of the

*Quoted in Moses Coit Tyler, *Patrick Henry* (Ithaca, N.Y.: Cornell University Press, 1962), p. 187.

Continental Congress, and the decisions for independence by the rest of the south all played their part. Added to this were pressures for independence by Richard Henry Lee and by George Washington through his brother John, the fact of Washington's being a Virginian being highly important in attracting the patriotism of fellow Virginians. Finally, at the end of March, Charles Lee took up his post at Williamsburg as head of the Southern Military Department and added his determined and fiery personality to the pressure upon the Virginians. Indeed, Lee stayed at Williamsburg largely to rouse the inhabitants and press for independence. His presence was especially needed for the crucial April elections for the critical meeting of the Provincial Convention starting on May 6, elections that hinged on the issue of independence. So overwhelming was the sentiment of the new convention for independence that, on May 15, Virginia unanimously instructed its delegates to urge the Continental Congress to "declare the United Colonies free and independent states, absolved from all allegiance to, or dependence upon, the Crown or Parliament of Great Britain." Here, significantly, was not simply an agreement, as in most of the other provinces, to concur in any congressional resolution for independence; here was an instruction for actually proposing the final break with Great Britain. Congress was also urged to form whatever foreign alliances or confederation of the erstwhile colonies that might be necessary. The conservatives of the convention bent easily with the wind and endorsed the resolution.

Having opted for independence, the Virginians believed they had to settle on a constitution for the province, and upon its nature furious battles ensued. The internal struggle was not, however, as it was in such provinces as Massachusetts, between Paine-type democrats on the Left and Adams-like adherents to mixed government on the Right. So conservative were all the leaders of Virginia that the debate shifted sharply rightward. The Virginia Left held views similar to the Massachusetts Right. Of its leaders, Patrick Henry hailed *Thoughts on Government* as fully expressing his own views, and Thomas Jefferson's doctrines were quite similar. Other leaders of the Virginia moderates were Richard Henry Lee and the eminent lawyer George Mason.

Bitterly opposing these moderate forces were the ultraconservatives, headed by Pendleton, Nicholas, and their chief theoretician, Carter Braxton. Braxton quickly published an *Address to the Convention of . . . Virginia*, specifically designed as a reactionary rebuttal to Adams' *Thoughts on Government*. The pamphlet brusquely hailed the current British constitution as ideal and urged on Virginia a similar government. Braxton insisted that the popularly elected assembly choose a governor and members of an upper house of the legislature, both of these to hold their positions for life, "that they might possess all the weight, stability, and dignity due to the

importance of their office." In this way, both the governor and the upper house would be totally independent of the people and hence avoid the evils, the "tumult and riot," of democracy. Braxton was here simply taking the concept of Adams, Jefferson, and Mason of some independent governing bodies, and pushing it to its logical conclusion: life terms for everyone outside the lower house. The Virginia moderates, however, did not see the connection between Braxton's plan and theirs, and they dismissed his pamphlet as "silly" and "contemptible."

Patrick Henry, leading the moderates of the committee appointed to draft a Virginia constitution, despaired for a time of triumphing over the "great bias to aristocracy" among "most of our opulent families." When he poured out his worries to his friend John Adams, Adams answered with an eloquent and thundering denunciation of Virginia's ultraconservative and highly aristocratic "nabobs":

The dons, the bashaws, the grandees, the patricians, the sachems, the nabobs, . . . curse, but all in vain. The decree is gone forth, and it cannot be recalled, that a more equal liberty than has prevailed in other parts of the earth, must be established in America. That exuberance of pride which has produced an insolent domination in . . . a very few, opulent, monopolizing families, will be brought down nearer to the confines of reason and moderation. . . .

Dominating the committee drafting the Virginia constitution was Henry's right-hand man in leading the Virginia moderates, George Mason. Mason, who had drafted the Fairfax Resolves put through the Fairfax County meeting by Washington, had played an important role in leading the revolutionary forces in Virginia. The constitution, as submitted by the committee and adopted unanimously on June 29, signalled a victory for the moderates: An elected lower house would consist, inequitably, as in colonial days, of two members from each county; an upper house, or Senate, would also be elected annually by the people; a governor would be elected annually by joint ballot of both houses of the legislature, as would a privy council, or Council of State, to assist the governor. To check entrenchment of an executive in power, no more than three terms in succession were allowed a governor, and he could not act without the consent of the Privy Council. Superior judges were to be elected by both houses, but county judges and other officials were to be appointed by the governor and were to hold office on "good behavior," i.e., virtually for life. Both the gubernatorial appointment and the life terms were hold-overs from colonial rule.

The proportion of two members from each county was palpably weighted in favor of the planter oligarchy of the Tidewater counties, which had larger plantations and fewer eligible voters than the pied-

mont and valley areas. Thus, tiny Warwick County in the Tidewater, with a few hundred voters, had a delegation in the lower house equal to large western counties containing a few thousand voters each. As time went on and emigration continued westward, this disproportion would grow still greater. Virginia's restrictive qualifications for voting were retained intact, despite proposals by Mason and Jefferson to broaden the suffrage.*

Due to a determined fight by the Henry forces, the power of the governor was set as subordinate to the legislature, only the House could originate legislation, and the Senate could not amend an appropriations bill. In selecting the governor, the moderates put up Patrick Henry, while the archconservatives selected the virtually outright Tory, Thomas Nelson. Henry was elected by a vote of sixty to forty-five; the Council of State chosen to aid him was dominated by the conservatives.

As a preamble to the constitution, the provincial convention inserted a list of bitter charges against the person of King George III, sent by Jefferson from his post in the Continental Congress. On the basis of these charges levelled squarely and boldly against the king, Virginia repeated its assertion of independence and declared its connection with the British Crown totally dissolved.

If the Virginia Left was middle-of-the-road on the structure of government, the same caution and moderation were not shown on another critical struggle waged in the provincial convention. In one of the monumental libertarian advances of political history, the Virginia Left decided

*In their desire to demonstrate that (a) colonial Virginia was thoroughly democratic except for the impositions of Great Britain, and (b) that the American Revolution was in no sense an internal social revolution, Robert E. and B. Katherine Brown become mired in a grave inner contradiction. If, for example, representation was only undemocratic because of British coercion, then how is it that this imposition was cheerfully continued in the new constitution by the supposedly democratic Virginia leadership? One cannot pin the responsibility for aristocracy in colonial Virginia upon Great Britain, insist (with some justice) that there was no internal revolution in Virginia, and then conclude that Virginia was democratic before *and* after the revolution!

In his brilliant review of the Browns' work, Stephen Saunders Webb writes that they "insist that the prevalence of appointive office in Virginia was owing to 'imperial' control rather than to aristocratic dominance. They fail to consider that the appointive system was not significantly altered by the Revolution, which eliminated imperial control." As for the absence of an internal revolution in Virginia, this is "a fact which they attribute to a general acceptance of democracy. It is at least as logical (and more consistent with the fact that almost every revolutionary leader in Virginia was an aristocrat) to conclude that this remarkable quietude was the result of a continuing aristocratic hegemony. . . ." He justly adds that to take such quietude and lack of widespread public protest as a sign of democracy would mean that "Louis XIV's France was not undemocratic either." See Stephen Saunders Webb, "Review of the Browns' *Virginia: 1705-86*," *Wisconsin Magazine of History* (Autumn 1964), pp. 63-64; Robert E. and B. Katherine Brown, *Virginia 1705-1786: Democracy or Aristocracy?* (East Lansing, Mich.: Michigan State University Press, 1964).

to enact a Declaration of Rights committing themselves, at least in theory, to protect and not to invade the natural rights of each individual. Thus was born the monumental concept of a bill of rights designed to prevent government from invading the rights of the individual. On this issue the Virginia Left proved to be radical indeed.

The convention had assigned to the committee with the job of drawing up a declaration of rights the man best suited to the task, George Mason, who threw himself into the work with a will, aided by Thomas Ludwell Lee. In an effort to prepare the climate for the declaration, numerous county petitions were circulated, vaguely calling for democratic and liberal measures.

Drafted almost completely by Mason, the Declaration of Rights was introduced by the committee and modified by the convention. Some of the changes strengthened the declaration, but the central struggle grew out of the determined attempt by the archconservatives led by Nicholas to weaken or block it altogether. Patrick Henry's disquieting defection on forbidding *ex post facto* laws and bills of attainder cut these clauses from the declaration, but the major battle was waged over its magnificent first clause. Mason had there written "that all men are created equally free and independent, and have certain inherent natural rights, of which they cannot, by any compact, deprive or divest their posterity; among which are the enjoyment of life and liberty, with the means of acquiring and possessing property, and pursuing and attaining happiness and safety." Here, in a scintillating and compact form, was the essential statement of the radical libertarian theory of natural rights.

The conservatives, possessed of the clarity given to them by their vested interests, saw immediately the main danger of this clause. If *every person* has a natural right to be equally free and independent, what happens to the institution of slavery on which rested the power and pelf of the Virginia planter aristocracy? Undoubtedly, Mason knew what he was about, for as early as 1765 he had criticized the institution of slavery on moral and economic grounds. Nicholas and his "set of aristocrats" and "masters" (in the words of Thomas Ludwell Lee) fought the clause fiercely. To declare all men created free and independent would invite a slave revolt, they argued. The conservatives were able to force modification of the clause: "natural" was excised from "inherent . . . rights," and "God and Nature" was excised from another important clause. "Namely" was substituted for "among which are" to restrict the scope of individual rights. But most important, the clause "when they enter into a state of society" was inserted between "of which" and "they cannot." This made it possible for the conservatives to rest content with interpreting natural rights as belonging only to those men who had "entered into a state of

society.” Clearly, the slaves had never been given a chance to make this entrance.*

Despite these modifications, the Virginia Declaration of Rights, unanimously adopted by the convention on June 12, 1776, is one of the great documents in American history. It set the pattern for all future state and national—and foreign—bills of rights, and stamped the libertarian doctrine of natural rights, at least in theory, upon the American Republic. The preamble of the declaration stated that the representatives of the people of Virginia assert a body of rights which “do pertain to them, and their posterity, as the basis and foundation of government.” Following the first clause, the declaration included democracy (“that all power is [originally, ‘by God and Nature’] vested in, and consequently derived from, the people; that magistrates are their trustees, and servants, and at all times answerable to them”); the right of revolution (when government fails to secure or violates proper aims, “a majority of the people hath an indubitable, inalienable, and indefeasible right, to reform, alter, or abolish it. . . .”); no right of special or hereditary privileges; separation of the judiciary from the other functions of government; rotation of office in the legislative and executive branches; free and frequent elections; no taxation without representation; the traditional rights of a defendant to know the nature of the charges against him, to confront his accusers, to have a speedy trial by jury which must be unanimous to convict him of a crime, not to be forced to give evidence against himself, and to be free of excessive bail and cruel or unusual punishments; the prohibition of general warrants (searches and seizures by government must be named in advance in special warrants and supported by advance evidence); freedom of the press (“one of the great bulwarks of liberty”); no standing armies (which are “in time of peace . . . dangerous to liberty”); a people’s militia as the proper form of defense; “strict subordination” of the military to the civil power; and freedom of religion (religion “can be directed only by reason and conviction, not by force and violence; and therefore all men are equally entitled to the free exercise of religion, according to the dictates of conscience. . . .”). On this last point, the phrase “free exercise of religion” had been substituted for a far weaker stress on religious *toleration* at the suggestion of Mason’s young colleague on the drafting committee, James Madison.

Emboldened by the march of southern opinion and action as well as by its own deeds of the preceding months, the Continental Congress in mid-May took the penultimate steps toward a final state of independence.

*See Robert A. Rutland, *George Mason* (Williamsburg, Va.: Colonial Williamsburg, 1961), pp. 53ff.

On May 10, led by John Adams and Richard Henry Lee, it resolved to recommend to those legislatures of the "United Colonies" which had not done so to adopt suitable new governments of their own. No phrases hinting at eventual reconciliation with Great Britain appeared in this resolution, as in the advice to New Hampshire six months before, but it was still sufficiently bland to win the support of the conservatives in Congress.

The big battle was waged immediately afterward, over the preamble to the resolution. Drawn up by John Adams and backed by Richard Henry Lee, the preamble began with a list of grievances against Great Britain directed against the king as well as Parliament, and then concluded with this crucial and devastating passage:

It appears absolutely irreconcilable to reason and good conscience . . . now to take the oath . . . necessary for the support of any government under the crown of Great Britain, and it is necessary that the exercise of every kind of authority under the said crown should be totally suppressed, and all the powers of government exerted, under the authority of the people of the colonies. . . .

Here the gauntlet was hurled at Great Britain; this preamble, attached to a call for new government, was nothing less than a de facto declaration of independence. Opposition to the preamble was led by James Duane of New York, Carter Braxton, and the brilliant young James Wilson. Wilson warned prophetically that passage of the preamble would put his province of Pennsylvania into an anarchic "state of nature" and dissolve its existing proprietary government.

Congress, however, overrode the objections of the conservatives and adopted the preamble on May 15. The vote has been reported as six or seven to four, and assumedly among the four colonies in the negative were Pennsylvania, New York, and Maryland. Adams was understandably jubilant, writing that Congress had passed "the most important resolution that ever was taken in America," one that was "total absolute independence," "independence itself."

The Struggle in Pennsylvania and Delaware

Congress' May resolutions spurred independence sentiment throughout the colonies, and John Adams soon exulted that "every post and every day rolls in upon us Independence like a torrent. . . ." Virginia had struck for independence, and the Massachusetts House primed support in the grassroots by asking the towns their views on independence. Through May and June the Massachusetts towns, as might be expected, answered that they would support the measure "with their lives and fortunes." Rhode Island, too, was stimulated to instruct its delegates to sign any necessary treaties with foreign states; it had opted for independence as early as May 4 when the legislature had renounced all allegiance to King George and assailed "his debasing and detestable tyranny."

Adams' jubilation was decidedly premature. America could not proclaim its independence without the middle colonies, and the middle colonies still stood obdurately outside, or opposed to, the independence movement. The powerful landed oligarchs of New York and the highly conservative Philadelphia financiers stood foursquare against independence. Their brilliant leaders—the Morrises, the Jays, the Livingstons, the Dickinsons, the Willings et al.—not only thoroughly dominated their provinces; they were shrewd enough not to turn outright Tory and thus lose any hope of ruling their respective populaces. Independence could not be assumed while these two great colonies remained adamant in opposition. The Pennsylvania Assembly had, in November, specifically directed its delegates to oppose any plan for independence; and the instructions of New York, Maryland, and Delaware had clearly emphasized American ties with Great Britain. Even as late as the May 1776 assembly

election, the conservatives carried Philadelphia. On May 15 when Virginia and the Continental Congress were taking such rapid strides towards independence, the Maryland Convention, in a burst of reaction, was resolving unanimously that "a reunion with Great Britain on constitutional principles" would best secure the rights, liberty, and happiness of the whole empire.

The radicals readily concluded that Pennsylvania was the key to their problem. If that great ultraconservative province should capitulate to the radicals and independence, the other colonies would have to swing into line. Maryland and Delaware, caught between Pennsylvania and the South, could not hold out, and neither could a New York isolated from all of her sister colonies. But to accomplish such a drastic change would require something on the order of a veritable internal revolution.

The key to Pennsylvania politics was its almost unique status as a proprietary colony—a status it shared only with Maryland and Delaware, the latter being associated with it in the proprietorship of the Penn family. Directly under a sympathetic proprietary rather than the crown, Pennsylvania did not have to confront the royal tyranny directly or have its assembly dissolved or humbled by Great Britain. In contrast to the other colonies, therefore, Pennsylvania was not propelled into a "state of nature" and thence to a rule by spontaneously formed local committees and provincial congresses. Instead, throughout 1775, its colonial government continued complacently unaltered. Continuing in power were Pennsylvania's thoroughly undemocratic and malapportioned assembly as well as its executive and judiciary appointed by the proprietary. Controlling the assembly with an iron hand was archconservative John Dickinson along with the Quaker and financial oligarchy of Philadelphia and eastern Pennsylvania, all strongly opposed to independence. The Quakers and the proprietary party, formerly enemies, were now united in opposition to independence and in favor of the existing political structure. In Pennsylvania there was no confusion between internal and external issues among the radical and conservative camps; the conservatives were opposed to independence and domestic reform, and the radicals were squarely on the side of both. Indeed, the issues were conjoined, as neither aim could be achieved without the other.

One vital factor aiding the Pennsylvania Left was the presence of the Continental Congress in Philadelphia; heavily committed to independence, the Congress, especially since its resolution of May 15, 1776, exerted continual pressure on behalf of the Pennsylvania radicals. Over a month of agitation led by Joseph Reed, Washington's former aide, brought the assembly to enlarge its membership in mid-March, but this was a mild reform, and Dickinson, Robert Morris, and their conservative allies were still in comfortable control.

While local committees had not assumed power in Pennsylvania, they were in existence and a growing force in the province. They were a vital part of the protest movement against Great Britain; and a provincial convention of these committees during January 1775, while effectively hobbled by Dickinson and the conservative leaders, had marked the beginning of influence by the spontaneous organs of public sentiment. After Lexington and Concord, county committees formed voluntary militia units called "associations." While the county associations were governed by the assembly, friction developed as the radicals, eager to get on with the Revolution, demanded either conscription or special taxation upon the numerous conscientious objectors in the province. And in September 1775 the Philadelphia committee declared outright that free speech had to end when used for "counteracting . . . virtuous exertions against injury and oppression." In such cases the human and divine laws "justify the punishment of such licentiousness." William Nelson rightly adds that the "committee thereupon adopted the tyrant's usual plea of necessity: 'no person has a right to the protection of a community or society he wishes to destroy.' "* Thus Pennsylvania pacifists as well as Tories were subjected to invasions of their liberty—in the name of liberty.

The restiveness of the associations was seen in the bitter attack by the association of Lancaster County upon the pacifism of the Mennonites, demanding taxation of the Mennonites for military measures. Indeed, the living example of pacifism proved catching, and the Philadelphia association refused to serve as minutemen after contemplating the total exemption of the Quakers from the war machine. The leaders of the Philadelphia association also demanded a tax on conscientious objectors and a transformation of the libertarian institution of voluntary military association into the more familiar compulsory provincial militia. The assembly partially bowed to the pressure by levying a heavy tax of over two and a half pounds upon all nonassociators.

More important for the political structure of Pennsylvania was the radicalizing experience of belonging to the military associations, which were especially prominent in the west. For the masses began to wonder why they should risk their lives for the revolutionary cause and yet not—in the words of the Committee of Privates headed by Dr. James Cannon at the end of February—"be admitted to the enjoyment of all of the rights and privileges of a citizen of that county which they have defended and protected." The assembly's brusque treatment of the committee's petition, as well as its presuming to appoint their military officers, led the Committee of Privates to the revolutionary repudiation of the authority of the constituted Pennsylvania government. Furthermore, the committee was

*William H. Nelson, *The American Tory* (Oxford: Clarendon Press, 1961), p. 129.

perceptive enough to apply the argument of taxation without representation to affairs at home; since they were not represented proportionately in the assembly, the authority of the government need not be recognized. Moreover, they moved to elect their officers and in many cases to make their military decisions by majority will of the particular military company. It is not surprising that the associators were noted for their individualistic spirit and their failure to abide by orthodox military rules of hierarchy and submission.

That internal liberal democracy and independence were two sides of the same Pennsylvania coin was fully recognized by the Pennsylvania Right. During the spring of 1776, John Dickinson declared retention of the British royal power "indispensable" to protecting the colonies from civil war and democracy, and his views were echoed more circumspectly by James Wilson. The looming threat of independence and internal reform propelled many ultraconservatives into a quasi-Tory position, and many of them wrote pamphlets and articles denouncing independence. Thus, the Anglican clergyman William Smith cited Montesquieu in praise of the English form of government as the best guarantee of "liberty." And "Civis" railed against a republicanism that would lead to a government by a "set of men whom nobody knows," by apprentices and immigrants. George Chalmers, the young author of the pamphlet *Plain Truth*, an attack on *Common Sense*, also cited Montesquieu and attacked Paine for not resigning himself to the necessary imperfections of mankind's state, especially man's laws.

A particularly interesting statement of the right-wing position in Pennsylvania was that of the Tory Anglican priest, Charles Inglis. His pamphlet, *The True Interest of America Impartially Stated*, was specifically designed as a rebuttal to *Common Sense*. Since its entire first printing was destroyed by a radical mob, it did not have any influence on the struggle over independence. Nonetheless, Inglis' arguments provide important insights into the thinking of the conservatives. He began with a statement of fundamental opposition to Paine's allegedly utopian individualism. Man was not born free in a state of nature, he maintained, but born necessarily into society, and therefore supposedly born under innate social obligations. Inglis saw that Locke's and even Hobbes' ultimate individualism had to be repudiated in order to uphold the Tory cause. He maintained that man could not exist without society, society could not exist without law, and that law could not exist without government. After employing this string of non sequiturs to imply that government was anterior to man, he naturally concluded that government was not a "necessary evil" but a necessary good. He further adopted the classical Tory equation of government with human civilization. Thus the clash of Paine and Inglis posed critical questions of political philosophy, among which were: Is the individual logically

anterior to society? Is society or civilization to be equated with or clearly distinguished from the State apparatus? Inglis, of course, deduced from his thesis that Americans were naturally and inherently part of English society and government, and therefore must not assert their independence; moreover, he turned to Montesquieu to support the need for monarchy and aristocracy as well as to eulogize British institutions.

One assiduous radical writer perceptively charged that when the conservatives talked of their preference for the "mild and wise laws of Great Britain" as contrasted to the "tyranny of the many," they were really protesting at the prospect of losing their own special privileges, at being "governed by any laws that will effectually secure the liberty and property of the people from their ravenous clutches."* To this end, one radical, "Elector" (who may have been the radical theoretician Dr. Thomas Young), went beyond his fellows to advocate suffrage for all adult members of military associations in Pennsylvania.

The Pennsylvania radicals were handicapped by a lack of eminent leadership; the well-known and well-born were almost completely on the Right. Even Joseph Reed was not a radical and was not really ardent about independence. But this lack of "status" was one of the main reasons for the unique intensity of Pennsylvania radicalism. Its leaders came from outside the Pennsylvania power structure; these were new independent men, free from vested interest in the status quo. The leadership of the revolutionary Left included two mathematicians, the eminent astronomer David Rittenhouse and Prof. James Cannon of Philadelphia College; the roistering Philadelphia mechanic and retailer Timothy Matlack; Col. Daniel Roberdeau; and two great theoreticians of the radical libertarian movement, Dr. Thomas Young, the former Massachusetts mentor of Ethan Allen in liberalism and deism, and, of course, Thomas Paine. Virtually the only radical leader who had been prominent in the movement against Britain before the war was the Philadelphia merchant George Bryan. Cannon, writing as "Cassandra," came to the defense of *Common Sense* against its enemies, and other radical pamphleteers called for extensive widening of the suffrage.

Paine was a host unto himself, and in the "Forester's Letters," published in April 1776, he counterattacked his critics and elaborated his libertarian doctrine. In his third letter, he answered the common conservative contention that the evil inherent in human nature requires a strong State to repress it: "If all human nature be corrupt, it is needless to strengthen the corruption by establishing a succession of kings, who be they ever so base, are still to be obeyed. . . ." Furthermore, he argued, it is far more consistent for freemen to choose their governors than to be ruled by mere

*See Nelson, *American Tory*, pp. 128-30.

birth. Certainly, it is both folly and tyranny to give any one man power over all: "No man since the fall hath ever been equal to the trust. . . ." As to whether America could be happy under its own government, Paine sensibly replied: "As happy as she pleases; she hath a blank sheet to write upon. . . ." Let America make what it will out of this *tabula rasa*.

Paine also stressed in this letter the libertarian importance of trial by jury as the *people's* way to completely circumvent the government in making judgments: "Here the power of kings is short cut. No royal negative can enter the court. The jury . . . is a *republic*, a body of *judges chosen from among the people*." He pointed out that, typically, the Magna Carta that secured this liberty had not been granted by the largesse of the crown, but had been forced out of the king by irresistible pressure from below.

Paine also emphasized the goal of an isolationist foreign policy for the new republic that he envisioned on the horizon. America, he urged, will make peace with Britain as with an enemy; then, independent, it will live in peace "remote from all the wrangling world . . . bounded by the ocean, and backed by the wilderness, who has she to fear but her God?"

During May, the Pennsylvania Left was reinforced by the news of the hiring of Hessian mercenaries, followed by Virginia's electrifying decision for independence, and it stepped up its demand for a democratic provincial convention elected by all the freemen of Pennsylvania. But the major impetus to the radicals was the Continental Congress' resolutions of May 10 and 15, denouncing all allegiance to the enemy George III and calling on all colonies to form their own governments independent of Great Britain. The main resolutions were implicitly directed against Pennsylvania, the only province, along with its associated Delaware, that was still dominated by its old British-directed government.

The Congressional resolutions acted as a mighty signal (perhaps pre-arranged) to the Pennsylvania Left. The radical leaders, urged on by John and Sam Adams, now saw that they could put together the long-sought radical alliance of Philadelphia mechanics and artisans and western frontiersmen. Swiftly, on the night of May 15, the radical Philadelphia Committee, of which James Cannon was secretary, met to consider the formation of a new government. The opportunistic Delaware lawyer Thomas McKean was in the chair at the meeting, but the power resided in a steering committee that included Cannon, Young, and Paine. In presumed obedience to congressional advice, the committee called for a provincial conference of county committees to demand a vote for independence, and a constitutional convention—outside the stultifying structure of the assembly—to form a new and democratic revolutionary government for Pennsylvania. A mass meeting of nearly five thousand people, whipped up by Paine and others, gathered on May 20 at the behest of the

Philadelphia Committee, with Colonel Roberdeau in the chair. The meeting denounced the assembly as holding its authority from the king and for being based on a narrow electorate; it also called for a constitutional convention for Pennsylvania. A provincial conference of committees was set for June 18 to organize a constitutional convention, and associations throughout the province enthusiastically endorsed the lead of the Philadelphia Committee.

The conservatives of Philadelphia were able to organize a mass meeting of their own on May 21, as well as a remonstrance of 6,000 people to preserve the old government. This meeting was led by John Dickinson, Charles Thomson, and even Joseph Reed. Other conservative protests against the May 20 meeting came from the Committee of Inspection of Philadelphia County and from Chester County in eastern Pennsylvania. On the other hand, the York County committee soon demonstrated its power by forcing the York assemblyman James Rankin into a public recantation of the "bad tendency of my past conduct" in advocating the old Pennsylvania government. Citizens of Reading in Berks County burnt the conservative remonstrance as treasonable, and hundreds of Philadelphia signers shifted and withdrew their signatures. The numerous and powerful associations throughout Pennsylvania, superbly organized by Professor Cannon, joined the call for a new government and a constitutional convention. The tide of radical opinion was indeed swift; not even repeated concessions by the assembly could stem its flow.

The Pennsylvania Assembly, bewildered at seeing its public support rapidly dwindling, decided to wither away and allow Pennsylvania's great internal revolution to be bloodless. In this resolve, it was aided by Assemblyman Joseph Reed; on June 8 the assembly withdrew its November instructions to the delegates to the Continental Congress to oppose independence. The delegates were now authorized to adopt any measures they deemed necessary. To block any attempt by moderates to preserve the moribund assembly by taking charge of the forthcoming convention, radical members boycotted assembly meetings after June 13, thus preventing the gathering of a quorum. The Pennsylvania Assembly drifted into hopeless adjournment on June 14.

On June 18, the government of Pennsylvania changed hands in a peaceful but impressive revolution. The provincial conference met on that date, with delegates selected by the radical county committees. The conference itself dramatized the thorough transformation of political power. None of the old conservative or moderate Whig leaders were present: no Dickinson, no Thomson, no Mifflin, no Wilson, no Reed, no Morris. Fully half the delegates were leaders in their local military associations. The conference looked to the vanguard Philadelphia Committee for leadership, and here the only old-line Whig in prominence was Thomas McKean, who was

chosen president of the conference. That venerable opportunist, Benjamin Franklin, never one to be in any minority, had seen the way the wind was blowing and allowed himself to be included temporarily among the Left. He nominally headed the Philadelphia delegation to the conference, but never attended meetings. Apart from McKean, the leading delegates from the Philadelphia Committee were Committee President Christopher Marshall, Dr. Benjamin Rush, and Col. Timothy Matlack, with Cannon, Paine, and Rittenhouse active in the background.

The provincial conference began its work quickly; The assembly was declared abolished and a constitutional convention summoned for a new government based on the people of Pennsylvania. The suffrage for the convention was to be widened to all adult taxpaying associators. (Unreconstructed Tories were denied the privilege.) A more serious blow to liberty was the conference's decision to require an oath of Christian belief for all those elected as deputies to the constitutional convention. This oath—an effort to disfranchise the Quakers—opened a bitter debate between the elderly Christopher Marshall and the other, far younger, leaders of the radical camp. Marshall strongly supported the religious test oath against the vigorous opposition of Rush and especially Cannon, who privately denounced the supporters of the oath as “fools, blockheads, self-righteous, and zealous bigots.”

Representation at the convention was not allocated proportionately and democratically; understandably, exhilarating vengeance against the old overweighting of the east led to an even greater overweighting on behalf of the west. Each county was given eight delegates to the constitutional convention, so that sparsely settled western counties enjoyed almost the same representation as Philadelphia.

On June 24, the provincial conference surprised no one by declaring that George III had forfeited American allegiance and voting to concur in any declaration of independence. By late June, Pennsylvania was firmly in the camp of the proindependence radicals; indeed, the outcome had been clear since the beginning of June.

As for Gov. John Penn, of the proprietary family, he was generally sympathetic to the American cause and gave little trouble about his disappearance from the political scene. Indeed, he was content to remain a private citizen of the new commonwealth of Pennsylvania.

Where Pennsylvania went, little Delaware could not be far behind. The two were almost one province, having the same proprietary governor. Delaware, too, had retained its old assembly and governmental structure after Lexington and Concord. Its three delegates to the Continental Congress were Thomas McKean, a radical; George Read, an archconservative; and Ceasar Rodney, a centrist. By the end of 1775, Rodney had shifted

leftward, winning the delegation for the American cause. Pennsylvania's opting for independence quickly convinced Delaware. On June 14, McKean presented to the Delaware Assembly the May 15 resolution of Congress along with the recent resolutions of Pennsylvania. On June 15, Delaware removed the restrictions that prohibited its delegates from voting for independence, which had been in force since March 1775, when the delegates were instructed to aim for reconciliation with the mother country. Now, in imitation of the Pennsylvania Assembly's resolve of June 8, the Delaware Assembly ordered its delegates to concur with other delegates in favoring whatever measures may be necessary for the interest of America. The way was clear for the Delaware delegation to vote for independence.

Washington's Retreat at Long Island, August 1776

New Jersey and Maryland Follow

New Jersey, a scene of conflict between Rebel and Tory, had felt understandably diffident about antagonizing its two powerful and archconservative neighbors, New York and Pennsylvania. Lexington and Concord galvanized New Jersey as it did the other colonies, and a provincial convention in Trenton was formed in the spring of 1775 out of a general provincial conference of county committeemen. But while favoring military measures, the convention had continued to protest its loyalty to the king. By early 1776, the New Jersey revolutionaries had established a provincial congress, with a committee of safety as its executive arm. Even so, the Tories remained strong in New Jersey, and Royal Gov. William Franklin continued to be active in political affairs, as we have seen. Leading the radically militant forces in New Jersey was the distinguished president of Princeton College, the Scottish-born Rev. Dr. John Witherspoon. An early advocate of independence, he had seen his students fill the ranks of the Sons of Liberty, and he was prominent enough in the Revolution that he was one of the three Americans burned in effigy by the British and Tories when General Howe captured Staten Island in July 1776.

By early June, an internal drive for militancy, combined with the transformation of Pennsylvania, easily swung New Jersey into the independence camp. The elections to the June meeting of the provincial congress at Burlington produced a clear radical victory; two conservative delegates to Philadelphia were immediately recalled, and on June 21 the New Jersey congress selected an entirely new delegation, all of whom staunchly favored independence. The new delegation included Witherspoon. The

provincial congress also ordered the arrest of Governor Franklin, sent him to prison in Connecticut, and authorized the delegates to Philadelphia to concur in a declaration of independence.

After completing this drive for independence, the provincial congress promptly decided to write a constitution for the virtually independent province. The new constitution, on which Dr. Witherspoon was the main influence, was approved at the beginning of July. It was moderately conservative, establishing a bicameral legislature; but also, by a vote of five counties to four, abolishing the old freehold qualifications for voting. Suffrage was broadened to all inhabitants with assets, personal or real, valued at fifty or more pounds. Perhaps through careless wording, the unintended effect of the legislation, after a time, was to give the vote to widows inheriting property worth at least fifty pounds—an initial breakthrough for women's suffrage.

New Jersey's swift adhesion to the cause of independence left only Maryland and New York unconverted. Maryland was a proprietary colony of the Baltimore family, and for a century its politics had been expressed in terms of pro- and antiproprietary parties. The "Court Party" was the party of the allies and receivers of special privilege from the proprietary. It defended the quitrents and other exactions imposed by the Baltimores. It naturally controlled appointed officialdom, the governor, the council, the established Anglican clergy, and the body of the petty bureaucracy. In opposition was the "Country Party," dominating the elected lower house of the legislature. Added to the disfranchisement of the sizeable minority of Roman Catholic voters, the property qualifications for voting proved high enough to disfranchise proportionately more citizens in Maryland than in any other province; probably little more than two-fifths of the white adult males of Maryland were eligible to vote. Furthermore, as elsewhere in the south, apportionment for the assembly was weighted heavily in favor of the older eastern counties, containing large slave-holding plantations and fewer white citizens than the western counties. Every county, regardless of population, had equal representation in the assembly.

The exactions of the proprietary upon the land of the inhabitants were not merely academic; they included quitrents, caution money from land purchasers, rents from proprietary manors, and alienation fines on those who transferred their land. From these sources as well as fines and fees and tonnage and export duties on Maryland's staple, tobacco, the proprietary derived a net annual income in the decade before the Revolution of 12,500 pounds. In addition to this substantial sum, the people of Maryland were forced to pay 12,000 pounds in taxes per year to support the proprietary officials who enforced these exactions upon them, as well as 8,000

pounds to support the established Anglican clergy. Thus, over 32,000 pounds were extracted from the Marylanders to support the proprietary and a hundred-odd appointed bureaucrats and ministers; in contrast, the entire government of Maryland, including provincial, county, and local operations, cost Maryland only 18,500 pounds per year. It is easy to see that saddled with perhaps the most expensive state in the colonies, the grievances of the Country Party were real indeed. Both court and country parties were dominated by the social and economic leaders of the province, the wealthy planter oligarchs, their wealth based on slave cultivation of tobacco.

The continuing attack by the Country Party on the place and privileges of the Court Party led naturally to their leading the wider opposition to British exactions in Maryland. In the course of the revolutionary movement, the Country Party established periodic extralegal provincial conventions, with a council of safety appointed to operate in the interior. The provincial convention functioned as a supreme court and appointed county committees.

No American colony labored under such tight control of a small interlocking clique as Maryland under the Country Party. Virtually complete control was exercised by a very few men. First and foremost was the very wealthy Matthew Tilghman, head of a very prominent and powerful planter family on Maryland's Eastern Shore. Tilghman presided over all the provincial conventions, was usually president of the Council of Safety, and, later, was president of Maryland's constitutional convention. Also prominent was Edward Lloyd, first cousin of Tilghman and an extremely wealthy member of another leading Eastern Shore family. Lloyd was one of the largest slaveowners in Maryland and one of the biggest wheat growers in all the colonies.

Another important figure in the province was Charles Carroll of Carrollton. A resident of the capital city of Annapolis, Carroll had the largest slaveholdings in Maryland and was not only the wealthiest man in the province, but one of the wealthiest in America. A delegate to the Continental Congress, he achieved political prominence despite being a Roman Catholic. Almost equally important was another Charles Carroll of Annapolis, a distant relation to Carroll of Carrollton. Yet another Charles Carroll was the son-in-law of Carroll of Carrollton; he, too, was one of the wealthiest people in Maryland.

Three prominent Annapolis lawyers, once partners, rounded out the Country Party leadership. William Paca, a delegate to the Continental Congress, made his fortune by marrying into the Lloyd family and became a leading planter and slaveowner. Thomas Johnson, another congressional delegate, specialized in acquiring land grants in unoccupied western Maryland. (Before the Revolution, having put on enough pressure to gain

himself the land, Johnson had joined with George Washington to try to persuade the Maryland and Virginia legislatures to open a vast Potomac navigation system to raise the value of their lands enormously.) The third of these lawyers, Samuel Chase, was also a delegate to the Continental Congress.

Under this sort of control, it is not surprising that Maryland's revolutionary movement was staunchly conservative and opposed the radical drive for independence, and as we have seen, Robert Eden was courteously allowed to remain as nominal governor, though he retained no power. As late as May 15, 1776, the Maryland Provincial Convention reconfirmed its aim of reconciliation with Britain and its corollary instructions to the delegates at Philadelphia. The American radicals almost despaired of Maryland, but its very tight control afforded a chance of radical change through conversion of a few of the inner circle. The break came with the ardent adoption of the independence cause by two of the top oligarchs, Samuel Chase and Charles Carroll of Carrollton. To gain sufficient support and pressure for independence, they were forced to stump the western country, raising demands for independence among the Maryland masses, thus taking the risk of arousing domestic radicalism as well. In fact, along with a host of local committee resolutions for independence in western Maryland, many of the local groups were stimulated to agitate for domestic reform. Committees in western Frederick County, seeing the link between independence and domestic change, attacked the "tyranny" and discriminatory representation in the Assembly as part of an effort to develop political organs that would agree to independence. Military participation heightened pressure for reform, as soldiers in the fight against Britain felt with a special keenness their disfranchisement and handicaps in representation. They pressed for broadening the highly restrictive Maryland suffrage, and demands arose for allowing all adult arms-bearing taxpayers the right to vote. Clearly, mass democratic pressure was beginning to push against the tight aristocratic control of the province.

Chase's campaign and western mass pressure effected a remarkable change in Maryland's position, a shift aided by Maryland's sudden unwelcome isolation among the colonies and General Lee's agitation from Williamsburg. Moreover, Maryland was sternly confronted by the request of the Continental Congress for military aid, and this presented the stark choice of conforming or standing alone. Finally, on June 28, the Maryland convention revoked its instructions against independence and authorized its delegates to join in a declaration of independence. Governor Eden was gracefully permitted to leave for Britain on a British warship. The convention also decided to draft a state constitution on August 1. Property qualifications for the constitutional convention were to remain the same, but representation was partially corrected by splitting Frederick County

into three parts and adding more delegates from the major cities of Baltimore and Annapolis.

Thus, by the end of June, all the colonies but one stood foursquare for independence, and almost all had either formally adopted a new government or were in the process of doing so. But one—New York—powerful and firmly in archconservative hands, still stood in the way of American independence.

Independence Declared

On June 7, in happy obedience to the instructions resolved by Virginia on May 15, Richard Henry Lee submitted to the Continental Congress a momentous resolution for the independence of the United Colonies. His resolution embodied three historic affirmations. First was a declaration of independence: "that these United Colonies are, and of right ought to be, free and independent States, that they are absolved from all allegiance to the British Crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved." One of the great virtues as well as a corollary of independence would be the ability to form alliances with France and other countries in support of the war; so Lee's second resolve affirmed the utility of forming such alliances. Finally, if the colonies were now to be separate and independent states, it was clear that no war, especially no war with a regular army, could be waged unless the states were in some way united; and it was believed that a formal compact of unity was needed to bolster the standing of the Continental Congress, just as formal government was supposedly needed by each state to replace spontaneous and anarchic rule by organized networks of local committees. Therefore, Lee's third resolution instructed that a "plan of confederation" be drawn up and submitted to the separate states.

The conservatives had no objection to confederation per se; indeed, a strong central government over the colonies had long been a dream of many archconservatives. Neither did the prospect of alliances frighten them; after all, war was being waged, and the more help the better. The sticking point was independence, and this issue polarized opinion and was

bitterly fought in the Congress. Leading the battle against independence were Robert R. Livingston of New York, James Wilson and John Dickinson of Pennsylvania, and Edward Rutledge of South Carolina, who privately blasted the resolution as madness. Ranged in favor of independence were New England, Virginia, and Georgia, respectively, led by John Adams, George Whyte, and Richard Henry Lee. Adams was exultant, writing to a friend that "we are in the very midst of a revolution, the most complete, unexpected, and remarkable of any in the history of nations."

The opposition to Lee's resolution pretended to favor independence in principle and placed its hopes in postponement, arguing cogently that it would be more sensible to wait for a short while until the middle colonies had swung into line. The radicals came to see the validity of this particular argument, and so Congress agreed to postpone the consideration of independence until July 1. Still, the radicals lost little time overall, for they were able to carry the appointment of a committee to draft a declaration of independence to embody Lee's first resolution. The committee to draft the declaration, appointed on June 11, had an overwhelming radical majority: John Adams, Benjamin Franklin, Thomas Jefferson, Roger Sherman. It also included one conservative, Robert R. Livingston. Committees were similarly appointed on confederation and on a plan for foreign treaties.

The latter part of June did, as we have seen, bring the middle colonies into the fold, even though Maryland had first pleaded unsuccessfully for postponement of the discussion date beyond July 1. In addition, loose ends were wrapped up in those New England colonies that had not bothered to issue formal support for independence. By June 14, Connecticut flatly ordered its delegates to propose independence for the American states; the next day, the New Hampshire legislature pledged support for independence. Furthermore, Congress itself drove ever closer to independence; on June 24 it declared that any American adhering to the enemy king or levying war on his behalf was guilty of treason. In accordance with the resolve, Thomas Hickey, a private in the Continental Army, was hanged by that army for mutiny.

The momentous day of July 1 brought with it the news of Maryland's affirmation of independence. New York's delegates, having received no firm reply to a request for instruction from the provincial congress, decided that they had best abstain from the vote on independence.

Those radicals who really believed that conservative objections to independence had been met by the events of June were in for a rude shock. After a fierce debate on the Lee resolution in the committee of the whole, a vote was taken in which Pennsylvania and South Carolina voted against independence, while the two Delaware members present split on the issue. Clearly, the delegates from Pennsylvania and South Carolina were

voting their own reactionary wishes in defiance of the will of their constituents. Here was a stunning setback to the radical cause.

The next day, July 2, the independence resolution came to the floor of Congress. How was unanimity to be achieved in one day? Delaware achieved it by sheer energy: Thomas McKean sent for Ceasar Rodney in a hurried call, and Rodney (who had been leading militiamen against Tories in southern Delaware) rode all night in a thunderstorm from Dover to Philadelphia to cast Delaware's tie-breaking vote for independence. South Carolina's Edward Rutledge, a leader of the fight against independence, announced his decision to take his delegation into the camp of independence for the sake of intercolonial unity. That left Pennsylvania, and new delegates were not to be chosen by the radicals in the provincial conference until the end of July. On July 1, the Pennsylvania delegation had voted four to three against independence, with Benjamin Franklin, John Morton, and (surprisingly) James Wilson for, and John Dickinson, Charles Humphreys, Robert Morris, and Thomas Willing opposed. The next day, Dickinson and Morris deliberately absented themselves, and Pennsylvania's precarious three-to-two vote for independence made the congressional vote unanimous. The deed was done. The colonies were now separate, free, and independent states; and, as the "United Colonies," were now at last informally united states.

John Adams was understandably enraptured at having achieved the goal of years of labor and devotion. A greater issue, he wrote blissfully, "perhaps never was nor will be decided among men. . . . The second day of July, 1776, will be the most memorable epocha in the history of America. . . . I am well aware of the toil and bloodshed and treasure that it will cost us to maintain this Declaration. . . . Yet through all the gloom I can see the rays of ravishing light and glory."

The colonies had announced their independence; but only the bare assertion had been made. The republic of the united states needed a justification, a philosophical explanation and groundwork for the unprecedented act which could inform and inspire the citizenry and the world at large. Heading the committee to frame such a declaration, at the age of thirty-three one of the youngest members of Congress but already renowned for his brilliant pen, was Thomas Jefferson. The committee presented his draft to Congress on June 28, and debate ensued in the committee of the whole after the approval of Lee's resolution. An amended declaration was approved by Congress on July 4 by the same vote as that two days before, and this noble and immortal summation of the philosophy and motivation of the American Revolution was first proclaimed to the public in Philadelphia by local associators on July 8.

Jefferson's aim in drawing up the Declaration of Independence was not

originality of principle but the framing of a succinct “expression of the American mind,” of the “sentiments of the day” on the “common sense of the subject.” The document was indeed a superb epitome of the libertarian natural-rights philosophy propelling the Revolution as well as the specific grievances that had roused the American people. Jefferson began with a brief explanation of the decision for composing the document:

When in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature’s God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

The natural right to independence and self-government was in turn grounded on a fundamental structure of the natural rights of man. Nowhere has this philosophy been better put into brief compass than in the succeeding paragraph of the Declaration:

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.

Here was the quintessence of John Locke and of the eighteenth century libertarian creed: it is axiomatic that all men are endowed by nature with inalienable rights; the proper aim of government, as derived from the consent of the governed, is to secure those rights. Nothing other than this function justifies government’s existence; hence the right of the people to revolt against any government destructive of those aims. Jefferson went on to recognize the habit of mankind to suffer evil government rather than “right themselves by abolishing the forms to which they are accustomed.” But a “long train of abuses and usurpations” tending toward despotism confronts the people with the duty, let alone the right, to revolt and abolish such government.

He then proceeded to list the long train of usurpations, trenchantly summing up the history of the revolutionary struggle since the Seven Years’ War; and, as he had done in the preamble to the Virginia Constitution, he pinned the responsibility squarely on the ultimate head and governing symbol: the king himself.

In the concluding paragraph of the Declaration, “the Representatives of the United States of America in General Congress assembled” declared the status of the colonies as “Free and Independent States” and repeated the text of the Lee resolution passed two days before. For the support of the Declaration, they mutually pledged to each other: “our lives, our fortunes, and our sacred honor.”

Clearly, the formulation of Jefferson’s philosophical paragraph owed much to George Mason’s Virginia Declaration of Rights. Jefferson’s draft asserted, as had Mason, that men are endowed with “inherent” and inalienable rights. It should also be evident from the context that when Jefferson wrote that “all men are created equal,” he did not assert everyone’s right to an equal income and he did not intend the absurdity that everyone is equal in capacity or natural endowments. He meant, in the words of Mason, “that all men are by nature equally free and independent.” In his original draft, he had written that “all men are created equal and independent.” In short, man’s equality lies in his equal right to liberty. Neither is any profound significance to be read into Jefferson’s use of the phrase “pursuit of happiness” rather than the more usual “property.” Mason’s original draft of the Virginia declaration had said that among man’s inherent natural rights “are the enjoyment of life and liberty, with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety.” Jefferson, compressing Mason’s statement, originally wrote: “among which [rights] are the preservation of life, liberty, and the pursuit of happiness.” In short, the right to pursue happiness includes and implies the right to acquire and possess property. Jefferson knew as well as Mason or the other natural-rights theorists of the day that the individual has no natural right to any quantum of property; rather, his natural right is the equal liberty to *acquire* and keep property. The Declaration’s formulation, therefore, was in no sense a repudiation or weakening of the right of private property.

Some paragraphs in Jefferson’s draft were excised by the Congress, and historians have been decidedly unfair to Jefferson in ascribing his chagrin at these changes to mere personal pique and undue pride of authorship. High principle was often involved, and it was not personal pique that led his fellow committee member John Adams to fight tooth and nail against any changes in Jefferson’s draft. One critical paragraph condemned King George in the severest terms for establishing slavery in America. This paragraph boldly, clearly, and specifically applied the general doctrine of the inalienable rights of life and liberty to the Negro slaves:

He [George III] has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of a distant people who never offended him, captivating and carrying them into slavery in another

hemisphere, or to incur a miserable death in their transportation thither. . . . Determined to keep open a market where men should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce.

This paragraph, however, was excised at the insistence of the delegates from ardently proslavery Georgia and South Carolina, as well as by some northern reluctance to condemn a trade largely in the hands of northern merchants. Already a libertarian Left was beginning to emerge in America—Jefferson, Paine, Mason—highly critical of the institution of slavery. Even with the attack on slavery removed, however, Jefferson's biographer is correct in saying that

Jefferson's words [in the Declaration] should make tyranny tremble in any age.

They have alarmed conservative minds in his own land in every generation, and some compatriots of his have regretted that the new Republic was dedicated to such radical doctrines at its birth.*

With the Declaration of Independence, the United States of America made their final shift from arguing on the basis of historic British rights and privileges to the necessary grounding of their Revolution on the universal principles of the natural rights of man. Revolution and independence necessarily went beyond the narrow bounds of an intra-British argument; now the Revolution must justify itself at the bar of the world, and must therefore do so on principles universally applicable. In doing so, this philosophy brought the separate states closer together by providing a common revolutionary ideology. The Declaration was the embodiment of this break with the past. Professor Arieli sums up this development:

The revolutionary separation from the mother country involved a radical break with [the] past, the transformation of English subjects into American citizens and of the rights of Englishmen into the rights of nature. The very strongly developed consciousness of English national traditions and rights . . . had to be reinterpreted . . . by concepts taken from the natural rights philosophy. The fact that the American nation was created by a revolutionary separation from the mother country brought about the adoption of rationalistic values and norms. . . .**

34

New York Succumbs to Independence

The Declaration of Independence had been proclaimed and the colonies were now united states. But New York had not yet signed! Surely it would not hold out against all the other American colonies; and yet, its ruling landed oligarchy—the Livingstons, Jays, Duanes, Schuylers et al.—were set against independence. The New York Left had been effectively silenced, and as late as April 1776 archconservatives, a large bloc of whom strongly opposed independence, swept the New York elections, defeating radicals selected by the New York Committee of Mechanics.

The revolutionary cause was fortunate in having the Continental Army stationed in New York from mid-April on to defend New York City from the expected British attack. In the course of his stay, Washington was able to cow the province's Tories and to pressure the Central Committee of Safety into prohibiting supplies to British ships.

Congress's antiking resolution of May 15 made little impression on New York. However, in early June the New York Provincial Congress approved Congress' plan for an enlarged army to fight the war and pledged its support to Washington. The provincial congress also appointed the Committee of Seven to investigate, prosecute, convict, and imprison suspected Tories aiding the enemy. This committee was eminently conservative, including as it did Philip J. Livingston, John Jay, and Gouverneur Morris, but the very imminence of the British military threat necessarily drove them to more radical anti-Tory measures. New York was faced with the specter of a mighty British invasion fleet carrying nearly 35,000 troops, which appeared off New York in mid-June. And on June 22 David Mathews, the royally appointed mayor of New York City, was arrested for being

secretly in league with Governor Tryon, recruiting Tories for enlisting in British arms, and plotting to kidnap Washington. The action against the Tory Mathews implied recognition of American independence. Furthermore, New York collaborated with Washington in arresting Tories in Ulster, in suppressing armed Tories on Long Island, in raising a patriot militia to cow the Tories of Dutchess County, and in billeting 500 troops on the numerous Tories of Queens County.

Even so, an outright move for independence was extremely difficult for most of the New York aristocracy. Their Whig peers, however, displayed here, as on later occasions, a shrewd ability to compromise with the spirit of the times in order to keep control of affairs at home; by the end of May, Jay, Morris, Livingston, and John Morin Scott were beginning to move cautiously toward independence.

On the other hand, the New York Committee of Mechanics was ardently for independence from Great Britain. On May 27, the provincial congress began cautiously by decreeing the dissolution of the old royal government in New York. Still the Congress dallied, refusing to hurry its instructions to their delegates on the burning issue of independence. New province-wide elections at the end of June secured a large majority of supporters of independence, and on July 9, the Fourth New York Provincial Congress, meeting at White Plains, sedately voted unanimously to join the Continental Declaration of Independence. New York's acceptance was read to the Continental Congress on July 15 and occasioned the angry resignation of New York's John Alsop, an arch-conservative, irreconcilable to the last.

In the course of providing for June elections to the Fourth Provincial Congress, the conservatives in control of the third congress had made sure that any new constitution written by the new congress would not have to be ratified by the people, but would go automatically into force. This decision provoked a heated protest from the New York Committee of Mechanics, which pioneered in America in asserting the right of the people to vote on any constitution in a referendum; such a referendum was "the only characteristic of the true lawfulness" of government, a requirement that derived from a God-given right of all men.

If New York moved in measured steps toward independence, affairs were not nearly so placid in New York's proclaimed northeast, the New Hampshire Grant Lands that were to become Vermont. The first flush of common enthusiasm for the war against Britain could not long obscure the basic conflict between New York land monopolists and Vermont settlers. New York continued to claim the Vermonters' land, and the presence of Duane, Livingston, and other New Hampshire grantees in the Continental Congress did nothing to allay Vermont's suspicions. On January 16,

1776, representatives of westside Vermont towns met at a convention in Dorset; the meeting agreed to petition the Continental Congress to agree that their loyalty to the American cause did not include fealty to New York as well. The westsiders asked Congress to tell New York to refrain for the duration of the war from imposing its authority on the New Hampshire Grant Lands. The petition was presented to the Congress in early May by Capt. Heman Allen, brother of Ethan. The congressional answer was to counsel the Grant region to submit loyally to New York rule until the end of the war, with all land quarrels to remain meanwhile in abeyance. This recommendation greatly alarmed Allen, for he and his brother Ira had already quietly conceived a grand design for preserving the settlers' property intact against depredations: the creation of a free and independent republic of the Grant Lands. To advance this goal, the Grants must not acknowledge New York rule; agilely Allen withdrew his petition on the suddenly invented ground that he had neglected to bring various vital documents. Thanks to this strategem, the Vermonters retained freedom of action.

Meanwhile, the Vermont eastsiders were also growing restive, and a meeting of eastside committees of safety at Westminster at the end of June hinted that they might prefer shifting their allegiance from New York to Massachusetts. A westside convention received news of the Declaration of Independence at the end of July with great interest. The Declaration, coming after Congress' resolution of May 15, was so clearly applicable to the Vermonters' own conditions that they could not fail to get the idea. Led by Ira and Heman Allen, Dr. Jonas Fay, and the canny farmer Col. Thomas Chittenden, the Dorset meeting moved slowly toward independence by pledging loyalty to the new United States, but also expressing its distinct lack of enthusiasm for association with New York. The meeting then proclaimed the Grant area a "separate district." These sentiments were embodied in the articles of association which were sent to all the towns of the Grant district for endorsement.

It was now unanimous; all the states were united on independence. The Declaration of Independence was proclaimed throughout the land; toasts rang out to liberty and to the union of states, to freedom and independence; the royal arms were everywhere stripped and burned. An effigy of the king was paraded through Baltimore, and a lead statue of King George in New York City was happily toppled and melted down into bullets.

Predictably, the Declaration of Independence gladdened libertarians in Europe and deeply angered the conservatives. The French government warmly approved of the fact of independence, but the French people were enthusiastic over the libertarian philosophy as well. The great French

liberal Marquis de Condorcet put the case well. Here was theory put into practice: it is not enough that the rights of man “be written in the books of philosophers and in the hearts of virtuous men; it is necessary that . . . men should read them in the example of a great people—America has given us this example. The act which declares its independence is a simple and sublime exposition of those rights so sacred and so long forgotten.”*

English reaction to the Declaration was predictably hostile; although the brilliant young liberal Charles James Fox declared that the Americans “had done no more than the English had done against James II.” The virtually official reply to the Declaration was written by the barrister John Lind, who largely devoted himself to refuting the “calumnies” against the king. As for the philosophy of the Declaration, Lind thought it sufficient to make the penetrating observation that these doctrines “put the axe to the root of all government,” since every existing or conceivable government alienates some of these supposedly inalienable rights—in short, that the logical conclusion of the natural rights philosophy was anarchism.

*See Carl L. Becker, *The Declaration of Independence: A Study in the History of Political Ideas* (New York: Vintage Books, 1958), pp. 230–31. Sir George Otto Trevelyan wrote of the reaction of the European masses to the Declaration: “The depressed and underprivileged classes in a feudal society . . . hailed with delight from across the ocean that audacious proclamation of their own silent hopes and lurking sympathies.” George Otto Trevelyan, *The American Revolution* (New York: McKay), p. 301.

PART V

The Military History
of the Revolution,
1776~1778

The Invasion of New York

The decision of the colonies for independence came at the beginning of a severe military crisis. Until then, there had been no organized or regularized fighting on the soil of the thirteen states other than the siege of Boston. By the end of June, Lee and the army of the Southern Department had beaten off the invasion of Charleston by General Clinton; but in July the main British army was ready to invade New York. The long-range British strategy was to invade friendly New York City and then conquer the Hudson Valley in a two-pronged thrust from Canada and the city, isolating radical New England from the softer and more pliable middle colonies. This strategy posed a formidable threat to the American cause.

The mighty British invasion force began to assemble off New York City in late June 1776. It was headed by the Howe brothers, Gen. Sir William Howe in charge of land forces and his brother Admiral Richard Lord Howe, newly appointed overall commander-in-chief of the American theater. By the end of June, 130 British ships were stationed in New York Bay, and General Howe quickly seized an undefended and strongly pro-Tory Staten Island to use as his base of operations. By mid-August, a truly formidable force of over 32,000 regular soldiers, including 8,000 Hessians, was poised on Staten Island; it was the greatest expeditionary force that the world's strongest military power, Great Britain, had ever mounted. The army was supported by a fleet of thirty warships and hundreds of transports, manned by more than 10,000 seamen. Floating the expedition had cost the British treasury the vast sum of 850,000 pounds.

To oppose this vast force, Washington had a largely untrained army of

19,000 men. Surely the prime necessity for the American force was to pursue guerrilla war and avoid open contact with the British. Yet Washington decided on conventional resistance from fixed positions and elected to hold a city that Charles Lee had correctly warned could not be defended. First to urge Washington to abandon New York—and to irritate him in the process—was the brilliant young Maj. Aaron Burr, aide-de-camp to General Putnam.

Compounding his blunders, Washington chose to divide his forces between Manhattan and the southwestern tip of Long Island. The idea was to fortify Brooklyn Heights, commanding the city from the East River, but both Long Island and Manhattan were death traps. The mighty British fleet need only have sailed up the East River to cut off the force on Long Island, and up the Hudson to land troops in northern Manhattan to surround and annihilate the American force there.

If the British commanders had applied even moderate intelligence or devotion to their task, they could probably have wiped out Washington's army then and there and perhaps have won the war on the spot. The British, including General Howe, realized that to win on land they would have to mobilize their superior armed forces quickly and destroy the American army in one blow. Speed was of the essence; the strike had to come before the Americans had a chance to mobilize their resources and before France and Spain could send full-scale aid. Furthermore, the Howes and their commanders realized that the key, especially in conducting counter-revolutionary warfare against a hostile populace, was not so much to gain territory, which could turn out to be futile, but to destroy the enemy army. Washington's absurd decision to dig in at New York provided the Howes a golden opportunity for a smashing victory.

Yet they failed notably to take up this opportunity to crush the American forces. This and later failures were so enormous as not to be put down as mere blunders. Historians have generally recognized that a deliberate policy must have been involved, and have concluded it was based upon a general British desire to avoid annihilating the American forces so as not to preclude a peaceful political reconciliation. Yet it should be clear that the government—especially King George and Lord Germain, the colonial secretary—were out to crush the Americans militarily, and as quickly as possible. They put no stock in peaceful negotiations or a political solution.

The deliberate policy, it appears, was the choice, not of Great Britain, but of the Howe brothers themselves. Both ardent Whigs, and both strongly opposed to the war with America, the Howes took it upon themselves, in a move tantamount to treason, to avoid crushing the Americans and to hold out the olive branch of peace. Admiral Howe apparently convinced his brother of this policy upon his arrival off New York in mid-July, and from then on General Howe pursued continuous acquisition

and possession of territory rather than decisive blows against the Continental Army. Happily, Washington's stupidity was partially offset by the Howes' virtual treason to the British counter-revolution.*

On arriving off New York, Lord Howe delayed military action while offering peace terms to Washington, even though he was authorized by the Crown only to accept surrender by the rebels. For over a month, he tried to negotiate with the rebels, but the Americans, happy in their independence, were long past conciliatory terms.

General Howe was finally ready to launch his attack against New York in late August. But the important failure by the Howes was not the delay, which was used to build up British forces, but the strategy employed in the attack itself. General Sir Henry Clinton sensibly urged a landing in northern Manhattan to cut off nearly the entire American army; yet Clinton's suggestion was ignored. Instead, General Howe virtually refused to entrap and decimate the American troops, electing only to push them out of New York City. On August 22, Howe and a force of 20,000 landed on Long Island across the Narrows from Staten Island. Their landing was unopposed, the Americans sensibly taking their stand behind a ridge, the Heights of Guan, defending the approaches to the fortifications at Brooklyn Heights on the East River. The only competent American general in the area, Nathanael Greene, had fallen ill and could not command the 8,000 or so troops stationed on Long Island. Washington had replaced Greene with Gen. John Sullivan, who by his rashness had turned the retreat from Canada into a virtual rout. As the British landed, Washington had second thoughts and flightily replaced Sullivan with the still more incompetent General Putnam, leaving Sullivan in command of the American center. The confusion was compounded by Washington's failure to clearly allocate command authority between Putnam and Sullivan. Major Aaron Burr again only succeeded in irritating Washington by having the temerity and wisdom to urge that the troops be pulled out of Brooklyn while there was still time.

Among the three of them, Washington, Sullivan, and Putnam managed to leave the Jamaica Pass and the left wing of the ridge undefended—an arrangement that had passed muster with Washington. Learning of this gap in the American lines, Howe executed a brilliant tactical maneuver; while the center and left of the British forces frontally attacked the ridge, Howe, guided by Tories, moved through the Jamaica Pass in a flanking maneuver during the night of August 26 and surprised, encircled, and fell upon Sullivan's forces. Washington could easily have learned of this flank-

*See the excellent article on the Howes' disloyalty by Ira D. Gruber, "Lord Howe and Lord George Germain: British Politics and the Winning of American Independence," *William and Mary Quarterly* (April 1965), pp. 225-43.

ing maneuver in one of two ways: by recognizing the significance of a previous shift of British troops toward the eastern flank or by employing cavalry in his patrols. But he did neither. Furthermore, old Putnam, after learning of the penetration of the Jamaica Pass, failed to notify his commanders. Consequently, Sullivan's division was smashed and Sullivan himself captured, as was General Stirling, commander of the American right wing. Nearly 2,000 Americans were killed, wounded, or captured in the Battle of Long Island, while the British lost only 300 men. Instead of pulling out his forces as quickly as possible, Washington compounded his series of blunders by rushing six more regiments into Long Island and assuming personal command.* By pressing his advantage, General Howe could have annihilated Washington's army then and there; but again, against the pleas of his commanders, he failed to move, allowing the Americans to regroup on Brooklyn Heights. For three days, he stalled and failed to mount an attack which could easily have overrun the entrapped American army. And neither did his brother's fleet ships shell the Americans into submission.

On the night of the twenty-ninth, Washington at last decided to move, mounting a mass evacuation of his army from Brooklyn. The evacuation proceeded successfully in a fleet of small boats. He has been extravagantly praised for a heroic retreat, but it could never have taken place had Admiral Howe bothered to station his ships in the East River. Furthermore, instead of moving his troops to the mainland, Washington sailed into another potential deathtrap: Manhattan Island. The fleet of fishermen from Salem and Marblehead, however, assuredly performed a heroic job of shuttling the entire force of 9,500 men and their equipment across the river in a night of poor weather.

The morale of the Americans was in great disrepair as a result of the defeat on Long Island. Entire regiments deserted and left for home. Respect for Washington's military acumen among his officers had plummeted; one of his most brilliant officers, Col. John Haslet of the Delaware Regiment, wrote, "Would to Heaven General Lee were here is the language of officers and men."

Once again, Washington remained where he could be encircled and smashed, and once more Howe dawdled and did nothing; his brother opened another round of futile peace talks with the Americans, releasing the sympathetic General Sullivan to convey terms to the Continental Congress, terms which the Americans, now committed to independence, predictably spurned.

General Greene, Col. Joseph Reed, Washington's adjutant, and other

*On Washington's almost fatal errors in this campaign, see Ward, *The War of the Revolution*, I:227-30.

officers strongly urged a speedy evacuation of New York, and even the burning of that largely Tory city to the ground. Congress vetoed the idea of destroying New York, but Washington refused to evacuate, instead, as a supposed compromise, ineffectually stringing his men out across Manhattan Island. Once again, he was courting potential disaster by splitting his none-too-strong forces. Putnam's division was stationed in New York City at the southern tip of Manhattan Island; Gen. William Heath's forces were put on the northern tip of Manhattan; and a small force under Greene, over his strenuous protest, was placed in the middle of south-central Manhattan, at the East River, near what is now Thirty-fourth Street.

Characteristically, Gen. Howe did not land in northern Manhattan and trap the Americans; rather he waited until Washington was beginning to move his forces that direction and then landed in the southerly part at Kip's Bay and Turtle Bay on September 15. Again, he was terribly sluggish and failed to march across Manhattan to cut off Putnam's retreat. Even so, the energetic but bumbling Putnam would not have escaped were it not for Burr, who conducted the troops up a little-known road near the Hudson River on the west side of the island. The properly wild flight north by Greene's small force of militia was unsuccessfully impeded by the explosive rage of Washington, who himself was almost captured during a foolish attempt to rally them for a stand in the south. The next day, however, American troops, in an open skirmish in front of Harlem Heights, fought well, giving a boost to drooping American morale.

Again General Howe failed to pursue his advantage, allowing Washington to fortify Harlem Heights and Fort Washington in northern Manhattan. Almost incredibly, Howe spent another month erecting defensive fortifications in New York City! As Professor Alden puts it, "Howe . . . allowed day after day of good campaigning weather to pass while he threw up defenses against a weak and retreating enemy."* Of course, instead of fortifying Manhattan, Washington should have taken the opportunity to flee north to the mainland, but in all fairness, it must be noted that in making this decision he was bowing to the wish of Congress to hold New York and its environs.

Again, he foolishly split his forces, now numbering 16,000, to hold indefensible fixed positions. Greene was sent off with a rather small force to hold Fort Constitution on New Jersey's shore opposite Fort Washington. The rest of the army was divided between Fort Washington and Kingsbridge, across the Harlem River from the northernmost tip of the island, guarding the exit route to the mainland. Meanwhile, supplies grew increasingly short and soldiers were deserting in droves.

*Alden, *The American Revolution*. p. 102.

On September 22, while Howe was dithering in New York City, the British executed Capt. Nathan Hale, a twenty-one-year-old school teacher from Connecticut who had volunteered to spy behind enemy lines. He had been betrayed by a Tory relative and was hanged without even the formality of a trial or benefit of clergy; his last-minute letters to his family and fiancé were torn up in front of his eyes. Before dying, the gallant young Hale uttered his famous words: "I only regret that I have but one life to lose for my country."

When Howe finally moved on October 12, he blundered once again. He landed nearly his entire force on the mainland to the east of Kingsbridge to outflank and encircle the American troops. However, he landed in what is now the Bronx, at Throg's Neck, a virtual island linked to the mainland by a narrow causeway controlled by American troops. Washington was about to decide to fight off this flanking action (rather than to retreat) when, on October 14, Charles Lee, rushing up from South Carolina, reached the army to the undisguised joy of the American officers and men. He was immediately placed in charge of the hot spot on the American left flank, facing Howe's army. He began a strong and vigorous denunciation of Washington's decision to stay and fight on Harlem Heights, a decision that most of Washington's generals had supported. He urged the "absolute necessity" of quickly getting off Manhattan—where the Americans were in imminent danger of being surrounded by the British—and moving on to defensible ground. His pressure forced an American council of war on October 16, and Washington and the council were finally persuaded of this view. Lee's wisdom and determination here proved momentous, for the troops were thereby enabled to leave Manhattan in the nick of time, saving the American cause and probably the American republic. This high judgment of Lee's last-minute achievement was voiced by many contemporaries, including Joseph Reed and Washington's close friend and admirer the Marquis de Lafayette.

But Washington seems to have been incapable of making a completely correct military decision—even after pressure and lengthy reconsideration of his initial blunders. Agreeing to retreat, he yet overruled Lee in one of the most disastrous decisions of the war: he left 2,000 men at Fort Washington. Totally isolated and soon to be surrounded by the formidable British force, the 2,000 were doomed to certain capture.

Meanwhile, after stumbling around in an impossible position at Throg's Neck and losing six precious days, Howe withdrew his entire force on October 18 to Pell's Point, three miles to the northeast—where he should have landed originally—and slogged north past Yonkers toward White Plains. On the same day Washington's army left Manhattan. Howe could easily have sliced west and dispatched the long line of them; instead, he lingered at New Rochelle in Mamaroneck on the east coast of Westchester

for an entire week, thoughtfully allowing Washington to gather and entrench his entire army on the hills overlooking White Plains. Howe's intended flanking movement could now never materialize. As the English historian Trevelyan acidly put it, "The sun had set and risen more than forty times, since General Howe broke up his summer cantonments on Staten Island. In seven weeks—with an irresistible army and a fleet which there was nothing to resist—he had traversed, from point to point, a distance of exactly thirty-five miles."

On October 28, the British finally attacked Chatterton's Hill, on the right wing of the American position at White Plains. The British won the hill after several hundred casualties on both sides, but failed to pursue the routed Americans. More egregious was Howe's failure to launch a simultaneous attack on the main positions of the Americans with the bulk of his forces. Instead, the Americans were allowed to rest and regroup, and, at Lee's urging, to fall back to more defensible positions on North Castle Heights, five miles to the north. After never having engaged the full body of his forces, Howe decided on November 5 not to attack the Americans and to withdraw southwestward to Dobbs Ferry on the Hudson. The Continental Army was safe at last.

While Howe was graciously saving the American army from Washington's repeated blunders, the Americans were confronting another grave threat in the north. The American forces had retreated from Canada in complete disarray in the spring, settling at the southern tip of Lake Champlain. In mid-June, Congress had ordered Washington to place the command of the forces in the north under Gen. Horatio Gates, probably second only to his friend Lee as the best general in the American army. Congress did not have the courage of its convictions, however, and retained the less competent General Schuyler in overall command in the north. After Gates arrived in the north in early July, he and Schuyler, over Washington's and Putnam's objections, decided to withdraw southward from the crumbling fortifications at Crown Point to Fort Ticonderoga. Schuyler took overall command at Albany, while Gates remained in charge of the troops at Ticonderoga. A buildup of militia raised the number of American effectives at or near Ticonderoga to nearly 6,500.

In the meanwhile, General Carleton was gathering 10,000 redcoats at the northern end of Lake Champlain, preparatory to a strike southward to join General Howe and cut New York in two. While Carleton was building a fleet to sail down Lake Champlain, Gates brilliantly prepared the American defenses, combatting smallpox in the camp, greatly raising troop morale, and swiftly constructing a defensive fleet, which he placed under the command of Benedict Arnold.

Gates had ordered Arnold to deploy his Champlain fleet defensively

and to avoid engaging the more powerful British fleet, but from October 11 to October 13 the rash and headstrong Arnold foolishly got his force into a slugging match off Valcour Island, in the northern part of the lake, and Carleton's fleet smashed the Americans, sinking eleven of sixteen ships. Arnold himself only managed to escape capture by miraculously slipping through British naval and allied Indian lines.

Carleton pressed his advantage by swooping down to capture Crown Point. He then appeared before Ticonderoga, but Gates had built the fortifications too well, and winter was fast setting in. Confronted by these formidable obstacles, Carleton turned back to Canada about the same time Howe withdrew from White Plains. The British menace from the north was over for another year, and, as it turned out, the delay was fatal to the British cause.

Benedict Arnold, sharply and properly criticized by his contemporaries for his overwhelming losses on Lake Champlain, has nonetheless been extravagantly praised by historians for delaying Carleton until he was forced to turn back north. But if he had used his fleet defensively in harrying raids, he would have delayed Carleton even longer and avoided the destruction of his own fleet. The real credit for forcing the delay on Carleton belongs to Gates: it was he who ordered the construction of the fleet, which forced Carleton to construct his, and he who had fortified Ticonderoga. Gates, not Arnold, was the true hero of the repulse of the British in the north.*

36

The Campaigns in New Jersey

Washington's army was now safe. It was clear that Howe would turn back to capture the force left at Fort Washington, yet, despite the urging of Charles Lee, no decision was made to evacuate that isolated and indefensible position. General Greene, in overall command of both forts at Fort Constitution (renamed Fort Lee in honor of Charles Lee) made his worst blunder of the war by maintaining that Fort Washington could be held. He was supported in this by the bumbling General Putnam and by Col. Robert Morgan, commander of Fort Washington. The dithering Washington left the decision to Greene and himself took most of his forces into New Jersey on November 12 to counter an expected British thrust there. Lee was left behind at North Castle, and Heath at Peekskill, to guard against any British move north. When Greene decided to reinforce Fort Washington with almost 1,000 more men rather than evacuate, Lee lamented, "Then we are undone."

A British force of 10,000 began the attack on the fort on November 14, surrounded it, and secured its inevitable surrender. The Americans lost over 150 men in casualties and more than 2,800 captured, a staggering total loss of nearly 3,000 men. Three days later, the British crossed the Hudson and took Fort Lee, which Greene had to evacuate hastily without securing or destroying its provisions. At the two forts the British seized several thousand guns and muskets, large amounts of ammunition and flour, and hundreds of tents.

Typically, Washington allowed Greene to bear the brunt of criticism for the defeat, without acknowledging his own grave responsibility. To Lee, the disaster at Fort Washington was the last straw; the incompe-

tence of Washington could be brooked no longer. It was clear to him—and to many other Americans as well—that he would do far better as commander-in-chief, and that, at the least, Washington's superior rank must not be allowed to impose fatal blunders upon Lee.

Washington had encamped at Hackensack, New Jersey, northwest of Fort Lee, and Greene's forces joined him there after almost being cut off and encircled by General Cornwallis at Fort Lee. The American forces, totalling 14,000 effectives, were now split into three parts; Washington and Greene in Hackensack with 5,400 men, Heath at Peekskill with 3,200, and Lee at North Castle with 5,500. Hackensack, on a flat plain, was not defensible, and Washington, with only 3,000 men, retreated southwest toward Newark; this was the beginning of his full-scale retreat across New Jersey. To him and to his discouraged and broken army, it seemed that destruction was imminent, and he contemplated a retreat all the way to Virginia and even west beyond the Alleghenies. As he retreated, rapidly losing militia whose terms of enlistment had expired, Cornwallis followed hard on his heels; Washington fled toward Pennsylvania to safety on the other side of the Delaware River. Cornwallis was on the point of catching and destroying the American army at New Brunswick in early December, but at the crucial moment, Howe ordered him to halt at the Raritan River for four days, to wait for him to come up with his army. Washington was thereby allowed to escape to the Delaware. At the same time, in a useless and wasteful move, Howe dispatched Clinton with 6,000 men to seize Rhode Island, where the British were to linger around Newport for several years. Washington thereby escaped to Trenton, on the Delaware. When he got there, however, he uncertainly and with no clear goal or purpose turned back. When he learned that Howe had reached Cornwallis and that the two were again pushing forward, he fled across the Delaware on December 6. The British posted their men at Trenton and in the surrounding area and dug in contentedly for the winter.

Meanwhile, Washington was repeatedly and frantically urging Lee to join him in New Jersey, but Lee refused; he carefully waited to clear upper Westchester of Tories and to call up more Connecticut and Massachusetts militia to guard against any invasion of New England. Crossing the Hudson in early December, Lee decided that it would be better to remain in the western hills of New Jersey. Stationing his army at Morristown on December 8, he quickly realized, as Washington did not, that Howe was not about to fall on Philadelphia that winter; therefore, he would be better employed in harassing and disrupting the British communication and supply lines from New York to Trenton.

Lee was forming a new and brilliant conception of the proper mode of waging revolutionary warfare. Washington, interested first and foremost

in keeping his army intact, was willing to abandon New Jersey to the British—with the result that Tories began to sprout and multiply, and Tory militia to emerge and round up rebels. Lee saw that a revolution depends above all on the support and enthusiasm of the populace; the army is, in a sense, the superstructure of mass support. He saw that the people's militia was the last line of local defense and that this militia must remain active if the entire population were not to succumb to collaboration with the enemy. But the fragmented and untrained militia would only fight, especially in the early stages, if supported by Continental troops nearby. While Washington was denouncing short-term militia and calling for long-service volunteers, Lee urged increased emphasis on local militia, which would create "zones of resistance that could deny General Howe the fruits of his recent victories."* Lee, in short, had set out to "reconquer . . . the Jerseys" and he wrote Washington that "the militia in this part of the provinces seem sanguine. If they could be assured of an army remaining amongst them, I believe they would raise a considerable number."

Lee was increasingly acting independently of Washington; indeed, the New York Council of Safety tried to persuade Gates, who was leading a column from upstate New York to aid Washington, to disobey orders and join Lee instead. Gates, less of a military rebel than Lee, refused the plea. Furthermore, the New York militia under General George Clinton was getting ready to join Lee's army. Against his better judgment, Lee finally yielded to Washington's pleas and marched slowly southwestward. On December 13, a chance British raiding party captured Lee and spirited him to the British lines. Americans everywhere, from the ladies of Boston to Washington and Greene to Robert Morris, Hancock, and the Adamses lamented the sudden grievous blow. They had lost their "palladin of American liberty," as Lee was widely called. The British, on the other hand, rejoiced wildly, from the redcoated soldiery to General Howe and the officers to the public houses in England. Lieutenant Colonel William Harcourt, head of the raiding party, rejoiced at the imminent end of the war and received the personal thanks of King George for his exploit.

Never had American morale been lower. Ill, barely clothed or sheltered, Washington's 5,000 men on the west bank of the Delaware could have been crushed by a determined British attack and Philadelphia easily captured. But the Howes were still primarily concerned with making peace, and they issued a proclamation of a full and general pardon to all Americans who would take an oath of allegiance to the crown. Conservative New Jersey responded with enthusiasm, 5,000 quickly taking the oath; citizens fled the exposed capital city of Philadelphia in droves. The eminent and wealthy Allen brothers, of the old Proprietary Party of

*John Shy, "Charles Lee: The Soldier as Radical," in *Ibid.*, pp. 37–38.

Philadelphia, fled to join the British at Trenton, as did Joseph Galloway. Congress hastily turned over all military direction to Washington, and on December 12 adjourned to Baltimore amid the jeers of Philadelphia's Tories.

With his brilliant sense of timing, Tom Paine now published his pamphlet *The Crisis*. Paine had joined Greene's forces at Fort Lee as a humble volunteer, and shared the lot of Washington's soldiers. *The Crisis* was a stirring call for a redoubling of hope and effort. It opened:

These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country; but he that stands it *now*, deserves the love and thanks of man and woman. Tyranny, like Hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph.

The Crisis spread like wildfire through all the towns of America, and among the soldiers in the Continental Army. Everywhere morale was raised, even in New Jersey, where widespread and indiscriminate rapine and plunder by British and Hessian troops in the north alienated many Tories. But the biggest boost to morale was Howe's decision, over the objections of his officers, *not* to cut through Washington's forces and take Philadelphia, but instead to withdraw his army to winter quarters in New York. Philadelphia and the Continental Army were now safe. Heartened by this disastrous British decision, Washington began to take on, for a while, the accoutrements of a guerrilla leader. With the British tied down, somnolent, passive, and withdrawing, why not a swift attack across the Delaware? In this aim, Washington was reinforced by Lee's second in command, General Sullivan, who arrived across the Delaware with 2,000 troops; and Gates came from the north with another 500. All in all, Washington had 6,000 effectives by Christmas of 1776.

In this situation, he happily decided on a swift strike across the river. On late Christmas night, through a driving snow, Washington ferried 2,400 men across the ice-laden waters of the Delaware. Most remarkable was the feat of Col. Henry Knox in transporting across the river eighteen field cannon, a proportion of cannon to foot soldiers about three times the usual amount in the eighteenth century. The cannon were particularly useful on a snowy night, for the muskets of that day could not fire unless completely dry. In a perfectly executed maneuver, Washington and his men were able to surround the brigade of Hessians stationed at Trenton; they took them, sodden with the celebrating of Christmas, completely by surprise. Washington's troops had read *The Crisis* before embarking on the raid, and now they fell upon the Hessians crying, "This is the time to

try men's souls!" In an hour, the overconfident Hessian commander, Gen. Johann Rall, had been killed and the Hessians had surrendered. The Hessians suffered 30 casualties and over 900 men had been taken prisoner. In contrast, the Americans suffered only three casualties. George Washington had won his first real military victory, and it was indeed a brilliant one. It was also the first battle he conducted in a quasi-guerrilla manner. With the confusion engendered in the enemy troops, Greene and other officers urged Washington to press his advantage and attack the Hessian units stationed to the south in Burlington, but he lacked the imagination to grasp the dimensions of his own victory, and he cautiously withdrew back across the Delaware.

He indecisively waited several days to become aggressive once more, and the delay almost proved fatal. He plunged back across the icy Delaware on December 31 with 5,000 men and reoccupied Trenton. By this time, however, Lord Cornwallis, who had been about to set sail for England, had rushed back to Jersey and was advancing upon Trenton with 6,000 troops. Retreating just southward as Cornwallis entered Trenton on January 2, Washington was in grave peril, for the British were too close to allow the Americans to recross the river. Knox's guns held off the British advance in the Second Battle of Trenton and Cornwallis, against the advice of Gen. Sir William Erskine, overconfidently decided to wait until morning to deliver the *coup de grâce*. Perhaps at the suggestion of Brig. Gen. Arthur St. Clair, Washington silently moved east during the night, taking a neglected old road to slip around Cornwallis' lines and move north. At Princeton in the morning, Washington encountered a British brigade under Col. Charles Mawhood, and after a furious battle sustained by Knox's guns, the Americans routed the British force. If the American troops had been fresh, they might have sped on to capture New Brunswick and isolate Cornwallis in southern New Jersey. Instead, Washington promptly took his exhausted but happy men northwest to winter quarters in Morristown. The angry British were obliged to evacuate all of New Jersey except New Brunswick and Perth Amboy on the Raritan River.

Washington's victories at Trenton and Princeton served to bolster and restore American morale. As one young Englishman noted about the Americans: "A few days ago they had given up the cause for lost. Their late successes have turned the scale and now they are all liberty mad again. . . ." This turnabout of morale was eminently justified. Professor Alden estimates, with good reason, that Trenton, and not the victory at Saratoga the following year, was the true turning point of the Revolution.* Cer-

*Alden, *The American Revolution*. p. 116.

tainly, American fortunes were at their lowest ebb on the Jersey retreat in November and December; by the 1777 campaign, American forces were stronger and the British never as confident again.

As optimism returned, the Continental Congress moved back to Philadelphia. Despite difficulties in obtaining food, clothing, and recruits to replace deserters and short-term enlistees, by spring new continental regiments arrived at Morristown. Washington used dictatorial powers that had been granted him by Congress to commandeer food from the inhabitants of New Jersey, but the ravages and depredations of the British and Hessians had transformed the previously lukewarm Jersey populace into ardent patriots. As a result, the 14,000 British troops stationed at Perth Amboy and New Brunswick were virtually under siege; any British foraging parties were subjected to devastating attacks by Washington's forces or by Jersey militia, all aided by the intelligence work of the Jersey citizenry.

Planning in the Winter of 1777

Howe's next objective was Philadelphia; but instead of taking it as he could at any time, he dawdled in New York through winter and early spring, while Washington's army grew stronger. Several sporadic forays took place during the spring. In March, the British burned the American port at Peekskill. The following month, they sent New York Governor Tryon with 2,000 men to burn and destroy the large quantity of American military stores at Danbury, Connecticut. After successfully accomplishing their mission unopposed, the British were neatly harried on the way back by impromptu militia led by Gen. Benedict Arnold. Arnold had been at home in Connecticut, all but resigned from the army. The fiery Arnold had made many enemies, and had been passed over by Congress for promotion, in favor of a brace of inferior generals. After his exploit near Danbury, Congress gave Arnold a belated promotion, and he was persuaded to rejoin the northern army.

British planning for the campaign of 1777 was in the hands of three men: Lord George Germain in London, General Howe, and Gen. John Burgoyne. All three of them were to share responsibility for the British disaster of that year, but the greatest share must fall upon the bizarre strategy and tactics of Howe. Burgoyne had been put in charge of the British army in Canada, replacing General Carleton; Carleton was one of the best of the British generals, but he had become personally repugnant to the colonial secretary. Burgoyne's idea was that he would descend from Canada down Lake Champlain, a smaller force would cut through Fort Oswego and the Mohawk Valley eastward, and General Howe would bring his massive army up the Hudson Valley—the three to meet trium-

phantly in Albany. The colonies would be cut in two, and the combined British forces could proceed to capture New England, and then to turn upon the South. Given the rising American strength in 1777 and the nature of popular revolutionary warfare, the British might well not have succeeded in securing territory they had militarily captured, but at least such a plan had a good prospect of success. A greater emphasis on Howe's strike north than on a move southward from Canada would have been an improvement, however, for the terrain of Canada and northern New York was not well suited for an unpopular invading army.

Howe, however, confused the situation completely by submitting three completely different strategic plans in succession—each one worse than the one before. To begin with, he no longer saw any prospect of winning the war in 1777, neither, as Gruber puts it, "did his subsequent performance endanger the fulfillment of his prediction."*

His first plan, made while Washington was in the flood of retreat across Jersey, was sound and similar to Burgoyne's. The key was that Howe would take 10,000 troops up the Hudson to join Burgoyne in Albany; Rhode Island would then be used as a base to strike at New England; and then they would march southward to victory. Soon after, even before Trenton when the military situation had not yet changed, he submitted a radically different and much poorer plan: to take the bulk of his army to capture Philadelphia. Only 3,000 troops would be stationed in the lower Hudson Valley to assist Burgoyne. Philadelphia, at this stage, was a needless diversion and distraction, accomplishing little, disastrously splitting the British forces, and putting virtually the entire burden on Burgoyne's Canadian force. Apart from his political views (which were probably treasonable), Howe was bemused by the chimera of innumerable Pennsylvania Tories arriving to greet him—a chimera fostered in all good faith by Galloway, the Allens, and the other eager Tory emigrés in the British camp. In April, he submitted a third and even worse plan; now there would not even be 3,000 men to assist Burgoyne. Moreover, Howe would put his army to sea to invade Philadelphia by the circuitous route of the Chesapeake Bay. In this plan, his troops would be completely cut off from the possibility of helping Burgoyne in case of trouble. He did promise to raise 3,000 Tories under Governor Tryon to operate out of New York City and up the Hudson, but he never bothered to do so.

If Howe made the principal errors of strategy, Germain erred in not cracking down on Howe, while "Gentleman Johnny" Burgoyne, a wit and *poseur* full of fustian, was supremely overconfident. Hence, neither Germain nor Burgoyne realized the disaster that Howe's strategy would open up for the British.

*Ira D. Gruber, "Lord Howe and Lord George Germain," p. 241.

In addition to Sir William's plans for 1777, the Howes' true outlook may be gauged by Lord Howe's disobeying the crown's orders to blockade the coast of the United States. Instead, he directed his captains to allow subsistence fishing, to "cultivate . . . [the] good will and confidence of the Americans," and to "grant them every other indulgence" legally possible. The aim was to conciliate the "friendly dispositions" of the Americans. Moreover, the British sea captains were prohibited from raiding the American coast and the American ports. Howe persisted in this course despite the vigorous objections of his superiors in England, and Germain bitterly charged that, as a result of Howe's indulgence, the waters of Great Britain were teeming with American privateers.

At the end of May, Washington had moved his camp southward to Middlebrook, in the hills above New Brunswick. General Howe made no attempt to seize Philadelphia quickly and then return to aid Burgoyne, but instead, he spent most of June trying to lure him down in to open combat, once almost succeeding. Finally giving up, Howe evacuated New Jersey altogether at the end of June and moved his men to New York. The astute General Clinton as well as most of the other top British officers, pleaded with him to change his mind and adopt the sound first plan to march north up the Hudson, but he proved adamant. On July 23, his armada of over 260 ships, carrying 15,000 troops, set sail from New York toward Philadelphia. The enraged Clinton was left in New York City with 7,000 men, of whom half were American Tories, a force barely large enough to defend the city, let alone move north to aid Burgoyne's army in the north. Burgoyne was left to fend for himself.

Rebellion at Livingston Manor

While Burgoyne was preparing his fateful expedition, the oppressed tenants of Livingston Manor, in upstate New York, decided to take a hand in the struggle. To the downtrodden victims of the New York landed oligarchy, the issues of the war seemed remote; the important issue was gaining ownership of the land they had tilled and brought into productive use. If their landlords happened to be Whigs—as were the Livingstons, leaders of the conservative rebel faction—then the tenants naturally and understandably became Tories. For them, only victory of British arms might bring the ownership of their lands. Certainly there was no hope for them in a Livingston victory.

Livingston Manor occupied the east bank of the Hudson, south of Albany (now Columbia County). From the outbreak of the Revolution, tenant unrest, which had erupted during the general tenants' rebellion of 1766, was renewed throughout the 160,000 acres of Livingston Manor. As leaders of revolutionary New York, the Livingstons kept a tight control over the Manor Committee of Safety; like parish vestries in the south, the manor committee was a self-perpetuating oligarchy, despite formal adherence to democratic regulations such as annual elections by the inhabitants of the manor. By the fall of 1776, unrest on the manor was becoming grave, and was being aggravated by conscription into militia preparing to fight in their landlord's battles against Burgoyne. Indeed, Henry Livingston, commander of the regiment of manor militia, refused to march north against Burgoyne; for most of the men would simply refuse to march, and the order would probably provoke an uprising against the manor committee. Many tenants were reported hiding in the woods; and one magnifi-

cently independent tenant, Jury Wheeler, warned the manor committee "that if [he had] to go to the army, the first person he would shoot would be his captain."

By October 1776, a number of discontented tenants had gathered in the southeast corner of Livingston Manor, and several signed a "King's Book," pledging that they would fight for King George. Tenants were also restive on other estates of Whig landed monopolists. In the late autumn of 1776, 400 tenants rose in arms against the lord of Rensselaerwyck. By April of 1777, a great increase of Toryism around Albany led to massive desertions of militia, and an attack on the Albany jail by 700 men to free captured deserters.

The intelligent path for the rebellious tenants would have been to hold off any uprising until Burgoyne had reached the area of Albany, i.e. until the fall of 1777. If they had waited, they might well have turned the tide. But in those days information was particularly faulty. They acted in May 1777 on the false belief that British troops were already in the vicinity. Consequently, the tenants made two fatal mistakes: They rose much too early, and once having risen they failed to bring their full force to bear, expecting as they did British help at any moment. In addition, in their spontaneous action they lacked the leadership necessary to guide and give intelligent direction to their uprising.

Even so, the underground tenant organization was skilled and elaborate. Almost every tenant was included in the conspiracy, which was centered in the eastern part of the manor. Active in the rebellion were 400 tenants of Livingston Manor, 60 tenants of the Lower Manor (to the south) and 50 nontenant farmers and militiamen of the manor. Their goal was ownership of the land, which they believed rightfully theirs. Their arms were either homemade and improvised, or stolen from patriot stores or Livingston mill.

The Livingston tenant rebellion, taking place during the first week of May, was precipitated by the arrival of outside militia escorting tenant prisoners. A series of tenant skirmishes ensued. Several hundred militiamen from outside, headed by landed oligarchs John P. Livingston and Robert Van Rensselaer, were brought in to suppress the tenants and viciously ordered to "fire upon every man fleeing before them." On May 5, the hapless tenants, facing superior arms, offered to surrender in exchange for a guarantee against retribution. The offer was brusquely spurned, and the tenant uprising ruthlessly suppressed. Six tenants were killed in the fighting, and perhaps a dozen tenants were executed for their part in the rising. Over 300 tenant prisoners were dispersed outside the manor. A few were held hostage, while the suitably penitent were set free after swearing a loyalty oath to the Revolution. This uncharacteristically gentle treatment of the rebels was due to shock and bewilderment among

the Livingstons, who were afraid of further uprisings, especially with Burgoyne drawing near.

There were, it is true, no further uprisings among the tenantry; but their sullen Toryism (or rather, anti-Whiggery) continued. By the fall, the tenants were already repudiating the oaths of loyalty they had been forced to take in May, and nearly seventy Livingston tenants left to join Burgoyne's army. Even after Burgoyne's defeat, widespread desertions and draft-dodging continued on Livingston Manor. The tenants were not able to win their land, but they did accomplish one thing by their uprising: never again would they be treated like cattle by their landlords, and never would their votes be simply taken for granted.*

*For the story of this until recently forgotten uprising, see Staughton Lynd, "The Tenant Rising at Livingston Manor, May 1777," *The New York Historical Society Quarterly* (April 1964), pp. 163-77.

The Burgoyne Disaster

General Burgoyne arrived back in Quebec from England on May 6; by mid-June he had assembled a force of 9,500, including 7,200 British and German regulars, and Tory and Indian auxiliaries, and a mighty fleet to sail down the Richelieu River and Lake Champlain. On June 14, he set sail from Fort St. John's in Canada. At the same time, Col. Barry St. Leger set off for Fort Oswego and the Mohawk Valley to Albany with a force of 1,700, including 1,000 Indians under the brilliant Mohawk war chief, Joseph Brant. Burgoyne accompanied his launching with a flamboyant and preposterous proclamation to the Americans and his Indian allies, denouncing the Americans and proclaiming that Britain was fighting for the "general privileges of mankind." Even in an age accustomed to high-flown rhetoric, this bombast was a ready subject for satire and ridicule. Numerous parodies appeared, and in England, Lord North laughed heartily at Burgoyne's rodomontade. Burke ridiculed it, and the Whig writer Horace Walpole denounced "the vaporing Burgoyne," that "Pomposo" and "Hurlothrumbo."

Burgoyne overran Crown Point on June 27 and then advanced upon Fort Ticonderoga, that "American Gibraltar," where the American army was supposed to make its decisive stand. The condition of the American army at Ticonderoga had deteriorated considerably from the previous autumn. Not only had the northern army dwindled away during the winter to only 5,000 men, of whom half were militia; but the problem of command was acute. Gates and Schuyler had both lobbied in Congress for the post of commander of the army, and Congress had taken the worst course by vacillating between the two of them. In March 1777, overall

command was given by Congress to Gates, but was handed back to Schuyler in May. The quarrel between the two exacerbated the friction between New England and New York soldiers in the northern army, the radical Yankees admiring Gates and hating Schuyler, and the Yorkers loyal to their leader. When Burgoyne appeared before Ticonderoga on June 30, 1777, the northern American army was split in two. In command of the Fort was Brig. Gen. Arthur St. Clair with 3,200 men, while Schuyler maintained a force of 2,000 to the south.

Ticonderoga was surrounded by three steep hills, and St. Clair's troops were not sufficiently numerous to garrison them. The major American error was to leave Mt. Defiance, southwest of the fort, unfortified. Gates, seeing the danger of the peak's falling to the British, had repeatedly urged its fortification during 1776, but Schuyler paid no heed. During his two months' tenure in command in 1777, Gates and the brilliant Polish engineer, Col. Thaddeus Kosciuszko, who had come to America to fight for the revolutionary cause, prepared to fortify Mt. Defiance. But Gates was replaced in May before he could get the project under way. Even after May, he continued to pepper Schuyler with warnings, but Schuyler again paid no attention. Seeing the possibilities, the British seized two of the three hills at once, and by July 5, British Gen. William Phillips had transported several cannon to the top of Mt. Defiance.

Now directly under the big guns, St. Clair decided on immediate withdrawal; and in dead of night, the Americans sped out of the fort, fleeing down the opposite shore. In pursuit, the British seized, in rapid succession: Ticonderoga and its hills, Hubbardton and Castleton across the lake in Vermont, Skenesboro (near Whitehall, New York), and Fort Anne. Colonel Seth Warner and a rear guard carelessly dawdled, and the British caught up to them on July 7, resulting in a slashing defeat and about 400 casualties for the American forces. The British also suffered heavy casualties, totalling 200. Warner, leader of the American rearguard, fled with the rest of his men to the Vermont mountains; the rest of the American army met and regrouped at Fort Edward, on the east bank of the Hudson River. Meanwhile, Burgoyne's navy had destroyed and captured over 200 boats on Lake Champlain, and he had seized an enormous supply of arms and ammunition, including powder and more than 100 cannon, which the fleeing Americans had left behind at Ticonderoga. To Americans and British alike, it seemed that a complete victory for Burgoyne was inevitable; Albany was only seventy miles away. King George exclaimed: "I have beat the Americans," and John Adams talked angrily of making an example of a general leaving his post by having him shot. Actually, this was unfair to St. Clair, who did well considering the position he was in; his retreat was skillfully executed and saved his army. The common soldiers were better at pinning the blame where it truly belonged, and desertions

multiplied as many men refused any longer to serve under General Schuyler.

On the brink of victory once again, the British stopped to rest at Skenesboro instead of pressing their advantage to a swift conclusion. In drawing up his plans for the campaign, Burgoyne had specifically rejected the route from Skenesboro to Fort Edward because it led through dense forests and marshlands. Instead, he planned to return to Ticonderoga and sail to Fort Edward down Lake George, even though that route, including the captured Fort George, was now used only for transportation of supplies. His enormous blunder in finally choosing the land route was made at the advice of the Tory Maj. Philip Skene. Skene had obtained an arbitrary grant of over 30,000 acres in this region, and was the owner of the Skenesboro colony on that land. Now he was eager to have Burgoyne cut a road from Skenesboro to the Hudson, as this would greatly raise the value of his property after the war. By going to Ft. Edward by land (through the Skenesboro-Ft. Anne area), instead of sailing down Lake George, and by dragging over fifty guns with him on the march, Burgoyne greatly slowed his own advance. Schuyler astutely delayed him further by diverting creek water with boulders and by sending axemen to fell thousands of trees across the line of march. Burgoyne took twenty days to traverse 20 miles to Ft. Edward which he captured on July 29, the Americans retreating before him. He proceeded another seven miles down the east bank of the Hudson, stopping at Fort Miller at the Batten Kill. Schuyler established American positions at Stillwater, twenty-five miles to the south on the Hudson River.

As Schuyler retreated, the American army began to gain strength. Six hundred Continentals joined the army from Peekskill, and masses of New England militia slowly marched west to guard America from the British threat. General Arnold and Gen. Benjamin Lincoln joined the force, and Daniel Morgan, released in an exchange of prisoners the previous summer, had been given a handpicked corps of 500 riflemen by Washington and sent north. Morgan's men came from the frontier areas of Maryland, Pennsylvania, and Virginia, and included such noted frontier fighters as the celebrated Timothy Murphy.

One army that was not sent north but which should have been was Washington's. As General Howe's mighty fleet sailed out of New York Bay on July 23, Washington, understandably, could not bring himself to believe that he would really desert Burgoyne and sail south. He naturally expected the British fleet to sail up the Hudson to join Burgoyne. Howe's interminable delays and dithering on the voyage sent Washington into an agony of indecision, and he marched up and down New Jersey, and from New York to Pennsylvania, trying to see if Howe was engaged in an elaborate feint and would yet sail up the Hudson. But while Washington's

tactics were understandable, the strategy was abysmal. Instead of trying to counter Howe wherever he went, Washington should have abandoned Philadelphia to Howe (which Howe was to conquer in any case), to swing north to join the northern army and crush Burgoyne. The combined victorious forces could then have swung down to meet Howe; in any case, Washington's considerable force would not have been wasted hanging around Howe's much larger and more powerful army.

Stopping at Fort Miller and suffering from overextended supply lines, Burgoyne decided, upon the urging of the Hessian commander, Maj. Gen. Baron von Riedesel, to detach a mixed force of only 700, under Lt. Col. Friedrich Baum, another Hessian, on a raid to the southeast on Bennington, Vermont, which he knew to be richly stocked with food, ammunition, oxen, and horses, and therefore the answer to his supply problems. Reaching Bennington on August 14 and picking up eager bands of Tories on the way, Baum accidentally encountered a body of 2,000 American militia, under Gen. John Stark. Stark had served brilliantly in the Continental Army, from Bunker Hill to Canada to Princeton, but he, like Arnold, had been passed over for promotion, and he had left the army. The New Hampshire legislature, the previous month, had voted to raise a brigade of militia to defend against the advancing enemy, and he was able to raise an enormous force of 1,500 New Hampshire men, no less than 10 percent of the enrolled voters of that state. This force was joined at Bennington by 500 Massachusetts and Vermont militia. Generals Schuyler and Lincoln had ordered him to join Schuyler's main army, but Stark flatly disobeyed, declaring that he was responsible only to the New Hampshire General Court; instead, he decided to harry Burgoyne's lines of communication.

Baum saw that, being heavily outnumbered, he should not attack; but he did not have the wit to retreat quickly. Instead, he asked for reinforcements and Burgoyne imprudently sent German Lt. Col. Henrich von Breymann with nearly 650 men. On the morning of August 16, Stark struck at the British, aided by a ruse in which the Americans encircled the Germans in shirtsleeves, pretending to be Tories. The ensuing battle was extremely bitter, the Germans fighting desperately despite the flight of the Indians and Tories; finally, Baum was killed and over 350 Germans captured. Too late, Breymann's force appeared, having absurdly plodded along at one mile an hour in parade-ground formation. At the same time Seth Warner arrived with nearly 400 men, and the combined American force sent Breymann fleeing back to Burgoyne with well over 200 casualties. Not only did Burgoyne not get his supplies, but he had lost the huge chunk of nearly 1,000 men at the Battle of Bennington. Since he had been forced to leave a large garrison to guard Fort Ticonderoga, he now had only 6,300 men in his main army. Before him were gathering an ever

larger patriot army, and to the east American militia were forming and threatening to cut his supply lines. In this revolutionary war, the British were learning the great lesson to be absorbed by all counter-revolutionaries; the formal army of the rebels is not the full extent of their might. Behind them lay the people, and now the people were rising up in arms all around Burgoyne to crush him.

Neither could Burgoyne expect any help from St. Leger slicing east across the Mohawk. St. Leger, with about 700 British Tories and over 800 Indians, sailed down the St. Lawrence and reached Fort Oswego, on Lake Ontario, in mid-July, where he was joined by battalions of Tories and Iroquois. This particular fight was also part of a struggle for the soul of Tryon County, the vast, thinly populated frontier county of New York west of Schenectady. Tories were powerful in this frontier domain; Sir William Johnson, the wealthiest landowner in the county, had been the British agent to the Indians, and he was regarded as a hero by the Iroquois nations. In the spring of 1776, his son Sir John Johnson had been forced to flee to Canada, with his faithful Highlanders and other active Tories of the region; the remaining Tories had their property confiscated, and were imprisoned, flogged, tarred and feathered, and even shot and hanged, often at drumhead courts-martial. Families and relatives of suspected Tories were seized by the Americans and taken as hostages. Zeal for battle was intense on both sides, and now Sir John led the Tory contingent under St. Leger.

The leading Indian ally of the British was the brilliant young Joseph Brant, war chief of the Mohawk nation. Brant had been raised as a member of the Johnson family, and his sister was Sir William's wife. Brant had been restless to attack the settlers since 1775; but Carleton discouraged Indian raids on the Americans. On the one hand, this lost him a golden opportunity to terrorize the American frontier. On the other, the American invasion of Canada had cut off the St. Lawrence—and hence possible supplies—from the Indians. The arrival of Burgoyne changed all this: now the Indians were to be encouraged to aid the British in fighting the Americans. Brant and the Iroquois rushed to join St. Leger for the fray.

Marching east from Oswego, St. Leger reached Fort Stanwix on the Mohawk River, the gateway to the Mohawk Valley on August 3. Stationed at Stanwix was the main American force in the west, about 700 men ably commanded by two young Dutch-American colonels, Peter Gansevoort and Marinus Willett, a radical. St. Leger laid siege to the fort. General Nicholas Herkimer, a German-American who commanded the Tryon militia, marched west along the Mohawk with nearly 800 militiamen eager to defend their homes against the Indian menace. Reaching Oriskany Creek, eight miles short of Stanwix, he realized that he could not attack St. Leger's overwhelmingly larger force on his own. When he failed to

make contact with the besieged fort, he refused to go on. But his restive officers denounced him, not only for cowardice but also for treason, a charge to which Herkimer, with several Tory relatives in St. Leger's army, was understandably sensitive. On August 6 he was finally goaded into pressing on a few miles west, where Brant, commanding 400 Indians and over a hundred Tories, had set a cunning ambush. It seemed at first that Herkimer's surrounded troops would be decimated, and the Indians eagerly pressed their advantage in one of the bloodiest engagements in the war. Despite the mortal wounding of Herkimer, the untrained farmers almost miraculously banded together to survive in bitter close fighting with Indians and Tories. They retreated hastily in deep and fearful conviction that they had lost the battle and that the worst was at hand. It is true the Americans suffered a staggering total of 400 casualties out of their 800-man force, but the Indian and Tory force had suffered almost as greatly. The Battle of Oriskany had also succeeded in breaking the morale of the Indians; they were not used to heavy losses, and these they had suffered. Furthermore, Colonel Willett had seized the opportunity of the battle to lead 250 men on a successful raid on the Indian camp. These setbacks were coupled with Indian rancor at bearing the brunt of the battle and the losses. Despite Brant's urging, they began to desert and drift away by the score. St. Leger was losing a major portion of his force.

No longer the happy warrior, confident of an imminent march into Albany, he redoubled his siege of Stanwix, but now Schuyler detached 1,000 Continentals under Benedict Arnold to go to the relief of Fort Stanwix. Reaching Fort Dayton, east of Oriskany, on August 21, Arnold was able to deceive St. Leger and particularly his Indians about the size of his force. The approach of the renowned Arnold was the last straw for the Indians, who now fled *en masse*. Deprived of a large part of his troops, St. Leger was forced to abandon the fort on August 23, and he staggered back to Oswego and thence to Canada. Arnold's force, victorious without firing a shot, sped back to rejoin the main American army. The St. Leger threat was over and Burgoyne was now completely alone. Burgoyne's misfortunes, moreover, were now aggravated by desertions of over 400 of his original 500 Indians, disgruntled at British restrictions on their terror tactics and adept at gauging the changing tides of the fortunes of war.

Increasingly isolated and in worsening straits, Burgoyne should now have hightailed it back to Ticonderoga and abandoned the Albany campaign. But rather than retreat and abandon his exuberant plans for military renown, he crossed the Hudson to the west bank at Saratoga (now Schuylersville) in mid-September to launch a march to Albany. By this bold step, Burgoyne cut off any chance of retreat, and came into position to attack

the American force, now stationed southward on the same bank at the mouth of the Mohawk. It was to be all or nothing for Burgoyne in a final confrontation with the enemy.

In the meanwhile, the loss of Ticonderoga had disgusted Congress with General Schuyler, and in early August it replaced Schuyler with his old competitor Gates. Gates reached the American camp on August 19; the Americans' most able general was now on hand to wage their most decisive battle.

His arrival had an electrifying effect on the morale of the American troops. A week before he came, one officer despaired of the "miserable state of despondency and terror" among the men. "Would to God Gates would arrive," he exclaimed. Soon after, he exulted that from that woeful state, "Gates' arrival raised us, as if by magic. We began to hope, and then to act." He uplifted the American forces not only by his superior ability in battle, but also by his administration and respect for the New England soldiers who formed the bulk of his army, an outlook Schuyler did not share. Close to his men, and sharing the rigors and dangers of his troops, Gates had great confidence in the ordinary nonprofessional soldier, and he understood his needs and problems. His announced policy, for example, was never to call up the militia until virtually the very moment that they were needed. And as soon as they finished their short terms of duty, he did not berate them (as did Washington and others) for "traitorously" not reenlisting; instead, he thanked them courteously and sent them quickly and punctiliously home. In short, he understood that this was essentially a people's war, a popular revolution which depended for its success on mass uprising and mass support, not on European training and the European military system. Hence, the flocking by the militia of all New England to Gates' side for the forthcoming battle. A British officer reported, "The farmers left their ploughs, the smith his anvil, cobbler and tailor followed . . . the militia came marching from all the provinces of New England."* By the final battle, indeed, the American militia outnumbered the regular troops.

On assuming command, Gates moved the American army north from the mouth of the Mohawk, where Schuyler had stationed it, and where the American force would be subject to defeat in European-style warfare on an open plain. Gates marched the army north and stationed it on Bemis Heights—a strategic bottleneck to Albany, just south of Burgoyne at Saratoga—which Gates proceeded to have well fortified by Colonel Kosciuszko. As Burgoyne advanced south upon the Americans, Daniel Morgan's picked regiment of riflemen did a brilliant guerrilla job of preventing the British from sending out any advance scouts to discover enemy

*Billias, "Horatio Gates," pp. 90-93.

positions. Even though deprived of knowledge of the terrain and of American positions, Burgoyne nevertheless decided to attack.

As Burgoyne's column advanced down through the woods on Gates' left on the morning of September 19, Gates sent Morgan's riflemen to meet them. They were joined by a crack group of 300 musketeers, also under Morgan's command. The two forces collided with Burgoyne near Freeman's Farm. Morgan's men, long skilled at forest fighting, used mobile guerrilla tactics in thin, shifting skirmish lines, from which they could cut down the orthodox, bulky, and plodding linear formations of the British. At the clearing on Freeman's Farm, reinforcements came up on both sides, and Arnold, commander of the left wing, sent several Continental regiments to join Morgan. The heavy fire drove the British out of the clearing, but Arnold's Continentals were themselves driven out of the clearing by a British bayonet charge. Morgan's riflemen, unable to wield bayonets, continued to stay hidden in the woods, subjecting the British to devastating fire. Furthermore, Morgan instructed his sharpshooters to concentrate their fire on the weakest links in the British chain: the officers, the skilled artillerymen, and the Tory auxiliaries. Tory morale was far lower than that among British regulars; the officers and artillerymen were, of course, key figures in the army's structure. Morgan was criticized for his "ungentlemanly tactics" of centering fire on the military elite, for in traditional European warfare it was the custom to send out the common soldiery to slaughter in bulky linear formation on the open field. A tacit gentleman's agreement usually spared the officers on both sides. Open field fighting, however, would not have been so attractive to the military elite if their own lives had been placed in jeopardy, and Morgan's sharpshooters began driving this lesson home.

At the end of the day, Gates pulled back the American force from the furious battle, and thus ended the Battle of Freeman's Farm, or the First Battle of Saratoga. Burgoyne contented himself with a claim of technical victory, since the British force held the field; but the de facto victory belonged to the Americans. Burgoyne's losses were extremely severe, especially those suffered at the hands of Morgan: 600 casualties as compared to 300 for the American force. The American losses were caused primarily by Arnold's reckless insistence on open frontal attack upon the enemy lines. Arnold had urged Gates to abandon his protected positions and sally forth to attack the enemy, a move that would have been ruinous to the American cause. While Gates allowed Morgan's force to fire upon the enemy in guerrilla style, he compromised by allowing Arnold his futile attack on the clearing at Freeman's Farm. Even so, Arnold was furious because he had not been given more men.

Burgoyne was now bogged down and surrounded by an American force that grew rapidly larger as more and more New York and New England

militiamen poured into the camp. For more than two weeks, Daniel Morgan's riflemen harassed the British unmercifully, as night-raiding parties attacked and attacked on the flanks, and snipers picked off any British emerging into sight. Again, scouts could not be sent out to provide vitally needed information. Furthermore, Burgoyne learned of a successful raid on Mounts Independence and Defiance by Colonels John Brown and Seth Warner, which captured 300 men and a score of boats. But even as supplies began to run out, as the morale of his men rapidly deteriorated and desertions multiplied, and as chilly weather heralded the onset of winter and the importance of reaching winter quarters at Albany, Burgoyne decided to attack in a desperate gamble for victory. Meanwhile, Washington, engaged in unproductive battles with Howe around Philadelphia, asked Gates to send him Morgan's regiment—the crucial American unit at Saratoga. Gates declined the request, and thus thwarted a possible disastrous loss that might well have been inflicted on the American cause.

On October 4, Burgoyne held a council of war. General Clinton had proposed to come up from New York in an attempt to relieve Burgoyne, but nothing had been heard from him. Burgoyne's generals urged him to retreat, but he regarded this as dishonorable, and instead determined on a probing attack on the American left wing, to be followed, if successful, by a general assault the next day.

On October 7, Burgoyne, still ignorant of the terrain and of American dispositions, led his probing attack with 2,100 troops on the American left at Bemis Heights, leaving fewer than 3,500 behind in his entrenched position. Gates again sent out Morgan, and pursued his shrewd, guerrilla-type strategy of keeping his main force deep behind fortifications. Denying the British the opportunity of a pitched battle, he continued to wear down Burgoyne's forces. The tactics of the battle were devised by Morgan, who suggested simultaneous flanking attacks on Burgoyne.

Arnold had meanwhile been relieved of his command by Gates for insubordination after a violent quarrel; he did not think Gates had given him sufficient credit for the engagement at Freeman's Farm. Sulking in his tent, Arnold saw that the Battle of Bemis Heights was still indecisive and inconclusive toward the end of the day; restless at the stalemate, he rushed forth without authorization to help Morgan, and assumed the lead of his exhilarated and cheering Connecticut Brigade. Shouting, "Now, come on boys, if the day is long enough, we'll have them in hell before night!" Arnold led frontal assault after frontal assault on the British lines with the Connecticut and other brigades, without success. Finally, he led the Connecticut Brigade, Morgan's men, and two other regiments that had been supporting Morgan, in a furious attack against Breymann's Hessian redoubt guarding Burgoyne's right flank. This attack succeeded, Arnold

falling wounded and permanently crippled at the moment of victory. One of the important ingredients of this victory was the deliberate mortal shooting of Gen. Simon Fraser, singlehandedly rallying the British lines, by Morgan's brilliant rifleman Timothy Murphy. Burgoyne was forced to withdraw from the field and, his main position now indefensible, he retreated his army northward. The decisive battle of Bemis Heights, the Second Battle of Saratoga, was over. The Americans suffered only 150 casualties, the British nearly 700.

Arnold has generally received the credit for Burgoyne's defeat, but his charge, while dramatic and romantic, was reckless and could well have lost the battle. The victory really belonged to Gates, whose patient strategy would inevitably have worn Burgoyne down, without the needless chances taken and extra blood shed in Arnold's charge. Compared to the roles of Gates and Morgan, Arnold's contribution to Burgoyne's defeat, while real, was flashy and superficial.

Burgoyne's retreat was slow. When he took up strong entrenched positions at Saratoga on October 9, he hoped that Gates would be rash enough to launch a frontal attack. Instead, Gates wisely sent out militiamen to encircle and entrap the British army, and also to seize their boats. Burgoyne knew that Clinton had begun to move north, but he was still too far away to influence results. By October 12, he finally agreed to Baron von Riedesel's urging to flee northward, but he delayed another day, and by then it was too late: his once splendid army was a ragged force of 5,000 men, and surrounded by a force that had swollen to three times that number.

Gates demanded unconditional surrender; Burgoyne refused and held out for an agreement whereby the British force would be permitted to sail for England, provided that they would not fight again in America. Learning that Clinton's force of 3,000 men had broken through Putnam's defenses in the highlands and had reached Esopus (now Kingston) on October 15, Gates agreed to accept Burgoyne's offer, or "convention." On October 17, Burgoyne surrendered.

The repercussions of the Saratoga surrender would prove to be momentous; the move to split New York had failed and one-fifth of the British forces in America had surrendered in one fell swoop. The entire British strategy was shattered. And, as will be seen, France was to be led by the heartening victory to recognize American independence and to enter the war openly on the American side.

The surrender terms were violated immediately. The Americans, realizing that the British troops sent home would simply release other troops to serve in the war, refused to allow the prisoners to embark. Instead, they sent them to Virginia where they deserted in droves. There being little they could do in their isolated state, the British forces in New York

withdrew to Canada from Ticonderoga, now useless to them. As for Clinton, excessive caution had prevented him from racing up the Hudson to Albany after his breakthrough in the highlands, and also from taking with him the 2,000 soldiers uselessly stationed in Rhode Island. Apart from the losing Charleston expedition the year before, this was his first campaign as head of his own army, and it was certainly unsatisfactory.

The British might still have salvaged their fortunes, however, if Clinton had been allowed to keep control of the highland forts, cutting American communications and supply lines across the lower Hudson. But General Howe, apparently over his objections, ordered him to evacuate Fort Clinton and to send reinforcements to Philadelphia; Clinton was thereby forced to abandon the Hudson Valley and withdraw quickly to New York City.

Removed from his command and unfairly in disgrace, General Schuyler apparently toyed with treason and secretly told the British that he was ready to rejoin the British Empire if Britain would abandon its taxation of America. There is also some evidence that he was partially motivated by his hatred of the rebellious Vermonters and that he may have had St. Clair abandon Ticonderoga to smoke out the Vermont forces; their ardent fighting for the Americans may have led him to consider siding with Great Britain. Thus, the general American suspicion of Schuyler's loyalty after Ticonderoga was not entirely without foundation.

Howe's Expedition in Pennsylvania

While Gates was greatly helping to win the war in the north, Washington and Howe were seemingly competing with each other to see who could best lose the war further south. Howe had finally embarked with his huge armada on July 23. The voyage was a slow and lackadaisical one; apparently he had no intention of finishing his business at Philadelphia quickly and then racing back to New York to help Burgoyne. He first sailed up the Delaware River on July 29, this being the shortest route to Philadelphia, where he could land just south of the city. But then, worried about Washington's nonexistent river forts near Wilmington, he turned around, sailed all the way around the peninsula and up Chesapeake Bay, to land, finally, fifty miles from Philadelphia at Head of Elk, Maryland, on August 25. A full month had been consumed in this short voyage, and, after all this time and the suffering of men and horses aboard from heat, rough seas, confinement, and shortage of supplies, the British forces found themselves considerably further from that city than they had been in New Jersey!

Washington stationed himself at Wilmington and when Howe landed, he decided to abandon the uncongenial role of guerrilla chieftain for that of orthodox general. He chose open frontal battle with a far superior British army in order to defend Philadelphia—at all costs. His best strategy would have been to abandon Philadelphia to Howe, speed north to crush Burgoyne, and then lead the victorious army southward. In any event, he should not have courted terrible defeats by trying to keep Howe from a city which would do the British little good anyway.

With 15,000 men to Washington's 11,000, Howe's army was superior

in both firepower and manpower when the two forces met along Brandywine Creek, at Chad's Ford, in Pennsylvania near the Delaware border. Howe attacked on September 11, sending Cornwallis with half the troops in a deft and silent flanking maneuver—reminiscent of Long Island—to the left to cross the stream and come behind the American right wing. General Sullivan, commanding the right wing, turned almost at the last minute to meet the assault. Cornwallis had almost broken through Sullivan, but Nathanael Greene brought two brigades from the center and raced four miles in forty-five minutes to save the American right from utter rout, and perhaps the entire army from destruction. In the meantime, Gen. Wilhelm von Knyphausen, commanding the center at Chad's Ford, was able to crash through the American center, and Washington was forced to retreat north to Chester, where Greene brought back his brigades to join him. The American defeat had been severe indeed; Washington had lost over 1,000 casualties, while the British had lost 500. Again Howe failed to press ahead quickly and destroy the demoralized American troops, but this time there was perhaps the good excuse that the British forces were too weary.

Washington's generalship had rarely been worse than at Brandywine. Apart from the strategic error of confronting the British in open battle, he failed to anticipate Howe's favorite flanking maneuver with less excuse than at Long Island, and he failed to use his cavalry as scouts to find out what the British were up to. In his report on the battle to Congress, he displayed a severe lack of graciousness toward his best subordinates that was rapidly becoming characteristic, and he completely failed to mention the feat of Greene and his men in saving the American army.

Despite the severe defeat, Washington continued to be optimistic about massive encounters with the enemy. He tried a frontal attack again on September 16 at Warren Tavern west of Philadelphia, but a heavy storm halted the battle after fighting had begun.

On the night of September 20, young Gen. Anthony Wayne's division, left behind at Paoli when Washington recrossed the Schuylkill to harass the enemy flanks, was surprised by a force under Gen. Charles Grey. The British bayonet charge, always effective against the Americans, routed Wayne's forces and inflicted nearly 400 casualties at the expense of virtually none. In this nighttime attack, the British were aided by Wayne's having formed his defense lines between the attacking Grey and their own campfires, the American silhouettes providing easy targets. Free of harassment, the British pushed north on September 22. In a clever maneuver, Howe seemed to be trying to trap Washington's forces, to outflank him on the right, or to go westward to seize American stores at Warwick. In response, Washington moved north, falling for the ruse. With Washington

lured to the northward, Howe quickly turned southeast, crossed the Schuylkill unopposed, and marched easily toward Philadelphia. On September 26, Cornwallis and his column took occupation of Philadelphia, while the main British army camped north of the city at Germantown.

The easy taking of Philadelphia, coming after his string of victories, caused Howe to grow overconfident. He scornfully refused to build entrenchments at his camp at Germantown, and split his army by stationing considerable troops in Philadelphia and across the river in New Jersey to capture the fort at Billingsport. This left only 9,000 men in Howe's force at Germantown; in response, the Americans decided to attack from their positions to the north.

In emulation of such ancient strategists as Hannibal and Scipio, Washington launched a concerted multipronged surprise bayonet attack on the night of October 3. But, in contrast to Hannibal and Scipio, Washington made several grievous tactical mistakes. He placed the bulk of his army in the center and weak militia columns on the flanks, while his ancient models had placed their strongest forces on the sides; he failed to realize there was a lack of communications between the four widely separated forces launching the simultaneous attack; and he ignored the roughness of the terrain, which was not conducive to bayonet charges.

Despite these errors, however, the Americans almost won. Sullivan's column at right center was the first to engage the enemy on the morning of October 4. Greene took his force, including two-thirds of the army at left center, swiftly south and southwest to join Sullivan. Together the two, aided by the bayonet charge of Col. Peter Muhlenberg, broke through British lines and were on the point of victory. But fog was thickening rapidly, and soon the divisions could not see what was going on. A series of tragicomic errors ensued. Colonel Henry Knox, inspired by classical military lore, persuaded Washington to waste precious time trying—unsuccessfully—to level Justice Benjamin Chew's house on the battlefield (several British companies were using it as a fortress) instead of pressing his advantage in the battle. Moreover, Gen. Adam Stephen detached himself from Greene's column to bombard the house, gravely weakening Greene's forces. As the fog thickened, Wayne got the idea that Sullivan, at his rear, was in trouble, and he abandoned the spearhead of the advance to effect a "rescue." The two American divisions (Wayne and Stephen) thereupon fired upon each other, and both fled. Sullivan's troops, remaining in right center, began to run short of ammunition, and fearing imminent encirclement, they too broke and ran. As for the American forces on the wings, Maj. John Armstrong's column on the extreme right was repulsed, and Gen. William Smallwood's force arrived on the scene after the battle was over. Neither man pursued his task very energetically.

Greene had been left to fight the British all alone, and he was trapped.

Muhlenberg's bayonet brigade was already far ahead of him, but they wheeled back, charged, and joined him. In the course of this, an entire regiment was captured. Greene's troops retreated and soon the entire American army was in a rout. In this Battle of Germantown—the final pitched battle of the Philadelphia campaign—the British had lost over 500 casualties; but the Americans had suffered the staggering total of almost 1,200 men. In the three battles, Washington's forces had lost over 2,200 men.

The most astute comment on the Battle of Germantown—indeed it could well apply to the entire two years of campaigning between Howe and Washington—appeared in a London newspaper: “Any other general in the world than General Howe should have beaten General Washington, and any other general in the world than General Washington would have beaten General Howe.”

To hold Philadelphia, the British had to be able to supply it by sea, and now at last Admiral Howe sailed up the Delaware to reduce the forts above Chester in American hands. The fort at Billingsport fell quickly, but Fort Mercer, at Red Bank on the Jersey shore, repulsed a massive Hessian assault on October 22, inflicting nearly 400 losses. But when the Americans foolishly tried to hold the indefensible Fort Mifflin, on Hog Island in the Delaware, fierce British bombardment reduced it to rubble, killing or wounding 250 of the American garrison in the process. The British took the fort on November 15, and from there were able to go back and capture Mercer. The Delaware was now clear and in British hands.

Meanwhile, Washington wandered around aimlessly, moving his camp to and fro without purpose. Howe withdrew from Germantown to Philadelphia and constructed fortifications. Washington toyed with the totally disastrous idea of a frontal assault on fortified Philadelphia, and was supported in this by General Wayne, but the leading officers, including Greene, Knox, and Sullivan, rejected the scheme. Howe tried once again to bring on a final battle with Washington, and marched out in dead of night on December 4 against Washington's camp at Whitemarsh. But Washington was well prepared, and the brilliant American partisan leader Capt. Allen McLane charged and harassed the British line. Apart from a few skirmishes on December 7, nothing else could be done, and Howe returned to Philadelphia.

Winter at Valley Forge

Washington now sensibly prepared to take his battered and half-fed men into winter quarters, rather than endure the rigors of another winter campaign as they had done the previous year. He favored quarters at Wilmington, where supplies would be plentiful and the weather mild. Furthermore, Delaware and Maryland could be guarded, and American boats could harass British shipping on the Delaware. The officers favored this plan; but in deference to Pennsylvania's howls against letting the British army ravage the countryside, and at the suggestion of Wayne, Washington weakly and unfortunately decided to winter on the icy slopes of Valley Forge, to the west of Philadelphia. Few worse locations for obtaining supplies could have been selected than this ravaged area. Generals James Varnum and "Baron" deKalb were particularly vehement at "wintering in this desert."

On December 19, Washington's army, short of food and water, poorly sheltered, and terribly short of shoes and other clothing, staggered into the ill-conceived camp at Valley Forge. In these conditions, disease spread like wildfire through the camp. To obtain food, both the American and British forces sent foraging parties to confiscate cattle and other supplies from the hapless citizens. By the spring of 1778, massive desertions had reduced Washington's army to five or six thousand men. Greene was appointed quartermaster general in the emergency, and he was able to scrape up and confiscate enough provisions to last the army through the winter.

During the campaigns of 1777 a suspicion began to well up among many Americans that Gates was an excellent general and Washington a

miserable one, and that maybe something should be done about it. In Congress, forced to meet in the small town of York, Pennsylvania, it was the men of the American left that were restive, notably Joseph Lovell and Sam Adams of Massachusetts. Dr. Benjamin Rush, a leading Pennsylvania liberal and chief physician in Washington's army, urged his replacement by "a Gates, Lee, or Conway," Thomas Conway being a capable Irish-born French general recently commissioned in the Continental Army. In November 1777, Congress advanced a step toward erecting a professional bureaucracy by creating a five-man Board of War, not composed of members of Congress, to supervise the army. As chairman of the board, Congress appointed the hero Gates, who was then too ill for field command. This apparent attempt to downgrade Washington and elevate Gates never got underway, in fact never reached the stature of an organized campaign. Indeed, no one in Congress ever proposed the replacement of Washington or even the curtailing of his powers.

Two major factors contributed to the crushing of any murmurs of dissent against the commander-in-chief. One was Washington's ruthless use of an indiscretion he discovered—a letter critical of him sent by Gates to Conway. Washington and his influential friends immediately conjured up a nonexistent widespread "plot," the mythical "Conway Cabal," supposedly designed to scuttle Washington. Both Rush and Conway were soon forced out of the army by the vindictive Washington.

Conway's fall (and subsequent emigration) and Gates's decline were also spurred by a madcap plan Gates had for another expedition to invade Canada and possibly take Montreal. This proposed expedition was to be independent of Washington's command, and was to be headed by the vain young French Catholic volunteer, the Marquis de Lafayette, in a rather farfetched scheme to appeal to the French Canadian masses. But Lafayette, ever-worshipful of his patron Washington, refused to be independent of his commander-in-chief, and bitterly denounced the supposed conspirator Conway as responsible for an intrigue against Washington. When the proposed expedition fell through in March 1778, the failure hastened the demise of all incipient opposition to Washington. The Board of War fell into a decline, and Gates, in virtual disgrace, and subject to Washington's continuing vengeance, was assigned a tiny and innocuous command on the Hudson highlands.

Thus, history had dealt in high irony with the victors at Saratoga. Gates, after the winter of 1777–78, was relegated out of the action, to a minor command; Arnold, seriously wounded and crippled at Bemis Heights, was never again to bear arms for the United States; and Schuyler, who, for all his faults, had after all harried and delayed Burgoyne in his march from Skenesboro, was in disgrace, suspected—with some justice—of treason. He too was never again to serve in the army; though eventually acquitted

at court-martial for his actions at Ticonderoga, he left the army shortly after. Of the main victors over Burgoyne, only Morgan was to continue in action—and even he was soon to be treated shabbily by George Washington. Meanwhile, Washington, the architect of defeat, surmounted a flurry of opposition and continued more firmly in command than ever.

As if the ragged soldiers at Valley Forge did not have enough troubles, they were to be further plagued by the arrival, in February, of a mendacious Prussian braggart and soldier of fortune calling himself “Baron von Steuben.” Actually, Captain Steuben was neither a baron nor, as he claimed, a Prussian general; but he managed quickly to be elevated to the post of inspector general of the Continental Army. Steuben set about to Prussianize the American army, and so now the hapless soldiery suffered the infliction of the whole structure of petty and meaningless routine designed to stamp out individuality and transform the free and responsible soldier into an automaton subject to the will of his rulers. Ever since he had embarked on the Philadelphia campaign, Washington had grown ever further away from the guerrilla tactics that had won him victory at Trenton (and had defeated Burgoyne). Washington had no desire to become a guerrilla chieftain; to his aristocratic temper the only path to glory was through open, frontal combat as practiced by the great states of Europe. Washington had tried this formula, and lost dismally at Brandywine and at Germantown, but this experience taught him no real lessons. He was delighted to have Steuben continue the process he himself had begun in the first year of war of imposing petty enslavement upon a body of free men. Until recently, historians have rhapsodized uncritically over the benefits of Steuben’s training, of the enormous difference in the army’s performance. But Washington’s and his army’s performance was equally undistinguished before and after Steuben; any differences were scarcely visible.

In the midst of this Prussianizing of the American army, Charles Lee was released in a prisoner exchange in early April. While Washington and Steuben were taking the army in an ever more European direction, Lee in captivity was moving the other way—pursuing his insights into a full-fledged and elaborated proposal for guerrilla warfare. He presented his plan to Congress, as a “Plan for the Formation of the American Army.” Bitterly attacking Steuben’s training of the army according to the “European Plan,” Lee charged that fighting British regulars on their own terms was madness and courted crushing defeat: “If the Americans are servilely kept to the European Plan, they will . . . be laugh’d at as a bad army by their enemy, and defeated in every [encounter]. . . . [The idea] that a decisive action in fair ground may be risqued is talking nonsense.” Instead, he declared that “a plan of defense, harassing and impeding can

alone succeed," particularly if based on the rough terrain west of the Susquehanna River in Pennsylvania. He also urged the use of cavalry and of light infantry (in the manner of Dan Morgan), both forces highly mobile and eminently suitable for the guerrilla strategy.

This strategic plan was ignored both by Congress and by Washington, all eagerly attuned to the new fashion of Prussianizing and to the attractions of a "real" army. Lee made himself further disliked by expressing yearnings for a negotiated peace, with full autonomy for America within the British empire. During his year in captivity, it seems he had partially reverted to the position of the English Whigs. He did not realize that the United States was now totally committed to independence, and that peace terms that would have been satisfactory three years earlier would no longer do. Too much should not be made of this, however; General Sullivan, in his earlier term of captivity, had also been temporarily persuaded of similar views.

On reaching camp in late May, Lee soon embittered Washington by scorning Washington's abilities, and praising Gates' in a letter to his friend Benjamin Rush. He did succeed, however, in having Steuben's powers curtailed. He also increased his unpopularity by objecting to—though reluctantly taking—a loyalty oath of allegiance to the U.S. and repudiating Great Britain, an oath forced upon every officer in the army. The old scourge of the Tories, the coercer of loyalty oaths, seemed to be growing soft.

During the winter of 1777–78, Howe lost his last opportunity to crush Washington's army. Only twenty miles away, and drilling for open combat, it would have been easy prey. But Howe and his troops remained in Philadelphia: while the Americans froze, starved, and drilled, they revelled and partied, luxuriously enjoying the victuals, wine, and women of Philadelphia. On May 18, Washington, chafing at the inactivity, sent out a force of 2,200 men—one-third of his army—for a reconaissance in force against the British. He placed in command of this pointless foray the Marquis de Lafayette, who was apparently being rewarded for his assiduous flattery of the commander-in-chief. Now he could have his own command and end his pouting; but 2,200 men seems an extravagant price for soothing Washington's protégé. Lafayette advanced to Barren Hill, only two miles north of the British lines, and settled down to wait. He did not have to wait long. Howe, about to be replaced by Clinton as commander-in-chief, was determined to end his term on a triumphal note by capturing the young Frenchman. But Lafayette, nearly surrounded, managed to elude the enemy with his troops and to speed back home without fighting a major battle.

Upon the collapse of Burgoyne, General Howe—joined by his brother—submitted his resignation. After furious objections by Howe's well-

placed friends and relatives, Germain replaced him with General Clinton, who assumed command in mid-May. With the end of Howe's term, the last chance for a quick crushing of the American forces had gone, for France was entering the war on the American side. For Britain, the character of the war had now unpleasantly changed; from trying to teach a lesson to revolutionaries, Britain now faced an international, trans-Atlantic, even a worldwide conflict. The first thing to do was end the occupation of Philadelphia, which at best had been a waste of time. Howe had thought of Philadelphia as equivalent to a European capital: the hub and nerve center of administrative, commercial, political, and military life. But in a decentralized people's war such as the Americans were waging, there was no fixed nerve center; indeed, there was scarcely any central government at all. All this gave the Americans a flexibility and an ability to absorb invading armies in a manner highly stultified Europe could not understand.

42

The Battle of Monmouth and the Ouster of Lee

With a powerful French fleet sailing westward, Britain could no longer afford the luxury of being open to entrapment between French and American forces. Clinton had to disperse a large part of his troops quickly to fight against the French in the West Indies and to Florida as a base for southerly operations. He was ordered to evacuate Philadelphia immediately and repair to the main British base in New York City.

Clinton evacuated Philadelphia from June 8 to 18; by sea, his ships transported 3,000 terrified Philadelphia Tories to New York; the army would have to march across New Jersey. His 10,000 men were soon vulnerably strung out and loaded down with baggage as they trudged slowly northeast across the New Jersey plain toward South Amboy and New York City.

Washington's army was now in good condition, thanks to General Greene's supply efforts, and had swelled to 11,000, supplemented by militia in New Jersey. Before leaving Valley Forge, Washington asked advice of his council of war. The reckless General Wayne urged a full-scale frontal attack on the British in New Jersey, but the other generals agreed with Lee in arguing strenuously against an open attack. Far better to enjoy the victory implicit in the British retreat, and to bid Clinton good riddance to New York.

Washington appeared to accept this sober advice, and followed Clinton's army, harassing them along the flanks, and outracing them to Cranbury in central New Jersey. Reaching Allentown, east of Trenton, Clinton feared a possible attack crossing the Raritan River, possibly combined with a move southward by Gates; he veered east from the New Brunswick-

Amboy road to take his army to Sandy Hook on the Atlantic Ocean, there to evacuate his men to New York by ship. Washington was anxious to reverse the council's decision for limited harrying operations, and at another council of war on June 24 he suggested a general open attack on Clinton's army. Washington was seconded by Wayne, Lafayette, and by his aide and theoretician, Col. Alexander Hamilton. Lee, on the other hand, argued trenchantly that it would be "criminal" to risk a general engagement against Clinton's professionally trained and equipped troops, and that it would be far better strategically to "build a bridge of gold" to speed Clinton on his way to the strategically valueless nest in New York. Other generals, however, wanted to have their cake and eat it too, calling for a partial attack that would not risk the entire American army. In a typically muddled compromise, the council decided to keep the main army in reserve, while 1,500 men attacked the British flank and rear. This partial attack would accomplish little, and, at worst, as Lee cogently warned, it would rapidly escalate into the very general frontal engagement that most of the generals were trying to avoid. Greene's naively optimistic view that "I think we can make a partial attack without suffering them to bring us to a general action" was linked with his psychological argument for having the action at all: "People expect something from us." On the other hand, Lafayette and Wayne wrote letters protesting what they regarded as too soft a decision; Hamilton wrote bitterly that the council's decision did "honor to the most honorable body of midwives and to them only."

Lee angrily refused to lead the 1,500 attackers, and the command was given to Lafayette, itching to get into action. He was ordered eastward, to harass or strike at the enemy as he saw fit. But when Washington decided to escalate the partiality of the attack, and to commit 5,000 men—fully half of his army—to the engagement against Clinton, Lee changed his mind and insisted on assuming command of the front-line forces, the possibility of defeat now being far more grave. Lee camped at Englishtown, and the British lay at Monmouth Courthouse, five miles to the east.

On June 27, Washington ordered Lee to attack Clinton's rearguard the following day to prevent Clinton from reaching Sandy Hook, even though neither Washington nor Lee had had time to reconnoiter the terrain. Before this attack, Lee was to send out a skirmish force of 600, which, joined with Morgan's 600 men on the British right flank, were to harass and scout the British force when it began to march northeast. Morgan's men, however, were too outnumbered to do any good. As the harassment began the following morning, Washington ordered Lee to advance to Monmouth with the rest of his men, and to attack the British rearguard "if possible" and "as soon as possible." Washington was to remain at Englishtown in support of Lee, but because the terrain between English-

town and Monmouth Courthouse could only be traversed across three morasses, or "ravines," any support he gave Lee would not be effective. Lee halted upon receiving contradictory information about Clinton's movements, then pressed on to Monmouth, not knowing that Clinton had anticipated the American attack and stood behind Cornwallis' rearguard of over 1,500 men with a crack force of more than 4,000.

After some indecisive skirmishing, Lee saw that Clinton's large force stood right behind the rearguard. He ordered Lafayette to defend the right flank against assault, but instead Lafayette retreated, without authorization, followed first by his fellow blowhard Anthony Wayne and then by Gen. Charles Scott. Lee had no choice but to retreat back toward English-town, and he managed to do so in good order, and he later admitted that Lafayette had done the proper thing by retreating. Lee's estimate of the futility of a large-scale attack had been vindicated against Washington's rashness and poor judgment.

When Washington, making his advance, met Lee's force retreating, he gave him no chance to explain the retreat. He cursed Lee publicly in a vile manner, halted the retreat, and roused the soldiers to a demagogic pitch. After an attack by the British and furious fighting, the British withdrew from the attack, leaving approximately 350 casualties on either side. The Battle of Monmouth ended in a futile draw, with Clinton satisfied that he had conducted a model rearguard action; that night he slipped away, and was soon at Sandy Hook, and, on July 5, in New York.

The long march across Jersey, the pursuit of Clinton, and especially the Battle of Monmouth accomplished nothing but the loss of lives. The order for attack at Monmouth, over poor terrain, was Washington's responsibility and his alone. Lee was correct in opposing the campaign, and especially the attack at Monmouth; his retreat was required by the circumstances. Washington's public outburst against Lee was typical of his habit of passing the blame for his own defeats and blunders onto his hapless subordinates. Unluckily for Lee, he was not the man to stand for this sort of despicable treatment. He quickly wrote an angry letter to Washington accusing him of "an act of cruel injustice" and demanding "some reparation." The letter led to a court-martial which, subservient to Washington, found Lee guilty of not attacking according to orders, unnecessarily retreating, and being disrespectful of his superior officer in his letters of complaint. It was characteristic that the major force in prosecuting Lee was the reactionary Hamilton, who had exploded at Lee on the field at Monmouth and had accused him of treason. The court-martial suspended Lee from command for one year.

Congress's approval of this unjust verdict led Lee to denounce Congress itself, and he was discharged from the army altogether. Yet both votes in

Congress—for approving the verdict of the court-martial and for dismissing Lee from the service—were close, surprisingly so since the campaign against Lee in Congress was largely made a test of confidence in Washington. The Left, led by Sam Adams, James Lovell and especially Richard Henry Lee, lobbied vigorously for Charles Lee; Dr. Benjamin Rush wrote angrily that the congressmen were beginning to “talk of *state necessity* and of making justice yield . . . to policy.” Lee placed equal responsibility for his fall on Washington and his aide Hamilton. Also participating in the savaging of Lee were Lafayette, Wayne, Steuben, Scott, and Washington’s aristocratic South Carolinian aide, Col. John Laurens. Defending Lee among the high officers (in addition to his legal aides) were Horatio Gates, Henry Knox, who had distinguished himself at Monmouth, Gen. Alexander McDougall, Gen. Benjamin Lincoln, who had been wounded and crippled at Saratoga, and Col. Aaron Burr, who had also fought at Monmouth. Even Nathanael Greene, staunch supporter of Washington and personally estranged from Lee, acknowledged the grave injustice of Lee’s treatment. Indeed, most officers acknowledged privately that Lee was right, but sided opportunistically with their commander-in-chief in public. Even General Clinton, certainly no friend of Lee’s, thought the treatment of him grossly unjust, and agreed that Lee’s able retreat had saved the American army from a smashing blow by his forces.

When Charles Lee heard the verdict of Congress, he turned to one of his beloved dogs and exclaimed, “Oh, that I was that animal! That I might not call man my brother.” Despite his being deeply hurt by the decision, he gamely fought on for vindication, publishing effective defenses in the press. In this, he pointed to Washington’s series of severe military defeats, and keenly raised the point of the similar treatment of General Conway by Washington. Finally, isolated and embittered, he retired to a Virginia farm; as he had wittily written to Aaron Burr, he would “learn to hoe tobacco, which I find is the best school to form a consummate general.” There he was to die impoverished before the end of the war, consoled only by a few friends such as the young Virginian James Monroe, who rallied round. Even in death, Lee shocked the respectables, as his will revealed him to be a confirmed deist. His final estimate of Washington was apt: a man whose stern and composed visage masked an impoverished intellect and a vindictive cunning that destroyed every man who aroused his envy or injured his pride. His only military victory in an innumerable stream of defeats was in “one successful surprise of a drunken Hessian.”

Monmouth was the last major battle of the war to be fought in the North. From that point on, the strategy of the war was to undergo a sharp change; it was now an international war, and the British government’s aim

for a quick knockout in the North had to be abandoned. From then on, only minor skirmishes and forays were waged in the North, with the bulk of the British Army concentrated in New York City; the scene of major conflict would now shift to the hitherto unscarred South.

43

Response in Britain and France

The great aim of American diplomacy during the 1776–78 period was to induce France to expand her role from that of staunch but covert supporter to open ally at war with England. Pressures played upon the French Government: the masses, and the political opposition led by former Foreign Minister Comte Etienne François Choiseul were eager for war; but Foreign Minister Comte Charles Gravier de Vergennes, though deeply sympathetic to the new republic, cautiously drew back from open war, especially after American reverses in the summer of 1776 and in 1777. France and Spain had been about to go to war with England when Washington's ignominious defeat at the Battle of Long Island changed Vergennes' mind; and France again drew back from the break after Burgoyne's capture of Ticonderoga. Finally, Britain tried to intimidate France by threatening war if she did not cease her aid, while the Americans responded with subtle blackmail and threats of a separate peace with Britain—threats that conjured up to the French the fearsome vision of old Pitt heading a unified Anglo-American war to crush France.

Negotiations for the fledgling United States with France were first handled by Silas Deane, who arrived in France in early July 1776. He was succeeded by a three-man commission appointed by Congress to negotiate treaties and agreements in Europe, consisting of Deane, Benjamin Franklin and Arthur Lee. The commission arrived in Paris at the end of December 1776. The wily old tactician Franklin proved to be a master at the intricacies of lying, bamboozling, and intriguing that form the warp and woof of diplomacy. Moreover, the old rogue was a huge hit with the

French, who saw him as the embodiment of reason, the natural man, and *bonhomme*.

This three-man commission was guided by a model set of treaties, the "Plan of 1776," drawn up while Deane was still on his own in France by a committee of independence. The committee submitted its model in mid-July 1776 and Congress adopted it in mid-September. The plan, which furnished the model for all the eighteenth century treaties of the United States, did not propose a formal political alliance with France, for John Adams had led Congress in adopting Tom Paine's "isolationist" view that America must be self-reliant, abstain from entangling alliances in the unremitting wars of Europe, and avoid possible domination by any of the powers. Instead, the Plan proposed French recognition of the independence of the United States, and a perpetual treaty of commerce and friendship resting on the great international law principles safeguarding the rights of neutral nations: free ships make free goods; carefully restricted lists of contraband that could be seized by belligerents; and freedom of neutral shipping between belligerent ports. All of these emerging libertarian principles went totally against the practice of Great Britain, the world's dominant and aggressive naval power. The American model also proposed total freedom of trade and reciprocity between France and the United States. As Professor Gilbert puts it: "Whereas usually commercial conventions were sources of friction and instruments of power politics reinforcing political alliances by commercial preferences, the Americans wanted to establish a commercial system of freedom and equality which would eliminate all cause for tension and political conflicts."*

In other terms of the plan, no separate peace with Britain would be made by either party in case France should be involved in the war, and the United States was to pledge not to interfere with Spanish possessions in South America. France, in turn, was to give up any claims it might have to territory on the North American continent.

In the Plan of 1776, as Felix Gilbert points out, the infant United States set forth a shining new libertarian conception of how nation-states should deal with one another: political isolationism coupled with cultural and economic internationalism. There was to be no political meddling by governments, but rather full freedom for peaceful and productive relationships between individuals and peoples. This conception put into practice the foreign policy views that were being developed by the French *philosophes*. The *philosophes* recognized that the expansion of international

*Felix Gilbert, *To the Farewell Address: Ideas of Early American Foreign Policy* (Princeton: Princeton University Press, 1961), p. 52.

commerce was rapidly creating one interdependent economic world, a true family of nations welded together through trade for mutual benefit. The task of governments, then, including their foreign policy, is to get out of the way of this natural social intercourse. Militarism, the chimera of the "balance of power," treaties and alliances, the frauds of diplomacy, all were denounced as old-fashioned and incompatible with the new international order of peace and freedom and reason, the only order compatible with the rapid emergence of one economic world. Or, as the French physiocrat and libertarian Nicolas Baudeau put it, in 1767: "The essence of power politics consists of divergence of interests; that of economic policy of unity of interests—the one leads to war, frustrations, destruction, the other to social integration, cooperation, and free and peaceful sharing of the fruits of work."* The "old policy" of aggression and restriction was to be replaced by the "economic policy" of unrestricted freedom of trade, mutual benefit, and harmony among nations. In brief, in the world to come, "foreign policy" per se would disappear; in a free and rational world, foreign policy and diplomacy, "a typical phenomenon of the ancien regime . . . would become unnecessary."

From the very beginning of the new republic, John Adams, Tom Paine and the other American leaders set forth as the objectives of American foreign policy peace, full neutral rights in international law, political isolationism, and unrestricted freedom of trade. "Relations between nations would become purely commercial contacts, and the need for a political diplomacy with alliances and balance of power would disappear from the international scene."**

By the autumn of 1777, Britain had intimidated France into stopping the loading of vessels for America, and in ousting the American privateers from hospitable French ports. But the startling news of Burgoyne's defeat at Saratoga coming in early December altered matters completely. Now Vergennes knew that America could win; in addition, the danger of an Anglo-American reconciliation suddenly emerged as Lord North's government moved from a policy of hard coercion to the offer of conciliatory peace terms. Both these factors moved the French toward open war.

From Lexington to Saratoga, Britain had been united in patriotic fervor in a war to crush the Americans. Only the gallant and seemingly discredited minority Whigs, led by Burke and especially by Charles James Fox, the London radicals to the left, and the Chathamites on their right, persisted in opposing the war. The Whigs and the radicals realized that their salvation could only come with a resounding British defeat in America,

*See Gilbert, *Farewell Address*. p. 63.

***Ibid.*. pp. 65-66, 69.

and on such defeat they centered all their hopes. In April 1777, in his *Letter to the Sheriff of Bristol*, Edmund Burke finally came around to Fox's position of advocating repeal of all acts upon America passed since 1763—even the Declaratory Act, which had been an integral part of the short-lived Rockingham ministry. Burke also went so far as to hint that he preferred American independence to continuing the war.

Burgoyne's defeat galvanized the British and the French. The British cabinet tried desperately to conciliate the Americans and avoid French entry, and was now prepared to offer the old Whig terms of going back to the status quo before 1763. The British secretly conveyed these terms to the American commissioners at Paris; but it was all too little and too late; Americans, after three years of bitter conflict, were not disposed to abandon their independence. As would happen again and again in history, an imperialist power, bogged down in an exhausting colonial war which it could not win, desperately tried to find a way to extricate itself; and the revolutionaries coolly pointed to the simple solution: cease-fire and evacuation of all forces as preconditions to negotiations leading to recognition of independence. But the British persisted in holding "face" to be a more important objective. The Americans, however, used these offers to pressure France into immediate entry into the war.

As early as mid-December, the French hastened to promise recognition of the independence of the United States; on January 8, even after failing to obtain Spain's agreement, Vergennes informed the Americans that France was willing to sign a treaty of friendship and alliance with the new republic. Finally, on February 6, 1778, France and the United States signed two vital treaties. The treaty of amity and commerce was a revised version of Adams's Model Plan of 1776; neutrals' rights were guaranteed, but instead of unrestricted free trade between the two countries, they adopted a convenient "most favored nation" clause. The treaty of "conditional and defensive alliance" pledged a military alliance whenever war should ensue between France and Great Britain. The aim of the alliance was declared to be the protection of the absolute independence of the United States. France pledged itself never to claim territory in North America previously held by the British. The two parties pledged themselves never to conclude a separate peace with Britain, nor "to lay down their arms, until the independence of the United States shall have been . . . assured." Each of the two countries also rather rashly mutually extended guarantees to the other's territory, and agreed not to seek compensation from one another for wartime actions. The treaties were a great diplomatic success, and contained virtually everything for which the Americans could have hoped, with no compromise whatever of American independence.

The English Whigs were radicalized enough by these events to come

forth now as open champions of American independence. They and the radicals put up a vigorous and gallant fight to stop the war, led by the Duke of Richmond's motion in early April for evacuation of the United States and recognition of its independence. The British masses, however, showed little sign of recognizing the folly of pursuing the imperialist war; on the contrary, they began to clamor for war with the ancient enemy France, and since war with France always conjured up William Pitt, it is possible that a united opposition behind Pitt could have toppled the North regime. For Pitt, however, Britain's imperial role came first and foremost, and he insured the failure of the justly embittered Whigs by roundly attacking the very concept of independence for the colonies; furthermore, he refused any sort of cooperation with such antiempire men as the Whigs. In virtually the last act of his life, William Pitt, Earl of Chatham, staggered into the House of Lords to register bitter opposition to Lord Richmond's notion. Croaking, "If we must fall, let us fall like men," the dying Pitt collapsed, as Burke acidly put it, "after he had spat his last venom." Pitt had performed his last betrayal, his last obfuscation, of the liberal cause. But his banner was taken up by his disciple the Earl of Shelburne, and the Richmond resolution was defeated in the House of Lords by a vote of 50 to 33.

In Commons, the American cause was led by Fox, who showed himself the equal of Burke as a political strategist. Instinctively, Fox realized that political ideas remain isolated and quixotic until they become rooted in a social class. He began, then, to reach beyond the narrow circle of Whig aristocrats toward the mass of country gentry, who, while traditionally Tory, were instinctively and inarticulately libertarian; their main concern was in keeping tax rates, and therefore government expenditures, as low as possible. He linked up in their minds the American war to the aggrandizement of ministers and their favorite placemen at home. A successful American war would rivet the power of the executive and of the Crown upon Parliament and the British people. In this session, Fox was able to make a serious bid for gentry support, and succeeded on several issues.

While reviving and unifying opposition to the war with America, however, the British liberal movement was beginning to undergo a deep-seated philosophical rift. Elaborating a conservative-liberal position was Edmund Burke. Much of Burke's *Letter to Bristol* was a bitter attack on the nascent radical libertarian wing of the opposition. Burke violently denounced systematic reasoning in political philosophy, as well as the belief in "abstract" natural rights. As against reason and logical consistency, he held up the "instinctive wisdom" of the past, compromise, and ad hoc prudence in political affairs.

Burke was nothing if not provocative, and his *Letter to Bristol* immediately provoked a pamphlet in reply by the ardent Whig peer, the Earl of

Abingdon, who championed the natural rights philosophy. Abingdon, however, was not the intellectual leader of the new libertarian movement. That honor belonged rather to the Dissenting minister, the Reverend Richard Price. Price's magnum opus, widely and enormously influential in England and America, was his *Observations on the Nature of Civil Liberty* (1776). Correctly observing that the Americans were risking all on behalf of liberty as a natural and inalienable right, he set out to examine both the nature of liberty and the controversy with America. Weighing the relative danger to liberty from a despotic government as against a popular mob, Price saw why a settled government is far more dangerous: a mob is by its nature transitory and short-lived, while "despotism wearing the form of government and being armed with its force, is an evil not to be conquered without dreadful struggles. . . ." While representation is a vital check against a king, Parliament's delegated power, too, must be kept subordinate and limited, for true sovereignty must lie in the people themselves.

The true purpose of government, Price argued, was to protect and confirm liberty and the natural rights of men, and not to infringe them. But power must be continually watched, and particular dangers to liberty are an extravagant budget and a standing army. Parliaments must be subject to frequent elections and be free of corruption. He went on as well to denounce England's war against America and its claim to tax the colonies; he also trenchantly defended revolution in phrases very similar to the Declaration of Independence which would appear six months later:

Mankind are naturally disposed to continue in subjection to that mode of government . . . under which they have been born and educated. Nothing raises them to resistance but gross abuses, or some particular oppressions out of the roads to which they have been used . . . there has been generally been more reason to complain that they have been too patient than that they have been turbulent and rebellious.

In setting forth his theory of liberty, Price came close to a stand for anarchism. The polar opposites in political regimes were slavery on the one hand, and self-government on the other, and self-government or self-direction was the key to liberty, not government by law, since laws can be and are made by one person or set of persons to bind others. To Price, "the mark of the free state was that in it every man was his own legislator, all taxes were free gifts, all laws were established by common consent, all magistrates were trustees." In short, the essentials of a system of individualist anarchism. In such a society, moreover, there would be no artificial equality of income or position; the equality would be in individual independence and liberty: "Equality is the independence of each on every

other. No man could be ruled without his consent, or taxed, or abridged of his liberty.”*

Price’s pamphlet quickly went into over a dozen printings, and was rapidly reprinted in Scotland, Ireland, and throughout the United States in pamphlet form and in the weekly press.

Emerging as leader of the London radicals in this period was Maj. John Cartwright. One of the first open advocates of American independence, Major Cartwright refused to serve in the fighting against the Revolution. In contrast to the Whigs, he and other radicals realized that liberty could never become the guiding principle of the British state until the ruling oligarchy was at least curbed. Hence, in his highly popular *Take Your Choice!* (1776), Cartwright urged democratic reform of Parliament to bring about a liberal government. He boldly called for democracy to check and limit the oligarchic power of Parliament; specifically, he urged strictly uniform representation, voting by secret ballot, annually elected Parliaments, and universal manhood suffrage. He even advocated the gathering of a great extragovernmental convention which could reform the British Constitution.

While the liberals were becoming increasingly radicalized on the American question, the harried Lord North, restrained by the king from resigning his post as prime minister, slowly pressed forward the former American policy of the Whigs. Overriding the dismay of the Tory extremists, North pushed through Parliament in mid-March the repeal of all the interfering acts since 1763, including the Tea, Coercive, and Prohibitory acts, as well as abandoning any Parliamentary taxation for revenue upon the colonies. Parliament also created a commission under the Earl of Carlisle to go to America and offer peace terms on the basis of home rule. The British concessions, however, made little impact on the United States, which branded anyone who might come to terms with the Carlisle Commission an enemy of the country. Further, the Americans used this offer, as we have seen, to pressure France into entering the war.

Shortly afterward, Congress received news of the French treaties, which were ratified unanimously on May 4 after only two days of deliberation. The Carlisle Commission arrived in Philadelphia in early June 1778, only to find General Clinton evacuating the city, hardly a strong position from which to bargain with the Americans! The commission’s repeated requests for peace talks were met firmly by Congress’ unanimous rebuff of June 17: there would be no negotiations unless they followed the withdrawal of British troops and recognition of the independence of the United States.

*Robbins, *The Eighteenth Century Commonwealthman*, pp. 337, 340.

It was now only a question of time when hostilities between Britain and France would officially begin—and the clash came at a naval skirmish off Ushant near Brittany on June 17. The two fleets battled to a standoff, and thus furnished an unpleasant reminder to the English that the French fleet was a formidable foe.

With the entry of France into the war, Britain was forced to adopt a defensive strategy in America to permit the waging of a general war. Naval strategy became dominant. Indeed, had French Adm. Charles Hector D'Estaing not dawdled in crossing the Atlantic, he could have intercepted Lord Howe's inferior fleet engaged in the evacuation from Philadelphia. When he arrived in American waters in July, he and Washington blockaded New York City; D'Estaing considered attacking the inferior British fleet in New York Harbor, but the lack of maneuverability for his heavier ships forced him to desist. From there he and General Sullivan moved toward a land-sea siege of the British base at Newport, but stout resistance and stormy waters beat off the French-American attack and both land and sea forces withdrew. D'Estaing, refusing to aid further in attacking Newport, withdrew his fleet to West Indian waters in November.

British strategy for America in the midst of the wider international war was temporarily to emphasize naval conflict, concentrating its land force in a few coastal bases, such as New York City, Newport, and Halifax, from which to wage blockades and raids on American trade and shipping and on coastal centers. Even Lord Germain agreed that the British war on America must be principally naval. But between the French navy and American privateers, now fully and openly cooperating, British naval affairs were in parlous shape. Before French intervention, British blockades and an efficient convoy system had considerably reduced the effectiveness of American privateers. But now, while North delayed in pushing naval construction, American privateers could raid British shipping from France and boldly strike at coastal areas of England and Ireland. Of the single ships of the tiny Continental Navy, the most prominent exploit was that of Capt. John Paul Jones; in the sloop *Ranger*, and operating out of Brest in Brittany, Jones raided and fought successfully during April up and down the coasts of England, Scotland, and Ireland.

The British had decided to center their operations in 1778 on an amphibious expedition of 5,000 of Clinton's men against St. Lucia in the West Indies. The arrival of D'Estaing's fleet forestalled this attack, Clinton was not authorized to take offensive action on land, and so the 1778 campaign was frittered away.

PART VI

**The Political History
of the United States,
1776–1778**

The Drive for Confederation

The most important political fact of the years after independence was the movement toward a formal confederation by the revolutionary states of America. The radicals were scarcely enthusiastic about creating any sort of permanent central government; but their innate distrust of all government, especially large central government necessarily removed from checks by the people, was partially neutralized by their overriding desire to win the Revolutionary War. The myth abounded that formal confederation was necessary to win the war, although the war would be virtually won by the time confederation was finally achieved. The war was fought and won by the states informally but effectively united in a Continental Congress; fundamental decisions, such as independence, had to be ratified by every state. There was no particular need for the formal trappings and permanent investing of a centralized government, even for victory in war. Ironically, the radicals were reluctantly pulled into an arrangement which they believed would wither away at the end of the war, and thereby helped to forge an instrument which would be riveted upon the people only in time of peace, an instrument that proved to be a halfway house to that archenemy of the radical cause, the Constitution of the United States.

The conservatives, on the other hand, suffered from no such hesitation. Those flexible conservatives who went along reluctantly with independence rather than becoming outright Tories, saw in a strong new central government the reconstitution of a powerful State—a British imperium without Britain. Here, they hoped, would be a strong central State which they could expect to control—a State which could bring back mercantilism

and monopoly privilege with even greater benefits to themselves. As Merrill Jensen puts it:

The conservatives who had opposed the Revolution and who went along with it only when they saw no alternatives, as well as many who were not opposed to independence, wanted supreme political authority placed in a central government which could exercise a coercive power over the states and their citizens. . . . They valued the British connection for the very definite advantages it gave the ruling classes of the colonies. When faced with the fact of independence, they demanded the creation of a government which would in some way function as a bulwark of conservative interests: in other words, as a substitute for the British government.*

The radicals, of course, were engaged in fighting a war against centralized government, its taxation, restrictions and privileges, and were not about to favor establishing an equivalent at home to what they were fighting to eject from American shores.

And what of the revolutionary radical principle of locating sovereignty in the people themselves rather than in the "legitimate" government? Would not this be an insuperable barrier to the aims of the Right? But here the able conservatives proved shrewd indeed; they managed to drop quickly the belief in the sovereignty of the crown, and demagogically to incorporate the radical doctrine of popular sovereignty for their own ends. Indeed, they cynically appeared to be *more* democratic than the radicals; for they argued that only a strong national government could *really* represent all the people. This contrasted to the radicals' distrust of central power and their doctrine that the central government should only be a limited federation of sovereign states. In the name of the "people," the conservatives called for the crushing of the powers of the separate states and the aggrandizement of national governmental power. Thus, for the first time on the American scene—but by no means the last time—the Right found the ability to use the language of popular democracy to befuddle the masses, to win their allegiance to strong central government, mercantilism, and monopoly, and away from individual freedom.

The drive for a national State came primarily from the financial oligarchs of the Middle States, and especially from Robert Morris and his Pennsylvania satellites and the allied oligarchs of New York. There were two major reasons for the greater zeal for national aggrandizement by these men than among the conservatives of the South. First, was the former's far shakier rule at home, especially in New York and Pennsyl-

*Merrill Jensen, *The Articles of Confederation: An Interpretation of the Social-Constitutional History of the American Revolution, 1774-1781*. (Madison, Wisc.: University of Wisconsin Press, 1962), p. 163.

vania; and second, was the greater economic and financial stake in the central government than that among the planters of the South. For example, Morris and his cohorts had already made millions from the centralized war effort alone.

Until a formal governmental structure should be achieved, the conservatives tried their best to aggrandize the power of the existing Continental Congress at the expense of the citizens of the several states. Leading in this attempt was James Wilson of Pennsylvania, Robert Morris' ally and chief theoretician. Scorning the history of Congress, Wilson boldly declared, as early as August 1776, that Congress "really" represented all the American people and was thus superior to the states; indeed the states, declared Wilson, had really been dissolved into one large state. But though Pennsylvania's Benjamin Franklin, Dr. Benjamin Rush—a centrist shifting steadily rightward—and the now conservative John Adams argued similarly, their repeated efforts at centralization were all unsuccessful. Thus, in early 1777, Wilson argued that Congress had to oppose a convention of New England states that had met the previous December to discuss plans to prosecute the war. Adams, Rush, and he asserted that an unauthorized meeting would virtually usurp the alleged powers of Congress. But the radicals fought back powerfully. Sam Adams acidly pointed out that only tyrants opposed the right of the people to assemble; and Richard Henry Lee insisted that there was no confederation, and therefore there could be no infringement of law. Congress finally agreed that it had no power to prohibit or punish such regional meetings.

Another fierce struggle about enhancing congressional power over people came in early 1777; it was waged over a measure authorizing Congress to empower local officials to arrest deserters without participation by the state governments. Led by James Wilson, Congress at first passed this law, but it was later forced to rescind. Just arrived in Congress, one Dr. Thomas Burke of North Carolina, an Irish-born physician, quickly assumed the leadership of the radical libertarian forces. He charged that this assumption of power by Congress would "thereby endanger the personal liberty of every man in America." He pointed out that such measures would give Congress "a power to act coercively . . . against the subject of . . . every state" and dissolve state institutions. It would have "power unlimited over the lives and liberties of all men in America." At the same time, Burke and Lee also managed to block an attempt by Wilson and John Adams to vote on a return of Congress to Philadelphia by vote of individual congressmen, rather than by states—another attempt to fuse the states into "one common mass," as Adams had revealingly phrased it. If Congress were thus allowed to change its own rules—of voting by states—Burke declared, it would then be "bound by no rule at all and only governed by . . . an arbitrary tyrannical discretion." Burke's threat to withdraw

should Congress thus change its rules forced the conservatives to retreat once again.

In a letter to North Carolina Gov. Richard Caswell, Dr. Burke penned a magnificent and prophetic analysis of the drive for power on the part of the conservatives, as well as other members of Congress:

The more experience I acquire, the stronger is my conviction that *unlimited power cannot be safely trusted* to any man or set of men on earth. No men have undertaken to exercise authority with intentions more generous and disinterested than the Congress. . . . [How] could individuals blessed with peaceable domestic affluence . . . endeavor at increasing the power with which they are invested, when their tenure of it must be exceedingly dangerous and precarious . . . ? This is a question I believe cannot be answered but by a plain declaration that power of all kinds has an irresistible propensity to increase desire for itself. It gives the passion of ambition a velocity which increases in its progress, and this is a passion which grows in proportion as it is gratified.

. . .

These and many other considerations make me earnestly wish that the power of Congress was accurately defined and that there were adequate check provided to prevent any excess. . . .

Even thus early men so eminent as members of Congress are willing to explain away any power that stands in the way of their particular purposes. What may we not expect some time hence when the seat of power shall become firm by habit and men will be accustomed to obedience, and perhaps forgetful of the original principles which gave rise thereto. I believe, Sir, the root of the evil is deep in human nature. Its growth may be kept down but it cannot be entirely extirpated. Power will some time or other be abused unless men are well watched, and checked by something they cannot remove when they please.

The main thrust of the conservatives for greater power was not to be through the existing Congress, but through the formal creation of a far stronger one. In a kind of two-pronged attack, efforts were made in this regard at the same time as the push was on to centralize power in Congress. Thus, when Richard Henry Lee, in June 1776, introduced a resolution for confederation as a corollary to his resolve for independence, the conservatives were able to obtain overwhelming superiority in the Congressional committee of thirteen to draw up a plan for confederation. Chairman of the committee was the archconservative John Dickinson, who submitted a draft of "Articles of Confederation and Perpetual Union," on July 12. Dickinson's draft was heavily influenced by a plan of confederation that Franklin had prematurely circulated in the previous year. A veteran pioneer of the idea of a strong central government over the American colonies, Franklin now outlined a similar plan with the British

imperium left out. The crucial consideration was the locating of sovereign power in the national Congress; delegates would vote individually and be chosen by population, and Congress would have unchecked power over war, peace, and foreign affairs, and would seize control over the untapped and promising lands west of the Appalachians. Moreover, Congress would have all law-making powers "necessary to the general welfare," and that indefinable phrase gave *carte blanche* to legislative whim. Franklin provided for a permanent executive council, chosen by Congress but its powers were not to be violable by that body. Only one vitally important power essential to sovereignty was omitted: the taxing power, against which, after all, the Americans were in direct revolt.

During 1775, the colonies had not yet been ready for independence or for federation, but now Dickinson drew heavily on Franklin's draft for federation. Dickinson, too, provided for the national sovereignty in Congress, its powers to be sweeping, and for a permanent executive council, but his draft was a bit less permissive than Franklin's. He set forth specifically the powers that could be wielded by Congress, not leaving them limitless. He also provided that each state, as in the existing Congress, have one vote, thus granting an important concession to the states. Furthermore, whereas Franklin would have had all matters decided by simple majority vote, Dickinson conceded that certain fundamental issues, including war, coinage, and apportionment of revenue, would require the vote of nine states. Although a concession to radicalism, it was still a far cry from the unanimity that had been needed for independence.

The powers left to the states in the Dickinson draft were negligible. Treaties specifically overrode state tariffs, and the Articles of Confederation overrode state internal police power. Furthermore, the draft strongly implied that all powers but the overridable internal police power were granted to Congress, rather than to the states. Congress would also have the power to settle disputes between states. The one vital restriction remaining upon Congressional power was that it would not be allowed to levy taxes; these would be levied by the states, and the revenue supplied by them to Congress.

Three specific clauses of the Dickinson draft proved to be the focal points of raging controversy within the Congress; all involved the central problem of the conservative drive for a unitary national state and strong central government. One struggle was an attack from the right, from those who wanted to restore the Franklin idea of voting by individuals elected proportionately to population rather than by states. The conservatives were bolstered by the delegates from the large states, who, of course, tended to back an amalgam by population in which they would exert far more influence than in equal voting by states. The attack from the right was led by Franklin, aided by John Adams and Benjamin Rush. Leading

the small state radicals was the Reverend John Witherspoon, president of Princeton College, who insisted that the confederation should not be a national State but a federal union of sovereign states. Finally, after a furious battle, equal voting by states prevailed over the stubborn objections of the majority of the Virginia delegation, John Adams, and Arthur Middleton of South Carolina.

If voting in Congress were to be equal by states, how would the expenses of the central government be apportioned among the states, which would undertake to supply the revenue? The sensible solution of the Dickinson draft was to requisition funds according to the population of each state. Here again, the attack was from the right, specifically from the slave states of the South wishing to keep their slaves untaxed. They proposed requisition on the basis of the property value of lands and improvements. This was a cunning attempt to foist the burden of revenue upon the liberal and relatively slaveless New England states, where land was intensively cultivated and improved, and therefore of a relatively higher value than in the other states. While the original draft prevailed during 1776, the final vote in late 1777 was a victory for the southern view. The unanimous vote against lands and improvements as the basis for calculating revenue cast by the four New England states was overcome by a solid phalanx of five votes from Maryland, Virginia, the Carolinas and New Jersey. (Pennsylvania and New York's two delegates were evenly split.)

The most bitter of the three controversies around the Dickinson draft was over its proposal to nationalize all the western lands: to vest all the lands beyond the boundaries of the thirteen states in the ownership of Congress. The alternative was to allow them to remain in the hands of Virginia, which had vague charter claims to all land westward to the Mississippi.

The radicals opposed the Dickinson draft in reaction to the imposed jurisdiction of a remote central government in which the public had no direct participation. More important, they realized that the drive for nationalization of the western lands came from long-associated groups of highly influential land speculators, whose grandiose claims to western territory had already been spurned by Virginia, and who counted on the national government to grant them their demands. If Congress ultimately would not do so, they had nothing to lose. Many historians have treated this conflict as being between the "landless" states favoring nationalization, against the landed in favor of keeping their claims; yet two of the six "landless"—New Hampshire and Rhode Island—showed no interest whatever in nationalization. It was from Maryland, Pennsylvania, Delaware, and New Jersey, home of the key groups of speculators in western land, from which all the pressure came. Before the Revolution, the land speculators had looked to the British government to establish their

monopolistic claims; now they turned equally naturally to the Continental Congress.

It is not at all coincidental that John Dickinson hailed from Pennsylvania; that Franklin, whose plan had envisioned Congressional control of the western lands, was both a Pennsylvanian and a land speculator; and that the chief defenders of the land nationalization clause in Congress were Samuel Chase of Maryland, a member of the Illinois-Wabash Co. of western-land speculators, and James Wilson of Philadelphia, the president of the same company.

The speculators were driven to the Dickinson draft by Virginia's actions during late June 1776. The Virginia Convention had formally asserted her jurisdiction to all her grandiose charter claims to western land; it had condemned all unauthorized purchases of land from the Indians; and finally, upon petition of the settlers, it guaranteed to the actual settlers the right to preemption of their land. This resolution of May 14 was the first legislation in American history to assert the rights of the settler. It was this Virginia claim, and the guarantee to the settlers, that led the land speculators to try for nationalization of the western lands.

The Dickinson draft, completed less than a month after Virginia's action, granted to the land speculators more or less all of their goals of nationalization. Congress was given the sole power to decide state boundaries and to purchase lands beyond these boundaries from the Indians, thus implying the existence of American lands outside the bounds of any state. It was also specifically given sole and exclusive power to limit the bounds of state claims to western lands.

The Virginians reacted to the Dickinson draft with understandable bitterness; after all, one of the grievances against Great Britain had been its meddling and authority over the western lands. Richard Henry Lee and Thomas Jefferson led the attack, while Samuel Chase and Thomas Johnson of Maryland and James Wilson led the nationalizers. Wilson even tried to specify and strengthen the Congressional powers over the lands, but each of the proposals was roundly defeated. Finally, by October 1777, the landed states had triumphed. Lee successfully moved to insert in the Articles a clause to the effect "that no state shall be deprived of territory for the benefit of the United States."

For his part, Thomas Jefferson was quite clear that his resistance to land nationalization was founded not on the territorial claims of Virginia but on his deep-seated belief in justice to the settlers. As his biographer puts it:

In his [Jefferson's] mind this was not primarily a question of rivalry between one state and another. . . . His major concern was not for the land but for the people who settled on it; and at this time he believed that the interests

of the pioneers could be better safeguarded by states than by Congress, which seemed more susceptible to the pressure of speculative land companies. He was deeply sympathetic with squatters, but had little patience with absentee groups who came seeking special favors. What he most relied on for protection of individuals was local self-government, . . . favoring the early development of it in Virginia's outlying lands, but until he could be reassured about the attitudes of Congress toward the small landholders, he preferred to depend on the states to protect them. . . .*

Leading the drive for land nationalization were three large and international companies of land speculators: the Indiana Company, which claimed an enormous tract south of the Ohio, virtually consisting of what is now West Virginia; and the Illinois and Wabash companies, claiming a still vaster region, including much of present day Indiana and Illinois. All these enormous tracts were in Virginia-claimed territory. Heavily and prominently involved in the Indiana Company were: Robert Morris; the Wharton brothers, Philadelphia merchants and financiers; William Trent, brother-in-law of George Croghan; the Franks and Gratz families, international Jewish merchants, based in Lancaster, Pennsylvania and Philadelphia; Benjamin Franklin, his son William, and Benjamin's son-in-law Richard Bache; and the Tory, Joseph Galloway. Archconservative and nationalist James Wilson was in the pay of the Indiana Company, and Thomas Wharton was selected by the speculators to distribute shares of their stock in bribes to members of Congress. The huge Illinois Company grant included virtually the same crew: Trent, the Franklins, the Whartons, Croghan, and Galloway. Patrick Henry, who later broke angrily with the land speculators, was at the time either in the pay of the Illinois Company or a direct participant in it, and accordingly favored the nationalization plan. The Wabash Company, claiming nearby lands, included the Gratz-Franks group and the entire top leadership of the Maryland oligarchy: Samuel Chase, Governor Thomas Johnson, former Governor William Paca (the brother-in-law of Robert Morris), and Charles Carroll of Carrollton. No wonder that Maryland fought fiercely for nationalizing the western lands! In late 1778, after the American forces had wrested the Illinois country from the British, the Illinois and Wabash companies merged their interests into one powerful force, which would then include Silas Deane and Conrad Gérard, French minister to the United States.

At about the same time, 1774–76, Virginia won a successful three-cornered conflict of its own with settlers and with speculative land companies. Its most important land struggle involved pioneers who had trekked across the Appalachian Mountains to settle on lands claimed by Virginia

*Dumas Malone, *Jefferson the Virginian*, p. 244.

south of the Ohio River in what is now Kentucky. In 1774, Lord Dunmore's royal Virginia troops had driven the Shawnee Indians out of the Kentucky region ("Dunmore's War"), and settlement across the mountains promptly ensued. At first, the settlers simply regarded themselves as the extreme western end of Virginia's Fincastle County. Very quickly, the new settlers began to imbibe the very ideas of self-government for occupiers of new land that the Americans in general were using against Great Britain. The arguments were clearly applicable to the Kentucky settlers as against the remote government of Virginia.

Into this potentially explosive situation stepped an ambitious group of land speculators headed by Judge Richard Henderson of North Carolina. They formed the Transylvania Company in January 1775, and soon bribed the Cherokee tribe to come together and cede the company the large land area southwest of the Kentucky River and north of the Cumberland. Since the Cherokees, ensconced in the mountains to the south, made no use of this land anyway and didn't really own it, they were happy to consent to this "sale" at the "Treaty of Sycamore Shoals" in mid-March. To head company operations in the Kentucky lands, Henderson hired the celebrated frontiersman Daniel Boone, who hacked a trail (the Wilderness Road) westward across the Cumberland Gap in the mountains.

In the next step of his ambitious scheme, Henderson persuaded the fewer than 200 settlers in Kentucky to send eighteen delegates to a convention at Boonesborough, on the Kentucky River, at the end of May 1775. Demagogically playing on ideas of independence and self-government, he eloquently proclaimed "that all power is originally in the people," and the delegates unanimously decided to establish Transylvania as an independent colony, free of all eastern ties. The convention established new courts, militia, and scales of punishment for the new Transylvania, and established freedom of religion. Congress was petitioned to recognize the new region as a separate colony.

But Transylvania was not destined to remain an idyl for very long. Henderson quickly began to use its new-found independence to mulct the settlers unmercifully. He raised the price of land he charged to settlers and imposed quitrents as stiff as those charged in Virginia. The unfortunate settlers soon came to regard Henderson's Transylvania scheme as a far worse threat than Virginia. Actually, the Kentucky settlers would have preferred to be independent and truly free of both Transylvania and Virginia. But for remote settlers facing an Indian threat, this was not a very realistic hope. Led by the citizens of Harrodsburg, the settlers turned to the idea of reincorporation into Virginia. In a convention held at Harrodsburg on June 6, 1776, the delegates selected the young frontiersman George Rogers Clark and a young attorney, John Gabriel Jones, to be

their delegates to apply for representation in the Virginia assembly as a new western county.

Their trip to the Virginia governmental seat at Williamsburg was a truly heroic one, for they ran into the newly erupted Cherokee War. In early July 1776, the prowar wing of the Cherokees, led by the fiery young chief Dragging Canoe, erupted to attack frontier settlements from southern Virginia to northern Georgia. Their timing was remarkably bad, for the Tory risings in the South, as well as the British attack upon Charleston, had already been defeated, and the militia of four southern states, especially of the Carolinas, were able to devote full attention to the Cherokees. Spurred on by handsome government payments for every Indian scalp, they had brutally and systematically burned and devastated every inch of Cherokee-cultivated land and property by August. Had the Cherokees waited another year to coordinate with Iroquois attacks, or to unite with other Indians, their war might have been far more successful. As it was, Dragging Canoe's militant policy proved to be merely adventurist. In addition, his braves did not always bother to make a distinction between Tory and Whig settlers, and only succeeded in deeply alienating many southern Tories from the British cause with which the Cherokees were allied.

Finally reaching Williamsburg after their travail, Clark and Jones presented their case to the Virginia assembly in early October. There they argued against Henderson, who was aided by those apathetic to the west country and by Fincastle County, which stood to lose its claimed jurisdiction over Kentucky. But Kentucky was backed by Gov. Patrick Henry, George Mason, and Thomas Jefferson, who was always an eloquent friend of the settler. Finally, on December 7, 1776, Virginia voted to grant Kentucky admission as its westernmost county. The Henderson land clique had been totally foiled.

The Articles of Confederation

We have just seen that in the three most important specific controversies waged in Congress in framing the Articles of Confederation, the Dickinson draft was in one instance altered leftward (preventing Congress from seizing control of the western lands), in another, rightward (changing the basis of taxation from total population to property values), and in another, remained unchanged (rejecting a rightward shift from equal voting by state to voting by individual Congressmen representing population). Generally, however, the radicals were not awakened to the revolutionary (or rather, counter-revolutionary) significance of the centralizing Dickinson draft until Dr. Thomas Burke arrived to assume the radical leadership of Congress in the spring of 1777. Burke realized the sweeping centralization implicit in the Dickinson draft, and he saw that the third article, by reserving to each state the power of internal police, “consequently resigned every other power” to the central government. To block this, he proposed as a substitute a crucial amendment, which, as Article Two of the completed Articles of Confederation, formed the bulwark of state sovereignty against the pretensions of centralized power. In its final form, this Article read: “Each state retains its sovereignty, freedom and independence, and every power, jurisdiction, and right, which is not by this confederation expressly delegated to the United States, in Congress assembled.” This amendment shifted sovereignty and reserved powers from Congress and the central government to the states. Fighting hard for his amendment against the opposition of James Wilson and, surprisingly, Richard Henry Lee, Burke overcame initial reluctance and was finally able to swing eleven states to his support, leaving only Virginia in opposition.

Furthermore, the Dickinson draft had created a council of state, functioning as a permanent executive body with irreducible powers. This provision for a virtually independent executive was excised from the Articles, and replaced by a "Committee of the States," an arm of Congress which would have no substantial power. Indeed, the completed Articles, vigilant of any buildup of executive tyranny, expressly forbade Congress from vesting in the committee any power to make war or peace, to regulate money or coinage, or any of the other fundamental Congressional powers.

The Dickinson draft had prohibited the states from levying any duties or tariffs contradicting the provisions of any treaties made by Congress. This was amended on the floor of Congress, however, to provide that no treaty could impair the power of any state to prohibit imports or exports, or to impose its own tariffs or duties, provided that foreigners and its own citizens were subject to them equally.*

The Articles of Confederation were completed by Congress on November 15, 1777, and submitted to the several states for the required unanimous ratification. While the radicals had succeeded in pulling much of the centralist teeth, the Articles were still a momentous step from the loose but effective unity of the original Continental Congress to the creation of a powerful new central government. To that extent, they were an important victory for conservatism and centralization, and proved to be a half-way house on the road to the Constitution.

The first few articles of the "Articles of Confederation and Perpetual Union" were sensible agreements among the several states, rather than the erection of a central government. Thus, apart from Article Two's declaration of state sovereignty and reserved powers to the states, the states pledged mutual defense, mutual privileges and immunities among the citizens of the respective states, and full faith and credit to the acts and judicial proceedings of the other states. Thereafter central power began to assert itself. While the prohibition on any state's engaging in its own foreign diplomacy, treaty or war seemed sensible, the prohibition against any state's having an army or navy not approved by Congress was an important seizure of the power of force by Congress. So too was the compulsion on each state to maintain a militia, and the requirement that

*Jensen expresses surprise that such centralist leaders as Robert Morris, James Duane, and William Duer supported this "states' rights" amendment. Rather than lamely trying to explain this vote as a concession to New York and Pennsylvania radicals, however, it should be clear that these archconservatives did not at this point wish to give up the power of the states to levy tariffs. Contrary to Jensen's implicit assumption here, "merchants" are not inveterate opponents of protective tariffs. The Philadelphia and New York oligarchs desired a nationwide tariff, and there was no reason at this particular point—certainly none deriving from formal nationalist principles—for them to abandon the power of state tariffs as well. Cf. Jensen, *Articles of Confederation*. p. 178.

each state supply revenue to Congress in proportion to its land values. (Congress, however, had to rely on the states to meet these requisitions.) So also was the power vested in Congress to be the final court of appeal on all boundary or jurisdictional disputes between states or land grant disputes involving two or more states. Moreover, Congress acquired the sole power to regulate the alloy and weight of all coins, whether minted by itself or the states; to establish post offices and exact postage; and to appoint all naval officers and all army officers over the rank of colonel, and to direct their forces. Congress also had the power to requisition soldiers from the states in proportion to the number of their *white* inhabitants (thus privileging slave states, who did not have to supply soldiers in proportion to their slaves), and to borrow money or emit bills of credit (i.e., paper money).

A key clause, Article Twelve, provided that all previous debts and bills of credit emitted by Congress would be deemed payable by the new government, thus setting a precedent for a compulsory visiting of the debts of the past upon future generations. The union, too, was made compulsorily perpetual, with *unanimity* of every state legislature, as well as approval by Congress, required for any alteration of the Articles of Confederation.

For such fundamental decisions as declarations of war, issue of letters of marque (also reserved solely to Congress), making treaties, coining or regulating money, voting common expenses, issuing bills, borrowing money, or raising armed forces, the vote of nine states, voting equally by states was required. This provision completely abandoned the requirement of unanimity which had been needed to declare independence or to ratify the Articles themselves. Unanimity would now only be needed to change the Articles.

Each delegate to Congress was to be elected annually by the state legislatures. The democratic and libertarian belief in rotation in office as a vital check upon the building up of entrenched political power was represented in the prohibition, in the Articles, against any Congressional delegate serving for more than three years out of any six. Moreover, he was prohibited from holding any central government office while serving as delegate.

The Articles were not exactly received with huzzahs; rather, they were greeted quietly and dutifully, as a needed part of the war effort against Britain. One of the keenest critiques of the Articles, as might be expected, came from Thomas Burke, who warned that, under cover of the war emergency, eager power-seekers were trying to impose a central government upon the states. He urged the North Carolina legislature not to ratify: not only no confederation, but no Congress, would be necessary after the war; and, in any case, each state must have the right to control

all the soldiers within its own territory. In response, the North Carolina legislature, controlled by radicals, expressed strong criticism of the excessive central power over the states and ratified only part of the Articles; it was only at the end of April 1778 that North Carolina consented to ratify in toto.

In the South Carolina Assembly the drive against the Articles was led by the radical leader, William Henry Drayton. He warned that the central government would seize effective sovereignty under the Articles, and attacked their vagueness and ambiguity. He also warned that constitutional precision was vital, for otherwise a consideration of "the spirit of the laws" would provide a ready route for Congressional assumption of power in the future. He effectively quoted the great Italian jurist Beccaria to the effect that the "spirit" of the law would be found in the necessarily fluctuating and subjective interpretations, and in the whims and crotchets and interests of the Congressmen and other concerned people at the time. He also attacked the abandonment of unanimity, and proposed a vote of at least eleven states to be needed for fundamental decisions. South Carolina's ratification included numerous amendments restricting central power, including denial of Congressional jurisdiction over interstate disputes. However, South Carolina, too, finally ratified the Articles in early 1778.

In New Hampshire also, the Articles were under heavy fire from the left. Town meetings considered the proposal throughout the state, and there was general dissatisfaction at real estate values as the basis of taxation. Some towns also urged that a declaration of war be required to be unanimous among the states. However, the New Hampshire legislature passively ratified the Articles in March 1778. Massachusetts followed a similar procedure. The towns suggested many valuable changes restricting central power, among them a required vote of eleven states for important decisions, and requiring that decisions on war and peace be left to the people of the states rather than to Congress. And yet the Massachusetts General Court meekly ratified the proposed Articles of Confederation.

Connecticut offered an amendment to the Articles prohibiting any standing army under Congress in time of peace, and New Jersey partly agreed. But again, these states soon fell into line.

But while all other states soon ratified (New Jersey and Delaware at the turn of 1778), Maryland, run by a tightly knit little oligarchy of land speculators, persisted in holding out against ratification unless the western lands were nationalized. As a consequence, the Articles of Confederation were not to be ratified and go into effect until 1781, when the Revolutionary War would be all but over.

Radicalism Triumphs in Pennsylvania

Certainly the most exciting political event in the years after the Declaration of Independence was the triumph of the radicals in the Pennsylvania Constitution of 1776. Pennsylvania's proprietary status had allowed its colonial assembly to retain its dominance even after war began; its conservative opposition to independence then forced the independence movement to polarize into a truly radical opposition. In the provincial conference of June 1776, this opposition had created a dual government in scornful defiance of the moribund assembly, and had declared independence. The conference organized a provincial convention to frame a new constitution for Pennsylvania, and this convention was weighted heavily in favor of representation from the west, in contrast to the previous weighting in favor of the east. It also greatly broadened the suffrage, giving the vote to all taxpaying adult military associators who would take a loyalty oath to the rebel cause.

The Pennsylvania convention which met on July 17, 1776, was heavily dominated by the radicals from Philadelphia and from the west. Benjamin Franklin was named president of the convention, but he was well content to serve as figurehead and took no interest in state politics at the time, preferring to work with the conservatives on the national scene. The major drafters of the Pennsylvania Constitution were the libertarian Prof. James Cannon of Philadelphia College, his fellow Philadelphia mathematician, David Rittenhouse, and the leader of the Philadelphia mechanics, Timothy Matlack. Not delegates to the convention but highly influential behind the scenes were Dr. Thomas Young, formerly of Massachusetts and ideological mentor of Ethan Allen, and Philadelphia merchant and

jurist George Bryan. The mass of the delegates were far more broadly based than American legislators had ever been; instead of dutifully electing their betters to office, the masses from among farmers and artisans had risen up to elect delegates of their own.

In the Pennsylvania constitution, the radical leadership and their new mass base created a remarkably democratic instrument which quickly became the object of hate and alarm among conservatives of every stamp throughout the country. Its essence was the radicals' realization that the inevitable thrust of despotism comes from entrenched oligarchy, and that therefore liberty is best assured by checking and scotching that oligarchy before it has a chance to grow. Conservative urgings of bicameralism were swept aside, and a single-house legislature created with no oligarchical upper house allowed. Executive tyranny was checked in advance by creating a plural executive, a council elected in rotation and removable at any time by the elected assembly. The president of this council, elected by joint vote of council and assembly, was only the presiding officer of the council with no real executive power. Furthermore, the council itself was strictly subordinate to the assembly and had no veto power over legislation. Plural officeholding was totally forbidden. Judicial despotism was prevented by making the Supreme Court judges *not* life judges guaranteed tenure on good behavior, but elected by the council for seven-year terms and removable by the assembly at any time for misbehavior. Military despotism was checked by allowing the state militia to select its own officers of colonel and below, higher officers to be selected by the assembly. Cannon and his Philadelphia Committee of Privates lost their fight, however, to make *all* militia officers electable by their men.

Contrary to many interpretations of the Pennsylvania constitution, the aim of the framers was *not* to erect unchecked rule by the one-house legislature. On the contrary, its power was also to be severely checked in advance. Thus, state government tyranny over local affairs was prevented by making all local officials elected by their local community. And no bill was to become law unless passed by *two* successive assemblies, so as to test the popular will before any measure could be finally passed. To insure rotation in office as a check upon entrenched power, representatives in the assembly could not serve more than four years out of every seven. An especially interesting check upon the legislature was to be a council of censors, whose job would be to meet every seven years to examine whether any part of government had exceeded its constitutional power (i.e., to function perhaps as a kind of judicial review), and to call a new constitutional convention to amend the old.

The constitutional suffrage continued along lines similar to the voting for the convention itself. Suffrage was broadened by extending it to all patriotic taxpayers and sons of freeholders. While overrepresentation of

the west was to continue for two years, the constitution recognized that representation in proportion to the number of voters (in this case taxables) "is the only principle which . . . can secure liberty" and thus dared to undercut the radical voting base itself on behalf of radical principle, establishing such proportional representation by 1778. One undemocratic feature confined to the freeholders the nomination of two choices for each post of justice of the peace, sheriff and coroner, one of whom would be chosen by the state council. The constitution-makers inserted, again over Cannon's objections, a Christian oath for holding office—an oath that unusually allowed Roman Catholics to accept office. Two particularly libertarian clauses in the constitution were the abolition of imprisonment for debt (except in cases of fraud) and the allowing of the right to vote to all foreigners resident more than a year in the state, which served to enfranchise many German immigrants. "Excessive" bail was prohibited, and punishments were to be reduced to become more proportionate to the crimes. In addition, jails were to be made places of forced labor where the criminals could be made to work, partially to repair the injuries they had committed. Perpetual entails of estates—an ancient feudal abuse of property—were prohibited, and a free press guaranteed to everyone.

The Pennsylvania constitution also included a comprehensive "declaration" or bill of rights. This included the bulk of the model Virginia Bill of Rights, for example, natural rights, power in the people, right of abolition of government, right of jury trial, liberty except by process of law, prohibition of general warrants, and prohibition of standing armies. To these, Pennsylvania added many other highly libertarian clauses. One held "that all men have a natural and unalienable right to worship Almighty God, according to the dictates of their own consciences," and that therefore there must be no compulsory religious establishment or abridgement of rights on account of religion—in short, full freedom of religion. A second stated "that the people have a right to freedom of speech, and of writing, and publishing their sentiments; therefore, the freedom of press ought not to be restrained." A third clause asserted the "natural inherent right" of all men to emigrate to a state that will receive them, or to form a new state on vacant lands. Another article upheld the right of the people to assemble and to petition for redress of grievances.

A potentially sweeping libertarian clause held "that every member of society hath a right to be protected in the enjoyment of life, liberty, and property," but inconsistently drew from that the qualifying non sequitur that he "therefore is bound to contribute his proportion toward the expense of that protection." The bill of rights also upheld, in this state with a long-time pacifist tradition, the right of conscientious objection to bearing arms upon payment of compensation. Some of the members of the convention toyed with the idea of a vague clause criticizing concentration

of property in the hands of a few, but this egalitarian clause was stricken from the final draft.*

The highly liberal and democratic Pennsylvania constitution, promulgated on September 28, 1776, proved to be a beacon and inspiration to libertarians and a scourge to the conservatives throughout America. The absence of an upper house greatly angered John Adams and Benjamin Rush, who was pushed rightward by the constitution. Most resistant was the bulk of the wealthy and the well-born, reluctant to give up their old privileges. As one contemporary opponent of the constitution frankly put it: "Must gentlemen, who have ruled society for a century past, be trampled down to the level of common mechanics in an instant and be obliged to consult their humors . . .?"** Dr. William Shippen, a member of one of Philadelphia's leading families, wryly wrote of the frenzied opposition:

I don't wonder to see more of our friends offended and full of resentment upon the change who have been heretofore at the head of affairs, in short have in many instances behaved as though they thought they had a sort of fee simple in them and might dispose of all places of honor and profit as pleased them best, now to be ousted or at least brought down to a level with their fellow citizens.

The main point of attack seized upon by the conservatives—and by historians since—was the convention's insistence upon prescribing a test oath of loyalty to the constitution and the new government by all Pennsylvania voters. The convention also raised revenue by levying fines on nonassociators, and decreed that justices of the peace could seize and hold indefinitely without trial or habeas corpus anyone speaking or writing against measures of the United States. While pointing to invasions of liberty by liberty's proclaimed champions was certainly a neat debater's trick, it was superficial and actually proved little. In the first place, the point was cynically demagogic, as the conservatives cared precious little for liberty. But more than this, it must be emphasized that invasions of liberty, particularly the liberty of Tories, were growing apace throughout the country. The Pennsylvania test oath was part of this nationwide crack-down, a crackdown here occurring in a state riddled with Tories and Tory sympathizers. While the oath was certainly deplorable and inconsistent with liberty, it is impermissible to equate mechanically the systematic invasions of liberty by a despotic regime with the sporadic excesses grow-

*Professor Douglass, in his illuminating work on political controversies in the Revolutionary period, lays stress on this clause as evidence of a certain "New Deal" orientation in the assembly. But surely the important point is that this admittedly radical-dominated convention rejected this clause in the constitution. Cf. Elisha P. Douglass, *Rebels and Democrats* (Chapel Hill, N.C.: University of North Carolina Press, 1955), p. 266.

***Ibid.* p. 274.

ing out of a radical revolution's desperate attempt to install a liberal regime against the opposition of its mortal enemies.

The wealthy and therefore the educated men of Pennsylvania and, hence, the bulk of the lawyers, opposed the constitution, which was defended by the radical theoreticians and supported by the mass of western farmers and by many urban artisans. The right, unwilling to accept defeat, rapidly formed an "Anti-Constitutionalist" party dedicated to framing a new constitution, while the radical defenders of the new regime became the "Constitutionalists." The Anti-Constitutionalists organized a large meeting in Philadelphia in mid-October, which passed numerous resolutions against the constitution. These critics of libertarians tipped their philosophical hand by calling for the separation of powers as taught by the reactionary Baron de Montesquieu, and also for a more stringent religious test for voting. A large Philadelphia mass meeting a few days later "ratified" these resolves, over the opposition of Young, Matlack, and Cannon.

But the Philadelphia dissenters found their way totally blocked in the hinterland; the committees of Cumberland and Chester counties rejected the Philadelphia resolves, and no county meeting unqualifiedly endorsed them. The November elections, while electing Anti-Constitutionalists from the city and county of Philadelphia, placed the Constitutionalists in firm control of the assembly. But the Anti-Constitutionalists, led by John Dickinson, tried to wreck the assembly by staying away from the sessions and preventing a quorum. The radicals, however, simply and effectively held new elections for the posts of the absent members, and by March 1777, growing Constitutionalist strength gave them a quorum. The assembly under the Pennsylvania constitution was firmly in radical hands.

The conservatives, however, refused to relax their fight; in county after county, they would not serve in public office, and, as in Bedford County, conservative county clerks refused to surrender official records to their successors. Lawyers would not practice in the courts. Rightists rioted in Lancaster and other counties. Increasingly, rightist agitation was being led by James Wilson from Philadelphia. To counter the agitation, the Philadelphia radicals, led by the young artist Charles Willson Peale, formed a Whig Society and a committee of correspondence consisting of Peale, Young, Cannon, Rittenhouse, and Thomas Paine, who brought his powerful pen to the defense of the constitution. Amidst the war crisis, Congress presumed to step in and grant power to Pennsylvania's executive officials, and the right mounted a crescendo of propaganda for a new constitutional convention. This plan was foiled by the crisis precipitated by General Howe's advance on Philadelphia in July 1777, when all constitutional questions were postponed. The thwarting of the rightist plans by the British advance was in a sense poetic justice; for this campaign by the right

against the constitution played into the hands of the numerous Pennsylvania Tories and greatly weakened the state's role in the Revolutionary War. To try and throw off the stigma of Toryism, the Anti-Constitutionalist party began to call themselves "Republicans."

In contrast to the conservatives, the radicals in control of the assembly showed themselves paragons of magnanimity reaching the point of mad-cap generosity. Thus, their archenemies Robert Morris and James Wilson were retained as delegates to Congress, and they chose the now determined conservative Joseph Reed as first chief justice of the state, only to have him refuse brusquely as part of the withdrawal drive to scrap the constitution. After Reed declined, the post was offered to the Anti-Constitutionalist Thomas McKean, who was opportunistic enough to accept it. Finally, the radicals chose the moderate conservative, Thomas Wharton of the Indiana Company, to be the first president of the Pennsylvania council. When Wharton died in the spring of 1778, moreover, the radicals offered this important post to Reed. This offer finally pricked his opportunism and persuaded him to desert the bitter-end opponents of the constitution.

Struggles Over Other State Governments

If radicalism was to have its greatest triumph in Pennsylvania, this was not to be matched in Massachusetts, the birthplace of American radicalism. As we have seen, Massachusetts had taken a considerable turn rightward after the Revolutionary War began. For one thing, it could, for a while, fall back on its old charter rather than have to precipitate a bitter internal struggle to dislodge a Britain-oriented assembly, as happened in Pennsylvania. For another, its major radical leaders had either shifted sharply rightward (John Adams and Hancock) or else lost their sharpness of purpose (Sam Adams). But even so, the Adamses remained the bulwark and focus of the decentralist and left faction in the Continental Congress. Only the Berkshire Constitutionalists in far western Massachusetts had developed a domestic radicalism comparable to the dominant Pennsylvania left. In some respects, the Berkshire Constitutionalists surpassed them.

As Berkshire and Hampshire counties in western Massachusetts continued to live in a state of quasi anarchy, however, pressure began to erupt throughout the state in the fall of 1776 for a regularized constitution—especially after independence had been declared. The old existing charter was now an anachronistic reminder of British rule. Massachusetts radicalism began to emerge again as Concord, Boston, and numerous Worcester towns joined to urge a constitutional convention unmistakably separate from the regular legislature. Many towns also pioneered in another vital democratic innovation: the right of the people themselves to vote in a referendum on any constitution that the legislature or a special convention might adopt.

The Massachusetts General Court, however, backed by the majority of the towns, turned down a move to allow the people to elect a constitutional convention, and formed itself into a convention to write a constitution for the new state. In the considerable newspaper discussion in the summer of 1777 regarding the form that the new constitution should take, two different points of view were taken by "Clitus" and by "Faithful Friend."*

On the left, "Clitus" urged a government that "is easy, simple, and cheap," and thus elective in all branches, having a unicameral legislature, and based on universal manhood suffrage. He attacked the conservative tendency to reintroduce the British political system without Great Britain:

We debase ourselves in reintroducing the worst parts of British rule. The plain question is, are we fighting and lavishing our blood and treasure to establish the freest and best government on earth, or are we about to set up a formidable court interest? . . . The origin and essence of government is in the people. Therefore, let us keep the staff in our own hands.

"Faithful Friend," in frank rebuttal, took up the traditional conservative theme of total distrust of the people and of the justice or the capacity of individuals to run their own lives. Instead, such power must be surrendered into the hands of a ruling oligarchy, who apparently suffer from no such incapacity, and who would presumably be checked sufficiently by periodic elections. Thus:

The stuff of power never was, nor never can be, in the nature of things, in the people's hands. As a people we have no power in our hands we can safely exercise, but of choosing our guardians once a year. . . . We are not fighting for this or that form of government, but to be free from arbitrary power and the Iron Rod of Oppression on one hand, and from popular licentiousness and anarchy and confusion on the other.

The constitution reported by the General Court in the spring of 1778, after a sharp struggle, was shaped by such conservatives as Robert Treat Paine, Thomas Cushing, and John Adams. It was a highly conservative document, and was angrily rejected by the towns of Massachusetts, voting under universal manhood suffrage, by an overwhelming majority of five to one. Boston rejected the constitution by a similar majority. The towns of Lexington, Concord, and Beverly demanded a special constitutional convention, and Lexington, Westminster, Brookline, Lenox, and other towns made it clear that they would reject any constitution that did not have a bill of rights.

*Douglass, *Rebels and Democrats*, pp. 171-73.

The town of Mendon, in Worcester County in the interior of the state, was typical in its libertarian objections to the constitution. It attacked the heavy property qualification for voting for governor or upper house, the veto power of the small upper house over the lower, the absolute power of the governor to command the militia, and the continuation of the Congregational establishment in the state. The nearby town of Sutton also attacked the absence of provisions against legislative corruption and the absence of any provision for abolishing slavery. Sutton also urged a popular referendum voting on all legislation and extending the vote to Negroes.

As might be expected, the most radically libertarian rebuffs to the proposed constitution of 1778 came from Berkshire and Hampshire counties. Thus, the town meeting of Greenwich (Hampshire) rejected the constitution because it replaced popular rule by oligarchy. It

entirely divests the good people of this state of many of the privileges which God and Nature has given them, and which has been so much contended for, and giv[es] away that Power to a few individuals which ought forever to remain with the people inviolate. . . .

Specifically, Greenwich denounced the powers of the governor and the upper house, and called for a unicameral, annually elected assembly, the election of the civil and military officers by the people, and the annual election of all judges and officers of each town and county by the voters of the respective areas.

When the constitution of 1778 was thus overwhelmingly rejected, the conservatives were content to peg along on the old charter, but the Berkshire Constitutionalists persisted in refusing to recognize this regime, and in keeping the county courts closed until a constitution should be established. They even threatened to secede from Massachusetts. When the General Court tried to reopen the Berkshire courts itself in the spring of 1779, a determined crowd prevented the judges from holding court, successfully defying the state of Massachusetts.

Thus, by 1779, conservatives and radicals in Massachusetts were still locked in an inconclusive struggle. Neither had yet triumphed, and a state constitution had not yet been adopted.

The radical principles of the Pennsylvania constitution proved to be far more influential in Vermont—a state precariously and uniquely emerging in rebellion against conservative New York, one of the United States of America. At the westside town of Dorset at the end of July 1776, articles of association had been approved, declaring loyalty to the newly proclaimed United States, but indicating that the Grant lands were a separate

district unenthusiastic about being incorporated into New York. The articles were approved by the separate Grant towns east and west of the Green Mountains, and the New York State Convention resumed New York's old harassment of the Grant settlers, insisting on rent payments to the New York land grantees. In response to this renewed threat, delegates from forty-four towns, eastside *and* westside, met together for the first time at Dorset on September 25. They boldly declared the Grants a separate district, abolished any New York laws still in effect, and organized a militia under this Grant land convention; The Grant lands were to be a separate state! A committee was appointed to ask Congress for admission to the Confederation. At the same time, a covenant was proposed to be signed by all adult males in Vermont, reciting the grievances against New York and pledging loyalty to this convention.

Approval and endorsement of the covenant by westsiders was almost unanimous; on the eastside a majority of the citizens had approved. Hence, another meeting of the Vermont Convention in mid-January 1777 proclaimed the Grant lands "a new and separate state" named New Connecticut. The convention drew up a declaration of independence modeled after that of the United States—except that New York State, rather than King George, was the major target. It also proclaimed the vital principle that unorganized territories be permitted to form their own governments.

Protests against independence emerged from the leaders of the long-time pro-New York towns in the southeast corner of New Connecticut. But even Brattleboro, the center of the protest, found that its pro-New York committee of safety could not muster a quorum and was falling into disuse, and that proindependence insurgents had seized the town jail and forced the New York-appointed sheriff to resign. New York further alienated Vermonters by reconfirming all royal land grants in its new state constitution.

At this point, Dr. Thomas Young, one of the authors of the Pennsylvania constitution, began to bombard the grateful New Connecticut leaders with letters and suggestions for a constitution. In particular, he sent them as a model a copy of the Pennsylvania constitution. He even persuaded them to change the name of the new state to Vermont, in commemoration of the Green Mountains. In the summer of 1777, undaunted by Congress' refusal to recognize its independence, Vermont adopted a constitution modeled after that of Pennsylvania. As might be expected from this highly democratic and individualistic state lacking the incubus of a landed or financial oligarchy, the constitution was far more radical than even its model. It included two great milestones. In its bill of rights was contained the outright abolition of slavery—the first such state action—as well as the abolition of all adult bondage, including indentured service. The other breakthrough was the establishment of universal man-

hood suffrage, another first. On the other hand, the most illiberal feature of the Vermont constitution was its insistence on a Protestant test oath for holding public office.

Boldly but precariously, Vermont, not recognized or admitted by Congress, was now an independent republic. Menaced by Burgoyne's army and by New York covetousness, little Vermont soon was rent from within. The turbulent eastside towns were split into five brawling factions: the Vermont group, loyal to the new state; the York party of the extreme southeast, agitating for acquisition by New York; the New Hampshire party, encouraged by New Hampshire President Meshech Weare; a pro-Massachusetts group, headed by Charles Phelps of Marlboro; and the imaginative College Party, which owed ideological allegiance to Dartmouth College radicals John Wheelock and Bezaleel Woodward. The Dartmouth group urged a split of eastern Vermont and western New Hampshire from their respective states, and their union into a new state centering on the upper Connecticut River. Actually, this was quite a sensible plan, as eastside Vermont had geographically more in common with western New Hampshire than it had with westside Vermont.

Soon, the New Hampshire and College parties formed an alliance—a coalition precipitated by a petition from sixteen western New Hampshire towns rebelling against taxes and conscription directed from Portsmouth and the eastern towns. They asked to be included in Vermont, and the eastside towns greeted their request with enthusiasm, threatening to secede from Vermont and form the new "College" state if Vermont refused admission to these western New Hampshire towns. The westside leaders, fearing a loss of their power and the enmity of New Hampshire, managed to stall the Vermont assembly's acceptance. By June 1778, however, the several Vermont towns voted overwhelmingly to admit the New Hampshire petitioners, and to the plaudits of a jubilant eastside, the sixteen river towns were admitted to Vermont. At the same time, a convention at Brattleboro of southeastern Vermont towns compounded the new republic's problems by proclaiming their refusal to obey Vermont law and their adherence to New York.

New Hampshire now threatened war, and immediately petitioned Congress to take action against Vermont and her own seceding towns. Justice was certainly on the side of allowing the western New Hampshire river towns to join Vermont, but the big battalions were on the side of the New Hampshire State. Colonel Ethan Allen, newly released from an English prison, was quickly sent to Congress and persuaded it to delay judgment. The great confrontation on this issue came at the October 1778 meeting of the Vermont General Assembly. A furious struggle ensued between the westside leadership, which warned that the entire United States would crush Vermont unless the New Hampshire towns were relinquished, and

the eastsiders and the towns themselves, which bravely clung to the union of both banks of the Connecticut River. The westsiders won at the last minute, ejecting the river towns from Vermont, at which the great bulk of the eastsiders walked out and threatened secession to form the "College" state.

Radicalism was also triumphant in Georgia, where it was led by artisans and others in the Liberty Society of Savannah, by back country farmers, and by such wealthy planters as Button Gwinnett, one of the signers of the Declaration of Independence. The temporary constitution of April 1776 was succeeded by a similar permanent constitution the following year. The legislature was unicameral, and any hint of executive or oligarchic judicial rule was systematically checked in advance. A governor and council were chosen by the legislature for brief terms and had no veto power and negligible executive power. The judges were to be chosen by the legislature and were removable at any time. Court fees were strictly limited. An important libertarian and democratic feature of the Georgia constitution was the elevation of the power of juries: special jurors were to be judges of law as well as of fact, and were to exercise judicial review on interpreting the constitution. In this way, judicial oligarchies would be kept strictly subordinate to the cross section of the people embodied in the juries. Entail and primogeniture—those hallmarks of feudalism—were abolished, and nearly all local officials were to be elected by the local communities themselves.

Here was a radical constitution to rank with Pennsylvania and Vermont. A conservative element was the restoration of a property qualification for voting amounting to a valuation of ten pounds, with higher qualifications for representatives. With respect to religion, voting was limited to Protestants, the Anglican church was disestablished, and clergymen were barred from being members of the legislature. Voting was established by secret ballot and legislative representation was to be by population; no longer would Savannah and the coast be allowed to dominate the back country.

During the winter of 1776–77, the conservative South Carolina legislature, apparently eager to scotch Georgian radicalism, proposed merger between the two states, but the Georgians angrily refused.

South Carolina came under an ultraconservative constitution of March 1776 under the aegis of the large planter aristocracy. The conservative Rutledges and Henry Laurens were the effective rulers of the new state. The radicals, led by Christopher Gadsden and William Henry Drayton, led a drive for reform and a new constitution culminating in March 1778, when a new charter was accepted by the assembly. This new constitution was considerably more liberal: the president lost his veto power, the upper

house was now elective, and suffrage was extended to those owning property equivalent in value to 50 acres of land. However, property qualifications for officeholding remained enormous, and apportionment still weighed heavily in favor of the low-country planters. In an important liberal step, the Anglican church was disestablished, and all sects declared equal before the law; but, on the other hand, Protestantism in general was declared the official religion of the state and churches were subject to state control.

The ultraconservative President John Rutledge tried to veto the new constitution, but he was forced to retire from his post. The radicals were unexpectedly deprived of political victory when Gadsden abandoned the radical camp in exchange for the vice presidency, and later the lieutenant governorship, of the state, allowing Rutledge to return in late 1778 to be the first governor under the new constitution. Gadsden's split with his mass base became apparent when he extended the deadline for taking the mass test oath of loyalty to the American cause. The radical mechanics of Charleston had zealously been imposing the oath and causing the departure of many Tories into English territory. The radical mechanics rioted against him in early June 1778, and from then on, the spokesmen for radicalism were the leaders of the June riot: Dr. John Budd, the lawyer Henry Peronneau, and the lawyer and merchant Joshua Ward.

In North Carolina, a furious struggle in April 1776 between radicals and conservatives over a constitution had resulted in deadlock. The elections of October were fought furiously and riots abounded in the back country. The best known leaders of the state, such as Gabriel Johnston and William Hooper, were firmly in the conservative camp. John Adams' ultraconservative *Thoughts on Government* was widely circulated in the state, and became the handbook of the conservative cause. Hooper attacked democracy and called for the "near perfection" of the British constitution, under which the "selected few" could rule. Hooper was livid about the Pennsylvania constitution and the danger of a similar document emerging in North Carolina.

Typical expressions of radical sentiment were the instructions to the convention delegates by Mecklenburg and Orange counties, widely separated back-country districts. The Mecklenburg instructions were written by John M. Alexander and Waightstill Avery, drafters of the seminal Mecklenburg resolves of 1775; the Orange instructions were drafted by Thomas Burke. These instructions made clear that supreme power belongs to the people, and that any representatives have only strictly subordinate and inferior power. Mecklenburg asked its representatives to be as democratic and antiaristocratic as possible.

The radical program favored separation of powers, but not the Adamsian "separation" of creating agencies unaccountable to the electorate. The radical means were such devices as the abolition of plural officeholding, frequent elections, unicameralism or popular election of any upper house, local election of county officials, etc. In short, the checks and separations were to be exercised by the people themselves, not by a newly created autarchic organ of government.

Other prominent radical leaders were Thomas Person, a wealthy landowner and former Regulator leader of Granville County in the interior, John Penn, also of Granville County, and Willie Jones of Halifax County, one of the wealthiest men in the state. On the other hand, Willie's brother Allen, also a wealthy landowner, was one of the leaders of the right wing.

The newly elected Provincial Congress of North Carolina finally passed a constitution on December 18, 1776, that embodied a compromise between right and left forces. The legislature was to be bicameral, but both houses and the governor were to be elected by the people. The executive, furthermore, had little power. County court judges were to be elected by the people of the counties themselves. All taxpayers could vote for the Assembly (and all householders paid poll taxes); qualifications for the Senate were a bit more restrictive (fifty-acre freeholders) but not substantially so. Plural officeholding was abolished, insuring a democratic separation of power, and entails and imprisonment for debt were abolished. And even though only Protestants could hold public office, the Anglican Church was disestablished and no other put in its place.

On the other hand, property qualifications for becoming representatives or senators were substantial, and quite large for the office of governor. Representation continued to discriminate against populous towns and counties, i.e., largely against the Piedmont in favor of the Tidewater areas. Justices of the peace—the keystone of despotic local oligarchies in the South—continued to be appointed by the governor and were exempt from the laws against plural officeholding; also appointed by the state were local sheriffs, coroners, and constables, so the local courthouse rings continued in business.

The radicals, headed by Willie Jones and Person, soon proved able, for the most part, to control the new North Carolina legislature, and Thomas Person continually urged lower taxes and a lower salary for the governor.

The tightly knit Maryland oligarchy passed a highly conservative state constitution in November 1776, but with some concessions to the radicals in the western part of the state. The high property qualifications were made very slightly lower than before. Property requirements for the top officeholders were, of course, much higher than that. The Anglican church was disestablished, although room was left for a general tax

for support of all Protestant sects. Other liberal provisions were strong prohibitions against plural officeholding by members of the legislature, election of sheriffs by the people of the counties themselves, rotation in office, and an end to poll taxes. A new and extremely conservative way of selecting the Senate, however, was instigated by Charles Carroll of Carrollton: the members were to be chosen for five-year terms by an elected electoral college, who would choose fifteen senators from among themselves; interim vacancies would be filled by the Senate itself! Thus, the Senate was to be virtually unchecked by popular control. This reactionary measure drew the later praise of such presumably moderate conservatives as Jefferson and Madison, as well as from such ultraconservatives as Alexander Hamilton. It influenced the U.S. Constitution in the indirect election of senators and perhaps in the presidential electoral college as well.

Agitation from the western counties and from Anne Arundel County near Baltimore for liberalized suffrage (the latter for votes to all native-born freemen) was beaten back, insuring unshaken control of the state by the oligarchy. Moves for local election of militia officers by their men, and for local elections of justices of the peace and county clerks, were also defeated.

Neighboring Delaware also came under the control of the conservative forces, although its constitution, passed in September 1776, was moderately conservative and undistinctive. Independence advocate Caesar Rodney, the man who saved the day for Delaware's vote on independence, was defeated as delegate to the constitutional convention, at which the lead was taken by the opponent of independence George Read. The constitution established a powerful council as upper house, with the right to veto legislation; a privy council was to be elected by the legislature to advise the similarly elected president of the state. A Christian test oath was required of all legislators, but any religious establishment was forbidden and clergymen were barred from civil office. The further importation of slaves was also forbidden. The most distinctive feature of Delaware's constitution was its formulation by a special constitutional convention separate from the ordinary legislature; Delaware was the first state to adopt this procedure of making constitutions.

In New Hampshire, the radicals, predominant in the western towns, objected bitterly to the conservative temporary constitution of early 1776 and agitated for a new constitution. The abolition of property qualifications and of the upper house veto, and provision for a fair proportionate representation, lower taxation, and a bill of rights, were some of their demands. We have seen that these western towns decided to secede and

join Vermont, only to be finally rebuffed. Radical polity in New Hampshire was seen in the unique provision of election of delegates to the Continental Congress by the voters themselves rather than by the legislature. Finally, in 1778, a convention was called and a constitution proposed the following year, but the provision that three-fourths of the voters had to ratify the new constitution insured its defeat.

The Rise and Decline of Conservatism in New York

If Pennsylvania provided the paradigm in the revolutionary period of a radical constitution, New York provided the model of a highly conservative one. The provincial congress, or convention, meeting in July 1776, appointed a committee to draft a constitution for New York. The major drafters on the committee proved to be three archconservative oligarchs: John Jay, the young son-in-law of William Livingston, Gouverneur Morris, the young lord of Morrisania Manor, and Robert R. Livingston. The drafting was delayed by New York's military troubles and the occupation of New York City, but by March the draft was ready. The conservative drafters proved to be heavily influenced by John Adams' *Thoughts on Government*.

The conservatives had to consider mass opinion in New York, and were divided on how many concessions to make. Gouverneur Morris led an ultraright assault on the committee draft on the floor of the convention, and succeeded in restoring property requirements which the draft had eliminated. The property qualifications for voting for the assembly were, it is true, lower than in colonial times, and at Jay's instigation this part of the suffrage was amended to include all freemen of Albany and New York City. This was not a momentous concession, however, since only a small fraction of the urban adult populace were freemen. But New York provided a unique example of a conservative schema in splitting property qualifications for voting, setting far higher property requirements—over twice the amount of the colonial freehold provision—for voting for governor and for senators than for other officeholders. This presumably was to insure an aristocratic executive and upper house. Morris succeeded in

striking from the draft the provision for a secret ballot, but his usual ally Jay led a drive that succeeded in obtaining at least a constitutional endorsement for it.

The New York constitution established a bicameral legislature, and, after a struggle, an electoral college for the election of senators was replaced by direct election of senators every four years. Property qualifications for most officeholders were low, but were high for senators. The judiciary was made an oligarchy independent of the electorate by providing indefinite terms on good behavior, i.e., virtually for life. A particularly important conservative provision was the constitution's validation of all royal land grants, thus fastening the quasi-feudal land system in the Hudson Valley upon the tenants of the state. Jay and Morris could not persuade the convention to provide for the abolition of slavery in New York.

The most important and pioneering conservative provision, however, was the aggrandizement of executive power. Morris pressed for massive power in the elected governor (who was to have a long term of three years) but his veto power was diluted into a plural executive consisting of the governor, chancellor, and the three supreme court judges in a council of revision. The council had veto power over legislation, which could only be overridden by a vote of two-thirds of *both* houses. This governor was to be commander of the state's armed forces, and was empowered to convene and dissolve the legislature, and even to recommend legislation. Patronage of executive appointments was vested in a council of appointments that included the governor and four senators. New York's unique executive veto powers, so redolent of the power of royal governors, provided inspiration for the executive veto power later inserted in the U.S. Constitution.

The constitution provided for full religious freedom, and clergymen were not eligible for office; but this provision was only secured by the deist Morris over the objections of John Jay, who fought for the virtual outlawry of the practice of Roman Catholicism in New York state. Ulster, Orange, and Tryon counties upstate supported Jay, but the more sophisticated and populated counties of Albany, New York, and Dutchess backed Morris. Apart from religion and provision of trial by jury, a bill of rights for the individual was conspicuously absent in the New York constitution.

This constitution was finally adopted on April 20, 1777, with only Peter R. Livingston dissenting to it as dangerously radical. The convention appointed the top executive officials in the state, and the right wing triumphed as Jay was chosen chief justice of the supreme court and Robert R. Livingston chancellor, both by a close vote over the erratic John Morin Scott, who had again veered to the leadership of the radical forces.

For the June elections for governor, the conservatives nominated one of their least attractive leaders, Gen. Philip Schuyler. Scott was the candi-

date of the left, and in the left-center, there arose a war hero and veteran leader of upstate prewar radicalism: the blunt Gen. George Clinton, yeoman and lawyer from Ulster County. The election results were of momentous import, for Clinton's victory meant that for the first time in a century the landed oligarchy was no longer in control of New York state. Now, with the mighty financial oligarchies of Pennsylvania and New York suddenly out of control of their states, these oligarchs became committed to a drive for a powerful national government, which they hoped to control and exploit.

Ironically, Schuyler's defeat may be attributed to the defection of the tenants of Livingston Manor. Their revolt crushed the previous month, they demonstrated that no longer could their votes be taken for granted. The tenants certainly had no use for either Clinton or Scott, both their long-time enemies. But on election day they abstained *en masse* and Schuyler attributed his defeat to the low vote in his supposed stronghold of Albany County.

With the monumental victory of Clinton, there came to the fore throughout the state a resurgent new left, a radical movement considerably to the left of the governor. In landlord-ridden Dutchess County, for example, more polling places and a secret ballot helped carry Clinton to an unexpected and large victory over Schuyler; it also led to a social and political revolution *within* Dutchess County. Since the beginning of the 1770s, the top posts in the county had gone, by appointment of the royal governor, to the right: sheriff had been Philip J. Livingston, and chief justice of the county, Beverly Robinson of Virginia, one of the leading landlords in south Dutchess County, who quickly became a Tory. These were ousted in the 1777 elections and replaced by Melancton Smith and the Reverend Ephraim Paine, leaders of the embattled left in Dutchess County. In contrast to their predecessors, young Smith had begun life as a retail clerk, and Paine was a self-educated son of a farmer and blacksmith. No one can deny that this was a true internal social upheaval. Moreover, these two cases were not exceptions. For eleven years after, not a single member of the old landlord ruling class either sought or held an appointed or elective office in Dutchess County.

Also typical of the new men of the left emerging with the Clinton revolution of 1777 was Abraham Yates of the city of Albany. A typical radical of the middle class, this lawyer saw himself as a spokesman of the independent yeomen as well as of the town burghers. His becoming chairman of the Albany committee and member of the New York Senate challenged the dominion of the landed oligarchs of Albany County, appropriately headed by Philip Schuyler who sneered at him as an "old booby" and a mere "cobbler." Yates was a highly articulate intellectual of this internal revolution in New York. In an unpublished paper, he squarely

demonstrated how the patroon and later land grants had stolen the land of the Albany settlers, and he saw "a similarity in the revolutions of 1688 and that of 1776. . . ."*

An historian of the Revolution, Yates maintained that the democratic features of the New York constitution of 1777 were forced upon the convention by mass pressure; had it not been for that pressure, the constitution would have been far more conservative. Much of the pressure came from the great disaffection of the New York militia. This was particularly true of the feudal tenant militia of south Dutchess and of Livingston Manor. While militia colonels earned a salary of \$75 a month, privates received less than \$7. This wage amounted to little more than slave labor, with the greatest hardships being suffered by the poor. Heavy desertions ensued, forcing the draft rate to be cut in 1777 and concessions to be made to the masses in the constitution.

The characteristic form of right and left in New York State was now taking shape; the conservative forces were wealthy, influential, educated and articulate, cohesive, interrelated, and tightly knit—all of which made for influence and effectiveness far beyond their number. The more numerous radicals, on the other hand, were far less wealthy, and locally based; while strong and well organized within each county, there was no real organization or cohesion between the counties or regions. That was their chief disadvantage, which would be exploited in later years.

*On the internal revolution of 1777 in New York, see the illuminating works of Staughton Lynd: "The Revolution and the Common Man" (Unpublished Ph.D. dissertation, Columbia University, 1962), Part I; *Anti-Federalism in Dutchess County, New York: A Study of Democracy and Class Conflict in the Revolutionary Era* (Chicago: Loyola University Press, 1962); "The Tenant Rising at Livingston Manor," *op. cit.*

PART VII

The Military History
of the Revolution,
1778~1781

The End of the War in the North

After the Battle of Saratoga and French entry into the war, British war strategy changed. No longer was a quick victory looked for. Instead, Clinton was to base himself at New York City and nearby areas; from there, he and the navy were to conduct a war of harassment and terror raids, blockading, burning, raiding. An open and direct confrontation with Washington's army was to be sought, but not counted upon. In the West, the British were to lead Indian terror raids on the frontier and try to capture the land west of the Appalachians. But the main theatre of war was to shift to the South. Lightly populated and filled with Tories and restive slaves, the South was now seen as the Achilles heel of the United States. Starting with southernmost Georgia, the plan was to roll north, attracting new governments by resurgent Tories as they went. New England and other northern states would thereby be isolated, cut off from the great export staples of the South, blockaded, starved out, and forced into surrender or at least subordination to Great Britain. As in the earlier years of the war, the plan relied on an overestimation of Tory strength and effectiveness, but with this difference: whereas Britain had previously overlooked the need to organize Tories because of overconfidence, now they relied excessively on Tory forces as against their own. In doing this, the British found that since the masses support the Revolution, as in other battles against revolution, that counter-revolution must reduce to sporadic raids against the people and rely increasingly on naked terror against their persons and property.

The remainder of the Revolutionary War in the north followed essentially this pattern of indecisive skirmishes and sorties. The most important

thrust occurred after a cessation of fighting of almost two years. Clinton moved up the Hudson with 6,000 men at the end of May 1779 to capture forts at Stony Point and Verplanck's Point. Washington was stationed in a ring around New York City, and Clinton tried to draw him into a general action or else into leaving his camp exposed. He sent expeditions on terror raids into Connecticut to burn the coastal towns, specifically New Haven, East Haven, Fairfield, Greens Farms, and Norwalk. Particularly exuberant in inflicting terror and devastation was the former New York Royal Governor William Tryon. But in all this Washington was not lured into coming to Connecticut's defense. Instead, he cleverly decided upon a surprise attack to retake Stony Point. Washington sent on the expedition a newly formed elite corps of riflemen and light infantry, the American Light Infantry. Headed by General "Mad Anthony" Wayne, these 1,200 men boldly and successfully stormed Stony Point on July 15. Although Wayne had to withdraw from Stony Point when Clinton approached, Clinton soon had to conserve men by evacuating the two forts.

Giving the command of the light infantry unit to Wayne was eloquent evidence of the shabby way in which Washington treated his best officers. Lee, broken, court-martialled, disgraced; Gates, the victor of Saratoga, vindictively given petty assignments and sent into virtual retirement after 1778; Arnold, confined during 1778 to the inactivity and petty administrative duties of military commandant of reoccupied Philadelphia; even the inferior Schuyler thrown to the wolves for his conduct of the campaign against Burgoyne and forced out of the army. And now the guerrilla fighter, Dan Morgan. The obvious choice for commander of the light infantry, he was deliberately passed over by Washington for the post he wanted so much. Despite his enormous services to the Revolution, Morgan, too, was forced into virtual retirement during 1779 when Washington summarily removed him from the Continental Army and sent him down to the mere colonelcy of a Virginia infantry regiment.

No important military battles took place in the North after Monmouth, even the Stony Point fracas being a minor skirmish of little importance. The British captured and held the port of Castine, Maine; Newport changed hands when Clinton evacuated the town in late 1779 to release more men for the southern campaign. The French under Comte de Rochambeau occupied Newport in July 1780; Washington hoped to unite with him in an assault upon New York, but the superior British fleet bottled up the French at Newport indefinitely.

More important were the British terror raids, such as the burning and destruction of the Connecticut towns, the burning of New Bedford, Massachusetts, and the murder of unarmed men in a night raid on Little Egg Harbor in New Jersey. The main effect of these raids was to embitter the Americans further and stiffen their resolve for victory.

Actually, the worst problem facing the American cause in the North was the progressive disintegration of Washington's Continental Army. The Americans, as a nation of revolutionaries, were not equipped to linger on for years like a conventional army in enforced idleness, yet this was what Washington was demanding. But the main source of the soldiers' distress was the mammoth and increasingly runaway inflation caused by the indiscriminate printing of Continental paper money. This cascade of new money caused the paper to depreciate at an accelerated pace against specie, engendering cries of a "scarcity of money" and pressure for even greater use of the printing press. Since the Continental soldiers were paid in Continentals, they were being paid in increasingly worthless paper. Their hardships were greatly aggravated, furthermore, by the attempts of the states to enforce maximum price controls to check the runaway rise in prices. By attacking the symptoms (prices) rather than the cause (the money supply) the governments did not halt the inflation, but only disrupted market supplies more by shutting off the flow of supplies to areas where maximum control was enforced. This was particularly true in an economy where farmers and artisan-manufacturers could easily consume their own produce or engage in local barter when price controls discouraged them from participating in the market economy at all. This combination of inflation, depreciation, price controls, and continued idleness caused a massive and increasing hardship, resentment, and a diminishing of the Continental Army.

Thus the winter camp of 1779–80 at Morristown, New Jersey, far surpassed the winter at Valley Forge for misery and adversity among the American soldiers. In mid-December, an empty commissary led Washington to despair of a total breakup of the army within a fortnight. The soldiers were forced to loot local farmyards, and supplies were increasingly confiscated from the populace. Their problem was not a shortage of food in the area, but rather that the New Jersey farmers were understandably reluctant to sell their produce for near-worthless Continental currency.

Angry over lack of food, clothing, and arrears in salary that would be paid in worthless paper, two Connecticut regiments mutinied at the end of May 1780, demanding food or permission to go home. They were only subdued with the arrest of the ringleaders by a veteran Pennsylvania brigade.

Washington's army had now been reduced from 27,000 the previous autumn to 10,000 men, of whom fewer than 4,000 were fit for duty—and these chronically hungry, cold, and embittered. Into this disintegration on June 6, Clinton sent Gen. Wilhelm von Knyphausen with 5,000 men from Staten Island to Elizabethtown in New Jersey. Here the British showed that they still failed to comprehend that revolutionary warfare is waged

by a people in arms. They could not understand that the real power of the American force lay not in the visible nucleus of the Continental Army, which was truly in bad straits, but rather in the "invisible" hordes of the armed American people, the "rabble in arms." Resorting to brutal terror on the New Jersey march, the burning and plundering of villages ordered by General Tryon, only served to harden the American resolve. Even as Burgoyne, in his march, found himself eventually surrounded by erupting and rapidly gathering militia, so Knyphausen was soon confronted by large bodies of suddenly materializing militia which forced him to turn back at Springfield.

Later in June, Knyphausen again tried to march toward Springfield. But the highly able Nathanael Greene, with fewer than 2,000 men, stopped him cold at Springfield. Realizing that "every mile of his future march . . . would be no less obstinately resisted," Knyphausen withdrew from New Jersey, pausing only to burn Springfield to the ground. This was the end of New Jersey operations by the British.

Greene's victory at Springfield marked the return to the field of yet another brilliant commander whose talents had been wasted for two years in the post of quartermaster general. Throughout the year 1779, the Americans had been deprived by Washington's mismanagement and personal pique of the services of their best military officers, and Greene was one of them. Moreover, Greene was now returned to his quartermaster post from which he resigned but was reinstated in a dispute with the Continental Congress.

An understandably severe blow to the morale of the American troops was the discovery of the treason of Benedict Arnold in the fall of 1780. Soon after taking up his post as military commandant of Philadelphia in 1779, the embittered Arnold married the aristocratic Tory belle, Peggy Shippen. Finding it difficult amid the pleasures of Philadelphia to support a way of life to which he and his bride were becoming accustomed, and encouraged by her, Arnold decided to make a deal with the British. Maneuvering to obtain the command of the fort at West Point, Arnold agreed to sell its surrender to the British for the munificent sum of 10,000 pounds. However, the British liaison with Arnold, Maj. John André, a friend of Peggy Arnold's, was captured with incriminating documents on September 23. Arnold himself was barely able to escape to New York City, where he was handsomely rewarded by the British and made a general on the British side. So shocking a blow was this to the Americans that "Benedict Arnold" became a veritable synonym for "traitor." For his part, Major André was hanged by Washington as a spy.

Disliked and distrusted by the British, Arnold ironically found the same complaint in their ranks he had suffered at home: he did not receive a

command at all worthy of his military talents. Although he was permitted to launch only a few raids he was nevertheless fated to conduct the last engagement of the war in the North—and against his old birthplace in southeastern Connecticut. In early September 1781, Arnold organized a large terror raid against the port of New London, Connecticut, a base for privateers that contained a large quantity of military stores. On capturing the garrison, his men slaughtered almost the entire body of 150 prisoners and systematically burned the towns of Groton and New London.

Conditions in Washington's winter camp of 1780–81 were as bad, and for basically the same reasons, as the previous winter. Most aggrieved were the Pennsylvania soldiers. The three years of duty for which they had enlisted were now up, and yet the military authorities insisted that they must stay until the end of the war. Especially outraged was the brigade of Pennsylvanians stationed near Morristown under the command of General Wayne. On the night of January 1, 1781, the men of the Pennsylvania Line mutinied, killed one officer and wounded two others and captured the artillery. The men were now determined to run their own lives, and unlike the Connecticut mutineers of the year before, they refused to be awed by higher authority. Led by Sgt. William Bonzar, six full regiments of Pennsylvanians demanded discharges for all who had served for their three years, as well as payment of the wages in arrears. They set out to march on Congress in Philadelphia to present their grievances there, thus placing justice and their liberty higher than the fetish of military subordination and obedience.

Congress was wiser than to try to treat these men as traitors and mutineers. A committee headed by Pennsylvanian Joseph Reed, now president of the Congress, was sent to Princeton to negotiate with the mutineers. There an agreement was hammered out by the end of January that yielded to the demands of the Pennsylvania Line. Congress agreed to discharge all those who had served for three years and to pay the arrears of wages, with an allowance made for the inflationary loss in value of the paper dollar.

While negotiations were in progress, General Clinton saw an opportunity to profit from this discord and sent two Tory emissaries to Princeton to offer back pay and full pardon if the mutineers would join the British cause. The incensed mutineers seized the messengers and turned them over to General Wayne, who promptly hanged them as spies. Remarkably, when Wayne offered the mutineers a reward in gold for their fidelity, Sergeant Bonzar nobly spoke for his men in declining the offer; the men, he argued, were "not entitled to any other reward but the love of our country."

Pennsylvania's example inspired the New Jersey regiments of the Continental Army, stationed at Pompton, New Jersey, to do the same thing. On January 20, parts of three New Jersey regiments began to march toward Trenton. But this time, Washington, who had wanted to crush the Pennsylvanians but was wary of fighting eight regiments, treated the men as his authoritarian instincts commanded. General Robert Howe was sent with a unit of New England Continentals to surround and disarm the New Jersey units; he selected mutinous leaders from each of the regiments, tried several at court-martial, and had two shot by a firing squad made up of other rebel leaders. As Washington snarled: "Unless this dangerous spirit can be suppressed by force, there is an end to all subordination in the Army. . . ."

The War at Sea

The entrance of France into the war at first redressed the balance of forces at sea by bringing a great naval power into the fray, and depriving the British of their accustomed absolute command of the waters. Now that the war was worldwide, moreover, the British were forced to scatter their fleet to the West Indies, to reinforce Gibraltar, to protect Britain itself from possible invasion, and to battle in the Indies. American privateers had had a hard time during 1777 from British coastal blockades and convoys of merchantmen across the Atlantic. Now they reentered the fray, and soon 10,000 Americans were engaged in privateering. Over 400 privateering ships emerged, and they severely damaged British trade and shipping. By the end of the war, American privateers had captured 2,000 British ships and 12,000 British sailors, as well as \$18 million in ships and goods. The small American navy was properly allowed to dwindle to only two ships by the end of the war; privateers were cheaper and more effective, and they placed no burden upon the taxpayer. The feats of the American captain John Paul Jones in capturing two British ships in the fall of 1779 and Capt. John Barry in seizing four British warships the following spring were spectacular, but of little intrinsic importance.

By the end of 1778, however, the French fleet sailed away from United States waters to the Caribbean, and there they stayed for over two years; thus, by 1779, the British were again in control of American coastal waters, and were even able to bottle up the French forces at Newport. Furthermore, American shipping and ports suffered almost as much as the British—from the Royal Navy and from British privateers, as well as from terror raids on the coast conducted by superior naval might.

American troubles caused by British naval operations redoubled when the British suddenly seized the Dutch island of St. Eustatius in the West Indies. Especially since the French entry into the war, the neutral Dutch moneylenders to the world had become highly important suppliers and financiers of imports to America, and St. Eustatius had become the great entrepôt for European trade with the United States—not only for the substantial amount of Dutch shipping to America, but also for the other countries as well, for the Dutch shrewdly made St. Eustatius a free port open to all nations. Even British traders happily, though illegally, sold goods to American importers here, and the Americans were happy to purchase, though illegally, the British goods. Much respectable opinion realized that trading with the enemy benefited both parties—and both countries—and was therefore valuable. Benjamin Franklin had demonstrated in 1774 that trade benefits both countries, even with a wartime enemy, and now Congressman Joseph Jones pointed out that if the southern states could sell their surplus agricultural output, even to the enemy, it would greatly relieve economic distress in the United States.*

This happy and prosperous idyl of St. Eustatius, however, was not destined to last. Great Britain decided to declare war on the Dutch, who were neutral and prosperous but lacking in warships for defense, and to pounce upon St. Eustatius. For this coup, King George selected Admiral Sir George Rodney, a dashing sea captain of unquestioned Tory views, but a bankrupt at cards who had fled England to escape his creditors. Brought back from exile by the king in 1779, Rodney had quickly relieved Gibraltar from siege and checked the superior French fleet in the West Indies. In early February 1781, St. Eustatius did not yet even know that the two countries were at war. Capturing the island by a ruse, Rodney fell upon it without mercy, “to savage” the merchants “for their perfidy.” Seizing nearly 50 Dutch ships, he sacked them as well as all the warehouses and property on the island. Millions of pounds of loot were seized, and Rodney settled down to enjoy his new-found bonanza of plunder—a plunder that he insisted was his personal prize. So thoroughly was St. Eustatius devastated that its usefulness to the Americans or Dutch was over. Benjamin Franklin’s comment on Britain’s making war upon the Dutch was apt: “The English have got another war . . . upon their hands. They are making large strides towards becoming what pirates are said to be, enemies to all mankind.”

Rodney’s predation was condemned by the British liberals and mer-

chants; Horace Walpole condemned the plunder as setting a “savage and dangerous precedent,” and the West Indies planters and merchants protested that the seizure “injured several contracts, which are founded on the law of nature, and which form the most sacred bond of society.”*

The War in the West

The war in the West, as in the North, largely consisted of a series of terror raids. But here the essence of the war was not a series of raids by heavily armed counter-revolutionary forces at war with the populace itself; here the main pro-British forces were the Indians, understandably deeply hostile to the settlers who had pushed back their territory. Indian raids were proportionately more massive; and warfare in the West was a guerrilla war on *both* sides, a genocidal war between two hostile peoples. Of course, another difference in the western war was the vast amounts of unoccupied land and the scarcity of inhabitants, that made the war in the West relatively unimportant and overlooked in the scale of the war as a whole. Its ultimate and long-range importance, however, was considerable, for the ultimate disposition of the vast western territory was at stake.

The region north of the Ohio and east of the Mississippi, captured by the British from the French in the Seven Years' War, was virtually unoccupied. This region, as well as what is now northern and western New York, was controlled during the Revolution by the British. The two strong British forts commanding the region, Detroit on Lake Michigan and Niagara in western New York, were the hub of operations for British regulars, Tory bands, and Indians against the frontier. The mutual devastation, especially in more populated upstate New York, was enormous.

The story of the Revolutionary War in the West is essentially the story of the brilliant young Virginia frontiersman George Rogers Clark. It has already been shown that Clark played a large part, in the early phases of the war, in saving the Kentucky settlers from the domination of the Transylvania Company. He had also been appointed as a major in the Virginia militia and the head of its forces in Kentucky.

Clark conceived a truly daring scheme: with his handful of Kentuckians he would strike, secretly and swiftly, at the French towns in what is now southern Illinois, towns that could serve as sources of attack upon the Kentuckians by Illinois Indians. The complacent British had left these French towns virtually undefended. Approving of Clark's plan, Gov. Patrick Henry made him a lieutenant colonel and authorized him to proceed. By the time Clark reached the last lap of his expedition—the departure from the Falls of the Ohio on June 26, 1778—his force had dwindled to considerably fewer than 200, and he had estimated 500 men as his minimum need! His command would be outnumbered five to one by the resident militia of the French towns and more than that by the Indians of the region. Nevertheless, he characteristically paid little attention to the odds: "The more I reflected on my weakness the more I was pleased with the enterprise." Sailing down the Ohio to the mouth of the Tennessee River by June 30, Clark marched up quietly through the Illinois country. On the night of July 4, the hungry little band reached and captured the French town of Kaskaskia without firing a shot; the surprise had been complete.

Clark shrewdly spared the people of Kaskaskia from any military reprisals or plunder, and also told them of the French entry into the war. Led by Father Pierre Gibault, the French now hailed the American forces as liberators. The nearby towns of Cahokia and Prairie du Rocher fell as painlessly.

It was clear that to safeguard the newly captured towns, the next objective would have to be Vincennes, another French town 180 miles to the east. Vincennes, on the Wabash River, was a key town commanding the great portage and river route from the St. Lawrence, the Great Lakes, and Detroit, down to the Wabash and thence to the Ohio River. Vincennes, too, was left in the hands of French militia and undefended by British troops. Father Gibault rushed to Vincennes and persuaded the French population to change sides, and the people of Vincennes readily agreed. A single American platoon was enough to occupy the town. Clark's meager force, now dwindled to 100, was scattered among the four French towns and was kept supplied from Spanish-held New Orleans. Through bravery and bluff, Clark's charismatic personality and his ability to appear out of the blue deeply impressed the powerful Indian tribes of the region, and he was not only able to occupy the four towns of the Illinois-Indiana region, but also to neutralize the massive Indian power on which the British had counted to move against the American frontier.

At this point, British Lieutenant Governor Henry Hamilton, commandant of Detroit, embarked upon the reconquest of the Illinois-Indiana region. Ultimately he hoped to join with British agent John Stuart and

southern Indians to sweep away all traces of Americans west of the Appalachians. Setting out in early October 1778, Hamilton expected to attract thousands of Indians along his march. He reached Vincennes on December 17 with 600 men, and marched in and took the town without opposition. The French militia, seeing on which side their bread was now buttered, had quickly shifted back to the English side.

The winter weather was extremely bad, and so Hamilton decided to wait until spring to rendezvous with Stuart's southern Indians on the Tennessee River. Clark, of whom Hamilton had just heard for the first time, and the town of Kaskaskia could be attended to in due course. Confidently, Hamilton sent home most of his force to winter more comfortably in Detroit, and sent out his Indians on various raids; he remained at the Vincennes fort with 80 men, awaiting the great assembly and advance the following spring.

An ordinary American commander would have taken advantage of this respite to hightail it out of the Illinois area, but Clark was no ordinary commander. To Clark the situation was clear. In the spring, Hamilton would be able to assemble enough men at Vincennes not only to capture Illinois, but Kentucky and perhaps Pittsburgh, able, indeed, to sweep the Americans out of the West. Now Hamilton was weak, and the only course for the Americans was an immediate surprise attack against an overconfident British force, who would never expect an American attack in the midst of the vile midwinter weather.

Clark decided on a joint attack by land and by water, the latter consisting of one warship which proved unable to reach Vincennes in time for the fray. To supplement his fewer than ninety Americans, Clark attracted about eighty Frenchmen to the cause by a display of enormous confidence and assurance. He launched his seemingly quixotic expedition on February 5. Slogging through intense rains and rising floods, his little band was able to reach Vincennes undetected by the enemy by February 23.

Replacing surprise by bluff, Clark won over the opportunistic French townspeople, none of whom ever dared to inform the British garrison in the fort of the arrival of the Americans. He swiftly occupied the town, added eager French militia to his force, and laid siege to the British fort. He continued to employ daring and braggadoccio to cripple the morale of the British forces, so impressing the French half of the garrison that they were ready to surrender. The gamble had succeeded with hardly the loss of a single man. Stunned at the sudden reversal of his fortunes, the intimidated Hamilton was induced to surrender on February 25. Universally hated by the frontiersmen for buying American scalps from the Indians, he was almost killed several times *en route* to his prison, where he was treated very badly for nearly two years by his Virginia captor, the usually humane Gov. Thomas Jefferson.

At this point Clark's remarkable and intuitive daring temporarily deserted him; it was now, with the British demoralized and the French population of Detroit on the verge of rebellion, that Clark could have taken his 200 men and struck at the heart of British power in the West: Detroit. But he allowed himself to be guided by more conventional military considerations, and waited for expected reinforcements, most of which never arrived. By June, the opportunity to seize Detroit was lost.

Even so, his achievement was still monumental, for he had stopped in its tracks the mammoth British invasion southward that would have conquered the West. By early spring of 1779, five British expeditions, picking up hundreds of French and Indians *en route*, were on the way to meet Hamilton in Illinois. Two expeditions left southwestward from Lake Erie, and three set forth from Mackinac, at the head of Lake Michigan. The electrifying news of Hamilton's capture totally demoralized the French and Indians, who deserted *en masse*. All the columns were forced to return home, and the British timetable for conquest in the West was completely disrupted. The 1779 campaign was finished. In addition, thousands of frontiersmen and settlers were so buoyed by Clark's victory as to pour into Kentucky and add to its defenses. Others erected completely new settlements at the bend of the Tennessee River.

To the northeast, on the New York frontier, the density of the population of American settlers and of Indian villages led to a more genocidal form of warfare than on the sparsely populated frontier of the Ohio Valley region. With the failure of the Burgoyne and St. Leger expeditions of 1777, it was clear that the brunt of fighting on the New York frontier thereafter would have to be borne by the Iroquois and by the Tories. Taking charge of the Indian effort was the brilliant, well-educated, and fiercely pro-British Mohawk chieftain, young Joseph Brant; the Tory forces were led by Butler's Rangers, organized by Sir John Johnson's old deputy Indian agent, Col. John Butler. In the late spring of 1778, the two agreed that Butler would launch an attack on the Wyoming Valley, while Brant would launch a series of covering raids further north in New York. The lush and isolated Wyoming Valley, in northeastern Pennsylvania on the Susquehanna River, had been populated by settlers from Connecticut who, with some logic, claimed it on behalf of their home state. But Pennsylvania's bitter hostility to the settlers and to Connecticut's claims weakened the defense of the valley and gave Butler and his Tories an easy target for mayhem and plunder.

In late June (about the same time Clark left Kentucky for Illinois) Butler set forth from his camp at Unadilla, from which he could strike north and east at New York or south at Pennsylvania. With 200 Tory rangers and 500 Indians, he marched down the valley, forcing two stockades to surren-

der. He then trapped the main American defense force in a clever ambush on July 3 and massacred the fleeing defenders. With several hundred Americans slaughtered in the battle, and only three losses to the Tory-Indian force, the remainder of the garrison and settler families surrendered at the main stockade of Forty Fort. The terms of the surrender called for their being disarmed and then released unharmed in return for their promise that they would not fight any further in the American cause. Butler and his Indians were surprisingly scrupulous in keeping the agreement, even though the valley's homes, mills and livestock were burned, plundered, and destroyed. But in their hysteria, the Wyoming refugees confused the disastrous battle with the later surrender, and convinced everyone, even the British, that Butler and the Indians had conducted a horrible massacre in the Wyoming Valley. Such was the power of atrocity propaganda that the Wyoming campaign became well known as the Wyoming Valley Massacre. Actually, the breaking of agreements cut the other way, for most of the survivors promptly broke their promise, unhappily for Americans captured in later campaigns.

Butler's successful devastation of the Wyoming Valley had strategic significance. Congress had just authorized Gen. Lachlan McIntosh, commandant at Pittsburgh, to march westward to capture the critical British base of Detroit. But Butler's strike near home ended that expedition, and this relief of pressure enabled Hamilton to embark on his autumn campaign against Vincennes and the Shawnee Indians to attack settlements in Kentucky.

In the meantime, beginning at the end of May 1778, Joseph Brant conducted a spectacular series of covering raids in the Mohawk Valley on the New York frontier. Fighting with him were some 300 Indians, plus a floating number of eager Tories of whatever neighborhood he happened to be in. Employing mobile and elusive guerrilla tactics, he marched back and forth for two months among the villages and farmlands of the Mohawk, the Susquehanna, and the Delaware watersheds, burning, plundering, destroying, terrorizing American patriots (especially the leaders), and rescuing and recruiting Tories. But while Brant systematically destroyed American property, depriving Washington's army of the important Mohawk Valley source of wheat and meat, he took care not to murder indiscriminately. There were no complaints, in an age when such protests readily arose, of his killing or mistreating American civilians; the only Americans he killed were armed men in the heat of battle. Most prisoners were released after Brant lectured them on their wickedness as rebels against King George.

Aided by the Butler Rangers, Brant went on to strike a devastating blow in mid-September to the most fertile part of the Mohawk Valley, the German Flats district in the west valley. While the citizens of the commu-

nity huddled safely but helplessly in Forts Herkimer and Dayton, the 500 Indians and Tories thoroughly and methodically burned and destroyed all the homes and property of that region.

The American military authorities decided that counter-raids of vengeance and collective punishment upon the Indian communities were in order. The most important of these took place in early October, when Col. William Butler led four companies of Continental riflemen upon Indian towns on the upper Susquehanna River. Only defenseless women and children were to be found in these villages, and the Americans added mass rape of the captured Indian women to the usual plundering and devastation of property on both sides. This gratuitous sexual brutality greatly shocked the Indians and led to escalating counter-brutalities in subsequent Indian attacks upon New York. All that Butler and the other American raiders had accomplished was to goad the Indians into greater and more destructive attacks.

By late 1778, the year's campaign was supposed to be over. The New York and Pennsylvania frontiers had suffered devastating losses, including the destruction of potential supplies for the American army. Sporadic Indian raids had also been severe on the southern frontier. But for the energetic young Tory Walter Butler, who had replaced his ailing father John as head of Butler's Rangers, the year's work was *not* over. He persuaded Brant and the Indians, infuriated by the barbarities of the American raids, to join him in a winter march on strategic Fort Alden in the New York Cherry Valley. Butler failed to keep his advance a complete surprise, but this did not matter. Colonel Ichabod Alden, commandant of the fort, not only refused to heed warnings of the Tory-Indian approach, but also refused to allow anyone to take refuge inside the walls of his command. He and his top officers heedlessly lived outside the fort, and paid for this carelessness with their lives when Butler swept down to attack on November 11, 1778.

Butler, however, at once lost control of his Indian troops, especially the Seneca and the Cayuga, who preferred to attack the defenseless residents of Cherry Valley rather than the armed fort. The defenders, meanwhile, remained in the safety of their garrison. This time it truly was a massacre, as lives were no longer spared in the general devastation. Even the Wells family, old friends of Brant and Butler, were slaughtered by the rampaging Indians without their commanders' knowledge. Only when the British forces reassembled did Butler and Brant prevail over the bitter objections of the Indians, and set free the prisoners taken at Cherry Valley.

The Cherry Valley massacre, occurring so close to the center of population and late and isolated in the winter campaign, also found an important

place in the public consciousness, and in American propaganda against the British—and with more justice than the Wyoming incident.

The next year, 1779, Congress decided upon total retaliation against the Iroquois. Washington placed in command of this massive expedition Gen. John Sullivan. The plan was to devastate the Indian country on the New York–Pennsylvania frontier by sending in three divisions of troops. The main body of three brigades under Sullivan was to advance north from Easton, Pennsylvania, through the Wyoming Valley and up the Susquehanna River to Tioga. Gen. James Clinton was to take another brigade southwest from the Mohawk and down the Unadilla River to join Sullivan at Tioga. In the meantime, Col. Daniel Brodhead was to march northeast from Pittsburgh up the Allegheny toward Tioga.

The campaign began inauspiciously as Clinton sent a force of nearly 600 to attack and devastate the Onondaga country. A swift surprise force in late April dutifully burned three Onondaga towns. The difficulty here was that the Onondaga had been the least warlike of the Iroquois tribes, and had yearned for peace; now they resolved to fight the Americans. By late June, Clinton had assembled 1,600 troops at Lake Otsego, and was ready to go. But Sullivan was having his troubles. Not only was Pennsylvania still reluctant to defend the Connecticut settlers of the Wyoming Valley, but his long unpaid New Jersey troops began to mutiny. Furthermore, he kept insisting upon ever more troops and supplies for the campaign. Sullivan was not ready to march until the end of July.

The British and allied forces knew of the developing American plans and for their part the Iroquois, always oriented to New York rather than to the west, were undaunted by the news of Clark's capture of Hamilton at Vincennes. Brant and Butler tried flank attacks on New York settlements, but Sullivan refused to be lured into defending the frontier areas; only aggression, not mere defense, he argued, could eliminate the Indian menace for good and all. He joined forces with Clinton at Tioga and, on August 26, they marched west with a huge force of 4,000 veteran Continental troops intent on totally devastating the Indian villages and farms. Guarding against surprise attack were veteran frontiersmen, Oneida scouts, and Morgan's former rifle unit. His force, numbering only 750, Butler was obviously no match for this massive troop and he assumed a defensive position at the Indian village of Newtown. He counted on surprise, however, and surprise he did not have. He and Brant were smashed at the Battle of Newtown on August 29, and were forced to flee posthaste westward to the Genesee. The bodies of the Indian fallen were savagely mutilated by the American forces. The entire heartland of the powerful Iroquois Nation lay open to total destruction, to which Sullivan applied himself with a will. It was to be so devastating as to eliminate any capacity of the Iroquois to make war or even to subsist in their homeland.

Towns, substantial wooden and stone houses with windows, cornfields, gardens, orchards, livestock, storehouses—all were burned to the ground. There were few prisoners or hostages taken and few Indian lives lost, as the despairing Indians fled before Sullivan's advance. Meanwhile, during late August and early September, Brodhead's force of over 600 devastated Seneca and Mingo towns on the Allegheny, burning eleven towns and returning to Pittsburgh without losing a single man.

Sullivan reached the Genessee on September 15 and levelled the Great Seneca Castle, the mighty stronghold of the Seneca tribe. Lacking supplies to press on to Niagara, he turned back to finish off those towns and farmlands overlooked in the previous devastation; no captives were taken despite Washington's desire for hostages. They did manage to burn alive a very aged squaw and a crippled Indian child, whom they had taken prisoner.

Returning, he was hailed throughout the country for his achievements. His policy of brutal devastation of Indian houses and property, his sweeping attacks on Indian villages, seemed to have reaped great fruits and to have justified the risk of employing a large chunk of Washington's Continental Army. The Tory-Iroquois military force had been routed: forty-one Iroquois towns and surrounding farms had been mercilessly burned to the ground, leaving only one town left standing in the entire Iroquois region. Thousands of distraught Indian men, women, and children were homeless and starving. The Indians were surely impressed by the invincibility of the American forces. And all this achieved with the loss of only forty Americans dead! The end of 1779 thus saw the Americans victorious on the two frontier fronts, New York and the Ohio Valley, and seemingly in command of both frontier regions. (For his efforts, Sullivan was rewarded by Congress by what was fast becoming an American tradition: he was forced into retirement. In Sullivan's case, however, it was because of his chronic complaining.)

There was a fatal flaw, however, in these seemingly coldly realistic calculations which ignored the fate of innocent Indian women and children. The Indians' property was devastated, but they were still alive, thirsting for vengeance. Now based at the English stronghold at Niagara, they were utterly dependent on English supplies, both food and munitions. The Americans their absolute and total enemy, they were irrevocably wedded to the English war effort. The aggrieved Iroquois could—and did—strike back. The victories of 1779 turned out to be mere delaying actions, delays forming a prelude to mighty British offensives of 1780.

The resurgence in 1780 of Indian attacks on the New York frontier rapidly demonstrated the ultimate pragmatic failure of the Sullivan campaign. As early as April, Joseph Brant was back, wreaking havoc up and down the frontier. The pro-American Oneida were severely punished by

his forces and he took particular satisfaction in the destruction of his old birthplace of Canajoharie. This town had had to be evacuated by the Mohawks at the outbreak of the war, when their places were taken by white settlers who received their comeuppance when Brant emulated Sullivan by burning their grain fields as well as their horses and livestock. In the meantime, Sir John Johnson, taking over from Butler as head of the Tory rangers, burst down from Crown Point to capture his old home town of Johnstown, and used this as his headquarters for pillaging and burning the lower Mohawk Valley and killing many of its inhabitants. By the time Governor Clinton had gathered enough militia to march against him, Johnson had burned Johnstown to the ground before abandoning it to return safely to Crown Point and thence to Canada.

George Washington, who had spared a huge force the previous year for Sullivan's brutal and ultimately inconclusive offensive, now felt that he could spare no one for the worthier task of defending the frontier settlements. Though worried about diminishing supplies, he made no attempt to save the principal sources of his provisions.

The next series of incursions on the New York frontier was a more organized and systematic effort. In a miniature of the two-pronged attack of 1777, Maj. Guy Carleton, nephew of the former Canadian governor, advanced down Lake Champlain in October 1780 with 800 men, including 600 British regulars; at the same time, Johnson and Brant burst upon the frontier with 1,200 men further south near the headwaters of the Schoharie River. This was supposed to coincide with a thrust by Gen. Sir Henry Clinton up the Hudson from New York City, upon the delivery of West Point by Benedict Arnold. Carleton managed to capture Forts Ann and George, but was forced to turn back after capturing Ballston, near Saratoga. Johnson and Brant laid waste the Schoharie River region, but turned west from Albany and, avoiding American forts, devastated the Mohawk Valley and crushed several militia units. Johnson was finally defeated on October 19 at Klock's Field by 1,500 Hudson Valley militia under Gen. Robert Van Rensselaer. Pursued only briefly by the sluggish Van Rensselaer, who thereby gave up the chance of a smashing victory, Johnson's forces fled westward to return to Oswego on Lake Ontario and thence to Canada. The revived English threat of capturing Albany and uniting on the Hudson had been easily thwarted; but at the end of 1780 the whole New York frontier west of Schenectady was a smoking desert for whites and Indians alike.

One amusing incident of the Johnson-Brant foray was the singlehanded saving of the Middle Fort by Morgan's crack rifleman, Timothy Murphy, the same man who had shot General Fraser at the Battle of Bemis Heights. When Johnson demanded that the fort surrender, the cowardly Major Melancthon Woolsey was quickly ready to comply; he was prevented

several times by Murphy, who threatened to kill anyone, including Woolsey, who attempted to carry out such a surrender. Murphy was backed in this courageous mutiny by the militia, and the Tory-Indian units moved on.

In the West, the British launched an attack southward in 1780 similar to the invasion of the year before. Again the proximate goal was to conquer Illinois and Kentucky; the ultimate goal, to capture the entire West. Spain had entered the war against Britain in 1779, and this time the British hoped to use their base at Pensacola in West Florida to sweep the Spanish out of Louisiana, the land west of the Mississippi.

It was, this time, a three-pronged invasion of armies of Indians stiffened by Tories, French-American militia, and a few English regulars. One force of nearly a thousand, commanded by Capt. Emanuel Hesse, set forth from Mackinac, then down the Wisconsin and the Mississippi. A second and smaller force, commanded by Capt. Charles Langlade, sailed down Lake Michigan from Mackinac and thence down the Illinois to meet Hesse at the Mississippi. Langlade's force was to serve as a distraction from the main Hesse column. The third and largest English troop of over a thousand men marched south from Detroit under Capt. Henry Bird, south down the Miami River Valley and into Kentucky. The Bird force carried with it two huge cannon to breach American fortifications. This three-pronged blow at the American West got smoothly under way in early May of 1780.

The defense against this formidable threat devolved again upon George Rogers Clark, whose already small force had been decimated by the staggering depreciation of the inflated paper dollar. His supply system from Spanish New Orleans was undone by Virginia's refusing to honor his requisitions, a pattern that was to be set for the remainder of his life. He was now virtually reduced to the local militia of the scattered towns of the Illinois and Kentucky areas.

In late May, Clark was suddenly informed of Hesse's march down the Mississippi and its grave threat to Cahokia and to the Spanish town of St. Louis on the other side of the Mississippi River. Rushing up north his few men from Fort Jefferson, which Clark was constructing near the mouth of the Ohio, Clark happily reached Cahokia on May 25, the day before Hesse's assault. The British confidently launched twin attacks on Cahokia and St. Louis; Clark repulsed the assault on Cahokia, while Spanish soldiers and French natives managed to repulse the major action against St. Louis. As usual when facing any rebuff, Hesse's Indians became intensely discouraged and began to melt away, unhappy in any event because of the military despotism enforced in the British army. Hesse was forced to retreat rapidly, pursued eagerly by a Franco-Spanish-American volunteer

force organized by Clark. He was chased as far as the Rock River, while Langlade's force, its Indian support also crumbling, was pursued back to Lake Michigan.

Clark had to deny himself the pleasure of leading the pursuit, for he had to race eastward to save Kentucky from Bird's army. To evade capture by Chickasaw Indians besieging Fort Jefferson, Clark and two companions disguised themselves as Chickasaws and rushed 300 miles through the wilderness to reach Harrodsburg in time to organize Kentucky against the coming invasion.

In late June, Bird struck directly at populous central Kentucky, quickly storming the stockade at Ruddle's Station by devastating use of his big cannon. Bird personally guaranteed the safety of the surrendered Americans, but as the gate opened the Indians ignored their commander and rushed in to massacre and mutilate most of the helpless prisoners, including women and children. Next, the smaller stockade at Martin's Station quickly fell to the British. But the Indians were getting out of hand, and were increasingly restive at Bird's attempts to save the lives of his prisoners. Moreover, their range-of-the-moment attitude toward food supply (e.g., immediate slaughter of all captured cattle) caused food shortages in Bird's army. The final straw came when the Indians learned that George Rogers Clark, of whom they were already in great awe, had miraculously turned up to lead the Kentucky defense. They began to melt away and the disillusioned Bird had no option but to leave Kentucky as fast as he could, dismiss the remaining Indians, and return hastily to Detroit. The great English invasion of the West in 1780 had been repulsed and driven back—virtually the singlehanded achievement of George Rogers Clark.

But Clark was not finished with the year's work. In retaliation, he swiftly raised a force of 1,000 Kentucky volunteers, who assembled on the Ohio River on August 1 with a captured cannon. He took his men up the Miami to punish the Shawnee, the Indian tribe most hated by the Kentuckians. Slashing swiftly upriver, Clark captured Chillicothe, a leading Shawnee town, and burned it and its adjacent cornfields to the ground. At the next town, Piqua, the heavily outnumbered Shawnee made a stand, but were routed by Clark and his cannon. The Americans then burned Piqua and its cornfields.

Despite the accelerating collapse of the paper dollar and subsequent economic chaos and shortage of supplies created by reversion to barter in the West, the emboldened Clark attempted to strike at the heart of the enemy and capture Detroit itself. Despite Virginia's increasing military distress, he left for Pittsburgh in late January 1781. He had planned to assemble 2,000 militia at Pittsburgh, move down the Falls of Ohio, and northward to Detroit. But this year, the British decided to avoid the failing strategy of relying on massive Indian invasions and to rely instead

on a lengthy series of violent raids on the frontier. The Americans' troubles were aggravated by the previously neutral Delaware Indians' coming down on the British side. Finally, the Americans were forced to pull back from Kaskaskia, from Vincennes, and from Fort Jefferson.

To cap these problems, Clark found it impossible to recruit the necessary troops for his projected march. Thus, Daniel Brodhead refused to join Clark and instead struck westward from Pittsburgh to punish the Delawares for entering the war. With a force of nearly 300, Brodhead swiftly seized and burned Coshocton and murdered a batch of Delaware prisoners. The major effect of this brutality was to intensify the Delawares' anti-American resolve, and they burned nine Kentucky prisoners in reprisal. Pennsylvania, moreover, was distrustful of Virginia's lead in the projected Clark expedition, and sent no troops to support it. Finally, Clark's potential recruits from the valley of Virginia refused to join his force; instead, they sprang to counter the British invasion of eastern Virginia and heeded Virginia's decision to call off the expedition. Clark could only rely on local Kentucky and Ohio Valley settlers.

He finally assembled 400 volunteers at Wheeling; inauspiciously, the continuing mass desertions from his army forced him to start down the Ohio. Luck continued to fail him when the force of over 100 Pennsylvanians under Col. Archibald Lockry, marching to join Clark, was wiped out in late August in a sudden slashing attack by a slightly smaller force led by none other than Joseph Brant. At Louisville, a series of councils in early September had to decide Kentucky's course. While Clark's faithful Illinois officers argued for his plan to attack Detroit, the majority of the Kentucky councils realized that the force was too small for such a campaign. They decided there would be no American offensive, and a discouraged Clark lamented that "I have lost the object that was one of the principal inducements to my fatigues and transactions for several years past—my chain appears to have run out. I find myself enclosed with few troops, in a trifling fort. . . ."

Brant had been shifted to the West in the early summer of 1781 to help check the expected drive by Clark against Detroit. Now, after the destruction of Lockry's force, he proposed to move swiftly upon Clark at Louisville with his full force of Tories and Indians, while the Americans were still demoralized. But, once again, the Indians themselves were as fully demoralized by victory as by defeat, and learning of Kentucky's abandonment of the Detroit invasion plan, they no longer feared destruction at the hands of an invading American force. They deserted *en masse*, as did the Tory Rangers, reducing a sizeable force to a mere troop of 200 men. The projected attack on Clark had necessarily become a surging terror raid of killing and plundering in the Kentucky settlements, at which point Brant was forced by the Indians' satisfaction with their loot to turn back across

the Ohio. Because he could not conquer Kentucky, Brant finished out the war disgruntled like his counterpart Clark. Seventeen eighty-one ended with Kentucky still in the hands of American settlers and with the British back in control of the land north of the Ohio—roughly the status quo at the outset of the Revolutionary War.

In contrast to these mixed conditions, the New York frontier was in virtually a hopeless state during 1781. Brant and the Indians were emphatically in control of western New York. Indian terror raids began as early as January, and the American settlers were permanently confined to two dozen stockades, from which they dared emerge only to plant their fields under armed guard. Moreover, the redoubtable Fort Stanwix, the westernmost American stronghold in the Mohawk Valley, had to be abandoned under siege, and the western bastion fell back to Fort Herkimer. Raiding parties roamed and destroyed the New York frontier almost at will, and the two major upstate towns of Albany and Schenectady feared imminent attack. Left to defend the New York region was the radical young Col. Marinus Willett, who conducted guerrilla warfare on his own by using Canajoharie as his base from which to attack Indian raiding parties. But these were only last-ditch actions, and once again Washington felt that he could spare no men to assist in the grievous burden of defense.

One gauge of the terrible American losses on the frontier during the war was the depopulation of frontier Tryon County. At the start of the war, the county had 2,500 enrolled in its militia; by 1781 fewer than 800 were eligible. One contemporary estimate held that, of the mammoth reduction, one-third were casualties, one-third had joined the Tories, and one-third had fled eastward.

The final British thrust on the New York frontier came in the autumn of 1781, as Washington's move south to Yorktown emboldened the British to try, for the third time, a three-pronged offensive to cut New York in two. The American force had dwindled to only 2,000 men under Gen. William Heath in the Hudson Highlands, and this seemed to provide a golden opportunity. Driving down Lake Champlain to Ticonderoga, St. Leger became embroiled in negotiations with the independent state of Vermont, and never proceeded further. Gen. Sir Henry Clinton, commanding 16,000 idle men in New York City, failed with his typical indolence to make any move northward to attack Heath. Only Maj. John Ross moved from Oswego on October 10, falling upon the lower Schoharie. But Brant's absence in the West deprived Ross of the bulk of the expected Iroquois allies, and his own force of nearly 500 was not sufficient to penetrate further than the outskirts of Schenectady. His withdrawal was harried by Willett, who had quickly assembled hundreds of militia. The engagements in the pursuit were inconclusive, but the settlers were im-

measurably cheered by the news that fallen in battle was perhaps the most hated man on the New York frontier, Walter Butler. As Van Every puts it: "There was more rejoicing in Tryon County over his death than over the coincidental news from Yorktown."*

Spain was willing to aid the American cause, but when it entered the war against Great Britain in 1779 it was to recapture her territory and weaken her old enemy Great Britain, not to aid republican revolutionaries. When Clark won his great victories in Illinois in 1778, and James Willing, brother of the partner of Robert Morris, headed a band early that year to plunder unmercifully the planters of Natchez in West Florida, Spain realized that the aggressive Americans, in the long run, posed a greater threat to her holdings and ambitions in the West than did Britain's bases there. The only thing that Willing's plunder accomplished for the American cause was to make confirmed Tories of the Natchez planters, and to lead Britain to construct a series of forts on the lower Mississippi that effectively blocked American navigation.

As soon as Spain went to war openly in 1779, she moved swiftly to recapture the coveted territory Britain had seized from her in the peace of 1763. Louisiana's young governor, Bernardo de Gálvez, with remarkable swiftness, attacked and overwhelmed every English post on the lower Mississippi before the defenders had had a chance to learn that Spain was in the war. Fort Manchac, Baton Rouge, Fort Panmure, and Natchez all fell to de Gálvez in September, and Spanish ships defeated the British to gain control of Lake Ponchartrain, north of New Orleans. In a few weeks, de Gálvez had captured over 1,100 English troops and eight English ships. The following March, he captured Mobile, gaining control of the entire lower Mississippi Valley.

To forestall American settlers, Spanish commanders crossed the Mississippi further north in the winter of 1780–81 to assert Spanish claims to the formerly English east bank of the Mississippi. The Spanish flag was even hoisted in early 1781 over St. Joseph (now in southern Michigan), which had been captured by Capt. Eugene Pourre in a march from St. Louis. Spain's final spoils of war was de Gálvez' capture, in May 1781, of mighty Pensacola, the major English base in the south, a capture which included the final surrender by Britain of all of West Florida. Once in control of West Florida, the Spanish proved extremely lenient rulers, even to British rebels who had temporarily seized Fort Panmure.

The Southern Strategy

The main theatre of war, however, the theatre that decided victory or defeat, was not the North or the West. The South's great travail had begun.

As John Shy has shown in a brilliant essay on British strategy during the Revolutionary War, that strategy proceeded in three successive stages.* The first stage, from the Coercive Acts in early 1774 until the end of 1776, was seen by the British as a quick police action, or punishment operation, against the main rebel center of Boston, after which the other colonies and even rural Massachusetts would quickly come to heel. But this strategy proved counterproductive, and the rebellion spread throughout the American colonies.

After the outbreak of the war, and with their troops bottled up in Boston, the British proceeded to the second stage of their strategy: a conventional inter-State war against the rebel Continental Army. When this strategy collapsed at Saratoga, they withdrew to bases at New York and Newport, and reconsidered their strategy. By late 1778, they had decided on seizing the nettle of new large-scale revolutionary war by conducting a full-scale campaign of counter-revolutionary and counter-guerrilla "pacification." The idea now was that, instead of going from north to south as before, they would start in the deep south, and slowly move north, not moving until their rear had been thoroughly pacified by

*John Shy, "The American Revolution: The Military Conflict Considered as a Revolutionary War," in S. Kurtz and J. Hutson, eds., *Essays on the American Revolution* (Chapel Hill, N.C.: University of North Carolina Press, 1973), pp. 129-45.

Tory self-defense units and Tory instruments of government. This strategy depended upon the characteristic British overestimation of the extent of Tory sentiment among the American populace, especially in the South. It was a typical failure of imperialists in deluding themselves that the colonized masses are loyal, and that revolutions are only made by a malevolent minority of fanatics.

As Shy sums up the new strategy: "The basic concept was to regain complete military control of some one major colony, restore full civil government, and then expand both control and government in a step-by-step operation conducted behind a slowly advancing screen of British regulars. From a police operation, and then a classical military confrontation, British strategy had finally become a comprehensive plan of pacification directed against a revolutionary war."*

In this strategy, the first task was to capture Georgia, the weakest and least populous of the southern states, and also the one which could be readily attacked from the great British East Florida base St. Augustine. Georgia could also be approached readily by sea, where the British were dominant, and could then be used to supply the embattled British islands in the West Indies. The British plan was to drive northward, rolling up one state after another, depriving the northern and middle states of the benefits of the southern export trade, and blockading the North into submission. The southern Tories, protected from rebel fanatics by the presence of British troops, would then surely be able to resume stable government in their states. The British evidently did not learn from their disillusioning experiences with Tory strength in the North. As Alden writes: "Spokesmen for the Loyalists, insistent throughout the War of Independence that they formed the bulk of the population of the 13 states, were staunch in asserting their eagerness to pick up arms for Britain in areas as yet untouched by British troops. When the redcoats were in Boston, they were told they would be welcomed with open arms in New York; on Manhattan, they were informed that the Tories in New Jersey and Pennsylvania would rise as soon as they appeared; in Philadelphia, it was said that the supporters of the Crown in Maryland and Delaware needed only minimal assistance to throw off the yoke imposed upon them by their patriot neighbors . . . [; but] as [the British commanders] moved into the American interior they had found themselves surrounded by hostile militia rather than throngs of allies. In England, however, it was easier to accept Loyalist assertions at face value."**

While the proportion of Tories in Georgia and the Carolinas was certainly higher than the average in the North, it was scarcely as high as the

*Shy, "The Military Conflict," p. 140.

**Alden, *The American Revolution 1775-1783*, p. 227.

British liked to believe. More than overconfidence, however, was involved in the reliance upon the Tories and the consequent strategy they stubbornly insisted upon. Domestic political opposition in Britain revived and swelled after Saratoga, and the balance of power in Parliament was held by the country gentry. These nominally Tory, but instinctively libertarian, gentry were most deeply impressed with the tax burden upon themselves. Larger and wider war meant higher taxes on them, and there was the danger to the crown that they would let their aversion for taxation overcome their naive patriotism and join the opposition. Their main enthusiasm for the war had lain in the prospect of placing part of the imperial tax burden upon the Americans, but this was shattered by Lord North's abandonment of the plan to tax America in early 1778.

The southern strategy, however, was calculated to appeal to the budget-conscious gentry. It meant that the war in America could be carried on and supposedly won with the absolute minimum of additional expense to Great Britain: the American Tories themselves would supply the manpower! Bemused also by the overestimate of Tory strength, and influenced by the sentimental argument that Britain had the duty to come to the support of its suffering loyal subjects overseas, the gentry agreed to continue supporting the war effort, thereby irrevocably committing the crown to a strategy heavily reliant on Tory contributions to the war. This commitment itself reinforced and propelled the British tendency to overrate the Tories. As Professor Paul Smith concludes:

Consequently, the administration became dangerously dependent upon the American Loyalists. The weakness of Britain's reliance upon the southern Loyalists was that [it] . . . unwisely combined political and military considerations. It was one matter to base a single operation on the expectation that widespread civilian support would appear; if that operation failed, another maneuver could be tried. It was quite a different matter to use this argument to secure Parliamentary support for the War; if the anticipated civilian support failed to materialize at any time, the same dubious strategy would have to be repeated endlessly in other areas for no other reason than to maintain the necessary political support.

As Britain came to depend increasingly upon the Loyalists to justify continuance of the War against the colonies . . . it became impossible for officials in the ministry to formulate a grand strategy independently of their image of conditions in the colonies. In order to maintain a Parliamentary majority, the administration tethered its strategy to the chimera of Loyalist support. Moreover, . . . it fell victim to every unfounded report that American resistance was crumbling."*

*Paul H. Smith, *Loyalists and Redcoats* (Chapel Hill, N.C.: University of North Carolina Press, 1964), p. 98.

The opposition attacks in Parliament reached a peak in the spring of 1779, increasing emphasis on American Tories and on the southern strategy. By early 1779, the British government had expended hundreds of lives and millions of pounds on the American war, and it was certainly no nearer to success than at the outset. Naval and army losses had been severe during 1778, the year when the war had become worldwide. Only the iron determination of George III to carry on despite all opposition and all setbacks prevented the North ministry from toppling.

The Whig General Howe tried to salvage his reputation by opening up the entire question of the wisdom of the war to subdue America.* At the inquiry voted by Parliament, Gen. Charles Grey effectively told the country that the goal of crushing the American Revolution was completely impractical without a huge increase of public expenses—an increase that would not be tolerated by the country gentry. The administration rebutted with Gen. James Robertson, their most important witness. Grey had correctly maintained that the great bulk of the American people supported the Revolution, but Robertson countered with the thesis that “more than two-thirds” of the American people were against, or at least would not actively support, the Revolution. He argued, in effect, that the bulk of its American subjects were really docile and happy under the benign rule of their imperial masters; only a small minority of fanatical zealots (“outside agitators” had not yet been invented) tyrannized the bulk of the people. Therefore, all that would be necessary to win would be to land a “British presence” in the country to relieve the people of the pressure exerted by the league of fanatics, and the public would flock to the imperial banner; the British needed only to arm the American people “in their own defense.” He concluded that “the object of the war was to enable the loyal subjects of America to get free from the tyranny of the rebels, and to let the country follow its inclination, by returning to the King’s government.”

It was Robertson’s testimony that enabled the government to turn back the opposition’s challenge, but this line of argument committed the government even more heavily to the American Tory–southern strategy, and made it ever more dependent upon victories in the South.

To meet any British threat to the South, Washington had sent there, as head of the Southern Department, Maj. Gen. Benjamin Lincoln, who arrived at Charleston in December 1778. Lincoln was amiable, mild-mannered to the point of insipidity, and widely beloved, but as an officer he was undistinguished. Before being raised to this post, he had never

*Cf. Smith, *Loyalists and Redcoats*. pp. 115ff.

won a single battle. Posing no threat to the commander in chief's office or prestige, this good-natured mediocrity was picked for a vital command while Washington's vindictiveness and jealousy were forcing America's best generals into semi-retirement or out of the service altogether.

The Invasion of Georgia

The British ignited the war in the South on December 23, 1778, landing an invasion force of 3,500 men under the command of Col. Archibald Campbell at the mouth of the Savannah River, just below Savannah, Georgia. Meanwhile, in a coordinated strike, General Augustine Prevost moved up by land from St. Augustine with 2,000 troops. Maj. Gen. Robert Howe, Lincoln's predecessor, not yet replaced in the field, was there to defend Savannah with fewer than 900 men, mostly South Carolina and Georgia militia. Howe split his small force, weakening it further, leaving part south of Savannah at Fort Sunbury to check Prevost, and absurdly preparing himself to defend Savannah frontally against overwhelmingly superior British arms. To cap his strategic error of accepting direct confrontation, he added the tactical one of not choosing a defensible site, and he allowed himself to be nearly surrounded. Campbell easily smashed him on December 29 and seized Savannah. Howe's folly led to more than 500 American casualties and losses, a staggering rate of well over 50 percent of the American force. British losses were almost nonexistent. Fort Sunbury was soon captured by Prevost, and 200 more men were lost to the American war effort. At the end of January, Prevost, now in command of the joint force, sent Campbell northwest up the Savannah River with 1,000 men to capture Augusta and erect garrisons throughout western Georgia.

In Augusta, Campbell administered the oath of allegiance to 1,400 citizens and formed them into twenty Tory militia companies. By February, all of Georgia was under British control. The first phase of the British campaign in the South had been a resounding success, and they rushed the

last royal governor, Sir James Wright, and the other loyal top officials back to Savannah to reestablish a British civil regime in Georgia. This regime was the only one during the war to convene a legislature under British authority. (Even in New York City the British never felt secure enough in their six continuous years of occupation to shift from military to civilian rule.) The old Tory proclivities of the Georgians quickly came to the fore; most of the people of Georgia were opportunists and they flocked to make their peace with the British restoration under guarantee of royal protection. Reliance on Tories seemed truly to be the key to conquest of the South.

The Savannah River became the line between the two main armies: General Lincoln took up his post with 3,600 men at Purysburg on the South Carolina side of the river, north of the town of Savannah, while Prevost was stationed at Ebenezer across the river with over 3,000 men. The river was too wide and swampy for a crossing in force by Prevost or the Americans; but Prevost used the Royal Navy to land a Major Gardiner and 220 men to seize Port Royal Island behind Purysburg. Lincoln quickly sent Gen. William Moultrie to the island to raise the militia, and he assembled over 300 men to occupy Beaufort, the island's major town. Moultrie's force fought off the British in a pitched, if necessarily small-scale, battle on February 3, and Gardiner withdrew with heavy losses. This battle stopped the British military momentum and for the time being halted any attempt to invade South Carolina.

Meanwhile, Colonel Campbell, encouraged by his reception by the Tories at Augusta, had sent 200 mounted Tories under the command of Col. John Hamilton, an aristocratic and highly influential Scots Highlander, to the Georgia back country to recruit more Tory militia. This stimulated Colonel Boyd, a leading Tory of North Carolina, to round up 700 Scottish Tories of that state and march to back-country Georgia to join Hamilton. By plundering happily as they marched, Boyd's men gained few adherents to the royal cause in the Carolina back country and alienated many. After easily driving off a small party of American militia under a Captain Anderson, Boyd and his party crossed the Savannah River into up-country Georgia. While they were relaxing at Kettle Creek, on the Georgia side of the river, a party of fewer than 300 South Carolina militia surrounded the camp on three sides and fell upon them in a surprise maneuver. The outcome was a total rout of the superior Tory militia; Boyd was killed, nearly 200 other casualties were suffered, and almost half the survivors fled back to their homes. Three hundred of the beaten men were able to scurry to join Campbell at Augusta. The patriot militia, in contrast, had only about 30 casualties. The 75 captured Tories were taken to South Carolina, where they were tried *en masse* on charges of high treason, and all were condemned to death. While seventy were pardoned, five leading

Tories were duly hanged for treason—a hanging that taught the back-country Tories an impressive lesson.

The triumph at Kettle Creek brought into prominence Col. Andrew Pickens of the South Carolina militia, commander of the victorious force. The dour young Pickens, a Presbyterian elder, was to prove to be one of the finest guerrilla leaders of the war.

The nearly simultaneous victories at Beaufort and Kettle Creek in early February 1779 not only greatly buoyed American hopes, but they also turned the tide of public opinion in back-country Georgia. The emboldened patriot militia flocked to Lincoln's camp and inspired him to try to retake Georgia. He sent two contingents to the up country, one a force of 1,500 North Carolina militia under Gen. John Ashe to Briar Creek, and another of 1,200 men under Gen. Andrew Williamson of Georgia to the east bank of the Savannah opposite Augusta. Seeing this formidable force coming upriver, Campbell decided to leave Augusta and march back to Savannah. This withdrawal disheartened the Tories of the back country, and their militia companies wilted away, leaving upper Georgia, including Augusta, open to the rebels. Furthermore, by spreading themselves too thin in Georgia and consequently being forced to contract again, Campbell disheartened Tory sentiment throughout the South.

As General Ashe, his forces swelled to nearly 1,700 men, eagerly pursued Campbell's retreating force down to Briar Creek, about halfway to Savannah, General Prevost devised a brilliant plan to defeat him. Prevost sent his younger brother, Col. Mark Prevost, with 900 men in a wide flanking movement around Ashe, to encircle the American force and attack it from the rear. Ashe learned of Prevost's advance, but took no steps whatever to meet or forestall it. As a result of this remarkable display of incompetence, he was attacked simultaneously from front and rear, and on March 3 his army was totally shattered. Nearly 200 Americans were killed in this Battle of Briar Creek, and almost another 200 were captured, along with seven cannon and almost all of Ashe's arms and ammunition. Of the rest of Ashe's large force, nearly two-thirds scattered to their homes. Approximately a third of the southern army had been lost. Georgia had been saved for the British, who had lost only a tiny handful of men.

Despite the heavy American losses, Lincoln's forces continued to swell with militia recruits, and he still determined to march into Georgia. Leaving only Moultrie's 1,000 men to guard the lower Savannah, Lincoln marched upriver with 4,000 men on April 23 to take Augusta. General Prevost saw that lower South Carolina was weakly defended, and anxious to draw Lincoln back to South Carolina, he crossed the river with over 2,500 men to take Purysburg on April 29. After successive rear guard skirmishes, his advance pushed Moultrie all the way back to Charleston,

the only major city of the three southernmost states and by far the leading port in the South. Prevost pursued the Americans, and reaching Charleston on May 12, he demanded that the city surrender. Even though 3,000 American troops were within the city's walls, the fainthearted, the opportunistic, and the conservatives tried to opt out of the war effort. President John Rutledge (who had been given almost dictatorial powers by the legislature) and his fellow conservatives in the upper house prevailed upon South Carolina to propose an agreement of neutrality for the state for the remainder of the war, an offer which Prevost scorned.

The South Carolinians were prevented from making further moves in the same direction by the return of Lincoln's large force. Prevost retreated to John's Island below Charleston and kept a fortified bridgehead on the mainland at Stono Ferry. From there he decided to extricate himself by sea to Savannah. He left behind a vastly outnumbered rear guard of 900 under Col. John Maitland. On June 19, Lincoln attacked Stono Ferry with only 1,200 of his 6,000 men against the fortified position. Moultrie, on James Island, failed to provide expected support, and Lincoln had to retreat after suffering heavy losses and a large number of desertions. Prevost completed his withdrawal to Savannah and left Maitland in occupation of Port Royal Island, which could be protected by British control of the sea. Prevost had gained little from his swift foray to Charleston except for intensive looting of the civilian population *en route*. The British found great numbers of slaves flocking to welcome and aid them, but their gratitude consisted of selling the thousands of Negroes back into slavery in the West Indies. Once again, they had failed to take the opportunity to split America, especially the South, by offering to liberate the slaves. But then, the British could scarcely have been expected to suppress a revolution by outdoing the Americans in so radical an act.

Fighting stopped for the summer months, and the British were in firm control only of Savannah and its environs. In the up country, the Tories had been demoralized and the British were subject to continuing raids by the rebels. They made Mark Prevost temporary lieutenant governor of Georgia to try to restore order in upper Georgia until Wright and the other royal officials could arrive.

The growing difficulties encountered in the southern campaign did nothing to nurture whatever enthusiasm General Clinton had had for the southern invasion. Much has been made in recent years of Clinton's alleged personality defects as the explanation for his ambivalence and indecision. In truth, however, there were plenty of objective considerations to cause him—or anyone else in his place—to be indecisive. For one thing, a great many factors that could tip the balance were beyond his control. Among these were the dispositions of the British and French fleets, the number of reinforcements he might obtain, the extent of Toryism that

would be revealed in the South, and the political and strategic considerations and decisions that would be weighed and concluded in London. Certain it is that Clinton was not an outstanding general, but mediocre generals abound and are well understood without dragging in psychological approaches of dubious value by armchair historical "psychoanalysts" two centuries later. Suffice it to say that what the British needed was a military genius and Clinton scarcely filled the bill; but, for this fact, no historical psychologizing is required.*

While it is true that Clinton lacked any comprehensive or sound strategic plan in the South, his superiors in London had nothing better, and his means were limited. Under Lord Germain's general instructions, he did carry out a quick thrust against the Virginia coast. In early May 1779, he had sent out Gen. George Matthews and Commodore Sir George Collier with 2,500 men to prevent reinforcements being concentrated on the Georgia front; in a resounding military success, they captured Portsmouth, Norfolk, and other southern supply centers on the coast, and destroyed numerous ships and enormous amounts of provisions, naval stores, and ammunition. The captured towns were sacked and plundered and the plantations looted, all without the loss of a single man. The American losses have been estimated at the huge figure of 2,000,000 pounds. The British then abandoned the coast, as planned, although Commodore Collier made a strong case for at least retaining Portsmouth and giving aid and shelter to the many Virginia Tories who had suddenly emerged joyously to greet the British, and who, abandoned and disillusioned, would be left to their fate.

Clinton also decided to reinforce the troops in Georgia for a drive northward. But twice, in the summer and fall of 1779, his plans were thwarted by the French fleet: first when Jamaica asked for reinforcements to defend against the French and second in the fall. Admiral D'Estaing, fresh from victories in the West Indies, appeared off the Georgia coast in early September with nearly 6,000 troops and forced Clinton's 3,000 troops to turn back and withdraw to New York.

The French fleet moved in to besiege Savannah, and the fall campaign of 1779 found the British on the defensive. Maitland waded through the swamps of Port Royal with 800 men to increase Prevost's defense force at Savannah to 4,000. Meanwhile, Lincoln arrived near Savannah with 1,400 men to strengthen the siege.

*This is apart from the distortions injected into historical accounts when only one general is "psychoanalyzed" while all others in the historical drama are treated by ordinary rational historical analysis without benefit of psychologizing. For a brief but much needed critique of the recent psychological treatment of Clinton, see Curtis P. Nettels, "Review of William B. Willcox, *Portrait of A General: Sir Henry Clinton and the War of Independence.*" *The Journal of American History* (June 1965), pp. 115-16.

D'Estaing should have assaulted Savannah immediately when he arrived in mid-September, to take advantage of surprise and take the city easily. Instead, the admiral confined himself to a siege, giving Prevost time to strengthen the city's defenses. Furthermore, winter was approaching, and a long naval siege was not feasible in winter months. Hence, after a further siege of a month, D'Estaing assaulted Savannah on October 9. But the frontal assault of 3,500 French and over 800 American troops on the well-entrenched British positions failed ignominiously, and the French and Americans experienced heavy losses—over 800 casualties, a staggering proportion of the attacking force—and the British lost only 150. D'Estaing was wounded and the American Gen. Casimir Pulaski, a young revolutionary Polish count and cavalry officer who had enlisted in the American cause, was killed in the battle. Despite the pleas of Lincoln to continue the siege, D'Estaing and the French force hurried away to France. The British and the Tories were elated, and the Americans disheartened, by this defeat at Savannah. This was the third operation (the others had been at New York and Newport) that D'Estaing had conducted against the British on American shores, and each was a failure. Moreover, Georgia was again safe for the British, and they were now free to continue their campaign northward.

The Capture of Charleston

When Clinton, in New York, learned of D'Estaing's defeat and withdrawal, on the other hand, he determined to seize Charleston and use it as the southern British base. With the French at sea, the British securely in charge of Savannah, and little aid being sent by Washington or Congress to the South, the time certainly seemed auspicious.

He left Knyphausen in charge of New York and sailed south on December 26, 1779, with 8,000 troops. After a stormy voyage he arrived off Charleston on February 1 and landed on John's Island, south of the city, on February 11. He moved with the excessive caution and timidity that had now become traditional in British operations in the Revolutionary War. He inched his way north, captured James Island, and finally, on March 29, crossed the Ashley River near Charleston. By early April, reinforcements had swelled the British troops to 10,000 men and 5,000 sailors, while Lincoln had only 5,000 men in the city. Instead of using Clinton's sloth to make good his escape, Lincoln absurdly concluded that Charleston could be successfully defended in an open confrontation with the British forces.

After crossing the Ashley, Clinton proceeded eastward to the Cooper River, virtually cutting off Charleston by land. Meanwhile, in early April 1780, the British fleet sailed into Charleston Harbor. Charleston was now completely surrounded, except for one escape route: across the Cooper River and up the Cooper to Monck's Corner where Gen. Isaac Huger was stationed with 500 men to guard the route. But Lincoln, despite his inferior numbers and encircled position, did not consider using this out, and the bombardment of hapless Charleston began on April 13. The resolute Gen. Lachlan McIntosh pleaded with Lincoln to withdraw and

save the American army in the south, but Lincoln allowed himself to be swayed by the pleas of the Charleston populace to remain and defend the town.

While Lincoln hesitated, the British Col. Banastre Tarleton, commanding the British Legion of mounted Tories, struck swiftly and suddenly at Huger's force in the middle of the night of April 14. The Americans were shattered and dispersed, suffering heavy losses of nearly 90 men, while the British lost virtually none. Tarleton marched south toward Charleston, totally cutting off Lincoln's path of retreat.

Lincoln finally began to consider withdrawing from his untenable situation, but now the South Carolina Council warned that if the troops tried to withdraw, the citizens would wreck the army's boats and open the gates to the enemy. Meanwhile, Clinton drew the net tighter, and a ferocious British bombardment on May 9 quickly broke the none too hardy spirit of the Charlestonians, who insisted on surrendering the city. This demand for surrender was quickly seconded by Lieutenant Governor Gadsden and the South Carolina Council, and the militia began to abandon their posts. Lincoln had now but one alternative—to surrender. And surrender he did on May 12. The Americans thereby lost not only the great port of Charleston, but also the entire southern army of nearly 5,500 men, along with many ships and huge amounts of stores and ammunition. This was to be the largest surrender of American forces until the Civil War.

The surrender at Charleston did indeed bring out Tory sentiment in Georgia and South Carolina. Clinton's pullout of most of the British troops from Savannah and Augusta had at first disheartened Georgia Tories, who were subject to rebel raids within a few miles of Savannah. But now all this was changed. Two hundred citizens of Charleston congratulated Clinton on his seizure of the city; the defeated militia quickly took an oath of allegiance to the king and happily marched off to their homes. News of the surrender caused one back-country militia regiment to mutiny, seize their officers, and march into Charleston to yield the officers to the British.

Hundreds of South Carolinians flocked to join Tory regiments, and some of the leading conservative members of the council found no difficulty in collaborating with the British. The dejected rebels seemed everywhere ready to yield to British rule, and those rebel leaders who had escaped now came in to surrender. Rumors that Washington would abandon the South added to the defeatism in that region.

In these circumstances the occupation and reduction of back-country South Carolina proved unexpectedly easy. General Cornwallis, in charge of this occupation, established a string of strongly held posts across northern South Carolina from Cheraw, in the east, through Camden and Rocky Mount to Ninety-Six, as well as fortifications on the seacoast from north-

ern South Carolina through Charleston, Beaufort, and Savannah. Camden was the major post, with 2,500 men under Lord Rawdon; units were also stationed at Augusta. All these British posts were established without opposition; the last remnants of organized armed groups quickly surrendered at Beaufort, Camden, and Ninety-Six, and the remaining militia dispersed quickly and scattered to their homes.

The last remaining American armed force in the lower South was a regiment of over 350 Virginia Continentals under Col. Abraham Buford. Buford had come as far south as the Santee to help out Charleston, but when the city surrendered he was ordered to retire as fast as possible to North Carolina. But the amazing Colonel Tarleton, marching fewer than 300 men over 150 miles in 54 hours, caught up with Buford on May 29 at Waxhaws, near the North Carolina border. Buford poorly deployed his men for a cavalry attack, placing them on an open plain instead of behind fortifications, and held his fire too long. Tarleton's cavalry charge smashed the American defenses, and when the Americans surrendered, his troops fell upon the disarmed and wounded Americans with bayonets. The prisoners thus slaughtered, from that time on "Tarleton's quarter" was a phrase that described any massacre of disarmed prisoners. Buford and a hundred men had escaped, but over 260 men were killed or badly wounded and over fifty taken prisoner. In contrast, Tarleton lost only a handful of men.

Georgia and South Carolina were now fully occupied and pacified by the British and the contented Clinton prepared to take a third of his troops back to New York, leaving Cornwallis and 8,300 men (approximately half British and half Tory) in charge of the South. Before leaving, Clinton tried to settle the administrative system to be imposed upon the conquered states. He rejected the advice of British Adm. Marriot Arbuthnot to reestablish the royal civilian regime immediately in South Carolina, and instead, the state remained under military rule for the remainder of the war. More fateful was Clinton's July 3 proclamation. He had issued decrees for the reconquered subjects, pledging full protection and support for all those faithful to the crown. This and his offer of a full and free pardon to all rebels who would take the oath of allegiance made a very good impression upon the people of South Carolina and moved them closer to support of Great Britain. The effect of these decisions was wholly offset, however, by his proclamation that all prisoners on parole would be released and restored to their full rights *except* that all who later failed to take an oath of allegiance to the crown would be considered in rebellion. This harsh edict forced those who had been happily neutral to take aggressively one side or the other. Deprived of the choice of neutrality, they tended to shift to the rebel cause. The stern proclamation of June 3 revived a revolutionary cause that had almost died in South Carolina.

The Emergence of Guerrilla Warfare in South Carolina

Clinton had no qualms about his June departure north. Georgia and South Carolina were pacified and that was that. North Carolina would be no problem either: Cornwallis could make a quick thrust into that state, and the British presence, heightened by the return of North Carolina's royal governor Josiah Martin, would inspire and activate the Tories. And so that state would be quickly pacified. From there, the British would move up to the Chesapeake, both British armies would unite in Virginia, and then go on to subdue the middle colonies. No qualms were felt about the hostile personal relations between Cornwallis and Clinton, nor about Clinton's failure the previous May to mount an invasion of Virginia simultaneously with the attack on Charleston—a failure caused by the activities of the French fleet. Instead, Clinton confidently set sail for New York on June 8.

Several factors, however, now began to change the military picture in the lower South. A French fleet again prevented the British seaborne invasion of Virginia off the Chesapeake; a severe shortage of supplies forced Cornwallis to postpone his march into North Carolina; and the southern Indians failed to take their expected part in the southern campaign. For one thing, the death of John Stuart, the esteemed British Indian agent in the South, deprived the British of much influence over the Indians. The Spanish entrance into the war also gave the Indians more tasks to perform, and a smallpox epidemic blighted the fighting spirit of the Cherokee. Most important, however, was the emergence in South Carolina of that form of warfare most suited to the conditions of revolutionary war: guerrilla warfare. In this case, small but compact and highly

mobile partisan bands of rebels organized to harass and trouble the British. The three most noted guerrilla leaders were Andrew Pickens, Thomas Sumter, and the aptly named "Swamp Fox," Francis Marion, all officers of the South Carolina militia.

Several engagements between units of rebel and Tory militia were soon fought in the northern back country of South Carolina. A party of Tories was defeated by rebels at Fishing Creek, and Col. William Bratton defeated a detachment of Tories near Winnsboro on May 29. To crush the pesky rebel bands, Col. George Turnbull, in charge of the substantial British camp at Rocky Mount, sent out Capt. Christian Houk and his Tory militia to plunder and destroy in the back country and to crush the rebel partisans. Camping northwest of Williamson's plantation, 400 of Houk's militia were attacked in a withering surprise thrust by 260 rebel militia under Colonel Bratton. Bratton was able to attack Houk on two sides, and to fire at the defenders from behind fences. The result was the killing of Houk and the crushing of his forces, which suffered almost 90 casualties while the rebels lost only one man. This victory had been achieved by a truly democratic people's army in which every action was decided upon by a vote of all the militia.

Sumter, too rash and too willing to engage in open confrontation to be a first-rate guerrilla fighter, felt emboldened enough by the victory at Williamson's plantation to launch a direct attack on Rocky Mount itself. Gathering perhaps 600 militia at Mecklenburg, North Carolina, near the South Carolina border, he struck directly at the well-fortified British post on July 30; several assaults failed, however, and he wisely withdrew before losses should become too heavy.

It should be noted that the roundup of Tory support in the Cheraw district was so spotty that Lord Rawdon was forced to evacuate that post, and that a Tory battalion under Col. John Lisle carrying Rawdon's sick men defected to Sumter *en masse*, with the sick becoming prisoners of the Americans.

The climactic battle in this series of skirmishes came on August 8 at Hanging Rock. Here Maj. John Carden held a strong position with 500 Tories. Sumter, with 800 South Carolina militia, decided to attack. A comedy of errors brought all of Sumter's men to attack the British left flank, and to good advantage. When Carden tried to outflank the Americans on *his* left, the rebel militia swiftly opened up a withering fire from behind trees; the British were completely routed, and the American militia plundered and looted, heedless of the remainder of the enemy. This general carelessness finally forced Sumter to withdraw, but he had achieved a notable victory, inflicting over 200 casualties upon the 500 defending Tories.

All in all, during July and early August, no fewer than twelve battles

were fought between Tory and rebel bands in the Carolina back country, and a string of rebel victories made the British position highly precarious in the interior. These American victories took place in frays between modest-sized forces, but they were a portent of a rising threat of rebel militia in the northern back country as well as a slip in the effectiveness of the British occupation.

While the British-led Tories were suffering these reverses, Toryism in the North Carolina back country received a severe setback. Restlessly failing to wait for Cornwallis' march, Col. John Moore of Ramsour's Mill, near the South Carolina border, gathered a formidable force of 1,300 Tories to join British forces in Camden. Nearby, Col. Francis Locke assembled 400 patriot militia and launched an attack upon Moore. Although lacking central command, each officer acting on his own as representative of his men, the numerically inferior American force managed to attack the Tories front and rear on June 20. A fierce hand-to-hand combat completely routed and scattered the Tories, even though American losses were proportionately higher. Once again, Toryism was crushed in back-country North Carolina before the British could arrive; and only thirty men reached Camden. This rout of North Carolina Tories was to deprive Cornwallis of a great deal of effective Tory support in that state.

All in all, the British attempt to rely on the raising of Tory troops in South Carolina proved not very successful. It is true that effective Tory militia units were organized in the strong Tory areas of Orangeburg and the Little Pee Dee River in the interior regions closer to the coast. And at Charleston, Cornwallis was able to form eleven Tory companies totaling 400 men for garrison duty. But in the Camden and Cheraw areas, the results were disappointing, and attempts to form two provincial battalions of South Carolina Tories were abject failures. Some of the obstacles to Tory recruitment were simple supply problems; there was a scarcity of both small arms for militiamen and horses for mobile cavalry to check rebel guerrilla raids on back-country Tories. More important in the failure was a shortage of qualified Tory officers; the great bulk of back-country officer material either had become rebels or had fled the state.

Above all these problems, however, stood the alienation of public opinion, generated by the widespread plundering and atrocities committed against the civilian population by the vengeful Tory troops, particularly those under Tarleton. This revolutionary war was, to an extent undreamed of by the British, a people's war in which public opinion provided the indispensable groundwork for a committed revolutionary effort. This and their careless assumption that the South Carolina back country was staunchly Tory ignored the dynamics of the situation. These people had been largely indifferent to the Revolution, or their support had been

lukewarm, and they therefore needed to be wooed by the British. Instead they suffered plundering and the exigencies of martial law. British and Tory actions thereby pushed these men of the back country into ardent support of the Revolution during the critical summer of 1780. As Smith concludes:

British officials no more comprehended the situation that confronted them in the South than they understood the extent of revolutionary sentiment in America. They failed to see that a permanent restoration of law and order in South Carolina rested not on the strength of the Loyalists, as they had originally calculated, but on pacification of the revolutionists. . . . Peace in the South depended upon reconciling rebels to British authority and upon rapidly organizing Loyalists to quell any minor rebel resurgence. Any major revolution against British control was not anticipated.*

The successful rise of rebel militia bands in the back country of the Carolinas, and even in Georgia, led Cornwallis to complain on August 6 that all of upper South Carolina was in "an absolute state of rebellion, every friend of Government has been carried off, and his plantation destroyed." All this only confirmed him in his belief that he must soon invade North Carolina, and with his main force reduce the back country of the Carolinas to British control. This belief was reinforced by the news that a new Continental American Army was moving southward, news that inspired and emboldened the rebels and disheartened the Tories of the back country. Only a successful Cornwallis presence in North Carolina, the checking of the new American army, and the reduction of the Carolinas could save the interior of all the southern states for the British. Cornwallis determined to take his main force to Camden preparatory to moving north, leaving detachments particularly at Charleston, Augusta, and Ninety-Six. On August 10, he left Charleston for Camden.

*Smith, *Loyalists and Redcoats*, p. 141.

Gates Meets the Enemy

Into this more hopeful situation for the Americans now stepped a new Continental troop from Maryland and Delaware that Washington had sent southward under the German General de Kalb. Marching south on April 16 to the aid of Charleston from Morristown, New Jersey, de Kalb had reached North Carolina with 1,400 men when he learned that Charleston had been taken. Furthermore, difficulties mounted as North Carolina failed to cooperate in supplying de Kalb's force, which became increasingly short of food; even foraging and plundering of the inhabitants gained few supplies. With the capture of General Lincoln, Congress decided to call back, as commander of the Southern Department, Gen. Horatio Gates, the hero of Saratoga, to save the South. This was done, of course, over the strenuous objections of George Washington, who still did not trust Gates because of his part in the Conway Cabal.

Gates took command of the unhappy Continental force at Deep River in North Carolina on July 25, to the sardonic warning of his friend, Charles Lee: "Take care, lest your northern laurels turn to southern willows." The brief but most unhappy conduct of Gates' campaign has been subjected to a literally savage denigration by historians, even those who are always eager to put the best face on campaigns by all other American generals. The reason for this singular treatment seems clear: the great rift between Gates and Washington. Washington's actions are almost always painted in roseate colors, and devotion to his legend requires equal devotion to tearing down Gates' reputation.*

*For an almost hysterical attack on Gates by an otherwise judicious and highly competent

Gates soon found that the southern theater was very different from the north. For one thing, food was difficult to obtain, and distances were large between towns and farms. Secondly, Gates, familiar with the heroic deeds of the northern militia, did not realize that the longer distances, the wider area, and the lower population density of the southern theater meant that the southern militia were no longer fighting for their *own* homes and neighborhoods, thus giving up one of the major advantages of a people's militia war. But his most important error was to forget the main principle of the guerrillalike war that he had waged so successfully in the north: never to fight in open confrontation with a more heavily armed enemy well trained in conventional field tactics.

Gates' first decision, made almost upon his arrival, was to strike directly south into South Carolina to attack the British base at Camden. He has been very severely criticized for not taking de Kalb's advice to pursue a circuitous route westward to Camden through a country of prosperous farms, abundant food, and a populace loyal to the American cause. Instead, the shorter route Gates adopted led through desolate swamps peopled heavily by Tories. While Gates overestimated the health and morale of his troops, his decision was by no means absurd; his goal was to strike at Camden quickly before Cornwallis could reinforce it. Furthermore, his route allowed him to join with a force of North Carolina militia led by Gen. Richard Caswell, who had stubbornly refused to move to join de Kalb. By striking quickly at Camden, Gates believed he could set back any Cornwallis invasion of North Carolina. It was Gates' ill luck that Cornwallis would reach Camden just in time.

On his march, Gates was reinforced by 800 Virginia militia and Caswell's 1,200 North Carolina militia, thus raising his force to a formidable 3,000 men. But it was a force increasingly hungry, ill, exhausted, and discouraged. By August 13, Gates had encamped a few miles north of Camden; but unknown to him, Cornwallis had already arrived with his reinforcements. On August 15, Gates, with 3,000 men fit for duty out of a total of about 4,100, decided on a quick night strike at Camden. He was driven to this step by his growing lack of food; but the idea was not unsound in light of the fact that he did not know of Cornwallis' arrival. Furthermore, ill luck dogged Gates, for, in one of history's amazing coincidences, Cornwallis had also decided on that very night for a surprise attack on Gates.

The two armies blundered into each other at night at Saunders' Creek, north of Camden. Facing Gates' 3,000 men were Cornwallis and

military historian, see Ward, *The War of the Revolution*. II:717–30. More sober evaluations of Gates' southern campaign may be found in Billias, "Horatio Gates," pp. 99–104; Alden, *The American Revolution*, pp. 233–35; and Bernhard Knollenberg, *Washington and the Revolution: A Reappraisal* (New York: Macmillan, 1940), a pioneering work in Gates revisionism.

Rawdon with 2,200 men. But two-thirds of their force were highly trained regulars, while only one-third of the Americans were regulars and two-thirds militia—and regulars were far superior in massed confrontation on an open field. Cornwallis decided to wait until daylight to give battle; an error because it could have permitted Gates to slip away in the night. But here Gates decided to stay and fight on the open field, an error of his own which later allowed his traducers full sway. It should be emphasized that Gates called a council of war before making the decision and not one of his top officers called for a retreat or objected to giving battle.

A swift bayonet charge by the British regulars panicked the North Carolina and Virginia militiamen holding down the American left wing. Militia were never able to cope with the open-field bayonet fighting at which the British excelled, a fact Gates had overlooked when he formed the left wing out of militia alone. The militiamen simply broke and ran, most of them without firing a shot, and Gates, unable to rally them, was forced to flee to the rear to avoid capture. The American right wing, the Maryland and Delaware Continentals, more than held their own against the Tory troops, but once surrounded, they were smashed by Tarleton's ferocious cavalry charge. Tarleton then pursued the fleeing Americans for twenty miles northward, capturing great quantities of ammunition on the way. It was a devastating and crushing defeat: de Kalb was killed and the Americans lost 650 precious Continentals, while almost the entire force of the North Carolina and Virginia militia scattered and fled to their homes. In exchange, Cornwallis lost only 320 men.

Gates has been severely criticized and attacked for cowardice for speeding north from Camden 200 miles to Hillsboro in three days, stopping only for sleep. But no amount of cowardice would have required that great a distance of flight. Clearly, he sped to Hillsboro to begin forming a new army as quickly as possible, hoping to tap the resources of Virginia as well as North Carolina. He began with 700 men, the shattered remnants of the force routed at Camden. To this were soon added other military remnants, bringing the total force up to 2,000. He was joined in mid-September by Dan Morgan, who had also been neglected and in semi-retirement, and Gates managed to persuade Congress at long last to make Morgan a general.

At first, it seemed that Cornwallis's way north would be blocked by the South Carolina guerrilla troops. On August 15, two days after the victory at Saunders' Creek, Colonel Sumter and 700 men captured a British wagon train and took 100 British and Tory prisoners. But on August 18 at Fishing Creek, Tarleton, with only 160 men, was able to cut off Sumter's force from its arms and smash it completely, killing

150 and capturing over 300 with a loss of only a few men. Two days later, Col. Francis Marion, with only 16 men, fell upon some British and Tory troops and freed 160 American prisoners; but Sumter's blundering rout at Fishing Creek had left North Carolina open to the enemy.

The Battle of King's Mountain and the End of the 1780 Campaign

Historians, however, have greatly overinflated the importance of the routs at Camden and Fishing Creek; for the way that had been opened was quickly closed, and the British invasion of North Carolina decisively blocked. This blocking came not from the Continental troops, but from the really decisive forces of the American Revolution—the American public, the local militia, the people in arms.

Within two weeks after Camden, it was clear to Cornwallis that, instead of the Carolina back country flocking to his cause as the British had believed would happen once the Continentals were routed, the opposite was occurring. In South Carolina, guerrilla bands under Marion, Sumter, Pickens, and Col. William Davie were harassing Cornwallis' rear as he advanced northward. In North Carolina, the Tories had never recovered from the defeat at Ramsour's Mill, and the local militia and public sentiment mobilized against the British. In desperation, Cornwallis began to take drastic measures, hanging several men who had enrolled in the Tory militia and then had deserted to the rebels. By the end of August, he was insistently reminding Clinton of the need for a diversionary attack on the Chesapeake area of Virginia. The battles of Camden and Fishing Creek sank into insignificance in the face of the rising rebel voice of the people of the back country.

By the time Cornwallis began to march northward from Camden, the advance, harassed by guerrillas and with particular brilliance by Colonel William Davie, was far from triumphal, and proceeded rather in hopes that Charlotte would provide a happier and healthier base for the ailing British army. Charlotte, North Carolina, was finally reached on Septem-

ber 25; here Cornwallis called upon the people to deliver their arms and flock to accept the protection of the British army. But nobody flocked to the invaders here, in the heart of rebel sentiment; instead, Cornwallis could find little information about rebel movements, and British foraging parties were incessantly attacked. Cornwallis was therefore forced to pause once more to await supplies from Camden.

As Cornwallis marched northward to Charlotte, he ordered Major Patrick Ferguson, head of Tory recruiting, who had gathered and sent out over the countryside a formidable force of thousands of Tories at Ninety-Six, to march northward as well. Ferguson was to gather Tories and punish rebels to the west, and finally to join Cornwallis at Charlotte. Reaching Gilbert Town at the edge of the mountains in western North Carolina by late September, Ferguson, with 1100 men, began to turn south to help relieve Augusta, which had been besieged by rebels under Colonel Elijah Clark, and to help capture the rebels.

Ferguson had warned the "overmountain men" on the Watauga River in what would later be northeastern Tennessee that if they did not cease opposing the king, he would march over the mountains, hang their leaders, and lay waste to their country. Not taking kindly to this threat and tired of his depredations and plundering, the Watauga men decided to end the Ferguson menace once and for all, and became the center of a new rising. To them came Colonels Isaac Shelby, John Sevier, and William Campbell of Virginia, and Colonels Benjamin Cleveland and Charles Macdowell of North Carolina. By September 15 over 1,400 frontier riflemen knowledgeable of the terrain and eminently suited for guerrilla action gathered at the Watauga. This large force began to pursue Ferguson's troops, who turned eastward to take up fortified positions on top of King's Mountain, on the North Carolina-South Carolina border. Nine hundred of the best mounted riflemen were then detached to catch up to Ferguson and these arrived at the mountain on October 7.

Ferguson, with superior numbers, had assumed a well-fortified position on the mountain; but what he failed to realize was that the dense woods on all sides of the low mountain provided excellent cover for the deadly guerrilla force. Surrounding the mountain and climbing its sides, the riflemen climbed to the trees surrounding the plateau on the open mountaintop and cut down the bayonet-wielding troops with deadly individual rifle fire. As Ward puts it: "Everywhere the Tories were surrounded by men, not in solid bodies to be attacked with a bayonet and driven back, but fighting each man on his own behind the trees fringing the open plateau. From every side came a hail of bullets."*

The Tory force was hopelessly beaten, but the frenzied Ferguson de-

*Ward, *The War of the Revolution*, II:742.

clared that he would “never surrender to such banditti”; his reward for this was to be killed in the battle. The surrounded and helpless Tories were slaughtered by the vengeful rebels, who shouted, “Tarleton’s quarter!” until their officers finally brought them under control. The battle had been a glorious one for the Americans. The entire Tory force of 1,000 men was either killed or captured, while rebel casualties totalled only 90. Great stores of arms and ammunition also fell to the Americans. The Tory prisoners were marched to Gilbert Town, and nine were convicted of aiding the British in raiding and hanged.

The Battle of King’s Mountain was one of the turning points of the Revolutionary War. A people’s victory, a guerrilla victory without any semblance of a Continental force or even of an overall commander, King’s Mountain showed that so long as its spirit was high, the United States could absorb such devastating defeats of its regulars as at Camden and yet come back to crush the British and Tory forces.

Beaten at King’s Mountain and increasingly worried about growing guerrilla bands throughout the Carolina back country, Cornwallis was forced to beat a hasty retreat from North Carolina. His troops, ill, exhausted, and increasingly short of provisions, were hammered every step of the way by American militia bands. They finally encamped for the winter at Winnsboro, between Camden and Ninety-Six in northern South Carolina. At Winnsboro, continually harassed by American bands, Cornwallis was properly chastened. The end of the 1780 campaign saw the British, despite the massive victories at Charleston and Camden, thoroughly beaten back from their attempt to invade North Carolina. Cornwallis realized that the failure of the North Carolina Tories to materialize spelled the collapse of the whole southern strategy. The end of the projected northern offensive seemed at hand.

Of the American guerrilla bands, the most active and successful were those of Sumter and Marion. Marion did yeoman work between the Pee Dee and the Santee rivers in northeastern South Carolina, arousing revolt, cutting supplies, and threatening key British communication lines between Charleston and Camden. Cornwallis sent Tarleton after Marion, but the Swamp Fox proved too elusive in the best guerrilla manner. In the meantime, north of Winnsboro, Sumter was beginning to display great improvement as a guerrilla leader. The British sent out Maj. James Wemyss to catch him; but at Fishdam Ford on December 9, Sumter was ready for the supposed surprise. Wemyss was captured and his unit repulsed with heavy losses.

Moving westward and escalating his operations, Sumter threatened the key British post at Ninety-Six. Alarmed, Cornwallis sent Tarleton with a formidable force in pursuit. Sumter turned northward and, on November 20, took up a strong position at Blackstock’s on the south side of the

Tiger River. Sumter's 420 men now faced Tarleton's feared cavalry of 250. While Tarleton waited for his infantry to arrive, Sumter moved to cut them off; Tarleton's answering charges met concentrated guerrilla rifle fire from buildings nearby, forcing this British retreat. The widely feared and seemingly invincible Tarleton had been beaten, his force losing about a hundred men, while the Americans suffered virtually no casualties. This was a decisive blow to British prestige in the Carolinas. A piquant footnote to the battle is that Tarleton had the gall to claim "victory" because Sumter's force, in the classic manner of guerrilla fighters, later withdrew in the face of British reinforcements.

Cornwallis' natural optimism soon returned in December, when he found that Clinton had at last sent a diversionary force of 2,500 under Gen. Alexander Leslie to Portsmouth, Virginia. The harassed Cornwallis, however, now ordered Leslie to join him at Winnsboro; when Leslie complied in early January 1781, Cornwallis unwisely thought that his 4,000 men could now carry out the original British plan of the year before. He was further emboldened by the news that Benedict Arnold had been sent in December with 1,500 troops to raid Virginia in force.

Greene's Unorthodox Strategy

It was inevitable, however, that Gates would be removed from command in semi-disgrace, as he was in October. A chastened Congress entrusted the choice of his replacement to Washington and, fortunately, Washington chose the one highly able general whom he had not turned against, a man whose talents had been languishing for years in the post of quartermaster general: Nathanael Greene. Both Greene and Morgan were fully cognizant of the necessity for a guerrilla strategy in fighting the British. Greene arrived at Charlotte, where the American army was now stationed, in early December, taking over a force of fewer than 1,500 fit for duty, and these hungry and wretched.

It was clear to him that a move must be made right away, for the food supply of the entire Charlotte area had been stripped clear by the foraging and plundering of British troops. In addition, Cornwallis was about to begin his long-delayed and final invasion of North Carolina. At first, Greene proposed an immediate hit-and-run attack on Winnsboro, but he deferred to Morgan's judgment of its excessive risk. He then decided to march his army southeast for winter quarters to Cheraw Hill, 75 miles east of the British camp at Winnsboro. But so that this would not seem like a retreat from the British invasion route, he split his already inferior force in a daring and highly unorthodox maneuver. Accordingly, on December 16 Morgan quickly took 600 men to South Carolina north of Winnsboro, while Greene set out for Cheraw Hill on December 20 with 1,100 men, arriving there on December 26. Here was a brilliant piece of strategy in defiance of the sound classical injunction never to split an inferior force,

lest each in turn be attacked and destroyed. But this injunction rested on the assumption that frontal engagements would then be fought, and in Greene's strategy, it was the task of the American forces to be swift and mobile, and to avoid frontal battles.

In the face of this split, Cornwallis was in a bind. He could not chase Morgan or invade northward without leaving Charleston open to Greene's invasion, and he could not strike out for Cheraw without allowing Morgan to strike west at Ninety-Six or Augusta. Furthermore, if Cornwallis advanced, he could be hit on both flanks, and if he tried to return to Charleston, he could be harassed on both flanks also. At the same time, the various and effective guerrilla bands could continually harry the British wherever they might be. To counteract the multiple threats posed by the two forces, Cornwallis would also have to split his army—indeed, to split it into three parts. He sent Leslie east to Camden to defend against any possible attack by Greene; he sent the mobile Tarleton north to find and crush Morgan; and he moved himself slowly into western North Carolina to destroy the expected remnants of Morgan's force.

While Cornwallis was preparing his blow, American guerrilla action grew more and more menacing. Taking up his post at the Pacolet River and reinforced by over 300 North Carolina militia, Morgan threatened the British base at Ninety-Six: on December 27, he sent the mobile cavalry of Lt. Col. William Washington with over 200 men to the vicinity of Ninety-Six, where they crushed a Tory force at Faufort Creek. Nearly 200 of the 250 Tories were lost, while Washington lost nary a man. Meanwhile, to the east, the great cavalry unit of Col. "Light Horse Harry" Lee arrived from the north, and was sent east to assist Marion's guerrilla operations. Marion and Lee struck against the British base at Georgetown and nearly captured the post.

In this deteriorating situation, it was clearer than ever to Cornwallis that the guerrillas, and especially Morgan, must be crushed in a frontal engagement before the invasion northward could proceed. As Higginbotham notes:

His Lordship was not the only British military leader in the war to discover that rear areas could not be treated in the European sense—as free of enemy forces and simply as zones of communication. . . . Because of the activities of Morgan, Sumter, Pickens and others, [the] front-behind-the-front became a theater of operations in its own right. Hence, before Cornwallis could launch his long-planned invasion of North Carolina and the upper South, Morgan would have to be eliminated.*

*Don Higginbotham, "Daniel Morgan, Guerrilla Fighter," p. 306.

If anyone could catch up with Morgan, it was Tarleton; with more than 3,300 men, he gave chase to Morgan's force of now a little over 1,000—although it was soon to be raised to 1,100 when Colonel Pickens and his band joined him. In trained regulars, of course, Tarleton's force outnumbered Morgan's by over three to one. More militia had been expected to join Morgan, but Cornwallis had successfully roused the Indians to attack the frontier posts, and militia units had to remain in the West.

Hearing of Tarleton's advance, Morgan began to flee northward, properly trying to avoid open combat. But Tarleton was approaching with remarkable speed, and Morgan was forced to turn and fight on open ground at the plain of the Cowpens on the south side of the Broad River, a little bit south of the North Carolina border. On the highly unfavorable terrain, an open field with no protection on his flanks and no protection from Tarleton's famed horsemen, Morgan seemed doomed.*

If Morgan's terrain for making a stand could scarcely have been worse, his disposition of troops was novel and displayed his brilliance as a tactician. He decided to make use of the sharpshooting skills of his frontier militia without forcing them to stand for long in the front lines. He stationed a small body of 150 frontier riflemen in the front line, with Colonel Pickens' Carolina militia of 300 directly behind them. Behind these, on the crest of the slope behind the militia, were stationed Col. John Howard, in charge of the Continentals, and some militia totalling 450. Behind Howard, Colonel Washington commanded a force of over 100 cavalry as a reserve, stationed behind a rear hill. The plan was for the front line militia to fire a few volleys from behind trees, and then to retreat quickly to the second line militia, who, after further firing, would also retreat on their horses to Howard's forces and re-form behind them. With this plan, Morgan brilliantly incorporated the militia's propensity to flee under the fire of an open confrontation into a favorable aspect of the plan of battle itself.

Morgan knew that a successful militia war rested on the high morale of the troops, particularly if a complex plan were to succeed. He went to great pains to instill confidence and high morale, spending the whole night exhorting the troops by reminding them of British and Tory atrocities and of the great past successes of the American arms during the war, and promising them victory. In addition, he carefully explained his subtle battle plan to all his men. The popular and respected Morgan was thereby highly successful in inspiring, encouraging, and enlightening his troops.

The British launched the attack on the morning of January 17, 1781,

*Weigley contends that Morgan could have avoided the highly unfavorable position, but that an impetuous desire for a confrontation led him into what could have been a fatal error. Russell F. Weigley, *The Partisan War: The South Carolina Campaign of 1780-1782* (Columbia, S.C.: University of South Carolina Press, 1970), pp. 29-30.

with a charge by Tarleton's formidable cavalry. Thus there came face to face two of the most formidable military instruments developed during the Revolutionary War: Tarleton's cavalymen and Morgan's sharpshooting riflemen. A foreshadowing of the day's result came as the riflemen shattered and drove off the assault. The first line soon retreated to join the second line as prearranged. Tarleton threw his whole line forward against the Americans; again, the Americans coolly and skillfully took a heavy toll; and again the line withdrew to the rear as prearranged, with Colonel Washington's cavalry suddenly appearing from the rear and routing the dragoons. The British, understandably fooled into thinking that the withdrawal of the line was a full-scale retreat, rushed forward against Howard's main line, but were again met with cool and accurate fire. As Howard, due to a mixup in orders, began to retreat behind the hill, the British were sure that the Americans were now beaten and in rout; Tarleton's men rushed forward in wild disarray for the kill. Morgan, his American line seemingly in retreat, ordered Howard's line to wheel about *en masse* and fire four-square into the wildly onrushing British. Confusion and panic hit the British, and the Americans immediately followed with a bayonet charge, which for once was wielded by the American forces. In the meantime, the British right *and* left were simultaneously surrounded in a crushing double envelopment by Pickens and Washington. It was a great victory for Morgan and exhibited perhaps the most brilliant battle tactics of the war.

The American victory at Cowpens had been total and shattering. The British lost no fewer than 900 men killed and captured, nearly nine-tenths of their force, along with a large quantity of arms, supplies and ammunition. In contrast, the American casualties totalled only 70. Tarleton's force had been decisively smashed and the flower of the British forces in America had been destroyed. The victory was understandably cheered throughout the country.

The Race to the Dan

Morgan, however, was not yet safe, for Cornwallis was coming north with his main army to catch and crush him. Caught between two courses of action—abandonment of the North Carolina plan and a swift march north to King's Mountain to intercept Morgan (which Tarleton had urged)—Cornwallis did neither, and thus had fallen between two stools. His advance northward was slow, and he lost his chance to block Morgan's path of retreat. He was in his camp at Turtle Creek, 25 miles east of Cowpens when he heard of the disastrous results. He should have abandoned the entire North Carolina scheme as he had done after King's Mountain the previous year, but he was completely committed to the advance. He set after Morgan with 3,000 men, sending 700 under Lord Rawdon to Camden to assist Leslie against Greene. But delays and forays in the wrong direction lost precious time, and Cornwallis found, when he reached the anticipated point of interception at Ramsour's Mill, that Morgan, who had been marching away into North Carolina at remarkable speed, covering one hundred miles over difficult terrain in less than five days, was already two days' march away. Cornwallis, ever inclined to be rash and impetuous, now so embroiled himself in the task of invasion and of catching Morgan that he overlooked more strategic, long-run considerations: for the sake of speed in the race with Morgan, he jettisoned all of his stores and baggage. This desperate destruction led 250 Hessians to desert.

When Nathanael Greene, at Cheraw Hill, heard of Morgan's victory, he did not let his joy becloud his realization of the immediate danger to Morgan. He ordered General Huger to march his men north to and

beyond Salisbury, North Carolina, for a link-up with Morgan's force, while Greene himself raced heroically all the way to Morgan's camp on the Catawba River. Here the two generals disagreed over strategy. Morgan counselled a rapid retreat into the western mountains—certainly a prudent course which would have insured that Cornwallis could not follow. But Greene, a man of broader strategic visions, saw that Cornwallis' reckless destruction of his supplies could bring about his defeat. He therefore overruled Morgan, even though he failed to rouse rebel militia to his aid, and he ordered his force to march northeast through Salisbury and across the Yadkin River to join with Huger's troop marching northward.*

As he retreated, Greene kept just close enough to Cornwallis to keep him advancing in furious pursuit, meanwhile luring him ever further from his supply base and ever closer to Greene's own supply lines from Virginia and the North.

When Huger's army was held up by heavy rains and bad roads, Greene changed the junction point from Salisbury to Guilford Courthouse, in northern North Carolina directly north of Cheraw. It was now evident to both parties that the safe sanctuary for the American army would be north of the swollen Dan River, in Virginia, where supplies would be available to them. The Dan could be crossed either at the upper fords or in its lower stretches by boats. At Salisbury, Cornwallis, not knowing that Greene's foresight had arranged for sufficient boats on the lower Dan, abandoned hope of catching up with Morgan and Greene before their link-up with Huger, and instead swung north to intercept the united American army before it reached the upper fords. Greene and Morgan raced northeast and effected a junction with Huger's force at Guilford Courthouse on February 9. The American army of the South was once more united, and Cornwallis was twenty-five miles due west at Salem.

Greene was by no means committed to retreat behind the Dan; his cherished goal was to turn upon his supply-depleted pursuer and smash him decisively. He called for, and expected to receive, additional forces from Virginia and local militia; but no Virginia troops arrived and the militia were disappointing. His army totalled only 2,000 men against nearly 3,000 for Cornwallis. His council of war unanimously urged him to press on to the Dan on February 10. The race for the Dan, 70 miles away, had begun, but it had to begin without Morgan, whose ill health, perhaps aggravated by his opposition to what he considered a reckless course, led him to retire permanently from the fray.

*It must be noted that the Americans were greatly aided in all these maneuvers by Greene's precaution of assembling small boats in advance to help in crossing the swollen rivers.

Of America's top generals, only Greene was left in the field; but he would be enough. He detached 700 picked men under Col. Otho Williams to move west and then to the north to harass the British advance, and to fool the British into believing that the Americans were making for the upper fords. Cornwallis *was* fooled, and he began to race north toward the upper Dan. Both Cornwallis and Williams sped through wretched winter weather, sometimes covering thirty miles a day, with Williams' men getting little or no food or sleep. On February 13, Tarleton saw through Greene's plans, and at his urging, Cornwallis shifted east toward Greene, with Williams racing to keep ahead and following Greene's route to the crossing at Irwin's Ferry. Cornwallis followed in hot pursuit, but Colonel Washington's and Harry Lee's cavalry were more than a match for Tarleton's attempts to rush the Americans fording streams. Marching night and day, Williams was able to follow Greene across the Dan River on February 15, just in time to elude Cornwallis. The American army had reached sanctuary.

The Battle of Guilford Courthouse

Lord Cornwallis now found himself in a position often faced by imperialist commanders fighting against guerrillas and a revolutionary people. By classical standards he was in an excellent position; he was the conqueror of Georgia and all of the Carolinas, and no real army was left to oppose him south of the Dan River. But, in fact, he had no boats and few supplies, and could not pursue Greene into Virginia. Furthermore, Greene's army would outnumber his when it was reinforced by the divisions of Continentals being raised in Virginia by General Steuben. Cornwallis, therefore, fell back on the fundamental axiom of British strategy: the rallying of the supposed majority of North Carolina Tories to form the solid support for a British occupation and regime. He withdrew to Hillsboro and eagerly issued a proclamation on February 20 inviting all loyal subjects to join his army in the reestablishment of legitimate government in the province.

Meanwhile, Greene was having his troubles across the Dan. His militia, their enlistments up, had largely left him, and neither the expected reinforcements from Steuben's Virginia Continentals nor Virginia militia had appeared. In addition the level of the Dan was falling, exposing him to a potential blow from Cornwallis. He therefore determined to cross the river back into North Carolina. He sent Williams and Lee across to join Pickens' guerrillas in harrying the British and suppressing armed Tories. On February 23, they found a company of 400 mounted Tory recruits at Haw River under the command of Col. John Pyle. Pickens and Lee duped, surprised, and virtually massacred the enemy. Most of the Tory force was killed or wounded; not a man in the American force was even injured.

Understandably, the massacre at Haw River dried up Tory recruiting in the state.

On the same day, Greene, finally reinforced by Virginia riflemen, recrossed the Dan and headed towards Hillsboro, his force now numbering 2,100. His plan was to harass Cornwallis, discourage Tory risings, and wait for reinforcements before engaging in any frontal action. Cornwallis found to his dismay that Greene's recrossing and the harassment by his light infantry under Williams were, like the rout of Pyle, effectively crushing the incipient flocking of North Carolina Tories to the British cause. At Hillsboro, Cornwallis found himself among more and more enemies and ever fewer friends, the increase of enemies aggravated by British plundering and requisitions of foodstuffs, which were growing increasingly scarce in the area. It was clear that he had to leave Hillsboro. On February 27, he marched southwest to the south side of the Alamance, where he would be in a strategic position to march west to Guilford or Salisbury, or southeast to Cross Creek or Wilmington on the Atlantic coast. Greene encamped on the north side and shifted his camp continually, keeping Cornwallis offbalance while awaiting reinforcements. On March 6, Cornwallis tried to attack Williams in a sudden surprise, but Williams' corps managed to escape. Finally, both armies rested. Greene received his long-awaited reinforcements of over 1,000 North Carolina militia, nearly 1,700 Virginia militia, and a few Virginia Continentals. By mid-March, he was at peak strength, over 4,500 men, greatly outnumbering the better-trained British force of about 1,900. Finding his food supplies running low, Greene decided to make his stand promptly at Guilford Courthouse. This decision to do battle was strategically sound; Greene's great numerical superiority insured that the worst would be a minor defeat and victory could well have led to the final rout of the British troops. For his part, Cornwallis could do nothing else; the entire long-run British strategy of occupying the South and calling forth the Tories rested on triumph over the American army in open battle.

Following Morgan's earlier advice, Greene arranged his army as Morgan had done with such success at Cowpens: a front and second line of militia, a third line of crack Continentals, and two cavalry units on the flanks under Washington and Lee. But while Greene was a brilliant strategist, he was far inferior to Morgan as a tactician, and he made the grave error of stationing his three lines much too far apart. Morgan had placed the lines 150 yards apart; Greene now placed them 300 and 400 yards apart, leaving the militia too great a distance before they could find cover. This also forced the cavalry to cover too much ground before it could come up to aid the front lines.

The British swung into battle on March 15; the first American line of North Carolina militia panicked at the British advance and fled from the

scene without bothering to re-form at the rear. The second line of Virginia militia fought well, however, and did great damage to the British troops with its withering rifle fire. The third line of Continentals was again very effective, but twice Greene failed to administer the *coup de grâce* to the British for fear of risking his army. Cornwallis finally managed to stop Washington's advance by firing his artillery indiscriminately into the fray. As the British re-formed and advanced, Greene withdrew from the battle—a technical defeat for the Americans, but actually a smashing victory, for at the Battle of Guilford Courthouse the British had lost no fewer than 530 men, more than one-fourth of their army. In contrast, Greene had suffered only 260 casualties.

After his severe mauling, Cornwallis retreated southeast to Cross Creek; but there he made a fateful decision that was to bring the war to a close: disregarding Clinton's instructions to safeguard Charleston and South Carolina above all, he abandoned the entire South below Virginia. Pushing on to Wilmington, on the coast of North Carolina, where he could obtain supplies by sea, he allowed Greene to turn into South Carolina, leaving the Tories of Cross Creek to their fate. Never a man to assume a strategic defensive, as a withdrawal into South Carolina would have been, Cornwallis decided on his own to march north into the "privileged sanctuary" of Virginia, the supply route for the Carolinas, where other British forces were already deployed. For this unilateral change in fundamental British strategy in abandoning the South and the southern Tories, Clinton sharply criticized Cornwallis.

As Cornwallis pushed northward into Virginia at the end of April 1781, Clinton and the British could only come up with a middle states variant of the now abandoned southern strategy: the plan now was to conduct a campaign in Maryland, Delaware, and lower Pennsylvania, where, again, Tories could supposedly be relied upon to organize and control the area after its conquest by British troops. Cornwallis, disgusted with the extent of Tory support, now scorned the Tory strategy and continued the offensive against Virginia, an offensive Clinton knew to be unworkable because, unlike the middle states, there were few Tories in that state to hold it after conquest. In this quarrel, each man was right in his criticisms of the other; on the one hand, Virginia ultimately could not be held; on the other hand, there were not sufficient Tories to implement Clinton's new project.

61

The Liberation of South Carolina

Greene was far too expert a strategist to pursue Cornwallis; instead, he took the opportunity to wheel southwest and march against South Carolina, for which he was hailed by many American leaders. Shorn of the Virginia and North Carolina militia, whose terms were now up, Greene marched swiftly into northern South Carolina with about 1,700 men, and mobilized Sumter in the north and Pickens in the west to help him. Greene also sent Lee's crack legion to join Marion on the lower Pee Dee River. Lord Rawdon, in charge of the British troops after Cornwallis' abandonment, had over 8,000 men under his command, but these were scattered throughout Georgia and South Carolina, most of them at Savannah and Augusta in Georgia, in the forts ranging up the Santee River and its tributaries in central South Carolina (Watson, Motte, Granby, and Ninety-Six); and at Georgetown at the mouth of the Pee Dee. The main striking force of 1,500 was at Camden.

Lee and Marion, uniting forces on April 14, quickly laid siege to Fort Watson on the lower Santee River. After days of siege, Col. Hezekiah Maham, of Marion's South Carolina force, imaginatively thought of building a high wooden tower from which the riflemen could shoot down into the fort. Fort Watson was forced to surrender on April 23, the Americans taking over a hundred prisoners while losing but a few men. Rawdon had dangerously depleted 500 of his Tory troops, sending them under Col. John Watson to save the fort; as it was, they were lucky to escape Lee's and Marion's forces. In the meantime, Greene's main force, having begun to march southwest on April 5, arrived before Camden and encamped at Hobkirk's Hill. Rawdon had only 900 men against more than 1,400, and

he decided to attack Greene's force where they were stationed before Sumter, Lee, and Marion might unite with him. Actually, Sumter apparently had no intention of cooperating with Greene, and Lee and Marion were still chasing Watson's troops.

Rawdon attacked on April 25; the fighting was a fiercely waged tactical battle of wits, with Rawdon outmaneuvering Greene on the field. Greene tried to take advantage of Capt. Simon Morgan's advance on a narrow front by executing a double envelopment; but Rawdon quickly broadened his line and forestalled defeat. A break in the line of Maryland Continentals and subsequent defeat could have been more serious had not Washington's cavalry saved the American guns. The battle was an undoubted victory for the British, but once again a tactical victory was soon to turn to the ashes of a strategic defeat. For one thing, both armies had lost about 270 men, and Rawdon's force could scarcely afford this loss. For another, after finally being joined by Watson's force on May 7, he marched northwest to fight Greene once more, but was outfoxed and gave up the pursuit to return to Camden.

At this point, Greene could have surrounded and captured Rawdon at Camden if Sumter had joined him with his 1,000 South Carolina guerrillas, but Sumter simply refused to do this. The Virginia and North Carolina militia failed to assemble and reinforce Greene, and Congress did not send any aid. But Rawdon was in no position to take advantage of these weaknesses. Increasingly, guerrilla bands were cutting him off from food and supplies, while his Tories were threatening to mutiny because several Tory deserters had been hanged by the Americans after being taken prisoner at Hobkirk's Hill. Their exposed position now rendered the British decidedly uneasy. With food dwindling and his men restive, Rawdon evacuated Camden on May 10 to withdraw to lower South Carolina, where he finally stopped at Monck's Corner, 40 miles north of Charleston.

This withdrawal acted as the signal for widespread guerrilla attacks on the other British forts on the Santee chain. On May 11, Sumter easily seized Orangeburg, in the central part of the state without the loss of a man; the archers of Marion and Lee fired flaming arrows into Fort Motte and induced it to surrender on May 12. On May 15, Lee cleverly induced the strong Tory garrison at Fort Granby to surrender by promising that they could keep any private property in their possession. Only Georgetown, Ninety-Six, and Augusta remained to the British in the entire lower south, outside of the Charleston-Savannah coastal plain and the port of Wilmington.

Lee and Pickens, with a troop of Georgia and South Carolina militia, were sent west against Augusta, which they besieged on May 22. On the same day, Greene laid siege to Ninety-Six; Marion was sent to Charleston, but his attack did not begin until about a month later.

There were two British forts in Augusta; the smaller was first surrounded and captured, the Tory Colonel Grierson being shot after capture by one of the Georgia militia. The larger fort was a much tougher prey; even the erection of a "Maham Tower" could not hasten surrender. But finally, the 300-man Augusta garrison surrendered on June 5. Georgetown also proved to be no problem; Marion had hardly begun his attack when the British evacuated hurriedly by sea on June 20 and retreated to Charleston. After capturing Augusta, Lee and Pickens joined Greene at Ninety-Six. The fort had a strong Tory garrison of 550 crack troops under Col. John Cruger, and Greene tried everything in his arsenal against it—approaches built by Kosciuszko, Maham Tower, flaming arrows—all to no avail. Only cutting off the fort's water supply was taking any toll. Finally, Rawdon received reinforcements from overseas, and, with his 2,000 men, he marched swiftly from Charleston to relieve the garrison; Sumter failed to intercept and delay him, and the Americans were forced to retire from Ninety-Six on June 20. They had lost nearly 150 men to the enemy's 85. But once again a tactical defeat only delayed a strategic victory, for Rawdon pursued Greene's force northeastward in vain. The British prudently decided to abandon Ninety-Six on July 3 and fall back on the lower part of the state.

Both armies were now exhausted by the heat; Rawdon stationed his troops at Orangeburg, while Greene summered to the northeast on the cool and healthy plateau of the High Hills of Santee. During this rest period, Marion, Sumter, and Lee managed to force the British to evacuate Monck's Corner, while Rawdon, broken in health by the campaign, sailed for England, leaving Col. Alexander Stuart in charge of all British forces south of Virginia.

At the end of August, Greene, with 2,000 refreshed troops, was ready to attack. He was eager to crush Stuart to forestall any possible two-front war in case Cornwallis should decide to move south from Virginia. He was not able to cross the swollen rivers between him and the British troops directly, so he marched north to Camden, picked up Sumter, Marion, and Pickens to swell his force to 2,200, crossed the river, and marched southeast to Eutaw Springs in the lower part of the state, where Stuart had cautiously withdrawn with his 2,000 men. Paradoxically, Stuart's force consisted mostly of Tory regulars and deserters from the Continental Army, while many of Greene's Continentals had deserted from the British.

Greene's attack on Stuart at Eutaw Springs almost took the British by surprise, and they captured 150 members of a largely unarmed unit before the battle, nearly equalizing the numbers of the two forces. The Battle of Eutaw Springs, on September 8, 1781, was a fierce confrontation; the quality was high on both sides, each army consisting of crack troops. It

turned out to be Greene's last battle of the war and, characteristically, it was another tactical defeat and another strategic victory.

At first, Greene did very well; he placed his men in the Morgan manner, with militia in the front line and Continentals in the second. The first line fought well for a long time; when it began to give way, the British rushed forward in disorder and seeming triumph, only to meet a devastating volley and bayonet charge. The Americans routed the British, with only the cavalry and light infantry of Maj. John Marjoribanks on the British right flank holding firm. But, as luck would have it, on the point of a truly shattering victory, the rank and file of Virginia and Maryland Continentals abandoned pursuit and stopped to loot the food and liquor in the British camps. This lapse permitted the almost shattered British to re-form, and, while the battle was yet undecided, Greene prudently withdrew from the field. Stuart could only race back to Charleston, and reinforcements on the march prevented the Americans from falling upon his army. Losses were extremely heavy on both sides; but Greene's 520 casualties were more than matched by the nearly 870 men lost by the British—over 40 percent of their force. Once again, the British had a narrowly technical win, thanks to the sudden failure of American discipline; but the losses meant a smashing strategic defeat.

Eutaw Springs was the last major battle of the war in the lower South. The British now held only the ports of Charleston and Savannah (and Wilmington in North Carolina). All the rest of the Carolinas and Georgia were back in American hands, and the state governments there were quickly reestablished. Greene stayed in South Carolina to keep the British penned in at Charleston.

62

The Final Battle

The previous two years had not been easy for Virginia, and she was ill-prepared for the part she now had to play, for Cornwallis' decision to march north in April 1781 meant that the main theatre of war now had shifted to her territory.

In May 1779, Gen. Edward Mathew and 1,800 men had landed unopposed at Portsmouth, in the southeastern corner of that state, and plundered and burned all the towns and plantations in the Portsmouth-Suffolk area, inflicting a property loss of 2 million pounds without the loss of a single man.

At the end of December 1780, Gen. Benedict Arnold was sent from New York with 1,600 men to destroy military supplies and provide a diversion for Cornwallis' operations. Arnold sailed up the James River, but Virginia, apathetic and its supplies exhausted by furnishing provisions for Greene, failed to assemble militia even in the face of the Arnold threat.

Virginia was indeed in desperate straits. The fault lay neither with the people of that state nor with its governor, Thomas Jefferson. All during 1780, as it became clear that the South was the major theatre of war, Jefferson had pleaded for supplies from the Continental Congress; yet, beginning in the spring of 1780, Congress refused and continued to send all of its men and munitions to the North where they were scarcely needed, George Washington having concurred in this ghastly decision. Congress, in fact, incredibly decreed that the whole burden of the war in the South had to be borne by the southern states themselves; and with the capture of Georgia and the Carolinas, this meant that upon the citizens of Virginia alone was placed the entire burden of supplying both the North

Carolina theatre and George Rogers Clark and the war in the West. All of Virginia's stock of ammunition was therefore poured forth to aid the Carolina campaign during 1780, and no entreaties could move either Washington or the Continental Congress. As a result, by the end of 1780 there were only 2,500 pounds of vital lead on hand in Virginia, and only a little over 50,000 pounds of essential gunpowder, and much of this was damaged.* It was no wonder that such Virginia leaders as Richard Henry Lee were bleakly pessimistic by the end of 1780.

Arnold sliced in to capture the capital, Richmond, on January 5, again without resistance from the demoralized Virginians, and burned it to the ground, including its stores and records. He also destroyed Virginia's only powder laboratory, at Westham, its only cannon foundry, and five or six tons of gunpowder. He then retired to Portsmouth for the winter. Jefferson is often criticized for being unprepared, but despite the exhaustion of the state's resources, he managed to save about fifteen tons of arms and ammunition at Westham.

Virginia was finding itself beset on every side. The speaker of the Virginia House, Benjamin Harrison, rushed to Philadelphia in mid-February to beg Congress for supplies, but Congress only agreed to send a mere four tons of powder. This in spite of the British capture of St. Eustatius that same month, cutting off Virginia's best source of foreign powder. Washington, despite his comfortable position at Morristown, New Jersey, had not sent a single Continental soldier to aid his home state. Instead, he hoarded supplies, refused to send aid, and led the denouncing of "lifeless and inactive Virginia." Greene and Steuben, detailed by Washington to recruit men and arms for the southern army, kept blaming Virginia for its troubles. (As a means of striking a blow against the Jefferson administration, Steuben even engineered the ouster of George Muter as head of the Committee of the War Office of Virginia, making him a scapegoat for the success of Arnold's raid.) And with the French fleet nowhere in sight, the British fleet harassed and blockaded the Virginia coast, their gunboats ranging up and down Virginia's rivers, plundering in hit-and-run raids.

Finally, in March 1781, the Virginia assembly unofficially drew up a blistering "Remonstrance" protesting their plight, and sent it privately to the state's delegates in Congress. This remonstrance pointed out that Virginia had gladly supplied Boston and the North when they were at stake; but now, after exhausting its resources, and with the South almost completely lost, the North sent no aid in return. Yet, despite these pleas and the intense shortage of lead and powder, no munitions aid was to be received from the North until September.

*See Donald E. Reynolds, "Ammunition Supply in Revolutionary Virginia," *Virginia Magazine of History and Biography* (January 1965), pp. 56-77.

Washington had decided to try to pen Arnold in at Portsmouth, Virginia, and had Lafayette set sail for Annapolis in early March 1781 with 1,200 of Washington's troops; at the same time, the French fleet and 1,200 soldiers embarked from their base at Newport also to sail against Portsmouth. But on March 16 Admiral Arbuthnot overtook the French at the mouth of the Chesapeake; the British defeated the French task force and forced it to return to Newport. At the same time, Arnold was superseded by Gen. William Phillips, who arrived at Portsmouth with 2,600 men. Then, in mid- and late April, the two raided Petersburg, Virginia, and burned a large amount of tobacco; they did the same at Manchester and Warwick, and burned and sank a host of ships that the Americans had been preparing at Osborne's below Richmond.

When Cornwallis began his march north from Wilmington on April 25, the situation in Virginia was clearly auspicious for the British. Cornwallis' and Phillips' armies joined at Petersburg on May 20. Now, with reinforcements sent by Clinton, Cornwallis had a large force of 7,200 under his command at Petersburg; he was ready to roll.

By this time, however, relations between Clinton and Cornwallis had deteriorated even further. Properly worried about the French fleet, Clinton abandoned his plans for a Chesapeake offensive temporarily, and withdrew the bulk of Cornwallis' forces to New York. From this base an attack on Philadelphia could again be launched, after which Clinton would return to the Chesapeake. The rest of Cornwallis' force was to take up its base on the Chesapeake. But Cornwallis was determined on a Virginia offensive, and he ignored Clinton's request. He saw the weaknesses of Clinton's plan, which overlooked the immediate danger of attack by the French fleet on the Chesapeake, as well as the long-range folly of relying upon Tories. But Cornwallis had no real plan either; once he was in Virginia, with the public against him, what could he do with it?

Facing him at Petersburg was an army of 3,000 militia and Continentals at Richmond under Lafayette, with 500 new Continental recruits under Steuben on the upper James River at Point of Fork. After dispatching a force to reoccupy Portsmouth, Cornwallis moved north against Lafayette. With his inferior force, Lafayette realized that the best he could do was to imitate Greene's guerrilla tactics in avoiding and harrying Cornwallis. But when Cornwallis advanced northward, Lafayette quickly retreated to the northwest; meanwhile, Cornwallis sent a unit against Point of Fork and Tarleton northwest against Charlottesville, to which Governor Jefferson and the Virginia legislature had retreated. They just managed to elude Tarleton and flee to the mountains, while Steuben fled southwest to the Staunton River. After some blundering, Cornwallis fell back toward Williamsburg near the coast. Meanwhile, to the north near Fredericksburg and then further south, Lafayette had received welcome reinforcements:

over 900 Continentals under Anthony Wayne, 600 mounted riflemen under Col. William Campbell, veteran of King's Mountain, and Steuben's force of 500, who had managed to elude the British. Swollen to 5,000 by mid-June, Lafayette's force was able to pressure Cornwallis toward Williamsburg and harass him as he went, Cornwallis finally arriving there on June 25.

Harried by Lafayette's excellent strategy and maneuvering (his military abilities had clearly matured over the course of the war), Cornwallis' high hopes for the Virginia campaign had taken but a month to sour. At Williamsburg began the tangled and hopeless quarrel about strategy between Clinton and Cornwallis. The outcome of Clinton's flurry of confused and contradictory directives was that Cornwallis should take up a defensive spot on the Chesapeake as a base for a future Chesapeake campaign, and Cornwallis moved his troops from Williamsburg to Portsmouth. During this march, Lafayette's tactics slipped and both he and Wayne were drawn into a sharp but minor engagement at Green Spring on July 6. In spite of this defeat for the Americans, the disgruntled Cornwallis failed to follow up his advantage to try to destroy Lafayette's army. Finally, pursuant to Clinton's orders about the Chesapeake, he transferred his army at the end of July by sea from Portsmouth to Yorktown, at the mouth of the York River. There he sat, on the defensive, his bold Virginia campaign a shambles around him. He was obviously a sitting duck for a properly organized American force.

The War of the Revolution was now entering its final phase. The last phase of a revolutionary guerrilla war—which the American war had been in its victorious campaigns (in the New York and southern campaigns, if not in Washington's series of disastrous pitched battles)—is always the most difficult. In this final phase, even though the war is going well, a final *coup de grâce* must be given to the cornered and dangerous enemy. Burgoyne's worn-down army in its final phase had been neatly surrounded in the woods and trapped by a rising and gathering local militia. That was easy. But if the enemy is in a city—especially if that city is near the sea and can be defended by naval forces—the guerrilla army must, to execute its final coup, become a conventional force and fight in frontal attack. And that is not so easy. New York City, for example, was never to be recaptured by the American forces. It was true that Cornwallis, obliged to hold the Chesapeake, did not have the advantage of being in a city; but he *was* in a port. The key to besieging and surrounding him, therefore, lay in control of the sea, or rather the lower Chesapeake Bay outside Yorktown.

Washington had never given up his reckless dream of a frontal assault on New York City. On May 21, Washington arranged a conference at Wethersfield, Connecticut, with the Comte de Rochambeau, the head of the formidable French force that had occupied Newport since mid-1780.

Washington managed to persuade him to join him in an attack on New York. Accordingly, the French marched westward and joined Washington at White Plains, north of New York, in early July. But it soon became clear even to Washington that the French fleet was required for the attack. Admiral de Grasse wrote that he was bringing the French fleet and 3,000 French troops from the West Indies. He would be sailing on August 13, but to the Chesapeake and not to New York. De Grasse had been slowly influenced by Rochambeau's reluctance about the New York scheme. It was now clear to everyone that Cornwallis at Yorktown should be the target of all the allied efforts, and Washington finally prepared to march the bulk of his force to Virginia.

There were only two ways Clinton could prevent the surrounding and finish of Cornwallis: he could follow Washington down and reinforce his colleague, or he could intercept and repulse de Grasse with the British fleet. De Grasse, with a firm grasp of the importance of the occasion, boldly decided to send his entire fleet to America, and to abandon the expected huge convoy from the West Indies to France. In contrast, the British admiral Rodney not only remained for months to plunder St. Eustatius at his leisure and so lost the precious opportunity to engage and cripple the French fleet, but also took several of his largest ships home to England. Instead of intercepting de Grasse, then, the British fleet was depleted, and sailed late to America.

As for Clinton, Washington fooled him until the very last moment; preparing to march with 5,000 of Rochambeau's men and 2,000 of his own to Virginia, he made it look as if his forces were basing themselves at Chatham, New Jersey, for an attack on Staten Island. Maneuvering in this way all during the last week of August, Washington struck swiftly southward on August 29, leaving only 2,500 men to guard the Hudson. Clinton's only hope of stopping Washington had been to race out and smash him in New Jersey, but he was completely duped and lost his last chance to save the day. In the meantime, de Grasse arrived at the mouth of the Chesapeake on August 30, landed his troops, and blockaded the mouths of the York and James rivers. The blockade of Yorktown had begun.

The British West Indies fleet had been left to Rear Adm. Sir Samuel Hood, but his depleted force could not now defeat de Grasse. The British still might have intercepted de Grasse, however, if Rear Adm. Thomas Graves, commanding the fleet at New York, had rushed south to join Hood and check the French. Instead, he had wandered ineffectually off Boston and waited passively for Hood to arrive at New York. Finally united, Hood and Graves came upon de Grasse at the entrance to the Chesapeake on September 5. The depleted British fleet had nineteen ships against de Grasse's twenty-four. The British desperately needed a smash-

ing naval victory, but the French needed only a draw to maintain control of Chesapeake Bay. Graves missed several signals and passed up two good opportunities for a quick victory, and the French got their draw. Hood urged a further attack on the Chesapeake, and had Graves agreed, Cornwallis might have been saved. It was still possible for French Admiral Barras to have been prevented from joining de Grasse out of Newport with his siege equipment and eleven ships. The British fleet might have helped Cornwallis to break out of the siege by land. Even more important than these considerations, however, was the possibility that the British ships, blockaded in the Chesapeake, might be surrounded and captured themselves. And *that* would have meant, not just the loss of the war against the Americans, but the loss of the broader war against the French as well. The British, after all, had a worldwide empire to protect. In light of this, Graves' decision to give up and return to New York was probably the prudent one, even though it doomed Cornwallis and the entire British effort in America.*

De Grasse, in the meantime, used the French fleet to move most of the Washington-Rochambeau army from the upper Chesapeake to the James River by water, and by late September Washington's army had joined Lafayette to besiege Yorktown. For his part, Clinton, having missed his chance at New Jersey, lacked the numbers to march to Virginia by land, and was prevented from relieving Cornwallis by the French fleet. Only the reinforced and refitted navy could go, but the navy was bogged down by poor morale and Graves' sloth and indecision. On October 19, after a month of desperate pleas from Cornwallis, Clinton, the fleet, and 7,000 troops at last began to sail south in an effort to relieve the army at Yorktown.

Admiral Barras joined de Grasse on September 10, and the siege of Yorktown by land and sea began on September 28. The Franco-American forces were enormous. The huge French fleet, nearly 7,800 French troops, and over 8,800 Americans, of whom nearly 3,200 were newly gathered Virginia militia—a force as the Americans had not gathered since the beginning of the war—was pitted against Cornwallis' army of only a little more than 7,000. Siege guns began their continual fire upon Yorktown on October 9, and the Franco-American forces were able to push Cornwallis inward and to move their own guns forward. Trying desperately to ferry his troops across the river to Gloucester on the night of October 16, Cornwallis was foiled by a storm. Finally his battered troops could take the bombardment no longer; Cornwallis proposed surrender terms on October 17, and surrendered his force two days later as the British band appropriately played "The World Turned Upside Down." The southern

*Cf. the thoughtful discussion by Mackesy in *The War for America*, p. 424.

strategy was irrevocably over, and it became clear to the stunned and discouraged British that they could not hope to defeat the American rebellion.

At the last, it had been the French siege guns and the American artillery, wielded and commanded by Gen. Henry Knox, that had proved to be the decisive tactical stroke in forcing surrender. Failing this bombardment, Cornwallis would have been able to hold on until Clinton's arrival, and it was at least possible that Clinton's army and navy could have relieved Cornwallis. As it was, he could only turn back to New York. In the larger sense, however, it is doubtful that even a successful relief of Cornwallis could have accomplished much for British hopes of crushing the rebellion. The southern strategy was finished, and Clinton's upper Chesapeake scheme was the only thing left to try. When it failed, Britain would have been left, albeit at some time later, as it was then: with only Charleston, Savannah, Wilmington, and New York City as outposts in the United States, and with no hope of advancing from them.

While the war, for all intents and purposes, was over after Yorktown, this was not known at the time, although everyone knew that the surrender was a staggering blow. For one thing, mopping-up operations were still needed in the lower South. After his strategic victory at Eutaw Springs, Greene had pushed the British into Charleston, but he was soon in heavy internal trouble. Encamped at the High Hills of the Santee, his militia departed, his hungry, unclothed, and unpaid Continentals began to threaten mutiny, and even to plot turning Greene over to the British. But with Cornwallis' capture, American reinforcements could arrive; and Gen. Arthur St. Clair and a force of 2,000 Continentals marched south from Yorktown, driving the British garrison out of Wilmington and into Charleston, and mopped up South Carolina. Bands under William Washington and Harry Lee, meanwhile, incessantly harassed and helped pen the British in at Charleston. Wayne was detached from St. Clair's force and moved into Georgia, mopping up Tory and Indian bands and penning the British in at Savannah. He continued pressing the British in Savannah while Greene did the same in Charleston, but the return of de Grasse's fleet to the West Indies meant that the British could not be immediately conquered in either of these two cities.

After Yorktown in the West

Only in the remote western country did Yorktown have little softening impact. In early 1782, British and Indian raids on the frontier were resumed in full force: Brant and the Mohawks, in raids out of Oswego, intensified Creek sorties against the Georgia frontier and on the new Cumberland River (Tennessee) settlements. In response to the raids and the exposed western Pennsylvania frontier, the citizens of Washington County struck west from Pittsburgh against the Indians. In early March 1782, a hundred settlers marched against the Indian town of Gnadenhutten and nearby settlements on the Tuscarawas River in the Ohio Valley. There they came upon a group of Indians who had been converted to Christianity by Moravian missionaries, and who were well known to have been neutral and at peace in all conflicts since the French and Indian Wars. Assured of their unharmed removal to Pittsburgh, the friendly and unarmed Moravian Indians gathered in their chapel. Even though a tiny white minority pointed out that the Moravians had always been friendly, the overwhelming majority of whites urged that they be slaughtered on the spot, resting their case on the shameless frontier axiom, "The only good Indian is a dead Indian." The next morning, March 7, the whites took the Moravians, two or three at a time, to two designated "slaughter houses," in which the Indians were brutally killed. Ninety Moravian Indians, including 61 women and children, were butchered in cold blood, and their scalps were taken home as trophies by the proud frontiersmen. Before leaving, the three Moravian mission towns were burned to the ground and the houses looted.

To this exploit was added an attack by frontier militia on a small island

near Pittsburgh, where a dozen friendly Delaware Indians were stationed. Many of these had served the American militia faithfully for years; nevertheless they were captured and murdered on the spot.

The slaughter at Gnadenhutten was condemned by the Pennsylvania Assembly, which to its credit called it "an act disgraceful to humanity." But the frontiersmen were pleased. In all their massacres, the murderers had acted in the time-honored tradition of the frontier in dealing with Indians: when you can't successfully handle powerful Indian enemies on the frontier, fall upon and kill friendly or neutral Indians living nearby.

These exploits emboldened the frontiersmen to strike deeply westward at the focus of hostile Indian strength on the Sandusky River. The expedition set out on May 25, with nearly 500 mounted militiamen under Col. William Crawford. But the massiveness of his force and the slowness of the advance alerted the British, the Tories, and the Indians to the threat, and they gathered in force to meet the Americans near the Sandusky River. After an inconclusive skirmish, the British and Indian forces (including some Delawares) managed to encircle the Americans on June 6 and panic them into wild flight; the casualties probably amounted to over a hundred Americans, including the capture of Crawford and other leaders of the expedition. In retaliation for the massacre of the helpless Delawares and their Moravian kinsmen, the Delawares burned Crawford to death. The frontiersmen could not persuade the East to equip a retaliatory expedition.

Another important frontier raid was that of the Tory John Connolly, who struck from the British base at Niagara with 200 Seneca Indians. He attacked Hannastown, east of Pittsburgh, burned the town, killed or kidnapped 30 inhabitants, and devastated the surrounding area.

News of Yorktown finally filtered into Detroit in early April, and led to a great all-Indian congress of the western Indians at Wapatomica in late June. Seeing that the Revolutionary War was almost over, the Indians cogently decided on one last climactic effort to smash and obliterate the American frontier in the West. They resolved to burn all prisoners and to stop at no means to achieve their goal. Advancing with British Indian agents Alexander McKee and the Tory William Caldwell, 1,250 Indians and Tories approached Pennsylvania. False rumors of an approach against them by George Rogers Clark delayed the advance and caused half the Indian force to scatter. The massive invasion was transmuted into two large thrusts. One, under Capt. Andrew Bradt of the Tory rangers, besieged Fort Henry at Wheeling in mid-September, but he could not crack the defense and was soon forced to withdraw.

The other thrust, under McKee and Caldwell, moved to invade Kentucky, which now seemed a weakened target. In March, a small Wyandot raiding party against Estill's, deep in Kentucky, had surprised and worried

the frontiersmen by altering their usual pattern. Instead of fleeing from a unit of local militia, the Indians turned and fought against them and, what is more, defeated them. Furthermore, a lack of funds and a characteristic unwillingness of the militia to fight far from home prevented Clark from building defensive forts on the Ohio River. Now, in early August 1782, McKee and Caldwell, with 350 men, crossed the Ohio at the mouth of the Limestone and drove southwest to besiege the stockade at Bryan's Station. The forty-odd defenders stoutly held their stockade, but they lost their livestock and crops to the plundering and burning of the British forces. Militia gathered all over Kentucky, and began to pursue the Caldwell column, which had retreated to Blue Licks, on the Licking River. There, with fewer than 200 men, the Americans attacked them on August 19 without waiting for reinforcements, and were completely routed by the unexpected close-quarter charge of the Indian line. Over 40 percent of the Kentuckians were killed trying to flee back across the river, after which the satisfied Indian-Tory force withdrew across the Ohio.

The Kentucky frontiersmen, who had been convinced that Indians could not fight successfully man-to-man at close quarters (an American analog to the British attitude toward the Americans), were severely shaken by the battle of Blue Licks. This blow was soon reinforced by the Indian capture of the stockade at Kincheloe's Station.

The frontier was nevertheless able to recover toward the end of the year, a recouplement greatly aided by the British decision to call off the western Indians when the war drew to a close. In September, Virginia's Col. John Sevier and 250 Holston River (in what is now northeastern Tennessee) horsemen invaded Chickamauga and Cherokee country and destroyed and burned many towns. And in November, Clark took more than a thousand mounted Kentucky riflemen north to destroy all of the main towns and most of the food supply of the Shawnee Indians in the Ohio country.

The Response in Britain

Yorktown was surely “the surrender heard round the world.” Rejoicing abounded throughout the United States and France, while in stunned Great Britain Lord North exclaimed: “Oh, God! it’s all over.” To aggravate the intense dismay in England, the surrender came at a time when Britain was suffering other great losses in the worldwide war against France and Spain: the losses of West Florida, Minorca, Tobago and St. Eustatius in the West Indies, defeats in India, and naval threats in the British channel. It became shatteringly clear to the British that the war against America could not be won; an agonizing reappraisal was evidently in order.

The British opposition to the war had begun to intensify during 1780, and opponents made effective use among the country gentry of the swelling taxes and national debt incurred by the war. By late 1780, the opposition was able to use Cornwallis’ reversals, especially the one at King’s Mountain, as an effective argument; the government replied again with sentimental appeals concerning the supposed mass of American Tories who would be left in the lurch by a British withdrawal. It also played upon the common fear of gains by France. But now the country gentry and other independent members of Parliament recognized the collapse of both the southern strategy and the Tory myth, and the enormous government expense that would be needed to carry on the war was apparent to all. Furthermore, the argument about France now cut the other way, for unless peace were made with America, more imperial territory might yet be lost to France—and to Spain.

The impact of Yorktown upon Great Britain was all the more shocking

for the vaunting optimism that Lord George Germain, the war leader and ultrahardliner, had displayed throughout 1781. Throughout that year, he had insisted that the Americans were about to collapse at any moment. Even many of his opponents believed him; was he not the most knowledgeable person in Britain about the American war? But with Yorktown this myth was shattered.

King George, of course, was indomitable; still he babbled the hard line: "The prosecution of the war can alone preserve us from a most ignominious peace." At his side was Benedict Arnold, whose career would be shattered by Britain's making peace with the United States. Arnold repeated the discredited opinion about imminent victory and the Tory masses in America, but this time nobody listened. One by one the Tories soon began to resign from the cabinet—and the prosecution of the war. The lord advocate, Henry Dundas, who had earned the nickname "Starvation" by his zeal to starve out Boston in 1774, now despaired of the war and resigned from the cabinet, as did Richard Rigby. In contrast, the Whigs exulted in the defeat at Yorktown; Horace Walpole declared, "Whatever puts an end to the American war will save the lives of thousands—millions of money too." Lord Derby even began to talk exuberantly of "scaffolds" for the king and his ministers.

By Christmas of 1781, most of the country gentry opposed continuing the war. The end of the British war effort now seemed inevitable; within the cabinet, the great stumbling block to peace remained Lord Germain, who evolved his own domino theory: the loss of America would lead inexorably to the loss of the West Indies, the American trade and the West Indies trade; ultimately, peace would mean "that we can never continue to exist as a great or powerful nation after we have lost or renounced the sovereignty of America." It was clear, however, that if the king wished to save the North ministry from collapse, Germain would have to go, and many weeks were spent at the king's insistence on continuing Germain's policy through his successors, if not with the man himself. In private, North was pessimistic about the war. In December, he asked Parliament to do nothing that would hinder peace negotiations, and jettisoning Germain was to be part of this phased retreat. Germain was finally ousted in early February 1782, to be replaced by the veteran technician Welbore Ellis.

With King George stubbornly refusing either to abandon the war or to allow the North ministry to fall, the administration fought a delaying action against the opposition. But as soon as Germain was ousted, Charles James Fox launched a campaign in Parliament for removal of the Earl of Sandwich from the Admiralty. The prolonged and futile defense of Sandwich mobilized the opposition, until Fox was able to push through Parliament the crucial resolution of February 27, which declared against further

prosecution of the war. On this vote, many of the king's friends deserted him. Finally, on May 4, the House declared sternly that all who wished to prosecute or even advise the prosecution of any further offensive operations in America were to be considered enemies of their country. The war policy was finished.

From this victory the opposition proceeded to the ultimate step in ending the war effort: smashing the remains of the North ministry. With the government's shaky Parliamentary majority dwindling daily and the country gentry rapidly deserting, Lord Rockingham insisted that he would not enter any coalition. He would take the prime ministry only if granted full power to name his own ministers, to enact economic reform in cutting the budget, and to grant independence to America. He had wisely absorbed the lesson of his party theoretician, Edmund Burke, that it was necessary to have a clear-cut and firm program for the party as well as sole responsibility of the ministry for carrying it out. The king wildly muttered about abdication, but North in despair finally prevailed upon the king to accept his resignation on March 20. In abject surrender, King George was forced to replace him with his worst enemy, Lord Rockingham, one week later. The military phase of the American conflict was over; the conclusion of the war was now in the hands of the diplomats.

The triumph of Rockingham was the triumph of the Burke principle of party: the importance of remaining true to party principles and not accepting coalitions with groups of Tories. By remaining true to a program of "economical reform" and peace with an independent United States, Rockingham forced the king to turn to him to provide an alternative regime when the policy of war and high spending broke down. The only exception was Earl Shelburne and his followers. Under Rockingham, Whigs poured into government; the leader of the old Chathamite forces, Shelburne was the Whigs' only—and fatal—concession to the concept of coalition. The accession of Rockingham marked the definitive turn in Britain from the rule of the king and his friends to the rule of Parliament, as well as the corollary turn from the mere factional rule of personal cliques to a government of definite and demarcated political parties.

The Rockingham ministry swiftly abolished the post of secretary of state for the American department and two critically important figures took their places under Prime Minister Rockingham: Fox as foreign secretary, and Shelburne in charge of home, Irish, and colonial affairs as secretary of state for the southern department. As commander-in-chief for America, the new ministry confirmed North's decision to replace the discredited Clinton with Sir Guy Carleton, the old hero of the Canadian campaign.

The entire new cabinet was united in deciding on military strategy. While peace was being negotiated, the British army was to be completely evacuated from the United States and transferred to Halifax or the West

Indies. Shortages and inefficiencies in handling supplies and transports, however, delayed the evacuation. Savannah was evacuated on July 11, 1782, and its force moved to Charleston; the latter was evacuated on December 14, 300 British ships carrying out of the harbor a multitude consisting of the British army, about 4,000 Tories, and about 5,000 of their Negro slaves. By the time peace was declared, only New York City was left in British hands.

65

Making Peace

As peace negotiations got under way, it became clear that the diplomatic interests of the powers were drawing apart. France and Spain were less than enchanted about a potentially powerful United States that might eventually ally itself with England; and Spain understandably wished to keep its conquests in the American Southwest. For its part, England, already reconciled to American independence, began to see that a peace settlement favorable to the United States would weaken the dangerous Franco-American alliance and secure a well-disposed country instead of an embittered ex-colony.

After much effort by France, Spain, despite its antipathy to the Revolution, had been induced to enter the war against Britain in the spring of 1779 by the lure of recapturing Gibraltar. The Secret Treaty of Aranjuez between France and Spain in April 1779 had provided for Spain to enter the war, but violated France's terms of alliance with the United States by not insisting on American independence as a condition of peace. Furthermore, Spain flatly refused to recognize the independence of the United States, although it did send an envoy to the States who masqueraded as an "observer." And, as we have seen, Spain provided aid and supplies to the American cause.

The most advanced doctrines of international law, set forth most recently in the American plan of 1776 and the Franco-American treaty of 1778, made neutral shipping in wartime free from seizure except for contraband, which was strictly limited to munitions. England, however, insisted on a far more restricted view of neutrals' rights, and especially on the inclusion of naval stores (e.g., timber) in the category of contraband. Goaded beyond

endurance, the major European neutral powers banded together in a League of Armed Neutrality. The league began on February 28, 1780, when the mercurial Empress Catherine II of Russia, after urging by France, issued a declaration setting forth the most advanced principles of neutrals' rights and promising the use of the Russian navy to defend Russian rights. Even more important, Catherine invited other European neutrals to enter into conventions with her to enforce this code. Denmark and Sweden accepted by August 1780, and their bilateral conventions were forged into a tripartite alliance for protection of their common rights—rights, incidentally, which Spain but not England promptly pledged to accept. The Netherlands joined the Armed Neutrality in early January 1781. Britain, already enraged at the lucrative Dutch shipping and financial dealings with the United States, fell upon the Dutch at the end of 1780 in retaliation before Russian and other league ships could begin to protect the Dutch trade with America. At war, the Dutch were ironically deprived of the benefits of membership in the League of Armed Neutrality. Other powers joining the league later in the war were Prussia, Austria, Portugal, and the Two Sicilies. While the league did not exert armed weight against Britain, its very existence served as a useful deterrent to British depredations of their shipping, and it served to isolate and weaken Britain's position in Europe and the world.

In July 1780, John Adams was appointed negotiator with the Netherlands, where he was able, in April 1782, to win Dutch recognition of the independence of the United States. Now minister to the Netherlands, Adams was able to negotiate a sizable loan from Amsterdam bankers, and, in October, a treaty of amity and commerce between the Netherlands and the United States. This agreement was modelled on the French treaty, and affirmed the libertarian principles of neutrals' rights declared in the previous treaty and in many other recent documents (including the Declaration of Armed Neutrality).

Spain's entry into the war in 1779 promptly highlighted an important problem with the future peace negotiations: What would be the territory of the new United States of America? East of the Appalachians there was no problem; the Americans would be recognized as holding the territory of the thirteen states. But what of the large and scarcely occupied lands of the West? Would America be granted these? Spain, with its vast empire over Central and South America, its large territory of Louisiana, and an acquisitive eye on Florida and the Southwest, was keenly—and negatively—interested in the possibilities of westward expansion of the United States. Rational principles of justice would have dictated that U.S. territory encompass settler lands and only a little more. This would have given to the U.S. only the territory east of the Appalachians and the settlements in Kentucky. Surely there was no valid reason for giving the Americans

the territory north of the Ohio, which was sparsely settled by Frenchmen, militarily controlled by Britain, and peopled by Indians; and the area south of Kentucky was also populated by Indians and now militarily occupied by Spain.

The other issue with Spain was a corollary to the western land problem: navigation rights down the Mississippi. If the United States had received little or no land in the West, as was its just due, the Mississippi navigation problem would have been academic, since Spain, at New Orleans, controlled at the very least the mouth of the river and there would have been little American use of the Mississippi. Even at its most pressing, however, any demand by the U.S. for freedom to navigate the Mississippi would be highly presumptuous; freedom to trade or navigate is pleasant and beneficial, of course, but any such demand is aggressive behavior when made of one State by another.

America's first statement of its peace terms came in 1779 in response to a Spanish offer to mediate the conflict before she entered the war: an offer that failed because of the intransigence of George III. The urging of France to define peace terms brought the Congress to a spirited five-month debate (March-August 1779), at which Conrad Gérard, the French minister to the United States, used his considerable influence to try to induce the Americans to moderate their aggressive demands for the Mississippi as their western boundary and their old colonial right of access to the Newfoundland fisheries. Actually, the fishing rights spurred the most acrimonious debate, with New England and such radicals as Richard Henry Lee pressing an aggressive demand that war be pursued until the American right to the Newfoundland fisheries be guaranteed. France, of course, had no intention of fighting to the last for this arrogant claim, and neither did the southern delegates. Thomas Burke, himself a radical, spoke only common sense when he berated the New Englanders and announced his aim "to prevent any obstruction to peace but such as were unavoidable."

The split between radical and conservative factions in Congress had, indeed, been precipitated by the establishment of diplomatic relations with France the year before. Shortly after ratification of the Franco-American treaty in the spring of 1778, the French sent Conrad Gérard as full-fledged minister to the United States, where he arrived in mid-July. America had been represented in France by a three-man commission. The commission originally consisted of Benjamin Franklin, Silas Deane, and Arthur Lee, and there soon developed a bitter split: Connecticut's ultra-conservative (and eventually Tory) Silas Deane and the opportunistic hedonist Franklin on the one side, and the radical Arthur Lee on the other. Lee was particularly bitter at Deane's massive peculations at the public trough of war aid and war contracts. In particular, Lee insisted on telling

the truth that French aid through Beaumarchais was intended as a gift, whereas Deane and Franklin persisted in treating Beaumarchais as a legitimate merchant whom the Americans must repay. Lee cut to the heart of the matter in disclosing Deane's and Franklin's intimate business dealings with Beaumarchais, as part of their pattern of plunder of the American taxpayer.

When Deane was replaced by John Adams in 1778 and recalled to face Congressional inquiry, with minister Gérard ostentatiously siding with him, Congress rapidly split into two factions. The radical Adams-Lee "junto"—John and Sam Adams and Arthur and Richard Henry Lee—was pitted against Robert Morris and the conservatives. The major issue was whether Morris and his fellow oligarchs had the natural right to wax fat at the public trough, with little or no obligation to make an accounting to the public.

Gleefully entering the fray was Thomas Paine, who had been secretary to Congress' Committee of Foreign Affairs, which in turn had evolved out of the old Secret Committee of Correspondence in April 1777. Paine blasted the peculations and irregularities of accounts of Deane and, beyond him, of Morris, and also attacked the system of interlocking public-private finance and of public officials engaging in private trade that made the financial irregularities possible. He accurately termed these officials "monopolizers," and trenchantly added that

one monopolizer confederates with another, and defaulter with defaulter, . . . yet still these men will talk of justice. . . . That private vice should thus put on the mask of public good, and even imprudence in guilt assume the style of patriotism, are paradoxes. . . .

Joining Paine in a press war over the Deane affair were Henry Laurens, the Lees, and the Pennsylvania radicals Timothy Matlack, David Rittenhouse, and Charles Willson Peale, while Robert and Gouverneur Morris and William Duer defended Deane.

The result of this storm in Congress during 1778–79 was what all too often happens in such brawls: the decimation of the leaders of both sides. Grave irregularities being found in his accounts, Deane was implicitly repudiated by Congress and openly defected to the British side. Morris prudently left Congress and devoted himself solely to his commercial empire. Paine was forced to resign as secretary of the committee for disclosing state secrets in his zeal to expose the truth about Deane. France and Spain declared Arthur Lee *persona non grata*; His diplomatic career shattered, he became a congressman from Virginia and there led in the suspicion of France as an untrustworthy ally.

Characteristically, the one man who emerged from the fracas with lau-

rels was wily old Franklin. When Gérard was sent as the French minister to the U.S., America had to appoint its own minister to France. With Deane gone, the old opportunist was the favorite of the French court, and France put severe pressure upon Congress to appoint him. A wave of laudatory propaganda by France poured into Congress, and lavish loans were pointedly made by the French to the United States through Franklin. Richard Henry Lee slashingly and trenchantly announced his disgust at Franklin as a "wicked old man" who labored "under the idea of his being a philosopher."* Nevertheless, in mid-September 1778, Congress appointed him minister to France, but by a slender majority.

During the crucial 1779 session of Congress, the Adams-Lee radicals led the fight for maximum aggressiveness in peace demands and opposed Gérard's attempts to moderate these demands on behalf of French and Spanish interests. Finally, on August 14, after much squabbling among the factions, Congress agreed to the following peace terms as a *minimum*: independence, the Mississippi as the western boundary of the new nation, and the thirty-first parallel as the southern frontier of the American West. (It was assumed that Spain would demand East and West Florida, and the thirty-first parallel would grant the United States a large chunk of West Florida south of the mouth of the Yazoo River.) Gérard had been able to moderate the fishing and Mississippi navigation terms and the American drive to seize Canada and Nova Scotia to the status of conditional rather than absolute demands.

In return for moderating their aggressive demands, the radicals expected to be able to name the minister plenipotentiary who would have the power to negotiate a peace based upon these terms. The radicals wanted Arthur Lee, but his support was too slight, and they were forced to swing their strength to John Adams, whom they vastly preferred to his rival, conservative New York oligarch John Jay. Finally, on September 27, 1779, John Adams, an independent man strongly disliked by the French, was chosen by Congress as its negotiator for peace.

France now launched a quiet but effective campaign to pressure and suborn the American Congress, a campaign led in the United States by the wily new French minister, the Chevalier de La Luzerne. During early 1781, when the war news was gloomy for the allies, Vergennes quietly prepared to betray America by being willing to settle for a truce based on

*Precisely *how* wicked, even Lee did not know. Cecil Currey has recently discovered not only that Franklin was deeply involved in the Morris-Deane embezzlements, but also that he served throughout his wartime stay in Paris as a conscious secret agent of Great Britain (code number 72 in the British intelligence archives). During the peace negotiations, he shifted to a pro-French role, probably related to his own speculations in western lands. Cecil B. Currey, *Code Number 72/Ben Franklin: Patriot or Spy?* (Englewood Cliffs, N.J.: Prentice-Hall, 1972).

existing military lines. He was prepared to use an Austro-Russian offer of mediation in the conflict to put this scheme into effect, and his pressure and quiet bribery weakened Congress' stand. Much of his influence on Congress was exerted through the well-known Gen. John Sullivan of New Hampshire, who was on his secret payroll. La Luzerne's pressure and quiet bribery succeeded, by late 1781, in getting Congress to name his friend, the conservative New York oligarch Robert R. Livingston, to the vital new post of secretary of foreign affairs. After a studied campaign of calumny against John Adams, the French were able to induce Congress to replace him with a five-man commission to conduct the peace negotiations. In addition to Adams, the commission would consist of Franklin, John Jay, who had been negotiating in Spain, Henry Laurens, and Thomas Jefferson. But Jefferson was not able to leave for Europe in time, and Laurens was a prisoner in England, and so this left the conservatives Franklin and Jay as a majority on the commission.

La Luzerne's pressure also succeeded, on June 15, 1781, in drastically modifying the American stance on peace. Congress rescinded its 1779 peace terms, and only independence remained as the minimum demand for making peace. Apart from independence, the commission had absolute discretion to make whatever terms they wished, with the amazing proviso that no action could be taken without the "knowledge and concurrence" of the French, whose advice should be ultimately followed by the commission. It seemed that America was binding itself to French dictation, and the composition of the new commission, as well as the identity of the new foreign secretary, confirmed this view. The stunned congressman James Lovell wrote to John Adams of these new instructions: "Blush, blush America." After the Battle of Yorktown, Arthur Lee tried to get Congress to rescind these instructions, but it continued to cling heavily to an absolute trust that Vergennes would be ever vigilant in the pursuit of American interests!

Fortunately, the victory at Yorktown made Vergennes forget about betraying American independence. Peace negotiations began at the end of March 1782, as Shelburne sent the Scottish merchant and former Virginian Richard Oswald to France to confer with Franklin. Franklin secretly urged the sympathetic Oswald to cede Canada to the United States, a prospect France strongly opposed. But despite promises of immediate British recognition of their independence, the Americans steadfastly refused to betray their French ally by concluding a separate peace. Furthermore, Admiral Rodney's defeat of de Grasse's French fleet in West Indian waters in mid-April softened French demands and brought French and American goals closer into line.

On July 1, 1782, Lord Rockingham died. His natural successor as prime minister was the charismatic Charles James Fox, the new leader of the

Whig party. But King George, who could not abide the strongly liberal Fox, instead chose Shelburne, and Fox and the Whigs went into opposition. Shelburne and his emissary Oswald were now in full charge of peace negotiations.

Fox had urged the ministry to grant American independence as a preliminary to the body of negotiations. By thus recognizing the United States unequivocally, a split might be created in the Franco-American alliance. For similar reasons, the wily Vergennes tried to delay such an immediate recognition of American independence; and it was John Jay who realized this while Franklin was being bemused—to put it kindly—by France. Both Jay and Franklin, however, quickly caved in on their demand for advance recognition of independence before negotiations, a recognition that Shelburne had finally been prepared to grant by early September. Shelburne was even willing to accept the American terms for freedom of fishing in Newfoundland. Had Jay and Franklin held firm, independence would have been gained on the spot with none of the American concessions that were eventually imposed. John Adams, indeed, was so incensed at the retreat by Jay and Franklin on advance recognition that he thought seriously of resigning from the peace commission.

Serious divergences between the allies also arose over America's western boundary. Spain made clear to Jay its claim to the area of the Southwest east of the Mississippi, as well as its opposition to any American pretensions north of the Ohio, which it saw as more cogently in British or even Indian hands. France supported Spain's position, and, what is more, it privately advised the British that it did not agree to America's independent claims to the fisheries or to the lands around the Mississippi or north of the Ohio. It was these hints of French opposition that panicked Jay into abandoning the advance independence clause in order to launch peace negotiations rapidly. As a result, Jay and Franklin were naively content with Oswald's authorization of September 19 to treat with the commissioners of the "thirteen United States" and to accept independence as part of the treaty. But this was not ironclad recognition of American independence prior to and separate from the treaty. Moreover, Britain was further emboldened at the peace table by the relief of the French and allied siege of Gibraltar.

With Franklin's support, Jay submitted a preliminary draft treaty to the British, which included Franklin's previous conditions plus freedom of navigation on the Mississippi. The latter clause was tied to a reciprocal freedom of trade for American shipping and commerce throughout the British Empire. Furthermore, American boundaries were supposed to include the Toronto peninsula of Canada as well as the Southwest down to the thirty-first parallel. They had not relinquished claims to Canada in order to push for British acquiescence to America's attempt to grab the

lands in the West. For its part, Britain felt strengthened by the victory at Gibraltar, and raised the question of compensation of American Tories, as well as payment by the U.S. government of prewar private American debts to British creditors. Britain also let fall the idea of American trade obeying Britain's own navigation act.

At the end of October, a veritable flurry of negotiations took place, negotiations which Jay, Adams, and Franklin, in defiance of their Congressional instructions, conducted totally without consulting Vergennes, and indeed against his advice to moderate their presumptuous demands for territory and fishing rights.

The peace treaty between the United States and Great Britain—one highly favorable for the U.S.—was tentatively signed between the American and British negotiators on November 5, 1782. After some weakening of American fishing rights in Newfoundland, the final treaty was signed on November 30, and Franklin informed Vergennes of this *fait accompli*. The Frenchman's reaction was surprisingly mild, and he was placated by Franklin's reassurances that the French would have to conclude peace before the treaty could take effect. Probably Vergennes was relieved that America's signing a separate peace served to discourage Spain from trying to continue the war until she could recapture the now safely British Gibraltar. Collapsing finances also made France eager for peace, and parallel French peace negotiations were by now almost finished in any case.

Gibraltar was the final sticking point for the peace treaties with France and Spain. Shelburne was actually willing to concede Gibraltar, and a deal began to materialize for exchanging it for French-held Martinique, Guadeloupe, and Santa Lucia in the West Indies. But news of the American treaty as well as the tenacious defense of Gibraltar began to stir up a war fever among the British public, who were especially resistant to yielding Gibraltar. Finally, the Spanish ambassador to Paris, Pedro Aranda, decidedly unenthusiastic about a strong British presence in the West Indies, accepted a British offer of Minorca and East and West Florida; in turn, the Spanish sadly relinquished Gibraltar. All the obstacles to a general peace were now over, and both the Anglo-French and Anglo-Spanish preliminary peace treaties were signed on January 20, 1783. A general armistice was proclaimed which included the Netherlands, even though a peace treaty with the Dutch had not yet been signed.

In February, Fox formed a coalition with his old enemy, Lord North, who was also in opposition, and together they pulled down the Shelburne ministry. A Fox-North coalition ministry was formed in early April, with both men as secretaries of state while the Whig Duke of Portland was the front man as ineffectual prime minister. This maneuver to bring the Whigs back to power proved to be tactically shrewd, but it was strategically

disastrous to Fox and the Whigs. Fox was never able to explain this unprincipled left-right coalition to his followers, and his radical mass base was split grievously and ultimately crushed as a result. Fox tried to reopen peace negotiations by insisting on a permanent military alliance between Britain and the U.S., but the Americans countered with their own demands for free trade, the protection of neutrals' rights and other concessions. The peace treaty was conclusively signed between the United States, France and her allies, and Great Britain on September 3, 1783, with no change made from the 1782 Anglo-American draft.

This Treaty of Paris featured the following provisions: (1) U.S. independence was recognized; (2) hostilities were to cease and all British land and sea forces were to be evacuated "with all convenient speed"; (3) the United States was granted all the lands north of the Ohio River up to its present northern boundary, and the territory southward to thirty-one degrees south; (4) the Americans were given the right to fish, as they had during the colonial period, off Newfoundland and Nova Scotia, but the clause granting them the "liberty" to dry and cure the fish on the coast was ambiguous and proved a source of trouble for many decades; (5) Congress would recommend to the state legislatures to restore all the rights and confiscated estates of Tories—a clause having no binding effect on the states; (6) no future confiscation or other action would be taken against Tories, and imprisoned Tories were to be set free immediately; (7) all debts between citizens of either country were to meet "no lawful impediment" to repayment; and (8) the navigation of the Mississippi would be free to both countries (the U.S. and Great Britain)—a meaningless clause, since Spain effectively controlled that river.

Congress, knowing full well that the Tory clause could be violated with impunity and that France was already placated, easily ratified the preliminary treaty on April 15, and unanimously ratified the final treaty on January 14, 1784, final ratifications being exchanged on May 12. The United States of America had at last definitely won their revolutionary war: they were now a new nation.

On December 14, in accordance with the treaty, the British troops completed their evacuation of New York, taking with them 7,000 Tories, making a huge total of 100,000 Tories who had fled America for Europe or Canada. George Washington ceremonially entered New York City with Gov. George Clinton, took leave of his officers at Fraunces' Tavern, and resigned his commission as commander-in-chief before Congress on December 23.

England's cavalier cession to the United States of the entire unconquered western lands was part of her maneuvers against France and Spain and was, of course, a gross betrayal of England's Indian allies. The failure

of the United States to abide by the spirit of the Tory clause gave Great Britain the excuse to revoke, in effect, the cession of the Ohio lands, and to maintain its military garrisons intact. This appeased and strengthened Britain's Indian friends and preserved Indian control of the Ohio lands while Spain and its allied Indians threatened to contest the Southwest.

And so the revolutionary United States of America threw off the British yoke and won the first successful war of national liberation against western imperialism. Many factors entered into the victory, but the most important was the firm support for the war by the great majority of the American people. It was that support which harassed, enveloped, and finally destroyed the proud British armies come to conquer and occupy in the name of traditionally legitimate government. It was a revolution fueled by fervent belief in libertarian natural rights ideology and by a cumulative reaction to growing British infringement on those rights, political, constitutional, and economic. Its victory was essentially a people's victory, of guerrilla strategy in its broadest sense: not only of the small, mobile guerrilla bands of the Marions and the Sumters, but also of ephemeral and suddenly appearing militia who largely fought in their own neighborhoods and on their own terrain.

George Washington, the highly touted "Father of His Country," had a military impact that was negligible or even negative. Setting aside Yorktown—which Washington was slow to grasp and which was the siege of a finally routed army whose destruction had been prepared for months by Greene and Lafayette, and whose finish was more of a French affair—Washington won only a single victory among his many battles: Trenton-Princeton, and that was precisely the only battle where Washington deigned to stoop to guerrilla tactics. The rest of the time, before and after Trenton, Washington was far too much the orthodox military leader yearning for a Prussian-style State army and a conventional victory in frontal confrontation. Hence his string of defeats and disasters in the New York and the Pennsylvania campaigns. The military victories in the war belonged to others: to Gates, to Morgan, to Greene, all of whom won by basically guerrilla strategy and tactics, and most of whom were either disgraced or placed in limbo by the jealous Washington. Not only did Washington fail to understand the purely military aspects of a people's revolutionary war, but he also failed to grasp the importance of the free and inspired individual soldier in such a war, and hence he wrecked morale and brought about mutinies by his Prussian discipline. The war was actually won despite Washington rather than because of him. To a large extent, finally, it was the genius whom he broke and discredited—the almost forgotten Charles Lee—who discerned the true nature of a revolu-

tionary war and the way that it had to be won. The revolution was won because Lee's type of war was able to set aside the kind of war that Washington tried—but failed—to create. As Shy writes:

Intellectual that he was, Lee tried to see the Revolution as a consistent whole, with every aspect in rational harmony with every other. It was a fight by free men for their natural rights. Neither the fighters nor the cause were suited to the military techniques of despotism—the linear tactics, the rigid discipline, the long enlistments, the strict separation of the army from civic life that marked Frederick's Prussia. Lee envisioned a popular war of mass resistance. . . . He sought a war that would use the new light infantry tactics already in vogue among the military avant-garde in Europe, the same tactics the free men at Lexington and Concord had instinctively employed. Such men could not be successfully hammered into goose-stepping automatons and made to fire by platoons, but properly trained and employed, they could not be defeated.

Nathanael Greene's campaign in the South . . . [was] to confirm Lee's prophetic insight. But to Washington—a practical man not given to theorizing—this was all madness. He never seriously considered resorting to a war of guerrilla bands drawn from the militia. He would have recoiled with horror from such an idea.*

PART VIII

The Political and Economic
History of the United
States, 1778–1784

66

Land Claims and the Ratification of the Articles of Confederation

Unquestionably the most important political event of the latter years of the war was the final ratification of the Articles of Confederation. Like many other fateful political and economic changes made at the end of the war, this measure, put through as a wartime necessity, became effective only in time of peace. For American radicals, this represented a disastrous cultural lag between the social conditions that had arisen and the institutions that were established for very different times and purposes.

Maryland, under the firm political control of a tightly knit oligarchy of land speculators, blocked the required unanimity for accepting the Articles of Confederation, which had passed Congress in late 1777, by refusing to ratify unless Virginia's vast claims to the western lands were nationalized and placed under a Continental Congress that the speculators could hope to control. During 1778 and 1779 the Virginia Assembly directly repudiated the huge land claims of the Indiana, Illinois, and Wabash Companies, whose membership included the rulers of Maryland, overriding the Virginia conservatives, headed by Benjamin Harrison, Edmund Pendleton, and Carter Braxton, who had close commercial connections with the land speculators, especially the Philadelphia merchants Robert Morris, the Whartons, and the Gratz brothers.

The liberal forces in Virginia, led by Thomas Jefferson and George Mason, nevertheless faced a difficult struggle; they were, for example, blocked in their efforts to open up a land office for the western lands to throw them open for settlement and to end the speculator threat once and for all. The conservatives opposed this plan not only because of their connections with the land speculators, but also because widespread settle-

ment of the West would draw off population from the East, lowering the value of eastern property. The liberals, however, were aided by pressure from the western settlers led by Col. Arthur Campbell.

The defeat of the speculators seemed assured during 1778 and 1779, and a land-office bill was finally passed in June 1779. Mason's bill, however, gave firm preemption rights only to existing settlers, and failed to provide them for future settlers, who would naturally form the main body of the population of the West. An all-powerful Virginia commission was therefore able to sell the virgin lands at 40 pounds for 100 acres (in depreciated currency) to anyone who cared to buy. Jefferson's provision of granting only 50 acres to each settler was thus rejected, and no limitation was placed on the amount that could be purchased by any nonsettlers. The result was that within a few years the precious western lands fell into the hands of individual absentee land speculators, who paid in a still further depreciated currency. Robert Morris, for example, later came to own 1.5 million acres of western lands.

Their claims ended in Virginia by Mason's 1779 bill, the powerful land companies turned once again to Congress, and argued once more that Congress had plenary sovereignty over western lands, sovereignty which had "devolved" from Great Britain. Congress, they claimed, should keep Virginia from putting its land law into effect. Thus, Congress was asked to assert power over western lands which even the Articles would deny to it! But logic yielded to the aggrandizement of power, and, in early October 1779, Congress voted 6-5 to advance the land companies' proposals to a committee packed with their supporters. In mid-October, the committee reported a recommendation for Virginia and other states to suspend all sales and grants of their western lands until the end of the war. Congress voted for the resolution, with only Virginia and North Carolina opposed.

Virginia did not passively accede to this aggrandizement of central power, and led by George Mason, it quickly issued a strong remonstrance against the congressional invasion of its sovereignty on behalf of land speculators. New York, however, was scarcely as sturdy, and under the pressure of Congress, in mid-February 1780 it agreed to cede its dubious claims to the lands of the Iroquois, to make them the property of the Continental Congress. Congress agreed to this cession in September, urging other landed states to cede voluntarily their own claims for the sake of confederation, and even Virginia's delegates approved. Connecticut also ceded its claims to western lands in Congress in October 1780, reserving to itself a tract of three million acres in northern Ohio (the Western Reserve). Thus began the central government's fateful ownership and sovereignty over virgin lands. In this way, sovereignty, at least

over all territories not yet states, was placed solely in the hands of Congress—a vast accretion of central power that for the most part went unchallenged.

Virginia's turnabout was largely caused by the 1780 invasion of the South, prompting a panicky and irrational urge to ratify the Confederation and thus gain more effective northern support for the war effort—support which never materialized. The liberal administration of Virginia, headed by Jefferson as governor and by George Mason, was more interested in justice for the settlers than in power for Virginia. Hence, they overlooked future questions of central power and ceded the lands north of the Ohio to Congress. There were, however, certain conditions attached to their agreement, the most important being that the Indian land claims to the region (i.e., the claims of the land companies) be voided, and that Virginia be guaranteed the Kentucky lands. Congress refused to void the company land claims, and the land companies put up a furious barrage of propaganda, including subsidized pamphlets by Samuel Wharton, Benjamin Franklin, and Tom Paine, all of Philadelphia. Paine's hiring out to the Indiana Company to present its case in a pamphlet, *Public Good*, continued the practice of selling his pen and his principles for hire that he had begun the year before in his dealings with La Luzerne. (After the Deane-Lee affair, the impecunious Paine quietly allowed himself to join the paid ranks of the very French government that he had recently so strenuously opposed.) It goes without saying that the developing pattern of this sellout to the privileged interests dealt a grievous blow to the radical cause in America, for which Paine had been the most eloquent and popular champion.

In October 1780, Congress again agreed to all of Virginia's conditions except the crucial voiding of speculative land claims. The following January, the Virginia Assembly made the Mason offer official by voting to cede the lands north of the Ohio—the "Old Northwest"—provided that the Mason conditions were met.

In the meantime, Maryland's intransigence was also being undermined by the threat of British invasion or raids from the Chesapeake. Appealing for naval protection, Maryland was urged by La Luzerne, who was anxious for the war effort, to ratify the Confederation. Bludgeoned by this virtual blackmail, Maryland finally ratified the Confederation on February 2, 1781, after the Maryland Senate was convinced that their claims would still be pressed in Congress. Meanwhile, Virginia clung to control of the lands despite repeated attempts in Congress to dislodge it. Congress finally celebrated the enactment of the Articles of Confederation on March 1, 1781.

The struggle over the western lands raged for three more years within

the Confederation. Finally, driven by greed for revenue to be derived from the virgin public domain, Congress tacitly agreed to ignore land-company claims, with only New Jersey and Maryland objecting. Virginia's northwest lands were finally ceded to the suzerainty and total ownership of the Congress on March 1, 1784.

Inflationary Finance and Price Controls

Crucial to an understanding of the political history of the Revolutionary War era is a comprehension of the way that the war effort was financed. By the end of 1775, Congress had already increased the nation's money supply by 50 percent in less than a year, and state paper issues had already begun in New England. The Congressional Continental bills followed what was to become a sequence all too familiar in the western world: runaway inflation. As paper money issues flooded the market, the dilution of the value of each dollar caused prices in terms of paper money to increase; since this included the prices of gold, silver, and foreign currencies, the value of the paper money declined in comparison to them. As usual, rather than acknowledge the inevitability of this sequence, the partisans of inflationary policies urged further accelerated paper issues to overcome the higher prices and searched for scapegoats to blame for the price rise and depreciation. The favorite scapegoats were merchants and speculators who persisted in doing the only thing they ever do on the market: they followed the push and pull of supply and demand. In another familiar attempt to deal with the problems of inflationary intervention, they outlawed the depreciation of paper, or the rise of prices. Such attempts to hold back the inevitable results of inflation are invariably about as successful as King Canute's command to the tides; but the vital difference is that these controls create a great deal of havoc in their wake. Maximum price controls simply create grave shortages and "black markets" of the commodity. The inevitable response of this escalation of controls is ever more vigorous penalties against the merchants and speculators; and, aside from the oppression suffered by merchants, the

only result is to make the shortage even more severe. And so inflation tends to pursue its course until the paper money becomes worthless and controls eventually wither away.

Continental paper was issued by Congress at an accelerating rate: in 1775, \$6 million; 1776, \$19 million; 1777, \$13 million; 1778, \$64 million; 1779, \$135 million. This was a total issue of over \$235 million in five years superimposed upon a pre-existing money supply of \$12 million.

The state governments were supposed to collect taxes to retire the Continental notes, thus imposing a second burden upon the public after the "tax" of inflation had done its work. But opposition by Americans to taxation was too great, and most states levied no taxes at all until 1780. Instead, the states also turned to the printing press for their finances. Apart from Georgia and Delaware, they offered no security for the notes except a vague pledge of future tax revenues, which was no security at all, and so their notes depreciated, each at a different rate. The states tried to maintain their notes at par coercively with severe legal-tender laws. The states also tried to finance themselves by issuing interest-paying treasury notes. The total of state issues during the Revolution was nearly \$210 million. Virginia led in this inflation by issuing \$128 million, followed by the Carolinas, each with an issue of about \$33 million. Adding federal certificates and loan office certificates, this made a total of about a fiftyfold expansion of America's money supply in a few short years.

Depreciation of the paper money proceeded inexorably along with the frenzied increase in its quantity. Thus in December 1776, the Continentals were worth \$1–\$1.25 in specie on the market; in October 1777, the value had fallen to 3 to 1; in December 1778, to 6.8 to 1; and in December 1779, to the negligible 42 to 1. By April 1781, the Continentals were virtually worthless, exchanging on the market at 168 paper "dollars" to one dollar in coin.

This process of inflation and the subsequent attempts of government to thwart its consequences led both to the hardships and shortages of supplies suffered by the Continental Army, particularly at Valley Forge, and to the severe mutinies in the latter part of the war. In the first place, the soldiers were paid in Continentals, and were bewildered to find the value of their pay rapidly dwindling. Farmers understandably refused to accept paper money, preferring hard cash that would not depreciate before they could use it themselves. When the Continental Army moved to confiscate and seize supplies from them, they were embittered and often fled the area. The Continental Army often found that food and other vital supplies became woefully scarce, since the brutal power of the army to plunder could not extend to farmers remote from the military camp.

The several states—especially in New England and in the middle states

—also tried to help matters by imposing maximum price controls. State and local governments presumed to know what market prices of the various commodities should be, and laid down price regulations for them. Wage rates, transportation rates, and prices of domestic and imported goods were fixed by local authorities. Refusing to accept paper, accepting them for less than par, charging higher prices than allowed, were made criminal acts, and high penalties were set: they included fines, public exposure, confiscation of goods, tarring and feathering, and banishment from the locality. Merchants were prohibited from speculating, and thereby from bringing the needed scarce goods to the public. Enforcement was imposed by zealots in local and nearby committees, in a despotic version of the revolutionary tradition of government by local committees.

Price controls made matters far worse for everyone, especially the hapless Continental Army, since farmers were thereby doubly penalized: they were forced to sell supplies to the army at prices far below the market and they had to accept increasingly worthless Continentals in payment. Hence, they understandably sold their wares elsewhere; in many cases, they went “on strike” against the whole crazy-quilt system by retiring from the market altogether and raising only enough food to feed themselves and their own families. Others reverted to simple barter. Master artisans, forced by price control to sell at a loss, threatened to shut up shop. And, as always happens under price control, hidden price increases were achieved by lowering the quality of goods, again to the detriment of the consumers.

Efforts to enforce price controls during the Revolution were frenzied and futile attempts to thwart the laws of economics. Shortages of goods in localities or states where enforcement was harsh led to sporadic attempts to fix and coordinate uniform price codes throughout the United States. The first comprehensive statewide code was imposed by Connecticut in October 1776. In December, delegates from the four New England states met at Providence and fixed a detailed schedule of wages and prices, and each state government then enacted it into law. At the request of Congress, the middle and upper southern states then met at York, Pennsylvania, to draft a similar code, but it was voted down by three of the six states. In early August 1777, a convention of New England states and New York called by Massachusetts at Springfield resigned themselves to scrapping the whole apparatus of control. Congress, however, again called for a series of regional conventions to impose uniform price control in late 1777. As in the previous year, the deep South did not respond, but delegates from all the New England and middle states met at New Haven in January 1778, and recommended a new code. Only Connecticut, New York, New Jersey, and Pennsylvania passed it into law. When rebuked for not joining the effort, Massachusetts, no longer enthusiastic about price

controls, wryly announced that the Continental Army had informed it that the code would make it impossible for the army to buy supplies for its troops. This led Congress, in June 1778, to advise repeal of all controls; the four states that had passed the code soon followed the congressional advice.

The collapse of the state programs, however, failed to teach the local despots and vigilantes of the Pennsylvania, New York and New England towns their lesson. They tried to enforce local controls, and again all their efforts came to grief. In 1779, the towns and counties of Massachusetts (but not the state) tried again to frame joint codes at a statewide convention. In Philadelphia, the price-fixing committee was told by the town's artillery company that it would, if necessary, support the committee's decrees with force of arms. In late October 1779, delegates from New York and New England, meeting at Hartford, approved another comprehensive price code. Congress reversed itself again to endorse and recommend the new code in January 1780. Obediently, the states from New England to Virginia called a meeting at Philadelphia in early 1780 to establish a general uniform code of regulated prices. But delegations from New York and Virginia failed to appear, and the meeting adjourned in April to wait for these states. The meeting never reconvened.* The absurdity of price controls was being made ever clearer by the enormous depreciation of paper money, and the states finally abandoned their attempts at enforcement. Only the southern states had never succumbed to the price control mania.

(It goes without saying that each successive price code reluctantly allowed for far higher prices than the preceding scheme, a trend that should have given pause to the most fanatical of price controllers.**)

Attempts at enforcement of these controls and regulations were numerous and zealous, especially by local officials and committees. One example is the case of Peter Messier, a tea merchant from New York. In May 1777, Messier's home was invaded by a party led by two soldiers who refused to pay the price that he charged for tea; instead, they seized as much tea as they wished, leaving as compensation whatever amount *they* considered "fair," and this was not enough. Later, several other groups visited him, presuming to search his house in the name of the "Committee for Detecting Conspiracies." They assaulted Messier and his servants and committed personal acts of vandalism.*

*See Eric Foner, *Tom Paine and Revolutionary America* (New York: Oxford University Press, 1976), pp. 178-79.

**The dismal saga of price controls during the Revolution may be found in Richard B. Morris, *Government and Labor in Early America* (New York: Columbia University Press, 1946), pp. 92-135. The author, by the way, is in sympathy with the price control program.

*Morris, *Government and Labor in Early America*, p. 125.

As usually happens during inflation and wage-price controls, wage rates lagged behind other prices and especially raw materials; this added an extra burden upon the wage-earners, the poorest strata of the population. Moreover, as ten entrepreneurial Philadelphia cordwainers pointed out in mid-July 1779, the price control over their product (shoes) not only impoverished them, but forced them to fire their journeymen employees. They added an impassioned plea for *laissez faire*:

It [the system of price controls] is absurd and contrary to every principle of trade. . . . It will destroy every spring of industry, and will make it the interest of every one to decline all business. . . . Trade should be free as air, uninterrupted as the tide, and though it will necessarily like this be sometimes high at one place and low at another, yet it will ever return of itself sufficiently near to a proper level if . . . injudicious attempts to regulate it, are not interposed. . . .

Contrary to a general impression, opinion for or against price controls was determined far more by the state of the person's economic understanding than by his social class, or, for that matter, by his generally conservative or radical views. It is simply not true that radicals favored price controls and conservatives opposed them; the pros and cons cut across both ideological as well as occupational lines. Thus, while the conservative James Wilson denounced price controls in Congress—"There are certain things, Sir, which absolute power cannot do"—the reactionary Samuel Chase defended controls on the ground of necessity. Pennsylvania provided the sharpest model of conservative-radical cleavage on this issue. Robert Morris joined Wilson in opposing controls, and the Pennsylvania radicals, in their hatred for these two, were driven to supporting controls. It must be noted, however, that the radical price control leaders included such wealthy and eminent merchants and lawyers as Gen. Daniel Roberdeau, William Bradford, and Owen Biddle. Furthermore, among the radical leaders, Tom Paine, seeing the ill effects of price controls, shifted sharply and permanently in late 1779 from supporting price controls to a strong opposition to them.*

Those radicals who favored price controls also justified this sharp deviation from their commitment to liberty and property rights by alleged wartime necessity, much as the Jacobins would do in France over a decade later. Thus, Gen. John Armstrong, a highly respected jurist and engineer and a leading Pennsylvania radical (though an early patron of James Wilson), was the most inveterate and zealous advocate of price controls in Congress. He pleaded that necessity required this exception to the *laissez faire* rule.

*Foner, *Tom Paine and Revolutionary America*. pp. 149-82.

In a sense, the proponents of price controls had no economic arguments. Their views were purely superficial and ad hoc: "Prices are going up, they shouldn't, ergo outlaw price rises," was the argument form. In contrast was the sophisticated economic understanding of the opposition. Leading the opponents of controls was the New Jersey libertarian theorist, the Reverend John Witherspoon. He accurately and prophetically warned Washington that the army's severe price and wage controls on the commodities and services it purchased would only aggravate the shortages and lead to starvation for the army. No man, declared Witherspoon, can be forced to supply goods in the market at prices he considered unreasonable; and his concept of what is reasonable is the price "proportioned to demand on the one side, and the plenty or scarcity of goods on the other." And this price that clears supply and demand can only be set on the market by the voluntary interactions of buyers and sellers, not by any outside politician or government official, it being impossible for any authority to know all the nuances and variations that enter into supply and demand and hence into price. Price control, in fact, could only hobble commerce and thereby make commodities scarce and more costly than ever. The prices of regulated goods, Witherspoon pointed out, had already risen faster than those of the nonregulated.

The moderate Dr. Benjamin Rush was an able student of political economy, and he pointed both to economic theory and to the lessons of economic history. Previous price control efforts had always failed because the true cause of the price rise was not, as the unthinking believed, the wickedness or Tory proclivities of the merchants, monopolizers, or speculators. The cause, he declared, "was the excessive quantity of our money." Only a decrease in the quantity of money, he pointed out, and a rise in the rate of interest, would end the disastrous price increases, and bring value back to the country's money. John Adams was also highly knowledgeable and forthright in monetary matters, and he too pointed to the historic failures of price controls. As early as 1777, he urged a radical and libertarian cure for the inflation: redeeming notes in gold and silver and ending paper money issue.

Also outstanding in opposing price controls was the Philadelphia merchant and economic essayist, Pelatiah Webster. Webster clearly discerned that the price increases were due to the quantities of paper money, and that they could not be stopped by the superficial scheme of price controls. He insisted that freedom of trade, or the "unrestrained liberty of the subject to hold or dispose of his property as he pleases," was essential to property at any time, whether in war or peace. On the free market, he pointed out, every seller will produce the greatest quantity of the best goods for the consumers, in order to maximize his income. The scarcest commodities will have the greatest demand and the highest prices, and this

will stimulate production in these fields as well as impel the most economic allocation of the scarce goods. Price controls are unworkable and impose great administrative burdens. He further pointed out that price controls could not alter the value of money, which is determined on the market by the relation between its quantity and the supply of goods offered in exchange. He concluded that "laws ought to conform to the natural course of things," and therefore that all fetters and restrictions on the market should be removed.

Even less than for price controls do the radical-conservative categories explain the differences of opinion on paper money, for support for paper was far more broadly based than for controls. The archconservative Gouverneur Morris originated the idea of using government paper to finance the Revolution; and, far from being ashamed of his creation, he trumpeted to the complaining Washington that paper money was a great engine that would mobilize the nation's resources for the war. He recognized that the paper would depreciate, but he looked forward to this as a tax; the obvious inequity of the tax's falling hardest on the lowest-paid and the most exploited group in the country, the soldiery, caused him only fleeting regret. These men would simply have to sacrifice their pay as well as their lives to the national effort. As might be expected from the old paper-money enthusiast, Benjamin Franklin hailed paper as a "wonderful machine" that would "pay itself off by depreciation," which he persuaded himself would fall equitably on the members of society. In 1779, another ultraconservative, John Jay, prepared an apologia for the depreciating Continental paper.

Characteristic was the specious argument offered by inflationists everywhere that "true" redemption of paper money rests not on gold or silver but on the industry, trade, and soil of the country. Even Pelatiah Webster defended the benefits of depreciated paper, although he opposed the state legal tender law. But despite the blithe acceptance by the more sophisticated inflationists of depreciation, the universal outcry over the depreciation and price rise and the frantic attempts to stop them are testimony enough that the vast bulk of the people could not assume so philosophical an attitude. The havoc wrought in the United States by the distortions, inequities, currency breakdowns, shortages, and depreciation caused by the central state, and local government policies of wild inflation and price control, was far greater than that imposed by the British troops during the war. This is to say nothing of the maleficent heritage of the public debt that remained for the future economic and political life of the country. On their own grounds, the cheap money and price control policies burdened rather than fostered the revolutionary effort.

By 1779, no amount of theorizing, however, could cloak the naked fact of runaway paper depreciation and currency breakdown. Clearly, some-

thing had to be done. The monetary engine was now seen to be a runaway source of ill rather than a panacea. Evidently, to preserve any value of the paper, the note issues had to be stopped. The simplest and least burdensome solution would have been to rescind the dubious retirement clause, which could only inflict tax burdens on society in order to retire the notes. This would have allowed the notes to find their own negligible level, while permitting the economy to return to gold and silver. But despite the fact that the states had scarcely paid in any of the requisitions with which to retire the paper notes, Congress failed to take this easy path; instead it searched desperately for a way to retire some of the notes. As early as April 1778, Congress contemplated forcing the conversion of \$20–45 million of paper into loan certificates, which were interest-paying certificates of indebtedness issued by Congress. Congress finally lacked the courage to do this.

On September 3, 1779, Congress brought itself, nearly unanimously, to set an absolute limit of \$200 million in paper issues outstanding, a sum that left a leeway of \$60 million that could still be issued. The spirit of this resolve was quickly violated as Congress hastened to issue the \$60 million, and Continentals continued to depreciate rapidly. Congress had absurdly believed that the mere stoppage, at this late date and after enormous issues, would reverse the depreciation and allow the government to retire all the notes at par. It was now disabused of this notion, but it still insisted on levying crippling taxes in order to retire the notes.

By a law of March 18, 1780, Congress decided to have the states tax \$15 million worth of notes per month and deliver them to Congress to retire the paper in thirteen months' time. As the retirement proceeded on its way, new bills totalling \$10 million were to be issued by the states; not only was this quantity to be considerably less than the old, but the states were to pay 5 percent interest in specie or European sterling bills to be totally redeemed in specie in six years. Of the new bills, 40 percent were to go to Congress as income and 60 percent to the states delivering taxes in the old bills. The old paper was sensibly revalued at 40 to 1, so that the Congressional debt was now worth \$5 million in specie instead of \$200 million—a sensible step of partial repudiation. Even at that, however, the paper was overvalued, since in March 1780 its market valuation was closer to 60 to 1.

For a while, Continental money stopped depreciating, and even improved in value. But the states found they could not levy the requisite taxes, and the burdensome plan collapsed. By the end of 1780, only \$2 million in old paper had been retired, and the market, seeing the retirement plan and the official pegging of value fail, lowered Continentals to 100 to 1 by January 1781, and 168 to 1 by April.

Meanwhile, the Congress, having stripped itself of its massive inflationary power, turned to another potential inflationary instrument, its loan certificates. Loan certificates, before March 1, 1778, had paid 6 percent interest in specie, and hence three \$7 million blocs of certificates were highly prized; but after March, the interest was paid in paper. After March 1778, these certificates were not genuine loans, but simply notes issued by the government in payment for supplies and accepted by the merchants because the government would not pay in anything else. Hence, the certificates became a form of currency, and they too depreciated. As early as the end of November 1779, they were selling at 24 to 1 in specie on the market. Of the post-March 1778 loan certificates, \$600 million were issued by the federal government during the war, of which \$530 million were issued after September 1779. Loan certificates were even issued to pay the interest on other loan certificates.

In late 1780, Congress tried to issue \$1 million in “specie certificates” which were supposed to be sold only for specie to raise some hard money for the government; but the new notes were simply issued, as were other notes, to pay for the federal deficits.

As the Continental currency collapsed, the Continental Army turned to simple impressment—seizures of goods—to supply itself, and thus scarcely endeared itself to the populace being confiscated. To “pay” for the impressments, the army quartermaster and commissary departments issued paper tickets, or “certificates,” which then flooded the country. State governments also turned increasingly to impressment of goods, and “paid” for the seizure with their own welter of certificates. The Yorktown campaign was financed almost solely by federal and state impressment certificates. Even apart from state issues, federal certificates issued during the war amounted to about \$200 million in themselves. The certificates, which didn’t even pay interest, rapidly depreciated to almost nothing.

Naturally, when the states tried to impose taxes in order to retire old Continental paper according to the scheme of March 1780, Americans balked. For if they had to pay taxes, surely they were entitled to pay in the virtually worthless state or federal certificates rather than in the less worthless Continentals? And as the people of the various states insisted on paying their taxes in certificates, the state governments found it impossible to retire the old Continentals. By June 1781, when all the Continentals were supposed to have been retired, only \$30 million had been taxed and delivered by the states, and only \$600,000 of new bills had been issued—and even these had already depreciated to 5 to 1 in specie. The scheme to prop up and retire Continental paper had proved an abject failure. Pennsylvania and New Jersey decided to fix the value of Continentals at their true market value, which soon collapsed completely. After April

1781, the Continentals began to pass out of circulation, and before long they could hardly be found. If they were used, they passed at less than 500 to 1 in specie dollars. It is no wonder that the popular motto arose: "Not worth a Continental." Despite the strenuous efforts of Congress and the states, they took their natural economic course and passed out of existence. Their rapid disappearance also relieved the public of a permanent legacy of crippling public debt.

When Congress agreed to accept certificates in payment of the requisitions, some of the worthless paper was drained off; the legal tender laws were also repealed. Congress never bothered to pay its promised interest on the small amount of new bills, and this helped depreciate them further. After August 1780, Congress issued new certificates payable in new bills and bearing interest until redeemed, and the old certificates were made redeemable in their negligible existing specie values.

Thus, Congress and the states jettisoned their worthless mass of currencies without burdening the present and future economy with a further debt. They were not bemused by the notion that these currencies had to be redeemed at par, or indeed had to be redeemed at all. As Ferguson explains:

Currency and certificates were the "common debt" of the Revolution, most of which at war's end had been sunk at its depreciated value. Public opinion did not view government contracts as sacred and tended to grade claims against the government according to their real validity. Paper money had the least status; the mode of its redemption was fixed by long usage. . . . In any case, the holder had no exemption from the general misfortune, and he was expected to abide by the ordinary process by which money was redeemed.*

Unfortunately, Congress did not display the same wisdom with the loan certificates. For these securities, or rather for the security holders, it showed far greater tenderness. In 1780, Congress decided to reduce the loan certificates to their specie value according to the depreciation of Continentals that had actually prevailed at the time of purchase. The actual scaling down, however, was much too limited; the loan certificates issued after March 1780, for example, were liquidated at a rate of 40 to 1 in specie when depreciation at the time approached 100 to 1. Furthermore, Congress continued to pay valuable bills of exchange for the interest on the pre-1778 loan certificates. Most important, it undertook to redeem the interest and principal on the loan certificates itself, in contrast to the paper currency which it had been glad to push off onto the states. The loan certificates were to become the substantial core and the beginnings of the

*E. James Ferguson, *The Power of the Purse: A History of American Public Finance, 1776-1790* (Chapel Hill, N.C.: University of North Carolina Press, 1961), p. 68.

permanent, peacetime federal public debt. Significantly, the bulk of this debt was held in the northern states; 90 percent of the original subscriptions were held in states north of Maryland, of which people in Massachusetts, Connecticut and Pennsylvania held two-thirds. Pennsylvania alone originally held one-third of the debt, and its share was expanded by later sales and transfers.

As for the states, they too insisted on retiring their worthless paper through tax receipts, but at least they agreed to redeem the paper at depreciated values, some at the greatly depreciated market value of the currency. In Virginia and Georgia, they were as low as 1,000 to 1 in specie. By the end of 1783, all the wartime state paper had been withdrawn from circulation.

Conservative Counter-Revolution: Massachusetts and Pennsylvania in 1780

Ironically, just as the great havoc wreaked by the flood of paper money was fading away, with the money collapsing and passing out of circulation, the conservatives, especially those of New York and Pennsylvania, were preparing to use the paper emergency to put through a veritable counter-revolution in the American economy and society. These men had long yearned for the reestablishment in America of the British system without Great Britain: a strong, centralized government dictating to the people of the various states, centralizing and controlling the vital money power through a central system of taxation. Now that the financial oligarchy had unto itself so much of the federal public debt, it was newly inspired to found a strong central government so that its greatly depreciated securities might be redeemed in full, and so that they could establish a new form of paper inflation which *they* could control. Instead of Continental paper, which, after its emission, travelled haphazardly into the economy, they would found a commercial bank in America. This would be a private bank to function as a public monopoly central bank and insure that public operations could be skillfully employed for the oligarchs' private profit. This counter-revolution was also carried through to save the war effort—at a time when the war was almost over.

The way was paved for the triumph of conservatism in the latter years of the war by changes in two pivotal states, Massachusetts and Pennsylvania. In Massachusetts, the people in a referendum had overwhelmingly rejected the conservative constitution of 1778. Bowing to the inevitable, the conservatives realized that they would have to accede to the longstanding radical demand for a constitutional convention for the state separate

from the existing legislature, the General Court. The towns, for example, had urged a separate convention by a majority greater than two-to-one. In June 1779, therefore, the General Court called such a convention for early September, with voting for delegates by universal manhood suffrage. In another concession to radical demands, the various articles of any proposed constitution would have to be ratified by two-thirds vote at a popular referendum.

The constitution of 1780 was drafted, at the convention, by three people: the extremely wealthy conservative James Bowdoin and the two Adams cousins, with John Adams as the major author. Like its aborted predecessor, the constitution was a highly conservative document, a reflection of the willingness of Sam Adams to tag along with John, despite the former's radical instincts. A high property-value qualification for voting (60 pounds) was imposed for all state elections. This was substantially higher than that called for by either the old colonial charter or the rejected constitution of 1778. Furthermore, the sole qualification for officeholders was now to be in real estate, so that money or other personal property would not suffice to be eligible for holding office. A strong independent executive and upper house were imposed; and the governor could veto a legislative act which could be overridden only by a two-thirds vote.

A bill of rights was appended to the new constitution, but it was rather weak. Part of this "declaration of rights" authorized the legislature to *require* the towns to tax the public for church support, thus giving a constitutional mandate for a religious (i.e., a Congregational) establishment in Massachusetts.

The military was to be under the complete control of the governor, who could also appoint all judges. The governor was to be fully as powerful as in the New York constitution where he had a right of veto. Furthermore, judicial tenure was to be on good behavior (for all practical purposes for life), thus setting up an unchecked and long-lasting judicial oligarchy.

The heaviest opposition to the constitution came over the declaration of rights and its weakness in insuring freedom of speech or habeas corpus. Many towns opposed the property qualifications, as well as the appointive power of the executive and the oligarchy of independent judges. Also bitterly fought in the press and in the towns was the clause on establishment of religion. The conservatives insisted that a government religion was crucial to the government's own existence, as well as to the existence of religion. As one clergyman fulminated, "Let the restraints of religion once be broken down, as they infallibly would be by leaving the subject of public worship to the humor of the multitude, and we might well defy all human wisdom and power to support and preserve order in government and state." One rightist attributed much of the opposition to religious establishment to "profane and licentious deists" and "avaricious

worldlings." Even so, many towns rebuffed the religious establishment clause, including Boston, Bristol, Granville, and eight towns in Berkshire as well as seven in Middlesex County.

The towns objecting to the high property qualifications were concentrated in the West. They cogently raised the all too familiar issue of taxation without representation. Entering the lists once more for battle against the restricted suffrage of the new Constitution was Joseph Hawley, the only leading Massachusetts radical at the outbreak of the Revolution to keep firmly to the left path. He pointed out that the suffrage requirement was in direct contradiction to the constitution's professed devotion to the equal natural rights of all. The provision violated the principle of taxation only with representation.

Other demands by opposition towns were for election of local officials, a tight rein on the governor, a unicameral legislature, and a loosening of the highly restrictive provisions for amendment of the constitution.

Even though such articles as the bill of rights really failed to receive the required two-thirds ratification by the people, the Massachusetts Convention fraudulently declared the entire constitution ratified. On June 16, 1780, the precedent of popular ratification was thus continued, but with a heavy admixture of chicanery. The first American constitution formed and ratified by democratic processes was therefore a highly conservative one—more conservative, indeed, than the one it replaced. In part this reflected and foreshadowed the growing conservative sentiment in America beginning in 1780; in part, too, it reflected the absence of radical leadership in Massachusetts to give a statewide lead and cohesion to the opposition towns. Sam Adams' complete adherence to the conservative line of John is a case in point. Of the eminent leaders in the state, only the ailing Hawley could give even partial leadership to the radical cause. Even the town of Pittsfield, the Reverend Thomas Allen, and the Berkshire Constitutionalists, weary of their long struggle, yielded now and meekly submitted to the new constitution, eliminating their own *raison d'être*.

But old Hawley did his best. As his biographer states, "Unlike most of his old colleagues, he had not turned away from political liberalism."* Bitterly critical of the religious establishment and the constitution's requirement that all legislators take a church oath, he was not allowed to take his seat in the Massachusetts senate because he refused to take the oath. Hawley decried this as an infringement on free elections and on the rights of the individual.

The constitution of 1780 disoriented what remained of the Massachu-

*E. Francis Brown, *Joseph Hawley: Colonial Radical* (New York: Columbia University Press, 1931), p. 177.

setts left, and conservatism swept into power in the state. The opportunistic conservative John Hancock, personally very popular in the state as a charismatic symbol of the Revolution, was easily elected governor. His efforts to drive Sam Adams from political power culminated in Adams' ouster from the Continental Congress in 1782.

Conservatives also took control of the pivotal state of Pennsylvania during 1780. The high-water mark of radical control of Pennsylvania had come on October 4, 1779, when radical hatred of the leading conservative "Republicans" erupted in mob action. For some time before, the radicals had been planning to seize the families of all defecting Tories, and to deport them to British-occupied New York City. But at a Philadelphia militia meeting on October 4, their goal spontaneously changed to ousting the major conservative leaders from Philadelphia. This mob of militia seized three Tories and advanced upon the house of the hated James Wilson. Wilson, Gen. Thomas Mifflin, and other Republican leaders gathered there with arms, and a battle ensued at the Wilson home. The mob broke in and several persons were killed at this "Battle of Fort Wilson," but Pennsylvania President Joseph Reed managed to arrive with a "silk-stocking" troop of light horse militia, and they carried the day.

As the war dragged on, the radical leadership of Pennsylvania was inevitably saddled with all the errors and excesses of the war effort, including the Battle of Fort Wilson, but more particularly the economic chaos caused by inflation and price controls. Even so, the upheaval of the October 1780 elections in Pennsylvania came as a sudden surprise. Philadelphia, in particular, turned out its radical constitutionalist representatives and swept the conservatives into power by a three-to-one vote. With the overthrow within Pennsylvania as their base, the conservatives were able to change drastically the ideological complexion of that state's delegation in Congress. The stage was set for Robert Morris' accession to almost supreme power in the United States.

In Virginia, the moderate administration of Gov. Thomas Jefferson was discredited by the British invasion and by the defeats in the war. These led to his replacement by the ultraconservative Thomas Nelson, who had opposed independence. Thus Virginia, too, was ripe for a swing to conservatism. The old Adams-Lee radical junto was no more, Richard Henry Lee having abandoned Congress during 1781. As for the remainder of the South, invaded, war-torn, and battered, it was hardly in any position to play a leading role in national politics. And in New York, George Clinton's centrist administration permitted the conservative oligarchs plenty of room for maneuver, while at the same time its existence frightened the conservatives sufficiently to turn to national centralization as a refuge against political insecurity in New York.

Robert Morris and the Conservative
Counter-Revolution in National Politics,
1780–1782

During 1780, before their stirring successes in Massachusetts and Pennsylvania, the conservatives dreamed of a national military dictatorship. General Philip Schuyler raised the call for dictatorial powers to be given to George Washington in the spring of 1780, and such leading archconservatives as James Duane, Alexander Hamilton (soon to be the son-in-law of Schuyler), and Washington himself were receptive to the idea. A convention at Boston in August, representing Massachusetts, Connecticut, and New Hampshire, issued highly conservative resolves, including the payment of Continentals by taxation, the creation of executive boards in Congress, and a virtual executive dictatorship. The Boston meeting inspired the New York legislature, in mid-October, to call for great internal power to be given to Washington. In November, the New England convention met again at Hartford, and urged great power to Congress, including taxation to pay interest on the public debt, and far greater power for Washington.

In response to this rapid drift rightward, the left tried to counterattack by proposing a radical decentralization of political rule. Throughout New York, for example, local precinct and county committees arose, and Albany County delegates called upon everyone to “recommence acting by committees.” But these vague phrases quickly proved abortive.

Meanwhile, young Alexander Hamilton, who was emerging as the brilliant premier theoretician of the nationalist forces, adumbrated the long-range conservative nationalist program in a letter to James Duane. Ultimately, wrote Hamilton, a new constitutional convention must be called, to endow a central government with “complete sovereignty” over

the political, economic, and military life of the several states. And above all, this political power must be based on the coercive economic power of various forms of taxation, which power Congress conspicuously did not have under the Articles. In the meantime, Congress must build up executive power by establishing powerful executive departments under single heads; and the army must be permanently riveted upon public life to serve as a disciplined coercive arm of the central government. One means would be to grant handsome lifetime pensions to its officers.

The sharp political swing rightward from 1780 to 1781, however, meant that the conservative oligarchs could achieve their aims without having to turn toward a military dictatorship. It was more satisfactory to them to work within the existing democratic forms to achieve at least their short-run goals. By early 1781, for example, John Mathews was content to abandon his proposed military dictatorship, and instead called for dictatorial powers in Congress.

In control of Congress in the 1781 session, the conservatives moved swiftly and efficiently to fasten their counter-revolutionary program upon the country. Their first step, spearheaded by James Duane of New York, was to build up a powerful executive by creating executive departments, each in the charge of one man. This meant not only the erection of quasi-independent departments manned by nonelected bureaucrats, but also the centering of power in one man rather than in the democratic revolutionary institution of boards or committees. On January 10, Congress decided to create a department of foreign affairs, to be run by a noncongressman secretary; and on February 7, a similar decision was made to create departments and individual secretaries of war, marine, and finance. Since the linchpin of the conservative nationalist program was financial, the finance appointment was the crucial one, and it went inevitably to the eminent leader of the conservative oligarchs, Robert Morris. So strong was his political position, indeed, that he was able to dictate to Congress the terms of his acceptance of the post: (1) express advance sanction by Congress of any private business dealings that he might have while in office, thus forestalling anything like another ruinous Silas Deane affair, and (2) the absolute right, not only to hire officials in his own department, but also to fire anyone in *any other* branch of the government. By accepting these outrageous conditions, after a month of balking and grumbling, the supine Congress was well on its way to putting Morris on the road to being dictator of the United States.

Assuming his post on May 14, Morris quickly gathered all manner of power unto himself. By August, instead of Congress' selecting a secretary of the marine, the entire department was placed directly under "the Financier"; the various naval and admiralty boards were abolished and their functions also placed, incongruously but ominously, under the Office

of Finance. Those departments that he was not able to seize personally, Morris was able to place under the firm control of one of his friends or associates. At the War Department, Morris, seconded by Washington, tried to push Schuyler to be its head, but Schuyler's problems with Congress over his military rank and career precluded such a bald choice. At the end of October, Gen. Benjamin Lincoln was finally selected as the compromise choice. But until Lincoln assumed his duties in January 1782, Morris ran the War Department through his old friend Richard Peters, secretary of the board of war; and afterwards, Morris was easily able to dominate the weak Lincoln, to allocate the vital war contracts, and even to set policy in handling prisoners of war.

The biggest fight over appointment was over the secretaryship of foreign affairs. Morris' man was Robert R. Livingston, the New York oligarch and Morris' business associate; but here the left, headed by Sam Adams, made its last stand, fighting fiercely for the eminent radical, Arthur Lee of Virginia. After liberal doses of bribery were administered to Congress by the French ambassador, the Chevalier de La Luzerne, who was fiercely pro-right and anti-Adams-Lee, New Jersey and Pennsylvania changed sides and even Virginia was induced to desert Lee. Livingston was chosen foreign secretary on August 8.

Under Livingston's friendly aegis, most diplomatic functions were swiftly added to Morris' power, including corresponding with American ministers abroad, handling the proceeds of all foreign loans, and the power to import or export goods on the account of the U.S. government at his own personal discretion.

To cement his power further over all branches of the federal government, every Monday night Morris called together the major executive officers of government, including Assistant Financier Gouverneur Morris, the secretaries for war and foreign affairs, the commander-in-chief, and the secretary of Congress, in an informal but effective cabinet meeting.

Thus, in a few short months, Congress had surrendered much of its power to single executives, and this power was swiftly fused into the hands of Robert Morris. Before the end of 1781, observers were noting that virtually every function of government had been centralized in the hands of Morris, and that the business of government was thereby being highly "simplified."

Virtually Morris' first act in power was a bill submitted to Congress only three days after taking office: his bold plan to create what was at one and the same time the first commercial bank in the history of the United States, as well as its first central bank. Inspired by the model of the Bank of England, created at the end of the seventeenth century, his object was to institutionalize a permanent interpenetration of public and private business, in a profound sense to make permanent the interpenetration that

Morris had personally achieved during the Revolutionary War. In both its temporary and permanent forms, this was an interpenetration through which public funds, whether obtained through taxation or creation of paper, could be channeled into the private pockets of Morris and his colleagues. Taxing would be necessary to redeem at par that body of depreciated public debt which Morris and his friends so extensively held. This new "Bank of North America" would prevent the nation from lapsing into an economy based on hard money, and would be the device for returning to inflation. This time, however, it would be a more discreet inflation, controlled and managed for the benefit of Morris and company. The razzle-dazzle of complexities and mysteries of high finance—as well as the supposed needs of the vanishing war effort—would serve as the cloak for the hard realities of subsidy to a specially privileged few. Once again, revolutionary America was being pushed far in the direction of the reactionary British reality against which the new nation had struggled to come into existence, and the Bank of North America would have a vital role in this counter-revolution.

The idea of bringing to the United States a private central bank like that of England had been long in the air on the American right, and Alexander Hamilton, Gouverneur Morris, Pelatiah Webster, and the learned Pennsylvania lawyer William Barton had all outlined plans for such a bank.

Morris' bill incorporated a Bank of North America, which was to receive monopoly privileges from the central government in several ways. First, it would be able to issue bank notes payable on demand, which would be receivable in all duties and taxes to all state and federal governments, at a par equivalent to specie. In addition, at least temporarily, no other banks would be permitted to operate in the country. Although the bank was to begin modestly with a private capitalization of \$400,000 in specie, Morris envisioned its notes expanding to become the sole medium of exchange in the country. In short, the bank would have the monopoly license to inflate: in return for its privileges, it would graciously lend its newly created money to the federal government. In short, instead of inflating by simply printing new money, the government would only be able to issue new money by borrowing it from the privately organized Bank of North America.

The public debt holders were not to be forgotten in Morris' scheme. Congress would insure the payment of interest and principal on its debt, and it could be deposited in the Bank of North America, thus becoming backing for the bank's notes. Thus, the oligarchs were to benefit from issuing the new notes, and from being able to deposit their public securities as supposed backing for the notes.

Morris' far-reaching plan passed very quickly at the end of May, and over only minimal and scattered opposition. Only Massachusetts, led by

James Lovell and old Gen. Artemas Ward, voted against the plan, although the moderate nationalist from Virginia, James Madison, balked slightly at the extreme concentration of power, which went far beyond the power conferred by the Articles. As a concession to the powers of the states, however, Congress allowed that the bank could not operate within those states which might forbid it, and that it could merely recommend, not prescribe, that the states receive its notes for all dues and taxes.

Founding owners and directors of the newly created Bank of North America included, apart from Morris himself, his old partner Thomas Willing as president of the bank, and such old friends and business associates as John Swanwick, William Bingham, Cadwalader Morris, Gouverneur Morris, George Clymer, and Jeremiah Wadsworth.

Despite this impressive roster and all of Morris' power and cajolery, the financier was not able to raise anything like the modest legal minimum of \$400,000 in specie capital. All that he could raise was \$70,000, even with the aid of further financial juggling and subsidies to Morris and to his Pennsylvania friends. However, Morris was nothing if not resourceful in dealing with the funds of other people. When \$462,000 in specie arrived as a loan to the United States government from France, he simply appropriated \$254,000 of it to subscribe to his own Bank of North America on behalf of the federal government. This unauthorized act of virtual embezzlement went almost completely uncriticized. For the remainder of his needed "capital," he illegally secured pledges, and Congress incorporated the bank. It began operations on January 7, 1782.

No sooner did it open its doors than Morris borrowed heavily from it for government operations. It could only lend at short term, but its loans to the government during the Morris administration totalled over \$1.2 million. Since the government had to keep repaying loans, however, total notes outstanding at any time did not exceed \$420,000. Morris personally benefited in several ways from these varied operations. The bulk of the specie capital of his bank was supplied by Morris out of government funds; then a multiple of these funds was borrowed back by Morris as government financier for the pecuniary benefit of Morris as banker; and then he channeled the money largely into war contracts for his friends and associates.

Despite Morris' power and eminence, the market in its wisdom knew that it was confronting notes inflated, however limited the extent, beyond specie backing. There was therefore a persistent tendency for the bank notes to depreciate, especially as they travelled from the bank's home base in Philadelphia. Indeed, it was forced to hire men at critical times to persuade redeemers of its notes not to ruin everything by insisting upon specie—a tacit admission of the bank's unsoundness and inherent bank-

ruptcy as an issuer of demand notes beyond the specie available to redeem them.

Apparently Morris was not opposed to government-issued paper when he, personally, was the issuer; in addition to Bank of North America paper, Financier Morris issued his own notes, "Morris notes," signed by Morris or his cashier in the Office of Finance as well as his private business partner, John Swanwick. The Morris notes were payable in specie on demand.

A second form of Morris notes, better termed "Morris warrants," was payable at specified dates—usually in thirty to sixty days. Both forms of notes were receivable in dues and taxes and payable both by the government and then by Morris himself. He hoped that these notes would also help constitute the national currency medium. But Morris notes were even more inclined to depreciate, especially in New England, where they quickly fell by about 15 percent. Morris tried desperately to avoid depreciation, even threatening to force federal officers to make up the difference themselves if they should pay more than specie prices for purchases in Morris notes.

The confidence in Morris notes was never great, especially in New England, and hence these notes rather than specie were paid in taxes, and tax collectors presented them to the Office of Finance for payment. Total Morris notes and Morris warrants issued during 1782 amounted to approximately \$400,000; but by late August, Morris, disheartened by the reception of the notes, decided to stop issuing them and to retire them as they were received in taxes. Even this contraction could not stop the depreciation of the notes in Massachusetts.

Robert Morris and the Public Debt

Even more important than Morris' monetary program was his fiscal policy—the key to which was taking the Revolutionary War public debt (loan certificates) which had been going the way of the Continentals, and making it a permanent burden upon the body politic. In Morris' phrase, he wanted to bind the national government to powerful “private interest,” to the “interests of monied men.”

In 1780, Congress had been forced by its financial difficulties to suspend payment of the interest on its debt payable on paper money: the loan certificates issued after March 1778. Morris frankly told Congress that the securing of adequate revenue to pay the interest and eventually the principal of the certificates would cause the highly depreciated market value of these securities to rise. This windfall at the taxpayers' expense would, according to Morris, cause wealth to flow “into those hands which could render it most productive.”

Public debt and centralized government were mutually reinforcing. On the one hand, public creditors lobbied for a strong central government in order to raise the value of their securities; on the other, now that the war was about over, only the alleged sanctity of the public debt remained as an argument for strong central government by those who wanted such a government for many reasons of power and pelf.

If the Revolutionary War debt was to be “funded” (its ultimate redemption secured), there were two ways to go about doing it. One way was compatible with the decentralized system of the United States: to apportion the Congressional debt among the states, and to allow the states to

pay their quotas by raising their own taxes. The other way meant an upheaval of the existing system and the eagerly sought completion of the nationalist counter-revolution: keeping the debt national and giving to the central government the crucial power to tax. The conservatives had been able, during the Morris regime, to stretch the powers of Congress far beyond what had been envisioned by the framers of the Articles; but one crucial power of coercive sovereignty the Congress still lacked—the power of taxation. As yet it could only requisition: ask the states to supply funds with no power to enforce its request. To Morris and his cohorts, of course, state apportionment of the public debt was anathema—even though the debt could still have been paid—for then the seizure of the tax power, vital to their cherished principles of national aggrandizement, would have been lost.

Because of the vital political nature of the public debt, both the states and Congress began a seemingly ludicrous race to “liquidate” (formally assume at a certain specie value) a mass of undigested paper certificates as their official debt. The more public debt the states or Congress could accrue, the stronger each of their claims to be the source of taxation—and repayment. For their part, the states had already been asked by Congress (in 1780, before the conservative takeover) to assume all back pay debts to the Continental soldiers. This most of them did, and they also assumed the burden of army pay for the years 1781 and 1782. In order to make these payments, they issued interest-bearing “military certificates,” which became the largest item of state debts after the Revolution.*

The states also assumed the great bulk of Congress’ Quartermaster and Commissary debt. In 1780 they began to accept in taxes the very highly depreciated Quartermaster and Commissary certificates, absorbing about \$130 million in the nominal value of the currency in taxes. In addition, many of the states began to convert the remainder of these certificates into state debts. Generally, the state assumption of federal certificates arose from pressure by the people, who demanded that the states accept both federal and state certificates in taxes. As a result, many of the states at the end of the war “liquidated” (formally adjusted to specie value) these federal certificates as part of the state debt and gave the public state securities in exchange. These securities were soon absorbed in state taxes.

*Robert Morris’ zeal to pay government debts stopped short of paying the exploited Continental soldiery, and his refusal to pay them any salaries in 1781–82 impelled the states to continue assuming the burden. Morris proved far more interested in paying his administrative personnel in order to build up a loyal bureaucracy. He also displayed great interest in repaying, in specie, large sums due to his former business partners, William Bingham and John Rorss. In this, he presumed to pick and choose among all the various accumulated claims on the central government.

Thus, they not only assumed but quickly absorbed these federal debts in taxes, and left little or none as a permanent burden on the citizens. This process went furthest in the southern states. As a result of the almost complete liquidation of federal Quartermaster and Commissary certificates by the southern states, very few southern citizens came to hold the remaining federal certificates. By the mid-1780s, there was over \$3.7 million outstanding in federal Quartermaster and Commissary debt, of which only 7 percent was held by citizens of the states from Maryland southward; in contrast, the greatest concentration of the debt was in New York, New Jersey, and Pennsylvania, which held 83 percent of the debt. The result of this process of state assumption was therefore to increase the concentration of federal debt held in the northern, as opposed to the southern, states.

Meanwhile, Morris pushed Congress to assume all possible remaining public debt. In February 1782, Congress resolved to "liquidate" all existing "unliquidated" federal debt. Commissioners were appointed to travel around and verify all the extant Quartermaster and Commissary notes, to revalue them at their market value in specie, and to exchange them for "final settlement certificates" amounting to over \$3.7 million. The following year, Morris insisted on assuming all federal army debts (which the liberals wanted the states to assume), and \$11 million of final settlement certificates were issued to the soldiery. (The southern states, however, had assumed the Continental army debts within their borders.) The effect of all this was to raise the federal public debt from \$11 million (the specie value of the assumed loan certificates) in 1780 to over \$27 million at the end of the war in 1783. Of this total, the citizens of the South held only 16 percent, even though their proportion of the white population was well over twice that amount.

Robert Morris won his point also. Under the Articles, the procedure agreed upon was that authorized federal and state expenses during the war would be lumped together as "common charges," of which each state would pay its proper share according to the value of its land. In the final settlement, the war expenses of the various states would be reimbursed by the other states. Thus, states which had made heavy expenditures for the common war effort would be reimbursed by those that had made less. But Morris firmly established the federal debt, now greatly expanded, as payable by Congress alone and not by the separate states.

In the various and often fuzzy and confused state claims for repayment by the other states for their war expenditures, Morris saw another opportunity to aggrandize central government power. During the invasion in the latter years of the war, the southern states were forced to incur large military expenditures without observing the formal niceties of Congress-

sional authorization. Now the northern states balked at repaying the southerners in interstate settlements for their wartime burdens. With apparent generosity to the hardpressed southern states, Morris proposed in 1783 that all claims be admitted without cavil, but that the payment be made to them in newly issued federal securities. Furthermore, states which had incurred debts during the course of the war (including the debts for assuming the Quartermaster and Commissary warrants) could then eliminate the debt by simply paying their creditors in federal securities. In short, he was graciously willing to multiply the federal public debt still further, and to assume all state debts and expenses incurred during the war. His plan was premature at the time, but as the states continued to wrangle over the narrow technicalities versus the equity of the southern wartime expenditures, the way remained open for the seeming *deus ex machina* of a federal assumption of all the war-born debts of the states.

Until his cherished dream of a federal taxing power to pay for the public debt and for other purposes could be achieved, Morris did the best he could with the extant requisition system to build up a powerful federal bureaucracy. The states had been accustomed to collecting requisitions for Congress in paper money, and, in fact, to disbursing the money themselves in Congress' name. Congress' loan officers were state appointees, and hence the states could control the expenditures as well as the revenues they raised. As soon as Morris assumed office, he persuaded Congress to insist that all revenues must be paid either in specie or in Morris notes; even Quartermaster and Commissary certificates were no longer to be acceptable for the huge requisitions of \$8 million in 1781 and \$9 million in 1782. Furthermore, he very shrewdly relegated the state-appointed loan officers to clerical duties and appointed his own new staff of tax receivers, who took charge of all monies paid by the states to Congress. Appointed by and beholden to Morris, the tax receivers were usually not residents of the states in which they served, and they were also delegated as Morris' agents to lobby in the state legislatures. They were designed as the eager core awaiting the hoped-for federal taxing system.

Of the appointments as tax receiver, the most important was in the spring of 1782, that of 27-year-old Alexander Hamilton, who had already made his mark as the outstanding theoretician of the American Right. During 1781 and the first half of 1782, he had published *The Continentalist* essays, which called for stronger central government, especially for Congressional powers of taxation. Of all the conservative leaders, Hamilton was one of the first to realize fully the sharp conflict between their program and the liberal policy of *laissez faire* that was growing in adherents at home and abroad. Putting himself squarely on the side of tradition as against "speculative" ideas, Hamilton wrote that

there are some who maintain that trade will regulate itself, and is not to be benefited by the encouragements, or restraints, of government. Such persons will imagine, that there is no need of a common directing power. This is one of those wild speculative paradoxes which have grown into credit among us, contrary to the uniform practice and sense of the most enlightened nations.

Hamilton explicitly invoked the tradition of the supreme French mercantilist Colbert; and he declared that "to preserve the balance of trade in favor of a nation ought to be a leading aim of its policy," even to forcibly preventing individuals from thwarting this aim.

It should be noted that Hamilton considered the adoption of the Articles of Confederation as "a happy event" unless the people would be lulled into believing that the powers they gave to Congress would be enough. After his appointment as tax receiver for New York, in July 1782 Hamilton and his father-in-law, Philip Schuyler, the leader of the New York Senate, drove through the legislature a call for a national constitutional convention to strengthen the Articles, a call probably drafted by Hamilton and approved by Governor Clinton. Meanwhile, Morris suggested to the public creditors that they form an organization in the states to demand the resumption of interest payments on loan office certificates and to call for the establishment of federal taxation. Inspired by Morris, the Philadelphia public creditors met and urged these demands, but Morris privately dressed them down for intemperate remarks and for their obviously sole concern for their own vested economic interest. Instead, he urged a broader alliance with the Quartermaster, Commissary, and other public creditors. Hamilton also organized meetings of public creditors to pressure the federal government, and to enlarge their demands to call for stronger central government overall. In September 1782, Hamilton and Schuyler organized a meeting of New York public creditors at Albany that petitioned the state legislature and Congress and planned a statewide convention at Poughkeepsie to be followed by a national public creditor convention at Philadelphia. Thus they aimed at organizing the nation's public creditors as a vital pressure group for the nationalist program.

But Morris and his confreres soon found that pressure by public creditors could be a two-edged sword. While the creditors preferred the nationalist solution of federal assumption and payment, they also preferred state redemption to no payment at all. The Pennsylvania meeting of public creditors therefore also petitioned the legislature to join the southern states in assuming "unliquidated" federal obligations. The legislature, in response, protested to Congress at the stoppage of interest payment and then warned that it would assume the interest payments due to its own citizens. The following year, 1783, Pennsylvania carried out its threat and gave to the public creditors resident in the state new "certificates of

interest" receivable in taxes. At the same time, Pennsylvania created new taxes payable half in the interest certificates and half in specie; thus, Pennsylvania created a new state paper money as well as assuming and funding part of the federal public debt. Worse yet for the nationalists, New Hampshire and New Jersey soon followed Pennsylvania's example.

The Drive for a Federal Tariff

Until a federal taxing system could be established by constitutional amendment, however, the conservatives had to confine themselves to establishing a federal taxing power within the Confederation framework. That power, after all, was the critical linchpin of the entire counter-revolutionary program. The haphazard requisition system, leaving power in the hands of the several states, could never supply the firm basis for centralized sovereignty.

In early 1781, they proposed a federal "impost," or import duty, of 5 percent on all goods imported into the U.S. The import revenue was to go to repay interest and principal on the federal debt contracted during the Revolution, both domestic and foreign. The impost power was to continue as long as there was a public debt, i.e., permanently. The states were asked to agree to this power as "vested" in Congress; implicit was to be the collection of this tax by federally appointed collectors. The impost would only yield about \$500,000 a year, no more than \$1,000,000 in peacetime, and this did not suffice to pay even the interest on the public debt that Morris had assumed before the end of the war. But Morris envisioned it as an entering wedge to be eagerly followed by taxes on polls, property, and commodities. Indeed, Morris considered this impost, proposed and adopted by Congress before his accession to office, the key to the success of his entire program. Referring to the impost, he declared, "The political existence of America depends on the accomplishment of this plan."

The impost concept had previously been proposed in Congress by Gouverneur Morris and by none other than Thomas Burke, who by 1780

had shifted drastically rightward; but the 1781 plan was basically steered through Congress by Robert R. Livingston and John Sullivan of New Hampshire. It passed Congress on February 3, 1781. Originally, some conservatives wanted to present the impost plan as a simple revenue measure which would become effective after ratification by the legislatures of nine states. But it was clear to the dullest that the creation of a federal taxing power was a fundamental amendment to the Articles and therefore had to be ratified by every state.

The Right, firmly in control of every state, was optimistic; and Morris threatened, bullied, and cajoled the state legislatures. He pulled out every stop. First, the tax was supposedly absolutely essential to obtain foreign loans, and therefore for winning the war. With the war over except for the formalities, his harangues reached the height of absurdity in early 1782 as he ranted that he “who opposes the grant of such revenue . . . labors to continue the war, and, of consequence, to shed more blood, to produce more devastation, and to extend and prolong the miseries of mankind.”* He was embarrassed by obtaining foreign loans without the tax, but he relieved his embarrassment simply by keeping information of the French loan from the states in order to keep up the pressure for the impost.

When the war argument had become nonsensical to everyone, he shifted his tune to bellow about the sacredness of the public debt and the payment of the creditors. He went so far as to refer to the existence of a large public debt as an “inestimable jewel.” So sacred did the cynical Morris regard the public debt contract that he deliberately stopped all interest payments on federal loan certificates in 1782 in order to prod the public creditors into the pressure campaign we have noted at the end of the last chapter. He exulted to Benjamin Franklin about his “well-grounded expectation that the claims of the public creditors would induce the states to adopt the impost.”

Cajolery, threats, pressure—including sending teams of congressmen to persuade state legislatures—joined to tight conservative control of the politics of the country, drove the impost through all the states except one by the autumn of 1782. Only Rhode Island remained, and it seemed inconceivable that this little state could refuse to ratify when all the others had agreed.** Furthermore, Rhode Island Congressman Gen. James M. Varnum was one of the leaders of the nationalists, and he and his fellow conservative, Congressman Daniel Mowry, had been in control of the politics of that state. Congress confidently demanded an immediate deci-

*See Ferguson, *The Power of the Purse*, p. 147.

**Georgia, too, had not yet agreed; but Georgia had been until recently occupied by the British. Under restored royal government, and unrepresented in Congress, it did not count.

sion from Rhode Island, and Morris declared that the impost "may be considered as being already granted."

The left was demoralized, fragmented, its leadership ousted or gone; there seemed to be no force in the entire country that could stop the Nationalist-conservative juggernaut. Even Tom Paine had already literally sold out radical principles by secretly hiring out his eloquent and renowned pen to conservative monied interests, first to the briber and master French intriguer La Luzerne, and then to the land speculators. Almost miraculously an unknown David to "slay" the Philistine Morris and his well-constructed Nationalist machine was somehow found: David Howell of Rhode Island.

A political upheaval in Rhode Island in the spring of 1782 had ousted General Varnum and his colleagues from the Continental Congress and replaced them by liberals allied with commercial interests in Providence. The war and British invasion had all but wrecked Newport and shifted its prosperity to Providence, now the center of Rhode Island trade; and for its prosperity this basically entrepôt commerce required freedom of trade unhobbled by a tariff. Furthermore, the merchants and liberals sensibly saw no reason why Rhode Island trade had to be penalized and crippled in order to pay public creditors from other states. David Howell, leader of the liberals, was a professor at Brown University and he was chosen for Congress along with his Providence colleagues, Dr. Jonathan Arnold and John Collins.*

Upon arriving at Philadelphia in early June, Howell began virtually a one-man campaign against the impost, and attacked other centralizing measures as well. Emboldened by his efforts, the Rhode Island legislature postponed considering the impost in early September, leading the Congress to make its peremptory demand for Rhode Island's acceptance. At that point, Howell and Arnold advised the state legislature to reject the impost which, if granted, would bring about a huge permanent federal machine, with ever larger expenditures and taxes. Bureaucrats would multiply—"a numerous train of officers concerned in the collection and after management of the revenue, the tribes of half-pay officers, pensioners and public creditors. . . ." This program, eloquently warned the two Rhode Island delegates, would indeed complete "the bond of Union," in the favorite phrase of Morris and his supporters. But "we will add the yoke of tyranny fixed on all the states, and the chains riveted." They reminded the Rhode Island legislature that the object of the seven years

*It is characteristic of a man such as Howell that he romantically signed his able anti-impost articles in the *Providence Gazette* in the spring of 1782, "A Farmer," and characteristic of all too many historians to be misled into thinking that the Rhode Island anti-tariff movement was basically "agrarian." See Jackson Turner Main, *The Antifederalists: Critics of the Constitution, 1781-1788* (Chapel Hill, N.C.: University of North Carolina Press, 1961), p. 88.

of revolution “has been to preserve the liberties of the country, and not to assume into our own hands the power of governing tyrannically.”

To counter the Howell forces, Morris and his group organized a heavy pressure barrage upon Rhode Island. Thus, with only the knowledge of Livingston, Washington, and Gouverneur Morris, Robert Morris secretly hired Tom Paine to write articles attacking Rhode Island opposition to the impost. The conservatives organized a hysterical campaign of vilification of Howell, which led to his censure by Congress (unanimously but for Rhode Island) for disclosing important facts about the progress of foreign loans that Congress had deliberately kept secret in order to build up pressure for an impost.

Just as Congress prepared to send a commission to Rhode Island to put pressure upon it, it received the stunning news at the end of December that Virginia had repealed its ratification of the impost. The critical plank in the nationalist program—the federal impost—had failed. The repeal by the Virginia legislature occurred so quickly and quietly that such conservative leaders as Edmund Randolph and Gov. Benjamin Harrison could not understand what had happened. But with the English invasion of Virginia over, an impost passed as an emergency war measure had now been considered more soberly. As in the case of the public creditors, Morris’ arguments had backfired, and Virginia balked at allowing federal tax officials levy a tax that could be retained permanently. The impost plan was dead, and the right-wing juggernaut had been stopped, almost at the last minute.

The Newburgh Conspiracy

The conservatives would not simply give up and abandon their dreams of centralized rule. If the peaceful road of passing an impost was blocked, then more drastic means would have to be found. Moreover, the right knew that it was pressed for time; soon the war would be over in all formality, and the cover of the war effort could no longer be used as a prop for centralizing government power. Thus, both Robert and Gouverneur Morris saw that peace would be fatal to their hopes of greatly expanding federal power. To the conservatives, it appeared to be now or never. One solution would have been a convention for a new constitution; and Hamilton and Schuyler had already pushed a recommendation for such a convention through the New York legislature in mid-1782. But there was scarcely time for such a drive.

The conservatives found their immediate opportunity in rising discontent among the officers of the Continental Army. Thanks to Washington's drive for a conventional, disciplined army, the radical principles of a democratic army were vitiated, and an officer caste, highly paid in relation to the common soldier, was established during the war. The officers longed for the standard European system of half-pay pensions for life after the war; and in the fall of 1780, the triumphant conservatives in Congress, eager to establish an officer caste and a permanent standing army as an integral part of their nationalist plans, promised half-pay for life to the officers. But the states, more influenced by the radical hostility to the military, began to balk, and Congress, too, showed no signs of carrying through its promise. Time was also getting short for the officer caste, for peace would bring demobilization, weakening the potential counter-revo-

lutionary pressure that the army might exert. It was now or never for the officers, and their aims now coincided with those of the right.

A delegation of three army officers, headed by Gen. Alexander McDougall, submitted the officers' petition to Congress in early January 1783. The officers demanded payment of arrears, and, above all, half-pay for life, actuarially commuted into a payment of six years' full salary. Otherwise, they warned, "fatal consequences" would follow. Congress, led by antimilitarist New England, rejected the proposal, but while in the capital the delegates conferred with the leaders of the Right: the Morrisises, James Wilson, and Alexander Hamilton, now a member of Congress. These persuaded the officers to unite with the public creditors to try to obtain a centralized government with the power to tax and then to pay their claims. Robert Morris warned the officers that their demands—so useful to his schemes—must be made solely upon the federal government and *not* be referred back to the states. Generals McDougall and Knox, and Gouverneur Morris, spread the word of the new unity of the vested interests in federal government claims, and discreet hints began to circulate of an army coup, should Congress not capitulate. Arthur Lee, acutely worried, wrote to his fellow antimilitarist Samuel Adams that "the terror of a mutinying army is played off with considerable efficacy." He reported also that unwelcome memories were being awakened of Cromwell's counter-revolutionary coup during the English Revolution, when he and his army crushed Parliament for attempting to disband the army without meeting its demands for pay. Gouverneur Morris exulted to John Jay, "The army has swords in their hands. You know enough of the history of mankind to know much more than I have said. . . ." Or, as he explicitly and revealingly added, "You and I, my friend, know by experience, that when a few men of sense and spirit get together, and declare that they are the authority, such few as are of a different opinion may easily be convinced of their mistake by that powerful argument the halter."

With opinion in Philadelphia sufficiently alerted, it now became necessary to whip up the army. On March 8, Col. Walter Stewart, holder of a large amount of public securities and acting as an agent for Morris and his cohorts, arrived at Newburgh, where the Continental Army was stationed. Soon it was widely rumored that the army would refuse to disband, and, standing with the public creditors and aided by Morris, it would revolt against Congress. Asked by his close friend William Duer how the troops would be fed if they launched a coup against Congress, and in a sense against their country, Morris smugly answered, "I will feed them."

On March 10, 1783, the conspirators decided to move. John Armstrong, Jr., an aide to General Gates and the young son of a fiery Pennsylvania radical, circulated his explosive "Newburgh Address." In the address, he attacked the idea of moderation, and called for an officers'

meeting for March 11, to draw up a last remonstrance to Congress, a remonstrance which would be followed by an army revolt. And so the conservative conspirators began to put their plans for a military coup into effect.

To whipsaw Congress, Robert Morris had submitted his resignation at the end of January. This sudden and surprising move hit the Congress with the force of a thunderclap. It was an arrogant attempt at blackmail, for his resignation was to take effect at the end of May, *unless* Congress had by then established a system for the permanent funding of the public debt. He also took care to publish his resignation threat in the press, thus maximizing the pressure upon Congress from all sides. What Morris was demanding was that it *order* the states to pay a full schedule of federal taxes (internal as well as impost) if they did not pay their full quota of the federal debt within a year; this was to be an open assumption and seizure of an overriding tax power under the Confederation. The evident unconstitutionality of such dictation was swept aside. As Ferguson points out, "This ultimatum to Congress makes no sense except in the light of its timing to coincide with the army conspiracy."*

The final and critical link in the plan for a rightist coup was to persuade George Washington, a man of enormous if undeserved prestige as the victor of the Revolutionary War, to join in the scheme. Only the mighty Washington could successfully take the reins of a military coup d'état. Alexander Hamilton's main role, then, was to convince the commander-in-chief. He urged Washington to intervene, in conjunction with General Knox, to "bring order, perhaps even good . . . out of confusion." But Washington, while highly in sympathy with the conservatives' goals, staunchly refused to take the path of a military coup, a course that would be "productive of civil commotions and end in blood."

Stepping in to avert the plot, Washington ordered postponement of the officers' meeting until March 15, when the report of the delegates to Congress could be considered. Armstrong countered quickly with his second Newburgh Address, frantically calling upon the officers to turn their arms against the government, to seize the vital moment, and to "carry your appeal from the justice to the fears of government." Otherwise, the officers would only "wade through the vile mire of dependency" and "go, starve, and be forgotten." He also maintained that Washington was secretly in favor of his plan. But at the officers' meeting, Washington made a highly emotional speech in behalf of legal means, and he attacked the author of the addresses as perhaps an agent of the British, plotting disruption. In this climate, the conspirators could only suppress their bitter disappointment and vote unanimously to offer their loyalty to Congress

*Ferguson, *The Power of the Purse*, p. 161.

and to condemn the Armstrong addresses. In return, Washington sent an urgent message to Congress pressing it to meet the officers' demands. Hamilton, seeing the way the wind was blowing, hastened to assure Washington that he had not meant to urge illegal means.

While the Newburgh Conspiracy had collapsed upon the rebuff of Washington, Congress was still under the twin blackmail threats of the army and the resignation of the Financier. Congress did agree to grant the army officers five years' full pay in commutation of the promised pension. The pay would be in federal securities, thus adding the officers' committed pensions to the rest of the growing body of the public debt.

But the major nationalist demand, as before, was for a federal taxing program. Morris, Hamilton, and Wilson demanded a comprehensive federal taxing system collected and administered by federal officers. James Madison also led in the struggle for federal taxation. But various taxes met strong opposition. Richard Henry Lee was an effective opponent, and the hard core of the radicals, headed by his brother Arthur and the Rhode Island delegation, opposed any federal tax whatsoever. Furthermore, the clear restrictions of the Articles of Confederation helped the left greatly; as Arthur Lee declared, "The Confederation is a stumbling block to those who wish to introduce new and . . . arbitrary systems."

Rather than try to drive through a federal tax program, however, Congress finally fell back in April 1783 on a second request for an impost. This time the impost bill was modified: the grant of power to Congress for an impost was to be for twenty-five years instead of permanently, and the collectors would be appointed by the several states. However, for twenty-five years the federal government would also have the power to raise \$1.5 million a year in estate taxes.

Hamilton held out to the last, supporting the bill, but voting against it as a protest against the surrender of conservative goals, while Jonathan Arnold and John Collins voted against the impost, partly because the collectors would still be federal officers. Arnold, in fact, charged that the impost was a device to undo the Revolution. Morris, who had put his political career on the line, was also scornful of the compromise; and while he consented to stay in office until the end of 1784, his power rapidly melted away. For the nub of the conservatives' program—the federal taxing power—had been rebuffed, and now Congress' ratification of the peace treaty on April 15, 1783, meant that the pressure for centralization had passed away. Washington, highly critical of the Morrises for using the army's demands as a weapon in their drive for centralized power, remained as a bulwark against any coup. Furthermore, Congress' attempt to keep the army in being until Britain's final ratification failed, as soldiers, eager to get home, protested, mutinied, and insulted their officers. Soon, the entire army disintegrated under this pressure from below except for

Washington's own command. Congress authorized him to grant a wholesale furlough at the end of May, and within a month the Continental Army, its work obviously done, had virtually dissolved, ignoring the demands of its officer corps that it remain. Some of the departing soldiers were lucky enough to receive three months' pay in Morris notes, while the noncommissioned officers were thwarted in their demands for five years' pay. Unlike the officer caste, the soldiers did not pressure for grandiose terminal pay nor did they threaten a military coup or call for a permanent standing army.

The Fall of Morris and the Emergence of the Order of the Cincinnati

Robert Morris' last year in office was a far cry from his all-powerful role as war dictator. Rueing the failure of the nationalists' dreams, Morris found his power confined to administrative tasks in his own department and to redeeming Morris notes. Many leading nationalists quit federal office in disgust: Hamilton retiring from Congress to practice law in New York, Madison declining to serve out his term, Livingston resigning as secretary of foreign affairs to resume his old post as chancellor of New York. Gouverneur Morris resigned as Robert Morris' assistant. The rotation in office imposed by the Articles' injunction against more than three consecutive years in Congress insured the retirement of many of the ultranationalists. Furthermore, after being subjected to harassment by hundreds of mutinous Pennsylvania troops in late spring 1783 demanding the pay due them, Congress left Philadelphia, the home of Morris and the public creditors' pressure, and retired first to Princeton and then to Annapolis. This change of atmosphere helped considerably to shift Congressional opinion from right to left, ending what David Howell called the "poisonous influence" of the Pennsylvania metropolis. And the young Massachusetts liberal Samuel Osgood claimed that the removal from Philadelphia eliminated "systems which would finally have ended in absolute aristocracy."

Morris' Bank of North America was also eased out of its status as a central bank during 1783, to revert to the status of a private bank chartered by the state of Pennsylvania. By mid-1782, the bank had \$400,000 of loans outstanding to the U.S. government, and the government in turn owned five-eighths of the its capital. In December Morris, uneasy at the

close link between government and bank as his political power threatened to dwindle, began in December to systematically disengage the two institutions. By July 1783, all of the federal government's stock in the Bank of North America had been sold to private hands, chiefly to Dutch capitalists; and by the end of 1783, all the U.S. government debt to the bank had been repaid. The danger of a central bank was ended for the time being, although the bank continued to discount short-term notes for the government.

Morris once more came under congressional fire for the mixing of the public and his private interests; and it was revealed that by quietly giving special redemption status in specie to his own Morris notes, he was aiding his business partners who were speculating in these tickets. The grasping and once dictatorial Morris had become, in a brief period, a personal liability to the centralizing cause, a liability that stimulated liberalism in such Massachusetts delegates as the wealthy merchant Stephen Higginson. Higginson's major objection to the impost was that it was part of the scheme, the "web," of Morris and his middle state cohorts; much of the southern opposition was also inspired by hostility to the financier.

The nationalist forces had succeeded in some of their plans: executive departments had been established within the Confederation (itself a centralizing of power beyond the original Continental Congress); the northwestern lands were being nationalized into the hands of Congress; and a great deal of the Revolutionary War debt had been assumed by the federal authority. But in the main tasks, the perpetuation of control by Morris and the financial oligarchy, the establishment of a permanent federal taxing power and of a permanent national standing army, the reactionaries had failed. With the end of the war, nationalist power ebbed strongly and Morris was thoroughly discredited. But the brilliant, wealthy coterie of Nationalist leaders was not about to abandon its plans; instead, these men bided their time and waited for a period of popular discontent which they might be able to channel toward the creation of central national power. For his part, Hamilton brooded once more on a scheme for a new constitutional convention to give overriding power to a central government with taxing power, a funding of the public debt, a central bank, and a permanent standing army.

The right wing did, however, not brood and bide its time without an organization, a nucleus in being for future mischief. This especially held true of the old officer corps, which could form a mass base for the intrigues of the oligarchs. Hence, on May 10, 1783, shortly before the disbanding of the Continental Army, many of the officer corps formed the Order of the Cincinnati. Here was an organization that could keep up at least a modicum of military pressure for nationalist ends. It was fitting that the idea for the society came from its secretary, General Knox, and that its first

presiding officer was the Prussian "Baron von" Steuben. George Washington was, of course, selected as president-general, to be succeeded at his death by Alexander Hamilton. Branch societies were formed in each of the thirteen states, and even in France among the returning volunteers of the American Revolutionary War.

The society's membership was to be strictly hereditary, confined to eldest sons of members of the order, though some like-minded honorary members could be elected. This flagrantly aristocratic provision, combined with its obviously reactionary and militaristic complexion, played a large role in stimulating the radical cause by inspiring public opposition against the Order of the Cincinnati.

All over the country, indeed, opposition swelled against the blatantly militaristic Cincinnati. Even John Adams was severely critical, as were Benjamin Franklin and John Jay. But the man who galvanized the opposition was Judge Aedanus Burke of the Supreme Court of South Carolina. Burke's pamphlet of 1783, *Considerations on the Society or Order of Cincinnati*, blasted the order in no uncertain terms as planted "in a fiery hot ambition, and thirst for power; and its branches will end in tyranny by a hereditary aristocracy." Although New England had been the center of antimilitarism and opposition to commutation pay for officers, it took Judge Burke's pamphlet to arouse New Englanders to the menace of the Cincinnati. Connecticut had been the main center of opposition for the commutation pay for the officers; pamphlets and town meetings had condemned the settlement, as had the lower house of the legislature. The financial burdens of the scheme upon the taxpayers, the privileges to the officer caste, and the encroachment of Congress on the powers of the states in pledging payment, were the reasons for Connecticut's opposition to the Cincinnati. Now, Judge Burke's pamphlet was reprinted twice in Hartford and commended by a statewide anti-commutation-pay convention at Middletown.

The Middletown convention, which met three times during the winter of 1783-84, was the highwater mark of opposition to commutation pay in Connecticut. It appointed a standing committee headed by the veteran officer Capt. Hugh Ledlie of Hartford, formerly one of the Sons of Liberty at Windham. The revolutionary implications of the convention method aroused hostility in the press, as well as condemnation by the vacillating liberal Sam Adams, who refused even to support the movement.

Rhode Island's hostility to commutation pay was also quickly widened by a Newport edition of Burke's pamphlet to hatred of the Cincinnati. In the spring of 1784, Rhode Island even toyed with the idea of disfranchising members of the Cincinnati, and barring them from public office. Burke's pamphlet, reprinted in the *Boston Independent Chronicle*, also stirred great opposition to the Cincinnati in Massachusetts. Liberal leaders Sam Adams, Samuel Osgood, and Elbridge Gerry, denounced the Cincinnati

as leading toward a "hereditary military nobility." In late March 1784, the Massachusetts legislature condemned the Order of the Cincinnati, as "tending, if unrestrained, to *imperium in imperio*, and consequently to confusion and the subversion of public liberty." Hereditary distinctions could lead to a hereditary nobility. The legislature therefore concluded that the Cincinnati was "unjustifiable, and . . . may be dangerous to the peace, liberty and safety" of Massachusetts and of the United States. A Cambridge town meeting instructed its representatives to outlaw the order, and in North Carolina, a bill was introduced to bar any Cincinnati member from taking a seat in either house of the legislature.

Perhaps the most remarkable influence of Burke's pamphlet was in France. There, Franklin gave the pamphlet to the liberal leader Comte Honoré de Mirabeau, who was moved to expand it into a pamphlet of his own, *Considérations sur l'ordre de Cincinnatus*, which was quickly translated into English and German. Mirabeau's pamphlet, evidently written with the particular conditions of his own country in mind, included a bitter attack on the monarchy and aristocracy under which, in contrast to republics, men were not equal before the law. The Cincinnati, in opposition to republican principles, would introduce into America an "eternal race of aristocrats, who may soon usurp those insulting titles by which the European nobility crush the simple citizens, their equals and brothers."

Buffeted by the upsurge of hostility, Washington asked Thomas Jefferson, now in Congress, his opinion of the order, and this moderate liberal's view proved decisive in determining Washington's course. Jefferson wrote strongly that the society's very foundation violated both the natural equality of man and the spirit of such equality before the law upon which American institutions were built. At the first general meeting of the Cincinnati in May 1784, in response to this opinion, Washington once again smashed at a particularly cherished goal of his friends on the far right. He forced the meeting to abolish all inherited and honorary memberships, and to confine the organization to dispensing charity. But this time his well-meaning intervention had quite a different impact, for the national meeting's changes were null and void unless ratified by each of the constituent state societies, and this they refused to do. Yet public opinion took the shadow for the substance, and it was widely believed that the sweeping changes demanded by Washington had in fact been made. Criticism died down, and the Order of the Cincinnati remained as a reactionary canker upon the body politic.

The Western Lands and the Ordinance of 1784

As the Revolutionary War drew to a close, the settlement of the sovereignty over the lands of the Northwest became even more important. At the beginning of 1781, Virginia had ceded the lands north of the Ohio River to the Continental Congress, and Maryland was then persuaded to drop her objections to the Articles of Confederation. But the problem of the western lands was far from over, for Virginia had agreed to cession only if Congress voided the claims of the land speculators influencing middle states opinion. The speculative Indiana, Illinois and Wabash land companies fought back, urging Congress to refuse cession on those terms. The companies' powerful lobbyists included James Wilson, Benjamin Franklin, Samuel Wharton (Congressman from Delaware), and Bernard Gratz.

With the Virginians battling the land speculators, a lengthy stalemate developed in Congress. The western domain, however, looked attractive to Congress as a means of raising revenue by selling parcels of land; furthermore, it had promised land bounties to veteran officers, and these could only be extracted from the western lands. Congressional favor began to shift toward cession and against the land companies. Finally, a committee of Congress which included such pro-Virginians as John Rutledge and James Madison reported in early June 1783, implicitly accepting Virginia demands. Maryland and New Jersey delegates objected strenuously but were overruled. Virginia's cession was then finally accepted in mid-September and Virginia reaffirmed the cession of Northwest claims on modified terms at the end of the year, but had to be content with a tacit rather than an explicit acceptance of her proviso. The following March 1,

Congress officially ratified the confirmed Virginia cession, with only New Jersey (and presumably Maryland, if she had been represented in the chamber at the time) voting nay. New Jersey, it may be noted, had come so thoroughly under the spell of the land companies that George Morgan, agent of the Indiana Company, had also been appointed agent of the state by the New Jersey legislature.

The terms of Virginia's cession had not only worked to void the claims of the land speculators; they also pledged Congress eventually to carve several states out of the new territory, each to have the same rights as other states to "sovereignty, freedom, and independence." This provision was embodied in the Ordinance of 1784, adopted in late April and drafted and steered through Congress by Jefferson. This ordinance laid down the pattern for future American land policy, especially in the carving out of separate states. While the public domain was unfortunately nationalized and the settlers subjected to the domination of Congress, Virginia's proviso made sure that the new territories would eventually govern themselves, and not remain as permanent subjects of the original eastern states. But that tutelage period of congressional domination was long enough to make the Civil War inevitable—for it meant that the governing of new areas would have to be decided by a Congress which might contain within it irreconcilable sectional or ideological conflicts. Nationalizing the public domain meant also the nationalizing—the maximizing—of conflicts over its political and social systems. The broad impact of the Ordinance of 1784, furthermore, was heightened by the fact that it applied not only to the Northwest lands but also to any other lands that might be ceded to Congress by the individual states, a reflection of Jefferson's anticipating Virginia's ceding of the Kentucky lands into a separate state.

The specific form of government for all new territories under the ordinance was to create temporary territorial self-governments, followed by the formation of permanent states. Both would be subject to the Articles of Confederation. They would not be allowed to secede from the United States, they would be responsible for their share of the public debt, and they would be republican in form. Jefferson tried manfully to include the requirement that the western territories create no hereditary titles, nor allow any slaves or indentured servants after 1800. Given national control over western territories, only *one* proviso would have been consistent with liberty and justice *and* would have avoided the Civil War from the very beginning: Jefferson's plan for the early outlawing of slavery. Only nipping the slave question in the bud might have prevented the vast conflict and bloodshed that was to come. But the slavery proviso—which significantly applied to Southwest as well as Northwest lands—lost by a single vote: only six states agreed out of thirteen. The four New England states, New York, and Pennsylvania voted for the prohibition; but the illness of

New Jersey's John Beatty deprived the proviso of the seven affirmative votes required. The opposition to the slavery proviso was led by Richard Dobbs Spaight of North Carolina and Jacob Read of South Carolina. All of this points up the growing sectional North-South division over slavery in the United States, a division that had begun years before around the controversy over the basis of apportioning tax requisitions under the Articles. In the 1784 vote, the northern states were lined up against slavery, and the southern—with the exception of a few liberals such as Jefferson and his young Virginian disciple James Monroe—in favor.*

*In the controversy concerning the impost proposed by Congress in April 1783, the northern states had won a victory by projecting a change in the basis of requisitioning under the Articles. Instead of the value of ground land and improvements, the basis was proposed to be population—but this time a concession was made to the South in that only three-fifths of the slaves would be counted. This again points up the growing sectional disputes based upon slavery.

Following the work of Max Farrand at the beginning of the twentieth century, historians have, until very recently, almost completely deprecated the important role of sectional and slavery conflicts during the 1780s. For an analysis of this error, see Staughton Lynd, "The Abolitionist Critique of the United States Constitution," in Martin Duberman, ed., *The Anti-Slavery Vanguard* (Princeton: Princeton University Press, 1965), pp. 209–239. On the Ordinance of 1784, see *ibid.*, pp. 221ff.

The Republic of Vermont

Still another territory of ambivalent status was Vermont. As late as 1778, Vermont, an independent republic, had not been recognized by the United States or accepted as a state. The acceptance of the western New Hampshire river towns as part of Vermont incurred the intense hostility of New Hampshire and of the United States, and the Westside Vermont towns succeeded in expelling their new acquisition, though at the price of threatened secession by the Eastside towns in union with their confreres on the other side of the Connecticut River. Soon the Eastside towns erupted against their tormentors in the West. In the spring of 1779, the bulk of the towns on both sides of the Connecticut River inconsistently called for the New Hampshire conquest of all Vermont. (Any stick with which to beat their Westside oppressors!) But the major war raged in the southeastern towns, which were generally loyal to New York. Vermont—not very consistently—was unwilling to allow its southeastern towns (Brattleboro, Guilford, and others) the self-determination that it claimed for itself. It began confiscating cows in lieu of compulsory military service in the southeast, and Yorker crowds led by Eleazer Patterson, colonel in the New York militia, began recapturing the cows and returning them to their original owners. The “Cow War” was on. Patterson kept pleading with Governor Clinton of New York to come to the aid of the suffering Yorkers against the Vermont invasion, but Clinton, beset by a large threat from the British, sent only promises and encouragement.

Unchecked by New York intervention, the petty despots of Vermont sent Ethan Allen and a hundred men to crush the lower Eastside rebellion. No resistance was offered to the formidable Allen, who arrested Patterson

and all the Yorker militia officers. The hapless militiamen were tried under a new law, ironically prohibiting the disregard of "constituted authority." But Vermont shrewdly let the insurgents off with light fines and granted amnesty to all political prisoners, thus taking all the steam from Congress' order, incited by New York, to release all such prisoners.

During the summer of 1779, the lower Eastsiders petitioned Congress for New York's claim and against Vermont's admission as a state, while New Hampshire voted to incorporate Vermont into her own territory. In the face of these conflicting threats, Vermont acted boldly, defying one and all, and subtly raised the spectre of a possible separate peace with Great Britain. This placed her existence in great peril, for all of her enemy states agreed to place the power of decision over her fate into the hands of Congress. Congress arranged to make the decision on February 1, 1780, meanwhile ominously ordering Vermont to cease granting land or selling confiscated Tory property. The death knell seemed at hand for the independent state of Vermont.

But under the leadership of the Allens, Vermont defied Congress. As a separate republic, she continued to make land sales and published several pamphlets by Ethan and Ira Allen for the Vermont cause. Under this shrewd defiance and the blows of the British invasion in the South, Congress sidestepped any real decision, and confined itself to strongly denouncing Vermont's behavior. Then, in mid-September, Vermont Governor Thomas Chittenden presented to Congress a flat and open threat. Since Congress had refused to admit Vermont as a state, Vermont would feel free to accept separate peace terms from Great Britain. Great Britain began secret negotiations with the little republic, and Vermont shrewdly used these to continue to stave off a British invasion from the north. A Congress frightened by this great show of determination postponed matters once more.

Meanwhile, all the disaffected men of the Eastside—the river towns as well as the Yorkers—decided to unite against their Vermont oppressors. Meeting at Charlestown, on the east bank of the Connecticut River, in mid-January 1781, delegates from 43 towns in eastern Vermont and western New Hampshire decided overwhelmingly to join the state of New Hampshire. But Ira Allen, wheeling and dealing, persuaded the convention to reverse itself and vote the Eastside towns back into Vermont. In return, he promised once again that Vermont would take the western New Hampshire towns back into the Vermont republic—an act that would mollify the towns on both sides of the Connecticut River.

Vermont's daring in the face of enemies on all sides was phenomenal. Dickering with Britain to stave off attack, defying New Hampshire by incorporating her western towns once again, it now moved to incorporate New York towns on her western boundary which were disgruntled by

New York's failure to protect them against Carleton and grateful for Vermont's truce with Great Britain which by design included them as well. The New York towns lying west of Vermont's border and east of the Hudson and Lake George responded to the invitation with enthusiasm, and met in mid-May at Cambridge to apply immediately for inclusion in Vermont. The June session of the Vermont legislature eagerly accepted the reentrance of the New York towns.

Vermont was now united internally, but at the expense of the implacable enmity of New Hampshire and New York. In response to Congress' demand to surrender the towns that had seceded from New Hampshire and New York, she sturdily informed it that she could not do so until admitted as a state. Yorktown finally eliminated the threat of British invasion, but again opened Vermont to attacks from its jealous neighbors. New York sent a troop of militia under Col. John van Rensselaer to try to recover the seceding New York areas, called "the West Union." But New York militiamen began to desert *en masse* and defect to the ranks of Vermont, and the New York force, worn down to 80 men, fled at the arrival of Ethan Allen and his 500 Vermonters. Trouble also sprang up in the "East Union," the former New Hampshire river towns, with Vermont and New Hampshire imprisoning each other's officials. An angry mob rescued a pro-Vermont official from a jail in Keene, and the furious New Hampshire legislature delivered an ultimatum to Vermont to get off the East Union territory in 40 days or suffer a full-scale invasion by 1,000 New Hampshire troops. And the southeast Yorkers sprang up once more to urge Vermont inclusion in the state of New York.

At this point, Vermont's bold determination and high resolve were dissolved as if by magic, by the advice of the now charismatic George Washington. In January 1782, Washington gravely advised Vermont to surrender the West and East Union towns to New York and New Hampshire respectively, after which Congress would surely admit Vermont promptly into the Union as the fourteenth state. Vermont rapidly divested itself of these acquisitions, even though this meant the betrayal of the hopes of the East and West Unioners. Perhaps symbolically, it did this on Washington's birthday. But with the territory removed from Vermont hands, Congress conveniently forgot its part of the bargain and tabled the whole issue, now that the British threat was over. New York and New Hampshire began to move in for the kill, and New York passed a law pardoning all citizens of Vermont and recognizing all grants of land made there by New Hampshire or by Vermont itself. The southeast towns redoubled their urgings to be incorporated into New York and the East-side towns did the same for New Hampshire.

At this point, rebellion and conflict broke out in the southeast, launched by a Yorker movement centering in Guilford. In this unstable situation,

Vermont felt it could play New Hampshire and New York against each other, since in any partition of Vermont the entire Eastside was scheduled to go to New Hampshire and not to New York. Neither state could then intervene in the fray. The second Cow War began once more over attempted conscription into Vermont's militia, leading to refusal, consequent confiscation and sale of the refusers' cows by Vermont. A Yorker mob reconquered Joel Bigelow's cow and the fracas had begun again. Now New York state finally and officially organized Cumberland County in the southeast, appointing sheriffs, judges, and militia officers.

In the face of a threatened Vermont invasion, the southeasterners were scarcely deterred by Vermont's passivity and mild treatment of the affair. Yorker prisoners were forcibly released, and Yorkers refused to pay taxes to the republic of Vermont. Finally, in mid-September, Vermont sent Ethan and Ira Allen and over 200 men into Cumberland, and they promptly rounded up the leading Yorker officials. The blustering threats of the highly feared Ethan Allen to lay waste to Guilford quelled that town's attempt at resistance. A Vermont court decreed permanent banishment from the republic for the five leading Yorker rebels and confiscation of their property. Many other Yorker officials were fined or banished, and Ethan Allen accurately taunted the Yorkers: "You have called on your god, Clinton, till you are tired. Call now on your god, Congress, and they will answer you as Clinton has done." But while no rescue came, the banished leaders were soon readmitted and resumed their rebellious activities, and were once more arrested and pardoned, and took up rebellion again, and so on in a seemingly endless cycle.

While Washington tried to soften Congress' newly aroused hostility to Vermont, Governor Clinton continued in implacable opposition. But as the war with Britain came to an end, both Clinton and Congress were finally getting increasingly weary of the whole Vermont problem—precisely what the Vermonters had been counting on. Mounting rebellion in the southeast finally led to a second invasion by 300 Vermont militia under Col. Stephen Bradley in mid-January 1784, and this invasion again quelled the southeast revolt. With the death of the leader of the rebellion, Charles Phelps of Marlboro, the seemingly interminable Yorker revolt came to an end. Vermont still stood as an independent republic, albeit shorn of its expanded East and West Union towns, its eventual admission to the Confederation apparently inevitable.

PART IX

The Impact of the
Revolution

Oppressing the Tories

A myth has been promulgated by neoconservative historians that the American Revolution was a uniquely mild revolution, so mild as to be scarcely a revolution at all. In an America that now frowns strongly on the concept of revolution, this sort of mythologizing should not come as a surprise. The revolutionaries' treatment of its Tory minority, however, scarcely fits this myth. Civil war raged throughout the United States, and Tory terror bands abounded in North and South. An estimated 50,000 American Tories joined the British army during the course of the Revolution, and during the 1780–81 campaign 10,000 Loyalists were under arms. In this kind of ferocious civil conflict, in which the life of the Revolution itself was at stake, it is unreasonable to expect consistently libertarian methods of handling the Tories from even the most liberal supporters of the Revolution. The nineteenth century Canadian historian Egerton Ryerson was quite right in pointing out the inconsistency of the revolutionaries: "The Declaration of Independence had been made in the name of and for the professed purposes of liberty; but the very first acts under it were to deprive a large portion of the colonists not only of liberty of action, but liberty of thought and opinion. . . ."*

Everywhere Tories were deprived of civil rights and freedom of speech and press; they were especially taxed, and were arrested for the duration of the war on mere suspicion and without benefit of habeas corpus. They were herded together and shipped into prison camps far from the British lines, in which they were sometimes forced to work for the Revolution;

*Cited in North Callahan, *Royal Raiders* (Indianapolis: Bobbs Merrill, 1963), p. 8.

they were tarred and feathered, banished, and their lands and properties were confiscated by the State. Sometimes they were even executed. They were forced to take test oaths, they were disfranchised and barred from public office, and they were generally forbidden to practice as professional men. In many cases family punishment was imposed, and relatives of absent Tories were jailed for the behavior of their errant kinsmen and held as hostages. Local vigilante action kept watch on suspected Tories and imposed harsh penalties on them.

Banishment from the country—with little money allowed to be taken out—was a favorite punishment for Tories and suspected Tories. Thus, Massachusetts began its systematic policy of banishment in 1777, by providing for majorities at town meetings to name Tories and then to bring them to trial. Convicted Tories were to be deported at their own expense. The following year, Massachusetts imposed a test oath for which refusal to sign would bring banishment. Later that year, Massachusetts went further to bring into practice the hated and tyrannical act of attainder—a legislative declaration of guilt without benefit of trial. Two hundred and sixty suspected Tories were attainted, imprisoned, and banished.

How far even the liberals were inclined to go may be illustrated by Thomas Jefferson's action in the case of Josiah Phillips. Phillips had organized a Tory terror gang in Princess Anne County, Virginia. As a member of the Virginia Assembly, Jefferson pushed through a bill of attainder and outlawry declaring Phillips guilty of murder, plunder, and high treason and proclaiming Phillips and all of his unnamed associates to be outlaws whom any man could kill with impunity. Thus, Jefferson was willing to use a hated and despotic outlawry procedure rarely used in the American colonies and dying out even then in comparatively statist England.*

The Continental Congress, in October 1775, urged the imprisonment of anyone who might, in the opinion of the provincial committees of safety, "endanger the safety of the colony or the liberties of America"; and two years later it recommended confiscation of the property of all Tories, who had supposedly forfeited their "right of protection." But Congress could merely recommend; only the states and localities could take action against the Tories. One such state program of action against its Tories has been subjected to detailed study—that of New Jersey.**

As in the other states, enforcement was in the hands of the attorney general, in this case, William Patterson. The chief centers of legal prosecution were the thirteen county courts in New Jersey, composed of local

*See Leonard W. Levy, *Jefferson and Civil Liberties: The Darker Side* (Cambridge, Mass.: Harvard University Press, 1963), pp. 33ff. Levy's work is indispensable for revision of the common over-inflation of the extent of Jefferson's libertarianism.

**Richard C. Haskett, "Prosecuting the Revolution," *American Historical Review* (April 1954), pp. 578-87.

justices of the peace sitting together. But the traditional legal machinery proved too cumbersome a weapon, and in early 1777, New Jersey set up a council of safety, chosen by the legislature and including the attorney general, armed with the power to jail any man even suspected of Toryism.

The council of safety traveled all over the state, whipping up the zeal of local officials, and often taking the administration of anti-Tory law into its own hands: hearing witnesses, ordering the seizure of suspects, and the imprisonment of alleged Tories. In one day in July 1777, the New Jersey Council of Safety arrested no fewer than 48 suspected Tories! Juridical safeguards were disregarded, and Patterson could, for example, indict as well as prosecute. In practice, in fact, Attorney General Patterson did most of the council's work.

Anyone making "seditious" remarks, however slight, or failing to turn out for militia duty, was apt to be suspected and denounced as a Tory and also to be forced to take a test oath swearing loyalty to the Revolution. The peak of Tory prosecution in New Jersey took place during 1777 and 1778, when almost all the cases were prosecuted. By October 1778, New Jersey was presumably cleansed of Tories, and the Council of Safety was dissolved.

As we have remarked, the Revolution did not spare its Tories the ultimate penalty, execution. Two were hanged in Philadelphia in 1778, and several were executed in North Carolina. Many active Tories were executed by state militia and guerrilla bands, and many armed Tory prisoners were executed in reprisal for British killings of rebels.

The eminent historian Robert R. Palmer has offered a critically important comparison of the degree of radicalism in the American and French revolutions: the number of émigrés who felt compelled to flee the country during the revolution. The French Revolution created 129,000 exiles out of a total population of about 25 million: an émigré ratio of 5 per 1,000. The American Tory émigrés amounted to what Palmer very conservatively sets at 60,000 in a population of about 2.5 million: 24 émigrés per 1,000. But at least half a million of the American population were slaves, who could hardly be considered to be in the same category as other inhabitants of colonies. A more likely estimate for Tory emigration in the Revolution is 100,000. At this corrected rate, 50 Americans out of every 1,000 were émigrés during the Revolution, a rate fully tenfold the exile rate in the supposedly more radical French Revolution. Furthermore, as Palmer reminds us:

An important nucleus of conservatism was permanently lost to the United States. The French émigrés returned to France. The émigrés from the American Revolution did not return; they peopled the Canadian wilderness [*e.g.*, New Brunswick]; only individuals, without political influence, drifted back

to the United States. Anyone who knows the significance for France of the return of the émigrés will ponder the importance, for the United States, of this fact which is so easily overlooked, because negative and invisible except in a comparative view. Americans have really forgotten the loyalists. . . . The sense in which there was no conflict in the American Revolution is the sense in which the loyalists are forgotten. The “American consensus” rests in some degree on the elimination from the national consciousness, as well as from the country, of a once important and relatively numerous element of dissent.*

As the Revolution wore on and finances became tight, confiscation of Tory land became an increasingly tempting method of financing the war—certainly a method of reparation more just than inflation. Confiscation began as a method employed by scattered private individuals, operating on what might be called “the homestead principle.” Individuals, nearby rebel soldiers, and local committees expropriated the treasures, livestock, timber, furniture, and clothing of Tory families. Private appropriation of the property of Tories was not prosecuted as theft by the authorities.

At this point, the states stepped in, deciding to stake out booty from Tories for their own privileged use. Tom Paine, in *Common Sense*, had advanced the idea of seizing Tory property to finance the Revolution, and the Congressional resolution of late 1777 spurred the states to follow this advice. Generally, the states first sequestered Tory-owned lands to themselves, and then later sold the lands at auction, the state pocketing the proceeds. In this way, Tory lands were redistributed throughout the country.

Every state carried out the confiscation of Tory property, although the specific procedures often varied from state to state. Generally, the states seized Tory property by attainder, with no provision for jury trial. In some cases, the regular executive officers conducted operations; in others, special commissions were appointed. Auction sales were often made on credit, to ease the burden on purchasers, and sometimes payment could be made in state treasurers’ certificates issued to public creditors in the state. No Tories were permitted to buy the estates, and this effectively prohibited collusive purchases by Tory friends of the expropriated.

It is instructive to note the moral justification that a largely liberal society gave for the blatantly uncompensated confiscation of the property of the American Tories. The Virginia House of Delegates declared, at the end of 1782, that the confiscation laws “were strongly dictated by that principle of common justice which demands that if virtuous citizens, in defense of their natural rights, risk their life, liberty and property on their success, vicious citizens, who side with tyranny and oppression, or cloak

*Robert R. Palmer, *The Age of the Democratic Revolution. I: The Challenge* (Princeton: Princeton University Press, 1959), pp. 189–90.

themselves under the mask of neutrality, should at least hazard their property and not enjoy the labors and dangers of those whose destruction they wished.”*

The result of this redistribution was a significantly more democratic and less concentrated ownership of land in the country, for many large Tory estates were broken up by the confiscation process. Indeed, state policy was to divide up the large estates and sell them in small tracts, to prevent “dangerous monopolies of land.” In North Carolina, there was considerable redistribution of land and at low prices that small farmers could afford; thus, the vast holdings of the noted Tory, Henry McCulloh, were confiscated by the state and sold to eighty separate families. Such large estates as those of Tories John Wentworth in New Hampshire, Sir William Pepperrell in Maine, and Sir James Wright in Georgia were confiscated and redistributed. And various proprietary lands—in Maryland, the Penn family’s in Pennsylvania, Lord Fairfax’s tract in the Northern Neck of Virginia, and Lord Granville’s in North Carolina—were swept away. Their quitrents abolished, they were confiscated by the state and resold to separate private owners. In this way, the Revolution swept away these important remnants of feudalism.**

Lord Granville’s estate, it should be remembered, constituted one-third of North Carolina, while Fairfax’s Northern Neck domain totalled over five million acres. Interestingly enough, Lord Fairfax had settled down in permanent residence in Virginia in the 1740s, and he was never a Tory. Virginia therefore graciously waited until his death to confiscate his estate—a sign that elimination of this feudal land monopoly was a concern of Virginians separate from the urge to punish Tories. Furthermore, land monopoly was significantly attacked by the confiscation, division, and sale of ungranted royal estates and timberlands in New Hampshire, New York, and the southern states.

Whenever the State has privileges to dispense, they will tend to be granted to the State officials themselves or their favorites, or to be sold to the highest bidder. Hence, inevitably, corruption and special privilege entered into the lucrative disposal of the confiscated lands. Haskett shows this process of privilege as it developed in New Jersey. Confiscations and dispositions were made by appointed county commissioners. These commissioners were therefore suppliers of special privileges. Accordingly, they generally failed to advertise the land sales, doctored the auditing of assets, and rigged the bidding so as to sell the land parcels to favored

**On the other hand, Penn’s private manors in Pennsylvania and their quitrents, totalling over 500,000 acres, were reconfirmed by the Pennsylvania legislature rather than confiscated!

buyers at bargain prices. Moreover, the county commissioners often kept the sale money, invested it for their personal accounts, and only paid the money into the government later, in highly depreciated currency. Indeed, one shrewd commissioner of Somerset County, Frederick Frelinghuysen, ended up as owner of two of the seven confiscated estates he helped to sell. By 1781, New Jersey had only received \$28,000 from its sales of land.

Neither Attorney General Patterson nor the assembly ever acted to stop this wholesale corruption. Not surprisingly, since Patterson was an old friend of Frelinghuysen; indeed, both Patterson and his brother-in-law became owners of confiscated Somerset estates. In fact, Frelinghuysen, Patterson, and Patterson's family wound up as owners of over half the confiscated Tory estates in Somerset County.

Yet despite the widespread corruption, land distribution in New Jersey was still significantly broadened and made more democratic as a result of the Revolution. Over 500 Tory estates in the state were confiscated, parcelled out, and sold in New Jersey.

Tory Lands in New York

These conflicting tendencies are highly important in assessing the results of large-scale land confiscation in New York from which the state received \$3 million in proceeds. New York's land system was uniquely shot through with feudalistic land monopoly; huge manorial estates, derived from the land grants of the early eighteenth century, were still largely intact, and contained an oppressed and restive tenant "peasantry." Confiscation of large Tory quasi-feudal estates was therefore particularly significant in the much-needed democratizing of land ownership in New York. A particularly vital question for justice in land was the extent to which land ownership reverted to the tenants in this process, or instead went to land speculators privileged by the State.

New York feudalism was greatly weakened by the very fact of the breakup of the large Tory estates. This was the inevitable result of the confiscation and breakup of the huge estates of the Johnsons, Philipsburgh Manor of Philipse in Westchester, the Roger Morris and Beverly Robinson estates in Dutchess County (now Putnam), and the DeLancey estate in New York City; these last four accounted for nearly 90 percent of the tenantry of all Tory land holdings in New York. Thus, James DeLancey's estate in southern New York was broken up and sold to 275 different persons, and Roger Morris' to 250 persons.

New York's land confiscation policy came in two stages. The first policy was sequestration. In the spring of 1777, commissioners of sequestration were appointed for each county, and were authorized to seize all personal property of Tories in the county and to sell it immediately at public auction. Tory lands, on the other hand, were to be sequestered by the state

and held in trust, the state meanwhile taking over the role of landlord, exacting rents from the tenantry. Some leases were granted by private application rather than by public auction, and rebel refugees from southern New York were to be favored in granting leases, so favoritism was rife; numerous tenants were evicted to make room for favored émigrés from southern New York. The tenantry soon found to their dismay that government feudal landlords were just as oppressive as private landlords—just as tyrannical, just as cruel to squatters, and just as prone to compel eviction for nonpayment of rent.

Ferment by the disgruntled tenantry quickly took the form of pressing for outright confiscation and sale of the Tory estates. The greatest pressure occurred in south Dutchess County; on the one hand, this area was the frontier nearest British control, and filled with rebel refugees from Westchester. On the other hand, the landlords in the area were mainly Tory, and hence their tenants had a strong economic incentive to become ardent Whigs and press for outright confiscation and breakup of the estates. In October 1778, 448 citizens of Dutchess County petitioned the assembly for a confiscation bill. It is not surprising that the right wing was bitterly hostile to confiscation, and Livingston, Gouverneur Morris, and the Jays denounced the plan as a great “compound of folly, avarice and injustice”; the moderate centrist Governor Clinton strongly opposed the confiscation laws. The leader in the assembly for confiscation was the old antilandlord champion of the tenant struggles of the 1760s, the independent freeholder, Dirck Brinckerhoff of Dutchess County. The veteran John Morin Scott was also a leading advocate of confiscation.

The great confiscation laws of 1779–80, in fact, were driven through solely by mass pressure from below, pressure against both Clinton and the ultraright. Thus, a confiscation bill passed in February 1779, but was vetoed by the council of revision as unjust and an attainder. The veto precipitated a great crisis in New York politics. Radical victories swept the spring elections in 1779, elections which took place, in Orange and Ulster Counties, with proradical militia batteries ominously maneuvering near the polling booths. In the fall session of the 1779 Assembly, two-thirds of the delegates were new—and radical. It was this session that drove through the radical legislation of New York during the Revolution.

As the fall session opened in October, the New York legislature passed a tax law authorizing discriminatory assessments against suspected Tories. More important, on October 22 (the same month as the peak of Pennsylvania radical strength in the attack on “Fort Wilson”), it passed a law attainting for treason a long list of Tories, and confiscating their estates. Fifty-nine Tories were thus attainted for treason and expropriated. Once the lands were confiscated, the crucial question became: would these lands be divided and sold into private hands? If so, then land monopoly would

be dealt a tremendous blow, the lands would be divided and parcelled out, and irretrievably democratized. But if not, if the lands were rather kept by the state, then the land monopoly system would be retained, the tenants kept in their place, and perhaps the lands would even be returned to the large Tory owners. As a result, the conservatives in the legislature, led by the wily lawyer and longtime representative of the feudal landlords, Egbert Benson of Dutchess County, devoted themselves to trying to block the division and sale of the Tory lands.

Staughton Lynd has pointed out that this very question—the division and sale of confiscated feudal lands—proved to be a turning point in both the English and French revolutions. In England, a major factor in the Cromwellian counter-revolution was strong opposition by Presbyterians and London merchants to the sequestration and sale of royalist and bishop-owned lands; and in France, a crucial feature of the “Reign of Terror” was to be the Jacobin decision to sell off confiscated feudal lands in small lots, at low bargain prices, in order to get the land into the hands of the peasantry. In both revolutions, it was this decision to take the crucial step to smash feudalism and turn the lands over to the peasantry that alienated the middle-class land speculators and helped wreck the revolution. Fortunately, the United States did not suffer from that great weight of feudal land; hence the task of the revolution against feudalism was far easier (except in the case of slave-holding plantations), and the resistance far smaller.*

The radicals kept up a drumfire of pressure on the New York Assembly for sale of the lands throughout the 1779–80 session. Every county sent petitions for immediate sale. Finally, after a great deal of resistance by the Senate, the final step was taken in democratizing and liberalizing the land system: sale of the confiscated lands. The bill became law on March 11, 1780. To make things easier for the tenantry, the patriotic tenants were excused from all arrears in rent, and the lands leased to the émigrés were sold on the same terms as the rest.

We come now to a critical problem in judging the social effects of the confiscation of Tory land: how were the sales conducted? In the French Revolution, monied speculators instead of small peasants acquired the feudal lands; in the English, most confiscated land found its way back to the original owners. What of the New York lands?

Recent researchers have shown that the bulk of land sales did go to tenants rather than speculators, and that a significant leveling and democratizing of the feudalistic land structure in New York did take place. Staughton Lynd has found that in Dutchess County, some cases occurred of Whig relatives returning land to the original Tory owners, with more

*Staughton Lynd, “The Revolution and the Common Man,” pp. 76ff.

cases of middle-class land speculators acquiring one or two tracts to lease to the existing tenants.

Some tenants, unable to buy their farms in competition with the speculators, did demand that the government lease the land to them at low prices. But Lynd concludes that "the fact remains that the ledgers of the commissioners . . . bear out the older view that most of the confiscated land went to small farmers, and so contributed to the destruction of aristocracy in New York." This happy result was largely due to the sale law, which provided that confiscated land be sold in parcels of 500 acres or less—and the typical farm in Dutchess was 100–200 acres—and especially that existing tenants be given *first option* in acquiring their land. The tenants were allowed preemption for eight months to purchase the land at an appraised price. The appraisal was to be made by three men, one of them the tenant himself, another a commissioner, and the third selected jointly by the other two, so that the tenant had a large share in deciding how much he might have to pay.

During the 1780s, it is true, the law was altered by a more conservative assembly to the disadvantage of the tenants, including the weakening of tenant preemption rights. But time was sufficient for the tenants to reap the benefits of this liberal measure. Thus, in Dutchess County, 496 confiscated lots were sold, of which 471 belonged to four prominent Tories: Beverly Robinson, Roger Morris, Henry Clinton, and Charles Inglis, and 414 lots belonged to Robinson and Morris alone. These 414 lots in south Dutchess were sold to no fewer than 401 persons, and in very few cases did one person buy more than one lot. Almost all the lots were farms under the 500-acre limit, and the average price per lot was inexpensive, less than 100 pounds. A large proportion of these small, cheap, and widely shared lots, perhaps a majority, were bought by the actual pre-existing tenants.

For Westchester, democratizing took place where it was most needed: in the large, heavily tenanted estates. The land speculators made their main acquisitions in scattered urban or unoccupied land holdings.*

The majority of the purchasers were residents on their lands. The disposition of Westchester's largest Tory estate, Philipsburgh Manor, has recently been studied by Beatrice Reubens.** This huge estate composed one-fifth of present-day Westchester County, or 50,000 acres, centering

*Lynd points out that in Bergen County, New Jersey, where Tory landholdings were small farms rather than large estates, the confiscation policy led to no decrease in concentration of land; nor did it have to, since the real need for social change was precisely in the tenanted estates. Lynd, "Revolution and the Common Man," *passim*; cf. Ruth M. Keeseey, "Loyalism in Bergen County," *William and Mary Quarterly* (October 1961).

**Beatrice E. Reubens, "Preemptive Rights in the Disposition of a Confiscated Estate: Philipsburgh Manor, New York," *William and Mary Quarterly* (July 1965), pp. 435–56.

on Yonkers. At the outbreak of the Revolution, Philipsburgh, the domain of the Philipses, contained over 270 tenants on farms of about 200 acres each. The manor, moreover, contained no freeholds and the tenantry was theoretically on a highly insecure "at will" contract which also prevented them from voting in colonial elections and from holding major offices in later state elections.

Since Westchester was occupied by the British throughout the war, the confiscation law could not be applied to it until the war was over. The same was true of New York City and other occupied areas. Philipsburgh Manor was therefore disposed of under the 1784 confiscation law, which was not as liberal in granting preemption rights as the law of 1779. Yet the result of the disposition of Philipsburgh, first and foremost, was to replace one powerful landlord with more than 50,000 acres and 270 tenants by 287 independent farmers owning an average of 174 acres each. Moreover, more than two-thirds of the purchasers bought farms which they themselves had worked as tenants of the estate. Various heirs of tenants are not included in these figures, and many purchasers were really stand-ins who resold the land to tenants who had not been ready to preempt at the designated time. Furthermore, the commissioners were very lenient and helpful to the preempting tenants, extending their credit for payment beyond the letter of the law. The extent of liberalization of land tenure at Philipsburgh was therefore obviously enormous.

It is true that throughout the confiscated lands of New York, the tenants, not being granted their tracts outright, were often forced to buy the lands on mortgage and sometimes lost their lands to the mortgagor. But this was only a fly in the ointment of their newly found prosperity and status as owners of their land.

78

Elimination of Feudalism and the Beginnings of the Abolition of Slavery

The American Revolution brought about an important smashing of feudal elements in land ownership and their transformation into a far more liberal land structure. Land monopoly was transformed by the opening of free and virgin land in the West, Virginia's thwarting the designs of the speculative land companies, the liquidation of huge British proprietary estates and quitrents (in Pennsylvania, Maryland, Virginia, and North Carolina), and the confiscation and resale of Crown lands, and through the confiscation, subdivision, and resale—largely to tenants—of huge Tory estates, especially in southern New York. One other antifeudal measure came into prominence during the Revolution: the abolition of entail and primogeniture. The most prominent leader of the assault on these remnants of outright feudalism was Thomas Jefferson, who summarized his goals in this struggle with his customary eloquence:

In the earlier times of the colony . . . some provident individuals pursued large grants; and, desirous of founding great families, settled them on their descendants . . . so that they could not be alienated [entail]. The transmission of this property from generation to generation, in the same name, raised up a distinct set of families, who, being privileged by law in the perpetuation of their wealth, were thus transformed into a patrician order. . . . From this order, too, the king habitually selected his counsellors of state. . . .

To annul this privilege, and instead of an aristocracy of wealth, of more harm and danger than benefit, to society, to make an opening for the aristocracy of wealth and talent, which nature has wisely provided for the direction of the interests of society . . . was deemed essential to a well ordered republic.

While it is true, as recent historians have emphasized, that entails and primogeniture were not extensively employed in Virginia or the South, their abolition remains important as a principle. Furthermore, the arch-conservatives, led by Edmund Pendleton and Landon Carter, felt intensely enough about abolition that they fought it almost to a standstill. Carter, indeed, had the effrontery to call entail—a severe interference with an owner’s right to control and dispose of his property—a basic component of the “right to do as we please with our own property.”

Entail was abolished in Virginia in 1776, and in South Carolina, Georgia, and Pennsylvania during the Revolution. North Carolina, Maryland, New Jersey, and New York followed in the years after the war. Primogeniture was slower to fall, but was abolished in Georgia in 1777 and in Virginia, Maryland, New York, New Jersey, Massachusetts, and the Carolinas during the 1780s. By the mid-1780s, all but two states had abolished entail, and all had eliminated primogeniture by the early 1790s.*

One critical element of coercion—and of land monopoly—remaining in American life after the Revolution was Negro slavery. The relatively cheap and coerced labor provided by slavery made large plantations for such products as tobacco and rice profitable which would not have been viable on the free market. This was true because the simplicity and easy supervision of field work on a single crop made slavery particularly adaptable to plantation labor. Furthermore, the concentration of slaves on plantations had already brought about fundamental sectional divisions in America, divisions that were, of course, exacerbated once the colonies became independent and united. While in the North, Negroes, some of whom were free, constituted less than 5 percent of the population, in the South (Maryland and below) they formed 40 percent of the population, virtually all of them slaves.

During the Revolution the northern states began to move against slavery within their borders. The first steps were taken against the slave trade—against the importation of slaves into the state—since existing slavery was considered by too many people as a “property right” (even though in human beings) that could not be violated. In 1776, the Delaware Constitution prohibited the importation into the state of slaves for sale, and Massachusetts outlawed the slave trade. John Adams, however, effectively killed a Massachusetts bill for emancipation in 1777, and it took the Massachusetts constitution of 1780 for slavery to be abolished there—or so the constitution was eloquently construed in the Massachusetts Su-

*On the abolition of entail and primogeniture, and on other radical libertarian consequences of the Revolution within America, see Robert A. Nisbet, *The Social Impact of the Revolution* (Washington, D.C.: American Enterprise Institute for Public Policy Research, 1974).

preme Court in 1781 in the notable case of *Commonwealth v. Jennison*. Chief Justice William Cushing decreed that the constitution's declaration that all men are born free and equal, and are entitled to liberty, clearly made slavery unconstitutional. In his construction, Cushing was undoubtedly influenced by the brief of the lawyer Levi Lincoln, later attorney general of the United States under Jefferson. To the opposing argument that slavery was sanctified by the "custom and usage of the country," Lincoln pungently replied that "custom and usage against reason and right" were void.

Vermont directly prohibited slavery in its constitution of 1777. A bill drafted by radical leaders Thomas Paine, George Bryan, and Charles Willson Peale gradually abolishing slavery passed the Pennsylvania legislature in 1780, but it freed only children of existing slaves upon reaching the age of 28. The New Hampshire constitution of 1784 prohibited slavery, and Connecticut and Rhode Island decreed its gradual abolition in 1784. The Rhode Island action came after years of prodding by the prominent Quaker merchant, Moses Brown.

New York, New Jersey, Delaware, and the southern states remained with slavery unchecked by the end of the Revolution. New York City delegates, headed by John Jay, had urged a gradual emancipation law in 1777, but lost by a close vote. In 1785, a gradual emancipation bill freeing all future Negro children was passed in the legislature. It was vetoed by the Council of Revision of New York, however, because it denied the freed Negroes the ballot and thus would create a group of half-citizens. The staunchest and most principled libertarian in the New York legislature was New York Assemblyman Aaron Burr, who not only argued persistently for the Negro's right to vote, to be a witness and juror, and to intermarry freely, but who also fought unsuccessfully for immediate and unconditional abolition of all slavery in New York. New York *did* liberate all the slaves of its Tories, and New Jersey liberated the slaves who had become state property by its confiscation of Tory properties.

But while slavery was being largely liquidated in the North, it was being cemented in the South, despite the staunch opposition of such men as Jefferson. Indeed, the states actively encouraged slavery: North Carolina passed a law in 1777 restricting the voluntary manumission of slaves, while South Carolina and Georgia paid out slaves as part of the salaries of soldiers and state officials. During the war, however, every state except Georgia and South Carolina either severely restricted the slave trade or prohibited it. This was not a particularly idealistic action by the upper South, however, since the value of domestic slaves would inevitably rise after prohibiting their further importation. And then Virginia and Maryland, where slave labor was becoming less profitable, could breed slaves to replace foreign imports as a source of new slaves to the lower South.

Fearful of slave defections to the British in the light of their wholesale flight to Lord Dunmore's forces early in the war, the southern states placed especially severe controls upon the slaves during the war. Slaves were herded to points far from British-occupied zones. Special patrols were set up to prevent escape, and executions of slaves attempting to flee were stepped up. And yet, despite the harsh treatment and the resale into slavery in the West Indies suffered by the Negroes in British hands, many tens of thousands of slaves escaped to the British lines. Thus 4,000 escaped Negroes sailed away when the British evacuated Savannah, and around 6,000 sailed with the British from Charleston; in 1782, nearly 3,000 sailed with the British from New York City. Probably as many as 100,000 slaves—or nearly one-fifth of the slave population—succeeded in escaping during the Revolutionary War.

Many slaves also became known as "maroons"—fugitives fighting in inaccessible areas and waging guerrilla war against slaveholders. Maroon activity abounded in Georgia and the Carolinas, and a slave named Bill was hanged in 1781 in Prince William County, Virginia, for leading other ex-slaves in attacks upon plantations. One group of 300 determined ex-slaves decided not to evacuate Savannah with the British; instead they stayed in the swamps at Bear Creek as self-styled "King of England's soldiers," engaging in guerrilla raids on Georgia plantations. It took four years and the combined militia of Georgia and South Carolina to finally rout this band.

Plots of slave revolts were diminished during the war by the opportunities to escape offered by the revolutionary conflict. Still, several plots were uncovered, the most important being a planned revolt of the slaves of Pitt, Craven, and Beaufort counties in coastal North Carolina. The plot was betrayed by two slaves on the eve of the uprising in July 1775, and scores of slaves were arrested throughout the counties. They were punished by numerous lashes and ear croppings. Slaves rebelled on Tybee Island, Georgia, in early 1776, and Negro restiveness was noted, starting at about the same time, in Albany, New York, in Elizabethtown in Somerset County, New Jersey, and in Bucks County, Pennsylvania. Restiveness among the nearly 4,000 slaves in Albany County continued for several years, including organized escapes and a plot to destroy the slaveowners and burn Albany to the ground. Virginia was beset by several slave revolts or threatened revolts during the war: in Botetourt, Halifax, and Accomack counties and Williamsburg, where in December 1781 the slaves set fire to governmental and other buildings in the town.

One other escape route for several thousand Negro slaves was enlistment in the Revolutionary armed forces; for in many cases where the states permitted, masters offered freedom to Negroes who enlisted. These enlistments could not begin until mid-1776, for until then, Negroes were

barred from the army. In Congress this prohibition was led by the Rutledges of Georgia, but the ban also prevailed in the separate state militias, including Massachusetts, the rest of New England, and all the middle states. Tightened war conditions, however, as well as Dunmore's call for Negroes to escape, reversed American policy and permitted slave enlistments. In early 1776, Congress reversed its previous decision to bar Negroes from the armed forces and the towns and states followed later on. The enthusiastic expectations of the enlisted Negroes were reflected in the surnames many of them now gave themselves including "Freeman," "Liberty," "Freedom," and "Free." South Carolina and Georgia, however, despite the ardent pressure of Henry and John Laurens and of William Henry Drayton, refused throughout the war to allow their Negroes to enlist, and made it clear that they preferred defeat in the war to allowing that sort of subversive license. The stubbornness of these two deep-south states prevented what might have been a severe blow to the entire structure of slavery in the South.

Most of the Negro soldiers served in the Continental Army rather than in the short-term state militia, and the bulk of them was furnished by the New England states, despite their relatively small Negro population. Negroes served in fully integrated units, but few were selected for the higher status service of cavalry or artillery. Most were infantry privates, often in menial service (servants, orderlies, waiters, cooks, teamsters, drummers) rather than in arms-bearing functions. Even so, Negroes, happy to be slaves no longer, generally enjoyed higher morale than the other soldiers who were eager to return to the freedom and higher living standards they had been used to in civilian life. In contrast to the army, the American navy—Continental, state and privateer—welcomed Negro sailors from the very beginning of the conflict, partly because Negro sailors were already familiar to colonial America: they were often used as pilots and even the South Carolina and Georgia navies used Negro sailors.

By no means all of the Negro soldiers and sailors of the Revolution received their freedom as a result; many were enlisted involuntarily by their masters. But the vast majority—several thousand Negroes—were set free by the enlistment process.

Disestablishment and Religious Freedom

Another important social impact of the Revolution was a great impetus toward religious freedom and the separation of church and state. In the first place, the southern colonies, on which Britain had imposed an Anglican establishment against the will and beliefs of the majority, moved quickly during the Revolution to disestablish the Anglican Church, which eventually became a harmless Protestant Episcopal Church. This disestablishment was almost an inevitable natural consequence of the Revolution against British imperialism. (In contrast, the propatriot Congregational establishment in New England could not be dislodged.) Thus, New York, Maryland, Virginia, the Carolinas, and Georgia eliminated their Anglican burden upon the state. Significant opposition to this important liberal change came only in Virginia, where almost half the citizens were Anglican; Jefferson and Madison did not succeed in driving through disestablishment until six years after the bill had been written and introduced by Jefferson in 1779. Even then it met strong opposition from, among others, George Washington, Patrick Henry, and the young lawyer, John Marshall, who urged the general establishment of all religion in the state. This Statute of Religious Freedom, which Jefferson rightly regarded as one of his noblest accomplishments, decreed absolute religious liberty:

No man shall be compelled to frequent or support any religious worship, place or ministry whatsoever, nor shall be enforced, restrained, molested, or burthened in his body or funds, or shall otherwise suffer on account of his religious opinions or belief; but that all men shall be free to profess, and by

agreement to maintain, their opinions in matters of religion, and that the same shall in no wise diminish, enlarge, or affect their civil capacities.

All men were to enjoy such freedom, which the law affirmed as one "of the natural rights of mankind."

Jefferson's philosophical preamble to the Statute of Religious Freedom was eloquently libertarian: he strongly condemned past rulers, "civil as well as ecclesiastical," who had presumptuously "assumed dominion over the faith of others." The human mind is by nature free and must operate uncoerced; truth, he affirmed, must be left to itself to prevail in the free and unfettered argument against error: "Errors ceasing to be dangerous where it is permitted freely to contradict them."

Some of Jefferson's ringing declarations on the supremacy of human reason were eliminated in a final pique led by such conservatives as Benjamin Harrison and John Page; while Madison and the young libertarian theorist, John Taylor of Caroline, fought to preserve the eloquent affirmations intact. The weakening was not very serious, however, and Jefferson, with due pride, printed and circulated the statute far and wide, and it made a deep impression in Europe.

Jefferson's statute was quickly translated into French and Italian, and inserted into the notable French *Encyclopédie*. As he eloquently wrote to Madison from France in late 1786: "It is comfortable to see the standard of reason at length erected, after so many ages during which the human mind has been held in vassalage by kings, priests, and nobles; and it is honorable for us to have produced the first legislature who had the courage to declare that the reason of man may be trusted with the formation of his own opinions."

Another significant development during the Revolution was the easing of the previously hysterical anti-Catholicism that had permeated the colonies, North and South. France, not long before a hated Roman Catholic enemy, was now a beloved and much appreciated ally and it was inevitable that France's religion would no longer be treated as a creature of the Antichrist. No fewer than eight states moved, during the Revolution, to allow Roman Catholics to hold public office.

Was the American Revolution Radical?

Especially since the early 1950s, America has been concerned with opposing revolutions throughout the world; in the process, it has generated a historiography that denies its own revolutionary past. This neoconservative view of the American Revolution, echoing the reactionary writer in the pay of the Austrian and English governments of the early nineteenth century, Friedrich von Gentz, tries to isolate the American Revolution from all the revolutions in the western world that preceded it and followed it. The American Revolution, this view holds, was unique; it alone of all modern revolutions was not really revolutionary; instead, it was moderate, conservative, dedicated only to preserving existing institutions from British aggrandizement. Furthermore, like all else in America, it was marvelously harmonious and consensual. Unlike the wicked French and other revolutions in Europe, the American Revolution, then, did not upset or change anything. It was therefore not really a revolution at all; certainly, it was not radical.

Now this view, in the first place, displays an extreme naiveté on the nature of revolution. No revolution has ever sprung forth, fully blown and fully armed like Athena, from the brow of existing society; no revolution has ever emerged from a vacuum. No revolution has ever been born out of ideas alone, but only from a long chain of abuses and a long history of preparation, ideological and institutional. And no revolution, even the most radical, from the English Revolution of the seventeenth century to the many Third World revolutions of the twentieth, has ever come into being except in reaction to increased oppression by the existing State apparatus. All revolution is in that sense a reaction against worsening

oppression; and in that sense, all revolutions may be called “conservative”; but that would make hash out of the meaning of ideological concepts. If the French and Russian revolutions may be called “conservative” then so might the American. This same process was at work in Bacon’s Rebellion of the late seventeenth century and the American Revolution of the late eighteenth. As the Declaration of Independence (a good source for understanding the Revolution) rightly emphasized:

Prudence indeed will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations . . . evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government. . . .

It takes such a long train of abuses to persuade the mass of people to throw off their habitual customs and loyalties and to make revolution; hence the absurdity of singling out the American Revolution as “conservative” in that sense. Indeed, this very breakthrough against existing habits, the very act of revolution, is therefore ipso facto an extraordinarily radical act. All mass revolutions, indeed all revolutions as distinguished from mere coup d’états, by bringing the masses into violent action are therefore per se highly radical events. All revolutions are therefore radical.

But the deep-seated radicalism of the American Revolution goes far beyond this. It was inextricably linked both to the radical revolutions that went before and to the ones, particularly the French, that succeeded it. From the researches of Caroline Robbins and Bernard Bailyn, we have come to see the indispensable linkage of radical ideology in a straight line from the English republican revolutionaries of the seventeenth century through the commonwealthmen of the late seventeenth and eighteenth centuries, to the French and to the American revolutionaries. And this ideology of natural rights and individual liberty was to its very marrow revolutionary. As Lord Acton stressed of radical liberalism, in setting up “what ought to be” as a rigorous guidepost for judging “what is,” it virtually raised thereby a standard of revolution.

The Americans had always been intractable, rebellious, impatient of oppression, as witness the numerous rebellions of the late seventeenth century; they also had their own individualist and libertarian heritage, their Ann Hutchinsons and Rhode Island quasi anarchists, some directly linked with the left wing of the English Revolution. Now, strengthened and guided by the developed libertarian natural rights ideology of the eighteenth century, and reacting to aggrandizement of the British imperial

state in the economic, constitutional, and religious spheres, the Americans, in escalated and radicalized confrontations with Great Britain, had made and won their Revolution. By doing so, this revolution, based on the growing libertarian idea pervading enlightened opinion in Europe, itself gave immeasurable impetus to the liberal revolutionary movement throughout the Old World, for here was a living example of a liberal revolution that had taken its daring chance, against all odds and against the mightiest state in the world, and had actually succeeded. Here, indeed, was a beacon light to all the oppressed peoples of the world!

The American Revolution was radical in many other ways as well. It was the first successful war of national liberation against western imperialism. A people's war, waged by the majority of Americans having the courage and the zeal to rise up against constituted "legitimate" government, actually threw off their "sovereign." A revolutionary war led by "fanatics" and zealots rejected the siren calls of compromise and easy adjustment to the existing system. As a people's war, it was victorious to the extent that guerrilla strategy and tactics were employed against the far more heavily armed and better trained British army—a strategy and tactics of protracted conflict resting precisely on mass support. The tactics of harassment, mobility, surprise, and the wearing down and cutting off of supplies finally resulted in the encirclement of the enemy. Considering that the theory of guerrilla revolution had not yet been developed, it was remarkable that the Americans had the courage and initiative to employ it. As it was, all their victories were based on guerrilla-type concepts of revolutionary war, while all the American defeats came from stubborn insistence by such men as Washington on a conventional European type of open military confrontation.

Also, as in any people's war, the American Revolution did inevitably rend society in two. The Revolution was not a peaceful emanation of an American "consensus"; on the contrary, as we have seen, it was a civil war resulting in permanent expulsion of 100,000 Tories from the United States. Tories were hunted, persecuted, their property confiscated, and themselves sometimes killed; what could be more radical than that? Thus, the French Revolution was, as in so many other things, foreshadowed by the American. The inner contradiction of the goal of liberty and the struggle against the Tories during the Revolution showed that revolutions will be tempted to betray their own principles in the heat of battle. The American Revolution also prefigured the misguided use of paper money inflation, and of severe price and wage controls which proved equally unworkable in America and in France. And, as constituted government was either ignored or overthrown, Americans found recourse in new quasi-anarchistic forms of government: spontaneous local committees. Indeed, the new state and eventual federal governments often emerged out

of federations and alliances of local and county committees. Here again, "committees of inspection," "committees of public safety," etc., prefigured the French and other revolutionary paths. What this meant, as was most clearly illustrated in Pennsylvania, was the revolutionary innovation of *parallel institutions*, of dual power, that challenged and eventually simply replaced old and established governmental forms. Nothing in all of this picture of the American Revolution could have been more radical, more truly revolutionary.

But, it may be claimed, this was after all only an external revolution; even if the American Revolution was radical, it was only a radicalism directed against Great Britain. There was no radical upheaval at home, no "internal revolution." Again, this view betrays a highly naive concept of revolution and of wars of national liberation. While the focus of the upheaval was, of course, Great Britain, the inevitable indirect consequence was radical change within the United States. In the first and most obvious place, the success of the revolution meant inevitably the overturn and displacement of the Tory elites, particularly of those internal oligarchs and members of governors' councils who had been created and propped up by the British government. The freeing of trade and manufacture from British imperial shackles again meant a displacement of Tory favorites from positions of economic privilege. The confiscation of Tory estates, especially in feudalism-ridden New York state, had a sharply democratizing and liberalizing effect on the structure of land tenure in the United States. This process was also greatly advanced by the inevitable dispossession of the vast British proprietary landed estates in Pennsylvania, Maryland, Virginia, and North Carolina. The freakish acquisition of the territory west of the Appalachians by the peace treaty also opened vast quantities of virgin land to further liberalize the land structure, provided that the speculative land companies, as it increasingly appeared, would be kept at bay. Revolution also brought an inevitable upsurge of religious liberty with the freeing of many of the states, especially in the South, from the British-imposed Anglican establishment.

With these radical internal processes inevitably launched by the fact of revolution against Great Britain, it is also not surprising that this internal revolutionary course would go further. To the attack on feudalism was added a drive against the remnants of entail and primogeniture; from the ideology of individual liberty—and from British participation in the slave trade—came a general attack on that trade, and, in the North, a successful governmental drive against slavery itself.

Another inevitable corollary of the Revolution, and one easily overlooked, was that the very fact of revolution—aside from Connecticut and Rhode Island where no British government had existed before—necessarily dispossessed existing internal rule. Hence the sudden smashing of that

rule inevitably threw government back into a fragmented, local, quasi-anarchistic form. When we consider also that the Revolution was consciously and radically directed against taxes and against central government power, the inevitable thrust of the Revolution for a radical transformation toward liberty becomes crystal clear. It is then not surprising that the thirteen revolted colonies were separate and decentralized, and that for several years even the separate state governments could not dare to impose taxes upon the populace. Furthermore, since royal control in the colonies had meant executive, judicial, and upper house control by royal appointees, the libertarian thrust of the Revolution was inevitably against these instruments of oligarchy and in favor of democratic forms responsive to, and easily checked by, the people. It is not a coincidence that the states where this type of internal revolution against oligarchy proceeded the furthest were the ones where the oligarchy was most reluctant to break with Great Britain. Hence, in Pennsylvania, the radical drive for independence meant that the reluctant oligarchy had to be pushed aside, and the process of that pushing led to the most liberal and most democratic constitution of all the states. (A highly liberal and democratic constitution also resulted from Vermont's necessity for rebelling internally against New York and New Hampshire's imperialism over Vermont's land.) On the other hand, Rhode Island and Connecticut, where no internal British rule existed, experienced no such internal cataclysm. Internal revolution was therefore a derivative of the external, but it happened nevertheless. Because of these inevitable internal libertarian effects, the drive for restoration of central government through taxation and mercantilism had to be a conscious and determined project on the part of conservatives—a drive against the natural consequences of the Revolution.

Since the Revolution was a people's war, the extent of mass participation in the militia and committees led necessarily to a democratizing of suffrage in the new governments. Furthermore, the principle of "no taxation without representation" could readily be applied internally as could British restrictions upon the principle of one man, one vote. While recent researches have shown that colonial suffrage requirements were far more liberal than had been realized, it is still true that suffrage was significantly widened by the Revolution in half the states. This widening was helped everywhere by the depreciation of the monetary unit (and hence of existing property requirements) entailed by the inflation that helped finance the war. Chilton Williamson, the most thorough and judicious of recent historians of American suffrage, has concluded that

the Revolution probably operated to increase the size of that majority of adult males which had, generally speaking, been able to meet the old property and

freehold tests before 1776. . . . The increase in the number of voters was probably not so significant as the fact that the Revolution had made explicit the basic idea that voting had little or nothing to do with real property and that this idea should be reflected accurately in the law. . . . The changes in suffrage made during the Revolution were the most important in the entire history of American suffrage reform. In retrospect it is clear that they committed the country to a democratic suffrage.*

While many of the state constitutions, under the influence of conservative theorists, turned out to be conservative reactions against initial revolutionary conditions, the very act of making them was radical and revolutionary, for they meant that what the radical and Enlightenment thinkers had said was really true: men did not have to submit blindly to habit, to custom, to irrational "prescription." After violently throwing off their prescribed government, they could sit down and consciously make over their polity by the use of reason. Here was radicalism indeed. Furthermore, in the Bills of Rights, the framers added a significant and consciously libertarian attempt to prevent government from invading the natural rights of the individual, rights which they had learned about from the great English libertarian tradition of the past century.

For all these reasons, for its mass violence, and for its libertarian goals, the American Revolution was ineluctably radical. Not the least demonstration of its radicalism was the impact of this revolution in inspiring and generating the admittedly radical revolutions in Europe, an international impact that has been most thoroughly studied by Robert Palmer and Jacques Godechot. Palmer has eloquently summed up the meaning that the American Revolution had for Europe:

The American Revolution coincided with the climax of the Age of Enlightenment. It was itself, in some degree, the product of this age. There were many in Europe, as there were in America, who saw in the American Revolution a lesson and an encouragement for mankind. It proved that the liberal ideas of the Enlightenment might be put into practice. It showed, or was assumed to show, that ideas of the rights of man and the social contract, of liberty and equality, of responsible citizenship and popular sovereignty, of religious freedom, freedom of thought and speech, separation of powers and deliberately contrived written constitutions, need not remain in the realm of speculation, among the writers of books; but could be made the actual fabric of public life among real people, in this world, now.**

The Impact in Europe

Through a burgeoning press, book and periodical, reading clubs and the reports of foreign soldiers who had served in the American War, Europe was swept with fervor for the revolutionary cause. Indeed, a widely read political press and the formation of a "public opinion" really began in this era under the impact of the American Revolution. France, Germany, Ireland, and the Netherlands were particularly taken by the Revolution and its inspiring example for the rest of the world. Under its impact a political press developed in Germany and the Netherlands; in Ireland and the Netherlands, two countries with close personal and kinship ties to the American people, the revolutionary example of the Sons of Liberty and committees of correspondence inspired popular political clubs.

In the lands of America's wartime allies France and Holland, revolutionary sentiment could grow in a particularly favorable climate. Future French revolutionary leaders from Lafayette to Brissot de Warville were deeply inspired by the American example. France (as well as Ireland and Holland) learned about constitutional conventions, committees of public safety, test oaths, confiscation of émigré property, paper money and price controls from the Americans. Ambassador Franklin was lionized in Paris, and an international intellectual debate was waged over the virtues of the various American constitutions by such leading liberals as John Adams and Jefferson in the United States, Turgot, Condorcet, Dupont de Nemours, Mirabeau, Abbé Mably, and Abbé Morellet in France, and Richard Price in England. In Holland, John Adams intrigued with the radical republicans to join the war against the wishes of the pro-British Orange regime.

Adams had close contact with the Dutch revolutionaries headed by J. D. van der Capellen tot der Pol, the Reverend van der Kemp, and the bankers of Amsterdam. The Belgian revolution of 1789 was greatly influenced by the American constitutions and state papers, and the Declaration of Independence by Flanders against Austrian rule in 1789 reproduced the language of the American Declaration. Moreover, the Act of Union of the United Belgian States in 1790 almost exactly reproduced the language as well as the spirit of the Articles of Confederation; the central legislative body of the union was even called "Congress."

The American Revolution, and the question of participating in the fight against England, led to the formation of a Dutch revolutionary Patriot party around Capellen. Capellen, in a notable pamphlet of 1781, *An Address to the Netherlands People*, denounced the pro-British Orange oligarchy and bureaucracy, pointed to the example of an American government elected by the people, and, most importantly, called for the arming of the people, after the examples of America and Ireland. He also urged the formation of spontaneous grassroots citizens' groups like the American committees and the English associations, to put pressure upon the government. To follow the American example, he wrote, was to be ready, "every man with his musket." Accordingly, the burghers of Utrecht and other towns began to arm, drill, organize free corps, and form national meetings and assemblies. The mass army and the pressure of the burghers polarized and split the Patriot movement, for the aristocratic and traditionally anti-Orange Dutch "regents," in control of the councils and provincial estates, began to be frightened at the democratic demands of the middle-class burghers. The burghers' free corps was led by the fiery Ondaatje, a student at the University of Utrecht, who became a focal point for both sides in the Patriot split. The Dutch masses rallied to Ondaatje and the Patriots, while some of the regents left to join the Orange party.

Free corps began forming in 1784, and the first National Assembly of Free Corps met at Utrecht at the end of that year. By 1786, the National Assembly of Free Corps and the liberal wing of the regents issued a joint declaration calling for a truly republican, democratic, and liberal regime. What is more, the Utrecht burghers deposed the old aristocratic town council, and chose a new council by general election; the following year civil war broke out with the troops of the Prince of Orange. The Dutch Revolution seemed to be sweeping all before it. But, as was later to occur in France, the forces of foreign armed counter-revolution intervened to crush the popular movement. While financially aided by France, the Patriots were overwhelmed by large-scale British bribery and intrigue, but especially by the intervention of 20,000 Prussian troops, who invaded the

Dutch provinces, occupied Utrecht and Amsterdam, and crushed the Dutch Patriot revolution. The intriguer British Ambassador Sir James Harris was close to tears of joy as he and the Prussians restored the rule of the House of Orange. Edmund Burke, in a prefigurement of his reactionary role in the French Revolution, also hailed the crushing of the rebellion. Harris' financial largesse controlled the restored regime, and the House of Orange instituted a veritable reign of terror, driving many thousands of Patriots into exile. Most of the refugees fled to France and the Austrian Netherlands, though van der Kemp emigrated to the United States. Britain and Prussia made so bold as to guarantee formally the rule of the Orange regime.*

The Belgian provinces, led by the province of Brabant and by the lawyer Jean François Vonck, successfully revolted against Austrian rule and declared their independence in 1789. After independence, the Vonckists determined to complete their revolution and democratize and liberalize the restrictive feudal and guild systems of Belgium. In provincial revolutionary committees and in elections of local officials, insurrectionary committees of middle-class citizens began to sweep Belgium. The Belgian aristocracy countered by forming an estates general and adopting an act of union modelled, in its decentralization, on the Articles of Confederation, and insisting that the American model was only a national, external revolution for independence. The liberals led by the moderate Vonck, however, countered by citing the importance of the American state constitutions and the consequent liberalizing of each state. Thus, both sides in the Belgian struggle relied on their varying interpretations of the true nature of the American Revolution. Finally, after various scuffles, the reactionary Estates party won out in the spring of 1790, and hundreds of liberal leaders were forced to flee to France. A rightist reign of terror, launched by the Catholic clergy and its reactionary theoretician Abbé Feller, broke out against the liberals, and one monk declared in a sermon that anyone meeting a Vonckist should kill him on sight. Masses of peasants, led by their priests, poured out into the towns to kill liberals. Hence, the return of Austrian rule in late 1790 was understandably greeted by the harassed Belgian liberals as "almost a deliverance" from the rule of the Belgian aristocracy; they then returned to Belgium bitterly anticlerical and looking wistfully to revolutionary and anticlerical France for their future model.

*Palmer rightly concludes that "the Dutch Republic first lost its independence not to the 'Jacobins' in 1795, but to the already well-developed forces of the European counterrevolution in 1787." Palmer, *Age of the Democratic Revolution*, I p. 340.

The first of the eighteenth century European revolutions had occurred in the city of Geneva. The burghers, with Rousseau as their philosopher, tried to break through the tightly knit rule of the local aristocracy in 1767–68, and gained a few concessions. In 1781, the burghers again tried to democratize rule in Geneva. The Geneva aristocrats appealed to the powers that had presumed to impose and guarantee a tight aristocratic rule in Geneva in the Act of 1738: the cantons of Bern and Zurich and the kingdom of France. Genevese aristocrat Micheli du Crest urged external intervention “in the cause of all legitimate governments and of all sovereigns,” to crush the “atrocious and unprovoked horrors of sedition.” France, Bern, and Zurich promptly sent in troops and laid siege to Geneva and finally stormed it. The foreign powers, consulting with the town aristocracy, not only reinforced the pre-1781 aristocratic rule, but they even revoked the minor concessions of 1768. The banker Étienne Clavière, a burgher leader, fled from Geneva to Paris and there formed with Brissot de Warville a Gallo-American society to perpetuate the ideals of the American Revolution. Clavière was later minister of finance in the revolutionary Girondin government of France.

Another particularly direct outgrowth of the American war was the upsurge of a revolutionary movement in Ireland. In response to John Paul Jones’ raid on Belfast in the spring of 1778, upper and middle-class Irishmen, almost all Protestants (the submerged bulk of Roman Catholic peasantry had no voice in Irish political life), formed armed companies throughout Ireland. Designed originally for defense against invasion, these armed companies, the Irish Volunteers, remained in being to emulate the Americans and press for greater liberty in Ireland. Legal because of their ostensible purpose of common defense, the Volunteers exchanged ideas and met in regional assemblies. Newspapers, pamphlets, grand juries and county meetings agitated for liberal reforms against England, especially for the relaxing of British imperial trade restrictions in order to ease the severe economic crises caused by the embargo of Irish exports (especially linens) to the United States. Politically, the Volunteers wanted home rule for the Irish Parliament and democratic reform of that aristocratic body itself. The pressure of the armed Volunteers forced substantial concessions from the British, permitting some exports of Irish goods to the colonies. Further pressure by a Volunteer movement grown to 80,000 armed men forced the British in 1782 to grant the Irish Parliament, led by the reformer Henry Grattan, home rule and equal status with the British Parliament under the Crown. Such infamous measures as Poynings’ Law were repealed. Exuberantly, the Irish admitted that it was America’s victory, joined to their own armed pressure, that had forced England

to grant home rule. "It was on the plains of America," wrote one Irishman, "that Ireland obtained her freedom."

But home rule proved disappointing, and trade restrictions and royal control continued in force; the Volunteers insisted on continuing in force to demand reform of the Irish Parliament itself. But they were weakened by a grave inner contradiction: their desire to democratize ran squarely against their commitment to keeping the body of Roman Catholics submerged. If the Roman Catholics were to be given the vote, the entire social system established by the English conquests, notably land monopoly and the established Protestant Church, would be cast into peril.

Discontent with the results of home rule swelled the ranks of the Volunteers, who even began to admit Catholics into their ranks. In consequence, Grattan and the Irish Whigs, whose victory for home rule had rested on the Volunteers, now denounced these peoples' troops as an anarchic menace. The Volunteers pressed on to hold their first "Grand National Convention"—the world's first national convention—in late 1783. Their reform plan having been rejected by Parliament, the Volunteer ranks grew further in the following year; Roman Catholics were increasingly welcomed, and the Irish radicals began to talk openly of revolution. In particular, the American example was increasingly held up as a model, and the reformers began to call for a national "Congress," in open imitation of revolutionary America. But the attorney general suppressed the radical press, and arrested the sympathetic sheriff of Dublin. The Volunteer movement soon faded away, largely because it never resolved its contradiction on Roman Catholic emancipation, and hence because it never had the courage to openly enlist the Roman Catholic masses on its side.

Edmund Burke, significantly enough, staunchly favored the conservative side, the side of prescriptive custom. At the same time he bitterly opposed English Parliamentary reform; there he went to the logical conclusion of conservatism that *any* sharp change in government was simply "anarchy." "For to discredit the only form of government which we either possess or can project, what is this but to destroy all government? And this is anarchy."

Thus, in four countries in western Europe, armed liberal mass movements arose during the 1780s, inspired by the success of the American Revolution. (In England a feebler association movement collapsed with the division of the reform forces between Pitt and Fox.) In three of these cases—Holland, Belgium, and Geneva—the movement proceeded to the point of revolution. But in each of them the revolution failed and was crushed by armed counter-revolution. By the end of the 1780s, the first liberal impetus had been crushed by a regnant counter-revolution

that, in most of these cases, relied on armed foreign aid to help crush the revolutionary forces; generally it was Great Britain to whom the reactionaries looked for succor. This was true of the Dutch, of the Irish magnates, and of the Belgian right; and, of course, it had also been true of the American Tories before their expulsion. Everywhere, England began to emerge as the home, the nucleus of international armed counter-revolution.

In reaction to England's role, the liberal and democratic forces in Europe—and, for that matter, in America—had begun to turn to France for aid and sustenance. France, England's ancient foe, played this role, interestingly enough, long before the French Revolution, aiding the left in America, Holland, and Ireland, and providing a haven for refugees of all of the lost revolutions. This was done not because of idealism (as its own role in crushing Genevan liberalism made evident), but to help even the score with Great Britain.

And so outside of America the wave of liberal revolutions had failed abysmally. They failed basically because they were bourgeois rebellions that did not tap support among the peasant masses by mounting a total assault on the feudal land system. By failing to be truly revolutionary, the middle classes could not command mass support and left themselves vulnerable to armed force. As Palmer explains:

The democratic movement failed everywhere, before 1789, except in America. . . . Moderate though it was, or seems in retrospect, it failed to obtain any concessions at all . . . all the efforts of English and Irish parliamentary reformers and of Dutch, Belgian and Genevese democrats, had come to absolutely nothing. Indeed, matters were if anything worse, for the fear and vindictiveness of threatened oligarchies had been aroused.

The democratic movement had failed for various reasons, in some places because the forces of the old order had successfully called upon foreign aid, and in all cases because the democratic interests, though important and enlightened, were a numerical minority in the country as a whole. They had no mass following. The "mass," outside London, Paris, or Amsterdam, really meant the rural population. Country people at lower income levels in the countries now being considered, were politically unaroused. . . . So far as the ruling aristocracies drew their incomes from land, or their influence from the good will of the tenantry, they had little to fear from disaffected lawyers or impudent pamphleteers; the one thing that would undermine them was wholesale defection on their own estates. This did not happen until it happened in France in the summer of 1789.

If these events prove anything, it is perhaps that no purely middle-class or "bourgeois" revolution could succeed. Lawyers, bankers, merchants, shopkeepers, students, and professors could not alone unseat the holders of political power. . . . Another reason for the democratic failure, applying at least

to Holland, Belgium and Geneva, was that these countries had the misfortune to be small, and hence easy objects of intervention. The attempt of conservative Europe to intervene in France in 1792, was to have a very different outcome.*

Above all it was necessary to engage the masses, as the American revolutionaries had done. But in Europe, ridden as America had not been by internal feudalism, still dominated by monarchy and by theocracy, mass upheaval would have had to rend and disrupt the entire social fabric. The stage was set for France to pick up the baton of the American Revolution. The seemingly far greater radicalism of the French Revolution was merely a function of the far greater built-in resistance to libertarian principles. As Palmer justly concludes:

The American and the French Revolutions “proceeded from the same principles.” The difference is that these principles were much more deeply rooted in America, and that contrary or competing principles, monarchist or aristocratic or feudal or ecclesiastical, though not absent from America, were, in comparison to Europe, very weak. Assertion of the same principles therefore provoked less conflict in America than in France . . . it was the weakness of conservative forces in eighteenth century America, not their strength, that made the American Revolution as moderate as it was. . . . The difference lay in the fact that certain ideas of the Age of Enlightenment, found on both sides of the Atlantic—ideas of constitutionalism, individual liberty, or legal equality—were more fully incorporated and less disputed in America than in Europe. . . . For a century after the American Revolution, as is well known, partisans of the revolutionary or liberal movements in Europe looked upon the United States generally with approval, and European conservatives viewed it with hostility or downright contempt.**

The French, indeed the European liberals in general, had to face far more entrenched opposition than had the Americans, and Palmer brilliantly concludes that in France “the revolution was itself a reaction against an immovable conservatism already formed.” Just as in America British aggrandizement radicalized public opinion, so the tendency of European counter-revolution to harden after suppression of the revolts of the 1780s radicalized French revolutionary opinion.

It should be noted that the European theorists of the old order did not take the current neoconservative tack of praising the American Revolution and reviling the French. These reactionary ideologues knew their enemy, and that most emphatically included the American Revolution, which was attacked with the same phrases later used to denounce the

*Palmer, *Age of Democratic Revolution*, I. pp. 368–69.

**Palmer, *Age of Democratic Revolution*, I. p. 189.

French. Similarly denounced were the Dutch, Genevan and Belgian revolutions of the 1780s. The Abbé Feller, theorist of the Belgian right, Mallet du Pan in France, and Schlozer and other historical jurists (as opposed to natural rights jurists) in Germany all became noted opponents of the French Revolution and were equally hostile to the American. Edmund Burke formed his defense of reaction in the cauldron of the moderate and liberal Dutch, Irish, and English reform agitations long before he attacked the alleged horrors of the French Revolution. The American Revolution, the European right realized, was a vital milestone in the advance and development of the western revolutionary tradition.*

*On the linkage of the American and French revolutions, see Louis Gottschalk, "The Place of the American Revolution in the Causal Pattern of the French Revolution," in H. Ausubel, ed., *The Making of Modern Europe* (New York: Holt, 1951), 1:494-510; and Jacques Godechot, *La Grande Nation* (Paris, 1956), and Godechot, *France and the Atlantic Revolution of the Eighteenth Century, 1770-1799* (New York: Free Press, 1965).

Bibliographical Essay*

The material written on the American Revolution is almost limitless, and it would be folly to try to list all of it in a brief space. Indeed, the purpose of this as well as of the bibliographic essays in the companion volumes of *Conceived in Liberty* is not to cite an endless array of sources, but to highlight for the reader the most important works on the period, those to which it would be most fruitful for him to turn next. This essay is deliberately confined to secondary sources; primary sources from the period are cited in the secondary sources which we discuss below.

A concise, judicious, overall summary of the military, political, social, and economic history of the American Revolution is fortunately available in John R. Alden, *The American Revolution, 1775–1783* (1954). Alden supersedes the previous overall, one-volume history, John C. Miller, *Triumph of Freedom, 1775–1783* (1948), which tends to be unreliable.

The most important and dramatic change in interpreting the history of the American Revolutionary War has come about very recently: a realization that the Americans won because, and insofar as, they were conducting a massive guerrilla war, a "people's war," against the superior firepower and conventional military strategy and tactics of the British imperial power. With modern guerrilla war coming into focus since the late 1960s, recent historians have begun to apply its lessons to the American Revolution, not only to the tactical analysis of the individual battles, but also in basic strategic insights, for example, the realization that guerrilla war can only succeed if the guerrillas are backed by the great majority of the populace, a condition which obtained during the American Revolution. The valuable military histories of the Revolution, therefore, can be grouped into two

*Part of this essay appears, in altered form, in Murray N. Rothbard, "Modern Historians Confront the American Revolution," *Literature of Liberty* (January/March 1978), pp. 16–41.

categories: those which antedate and those which incorporate modern insights into the nature and potential of guerrilla warfare.

Thus, the best detailed history of the military conflict, devoting keen analysis to each battle, is Christopher Ward, *The War of the Revolution* (2 vols., 1952). A useful and relatively brief one-volume military history is Willard M. Wallace, *Appeal to Arms: A Military History of the American Revolution* (1951). More specifically, the standard military history of the first year of the war, is Allen French, *The First Year of the American Revolution* (1934), and the initial battle of Lexington and Concord is described in Arthur B. Tourtellot, *Lexington and Concord* (1963).

None of these books, however, was written recently enough to incorporate modern insights on the importance of guerrilla as opposed to conventional war. An important one-volume military history that does so is Don Higginbotham, *The War of American Independence: Military Attitudes, Policies, and Practice, 1763–1789* (1971). Particularly important, both for guerrilla insights and for penetrating “revisionist” studies of particular generals and their strategies and tactics, is George Athan Billias, ed., *George Washington’s Generals* (1964). Particularly important in this volume is George A. Billias, “Horatio Gates: Professional Soldier,” about the general who used guerrilla strategy and tactics against Burgoyne, culminating at Saratoga; Don Higginbotham, “Daniel Morgan: Guerrilla Fighter,” in which Higginbotham apologizes for the fact that his valuable biography of the war’s greatest guerrilla tactician had been written before the advent of his own and other general interest in guerrilla warfare (Don Higginbotham, *Daniel Morgan: Revolutionary Rifleman* (1961)); and especially John W. Shy, “Charles Lee: The Soldier as Radical,” in which Shy favorably rediscovers the outstanding military libertarian and guerrilla theorist, strategist, and general of the American Revolution. Lee, who had been drummed out of his number two post of command and court-martialled unfairly by Washington, is favorably reassessed in a biography by John R. Alden, *Charles Lee: Traitor or Patriot?* (1951). Gates has also been maltreated by historians, who tend to be sycophants of Washington, but see the reevaluation by Bernhard Knollenberg, *Washington and the Revolution: A Reappraisal* (1940).

Shy, who of all historians has the best grasp on the importance of guerrilla warfare in this period, trenchantly interprets the various phases of British strategy during the war (from police action to conventional war to counter-guerrilla attempts at “pacification” in the South) in “The American Revolution: The Military Conflict Considered as a Revolutionary War,” in S. Kurtz and J. Hutson, eds., *Essays on the American Revolution* (1973). John Shy, *A People Numerous and Armed: Reflections on the Military Struggle for American Independence* (1976) is a collection of his essays on military history, some of which contribute to a positive reevaluation of the importance of the militia in defensive warfare. R. Arthur Bowler, *Logistics and the Failure of the British Army in America, 1775–1783* (1975) shows that the hostility of the local populations contributed to the failure of food supplies. This hostility was compounded by British attempts to seize the food they could not purchase.

On militia and guerrilla warfare as against the conventional deployment of the Continental Army in a local area see Adrian C. Leiby, *The Revolutionary War in*

the Hackensack Valley: The Jersey Dutch and the Neutral Ground, 1775–1783 (1962). On the fierce guerrilla and counter-guerrilla conflicts in South Carolina during the last phase of the war, see Russell F. Weigley, *The Partisan War: The South Carolina Campaign of 1780–1782* (1970). Albert T. Klyberg, "The Armed Loyalists as Seen by American Historians," *Proceedings of the New Jersey Historical Society* (1964), stresses the Tories as armed combatants rather than merely as victims. North Callahan, *Royal Raiders* (1963) is episodic and noninterpretive.

Particularly important in George Billias, ed., *George Washington's Opponents: British Generals and Admirals in the American Revolution* (1969) is the essay by Ira D. Gruber, "Richard Lord Howe: Admiral as Peacemaker," which indicates clearly that one of the major reasons for the British failure to crush Washington's army in the first two years of the war was the Howe brothers' virtually treasonous opposition (as dedicated Whigs) to the British war effort against the Americans. For a fuller account, see Gruber, *The Howe Brothers and the American Revolution* (1972). Also see Gruber, "Lord Howe and Lord George Germain: British Politics and the Winning of American Independence," *William and Mary Quarterly* (April 1965), pp. 225–43. On the British view of the war, see Piers Mackesy, *The War for America, 1775–1783* (1964); for its direction by Germain, see Gerald S. Brown, *American Secretary: Colonial Policy of Lord George Germain* (1963). Eric Robson, *The American Revolution in its Political and Military Aspects, 1763–1783* (1955) is pro-British, but it reveals the crippling contempt which the British held for the Americans. William B. Willcox, *Portrait of a General: Sir Henry Clinton in the War of Independence* (1964) is a biography of the best of a rather poor lot of British generals; but see the review of the book by Curtis P. Nettels in the *Journal of American History* (June 1965) for a useful critique of the unfortunate tendency to psychoanalyze Clinton's personality.

On specific aspects of the fighting, Donald E. Reynolds, "Ammunition Supply in Revolutionary Virginia," *Virginia Magazine of History and Biography* (January 1965), pp. 56–77, treats the devastation in that state, while Dale Van Every, *A Company of Heroes: The American Frontier, 1775–1783* (1963) is a lively account of the war in the West and with the Indians. A previously unknown tenant rebellion in New York is discovered in Staughton Lynd, "The Tenant Rising at Livingston Manor, May 1777," *New York Historical Society Quarterly* (April 1964), pp. 163–77.

The most recent general history of the American Revolution, Page Smith, *A New Age Begins: A People's History of the American Revolution* (2 vols., 1976) incorporates many detailed insights about guerrilla warfare from primary sources.

On the political history of the American Revolution, Edmund Cody Burnett, *The Continental Congress* (1941, 1964) remains a thorough and definitive history of that national political institution; Merrill Jensen, *The Articles of Confederation: An Interpretation of the Social-Constitutional History of the American Revolution, 1774–1781* (1948) is an excellent study of the struggles around the Articles and the attempt to carry nationalism even further. Jackson Turner Main, *The Antifederalists: Critics of the Constitution, 1781–1788* (1961) studies the opponents of the nationalizing trend. Despite its age, Allan Nevins, *The American States During and After the Revolution, 1775–1789* (1924), remains by far the best, indeed the only satisfac-

tory, state-by-state political history of the revolutionary period. An unfortunate attempt to replace Nevins, Jackson Turner Main, *The Sovereign States, 1775–1783* (1973) is sketchy and overly schematic, while Main's *Political Parties Before the Constitution* (1973) is a tangled statistical web based on a fallacious and unenlightening division between alleged "localists" and "cosmopolitans."

Carl L. Becker, *The Declaration of Independence: A Study in the History of Political Ideas* (1922) is a well-written and still valuable study of the Declaration. Curtis P. Nettels, *George Washington and American Independence* (1951) demonstrates Washington's early devotion to independence. Eric Foner's *Tom Paine and Revolutionary America* (1976) is an excellent and sympathetic study of the great sparkplug of independence as a libertarian and laissez faire radical. None of the full-scale biographies of Paine do him justice; best is David Freeman Hawke, *Paine* (1974).

Elisha P. Douglass, *Rebels and Democrats: The Struggle for Equal Political Rights and Majority Rule During the American Revolution* (1955) is a valuable Beardian study of state politics during the Revolution. A thorough documentary history of the struggle over the Massachusetts state constitution during the war is presented in Robert J. Taylor, ed., *Massachusetts, Colony to Commonwealth: Documents on the Formation of Its Constitution, 1775–1789* (1961). The older view that confiscated Tory land in New York did not devolve upon the tenants of the feudal landlords is set forth in Harry B. Yoshpe, *The Disposition of Loyalist Estates in the Southern District of the State of New York* (1939), and is refuted in Staughton Lynd, *Anti-Federalism in Dutchess County, New York: A Study of Democracy and Class Conflict in the Revolutionary Era* (1962), and Beatrice G. Reubens, "Preemptive Rights in the Disposition of a Confiscated Estate: Philipsburgh Manor, New York," *William and Mary Quarterly* (July 1965), pp. 435–56. In contrast, Ruth M. Keeseey, "Loyalism in Bergen County, New Jersey," *William and Mary Quarterly* (October 1961), pp. 558–76, shows that Tory lands in New Jersey tended to be small rather than feudal.

Pennsylvania, the most radically libertarian state during the war, is examined in Robert L. Brunhouse, *The Counter-Revolution in Pennsylvania, 1776–1790* (1942), and its radical constitution specifically in John P. Selsam, *The Pennsylvania Constitution of 1776* (1936). A valuable general work on western Pennsylvania politics in the revolutionary and postrevolutionary periods is Russell J. Ferguson, *Early Western Pennsylvania Politics* (1938). Maryland is studied in Philip A. Crowl, *Maryland During and After the Revolution* (1943).

On biographies of American revolutionary leaders, in addition to the ones mentioned above, the definitive of the numerous Jefferson biographies is the magisterial study by Dumas Malone, *Jefferson and His Time*, of which see volume one: *Jefferson the Virginian* (1948). There is no wholly satisfactory biography of the great George Mason, whose Virginia Declaration of Rights inspired both the Declaration of Independence and the later Bill of Rights, but Robert A. Rutland, *George Mason: Reluctant Statesman* (1961) is useful though brief. Also see George Mason, *Papers, 1725–1792*, R. Rutland, ed. (3 vols., 1970), and Helen Hill Miller, *George Mason: Gentleman Revolutionary* (1975). The radical Pennsylvania leader, the astronomer David Rittenhouse, is studied in Brooke Hindle, *David Rittenhouse* (1964). Of the Massachusetts leaders, there is no satisfactory biography

of Samuel Adams. John C. Miller's *Sam Adams: Pioneer in Propaganda* (1936) is hostile and vituperative. Of the numerous biographies and studies of John Adams, best for this period, though not always reliable, is Catherine Drinker Bowen, *John Adams and the American Revolution* (1950). The doughty and steadfast western Massachusetts radical, Joseph Hawley, receives a valuable biography in E. Francis Brown, *Joseph Hawley: Colonial Radical* (1931). And two leading New York conservative rebels receive biographies in Frank Monaghan, *John Jay* (1935), and the excellent George Dangerfield, *Chancellor Robert R. Livingston of New York, 1746–1831* (1960). General Nathanael Greene is studied in Theodore Thayer, *Nathanael Greene: Strategist of the American Revolution* (1960). A moderate Pennsylvania leader receives an important biography in Kenneth R. Roseman, *Thomas Mifflin and the Politics of the American Revolution* (1952). New York's wartime governor is studied in Ernest W. Spaulding, *His Excellency George Clinton (1739–1812): Critic of the Constitution* (1938).

On the economic and financial history of the war, E. James Ferguson, *The Power of the Purse: A History of American Public Finance, 1776–1790* (1961) is a superb account of the machinations of Robert Morris and the Nationalists during and after the war, including the expropriation of public funds for private purposes by Morris and his associates, and the drive for a strong central government to consolidate and extend those privileges and similar ones. This should be supplemented by Ferguson's study of the first nationalist drive, which, though it failed, prefigured the later push for the Constitution: E. James Ferguson, "The Nationalists of 1781–1783 and the Economic Interpretation of the Constitution," *Journal of American History* LVI (1969), pp. 241–61. A useful biography of Morris is Clarence L. Ver Steeg, *Robert Morris, Revolutionary Financier: With an Analysis of His Earlier Career* (1954). There is no overall study of inflation during the war, but Anne Bezanson, "Inflation and Controls, Pennsylvania, 1774–1779," *Journal of Economic History, Supplement VIII* (1948), pp. 1–20, is a careful statistical study. Richard B. Morris, *Government and Labor in Early America* (1946) reveals the dismal record of price controls during the war; the book is made all the more valuable by the author's sympathy with the control program.

Special groups in relation to the American Revolution are treated in Charles H. Metzger, *Catholics and the American Revolution: A Study in Religious Climate* (1962), and in the excellent work by Benjamin Quarles, *The Negro in the American Revolution* (1961). Jesse Lemisch's rather quixotic program for writing history "from the bottom up" works in a particular case where data are fortunately available, in his article, "Jack Tar in the Streets: Merchant Seamen in the Politics of Revolutionary America," *William and Mary Quarterly* XXV (July 1968), pp. 371–407.

There has been increased interest in recent years in the fate of Tories during the Revolution; of these the best works are William H. Nelson, *The American Tory* (1961), and Paul H. Smith, *Loyalists and Redcoats: A Study in British Revolutionary Policy* (1964). Also see Robert M. Calhoun, *The Loyalists in Revolutionary America, 1760–1781* (1973), and Mary Beth Norton, *The British-Americans: The Loyalist Exiles in England, 1774–1789* (1972). A single Tory is studied in Carol Berkin, *Jonathan Sewall: Odyssey of an American Loyalist* (1974). The oppression of Tories in two states receives detailed treatment in Leonard W. Levy, *Jefferson and Civil*

Liberties: The Darker Side (1963), and Richard C. Haskett, "Prosecuting the Revolution," *American Historical Review* (April 1954), pp. 578–87, for Virginia and New Jersey respectively. Harold M. Hyman's history of the imposition of loyalty oaths in America, *To Try Men's Souls* (1960), contains a chapter on the Tories in the Revolutionary War.

The classic work on the foreign policy of the American revolutionaries is Samuel Flagg Bemis, *The Diplomacy of the American Revolution* (1935). A far more revisionist work, treating the origins of the American Empire and focusing on internal and external policies of European states rather than on strictly diplomatic history, is Richard W. Van Alstyne, *Empire and Independence: The International History of the American Revolution* (1965). Felix Gilbert's *To the Farewell Address: Ideas of Early American Foreign Policy* (1961) is an excellent work which shows the isolationist inferences for foreign policy drawn from libertarian principles by Tom Paine and other American revolutionaries. The detailed work on the negotiations of the Peace of Paris is Richard B. Morris, *The Peacemakers: The Great Powers and American Independence* (1965). But a fascinating corrective is Cecil B. Currey, *Code Number 72/Ben Franklin: Patriot or Spy?* (1972). Currey not only demonstrates Franklin's participation in Robert Morris' peculations during his ministry in Paris, but he also offers newly discovered evidence of Franklin's probable role as a double agent on behalf of Great Britain. His shift to a pro-French role during the peace negotiations is also detailed, as well as the well-founded distrust of Franklin by Arthur Lee, John Adams, and John Jay.

There is no space here to deal with the numerous works on the nature and consequences of the American Revolution, or on the vitally important topic of the relationship between the Revolution and the Constitution. Here we may mention Gordon S. Wood's careful and important study of the way in which libertarian ideology was conservatized during and especially after the Revolution: Gordon S. Wood, *The Creation of the American Republic, 1776–1787* (1969). Richard B. Morris has many judicious insights in his *The American Revolution Reconsidered* (1967), and treats the American Revolution more fully as the first war of national liberation and independence from European colonialism in *The Emerging Nations and the American Revolution* (1970).

Perhaps the most important controversy among historians in this period is on how radical, and how revolutionary, were the nature and the consequences of the American Revolution. The first volume of Robert R. Palmer's monumental two-volume work, *The Age of the Democratic Revolution: A Political History of Europe and America, 1760–1800*, volume one: *The Challenge* (1959), weaves together a scintillating tapestry of trans-Atlantic history. Palmer demonstrates the radicalism of the Revolution by pointing out both its decisive inspirational effect on the succeeding European revolutions of the late eighteenth century, and the similarity of their goals and ideologies. Palmer also shows that, by one important criterion, the American Revolution was more radical than the French, since proportionately far more Tories were driven out of America than aristocrats from France, and far fewer returned. Also see Louis Gottschalk, "The Place of the American Revolution in the Causal Pattern of the French Revolution," in H. Ausubel, ed., *The Making of Modern Europe* (1951), vol. 1, and particularly Jacques Godechot, *France*

and the American Revolution of the Eighteenth Century, 1770–1799 (1965). Elisha P. Douglass traces the impact of the Revolution on German intellectuals in “German Intellectuals and the American Revolution,” *William and Mary Quarterly* (April 1960), pp. 200–218. The best discussion of British politics in relation to the American scene is Charles R. Ritcheson, *British Politics in the American Revolution* (1954). The British radical movement, linked in many ways with the American cause, is studied in many works, including George Rudé, *Wilkes and Liberty* (1962).

The classic view defending the social radicalism of the American Revolution is J. Franklin Jameson, *The American Revolution Considered as a Social Movement* (1926). This thesis was attacked and seemingly refuted during the consensus period of American historiography in the 1950s, particularly by Frederick B. Tolles, “The American Revolution Considered as a Social Movement: A Re-evaluation,” *American Historical Review* LX (1954–1955), pp. 1–12; and by Clarence Ver Steeg, “The American Revolution Considered as an Economic Movement,” *Huntington Library Quarterly* XX (1957), pp. 361–72. But Robert A. Nisbet, in a brilliant article, has now rehabilitated the thesis of the American Revolution as having radical consequences, specifically in a libertarian direction. In his *The Social Impact of the Revolution* (1974), Nisbet shows that the Revolution had a radical libertarian impact on American society in abolishing feudal land tenure, in establishing religious freedom, and in beginning to abolish slavery. Thus, to the insight of Bernard Bailyn on the libertarian sources of the Revolution (whose works were cited in the bibliographic essay in volume three of this work) is added the Nisbet discussion of its libertarian consequences.

The impact of the Revolution on suffrage may be found in Chilton Williamson, *American Suffrage from Property to Democracy, 1760–1860* (1960). Staughton Lynd revives the neglected older view of the great importance of sectional conflicts over slavery as early as the 1780s, in Staughton Lynd, “The Abolitionist Critique of the United States Constitution,” in M. Duberman, ed., *The Anti-Slavery Vanguard* (1965). Challenging insights are to be found in Staughton Lynd, “The Revolution and the Common Man,” part one (unpublished Ph.D. dissertation, Columbia University, 1962).

Finally, for further bibliography on the Revolution, John Shy, comp. *The American Revolution* (1973) is indispensable for work published before 1972; unfortunately, as in the case of all the Goldentree series, the bibliography is not annotated.
